Transportation and Communications.—Plans to establish a direct cargo service between Asunción and New York were delayed in 1955 because drought conditions had reduced the Paraguay River to too low a level for large vessels. There are six airlines serving Paraguay, and a new air service between Uruguay and Paraguay was inaugurated in 1955. The Export-Import Bank of Washington announced a \$700,000 loan for reconditioning and enlarging the International Airport in Asunción. With financial aid from the International Bank for Reconstruction and Development, Paraguay has embarked on a program to improve its highway system (less than one third of its 3,750 miles of road are usable throughout the year). The International Cooperation Administration has granted Paraguay \$100,000 to train personnel in the use and maintenance of highway equipment. Work continued in 1955 on the Chaco all-weather road, financed jointly by the government, the Chaco ranchers,

and the Mennonites. Paraguay has 713 miles of railroad in operation.

Principal Events, 1955.—An unsuccessful attempt by military and civilian elements, led by an ex-Colorado Party leader, to overthrow the government of Gen. Alfredo Stroessner occurred in January. Sporadic demonstrations by the outlawed Communist Party caused tightening of security measures. In August, President Stroessner asked for and received authority to punish with prison terms all those who helped to spread communism. He was also empowered to take action against those who circulated derogatory information about Paraguay abroad.

In December, Stroessner quickly put down a new uprising against his government. The revolt was said to have been instigated by influential businessmen and officers of the First Cavalry Division.

Paraguay came prominently into the news when it granted asylum in October to the deposed Argentine president, Juan Peron.

Asunción will benefit by an Export-Import Bank loan of \$7.2 million to defray the cost of installing a water supply system in the capital. An autonomous agency has been created to carry out construction of the system, which will furnish 15 million gallons of water a day to about 135,000 persons living in central Asunción. The water will be taken from the Paraguay River.

PARAPSYCHOLOGY (PSYCHICAL RESEARCH).

This new branch of natural science deals with all interaction between a person and his environment that does not depend on the usual sensory and motor functions. Thus it has to do with man's direct knowledge of his outer world (extrasensory perception, or ESP) and his ability to exert a direct influence upon it (psychokinesis, or PK).

Parapsychology is still a topic of lively debate, but it is of increasing interest as well. Articles both for and against ESP have in recent years appeared in many of the leading periodicals of American science, including *Science*, *The Scientific Monthly*, and *The American Scientist*.

Likewise, there has been, during the last two years, an increasing number of international conferences centering on the problems of parapsychology. Some of these conferences have been supported by the Parapsychology Foundation of New York, the most recent one being a conference on spontaneous psychic experiences held at Cambridge University in July 1955 by the Society for Psychical Research. The Ciba Foundation of London, interested mainly in the medical sciences, held an international symposium on ESP in May 1955. In December 1954 the American Philosophical Association (Eastern Section) held a symposium on ESP at its annual meeting; and in its annual meeting for 1955, the South African Association for the Advancement of Science scheduled invited papers on its program.

On the more important aspect of research progress, however, the last two years have not seen any clearly novel advances. It has seemed more like a period of fulfillment and adjustment. Haakon Forwald, a Swedish engineer who has been making efforts to estimate the energy expended in psychokinetic action on dice, has discovered that rough-surfaced cubes are more effectively influenced psychokinetically than are smooth ones. This could be a very important

finding. The long-pursued problem of precognition (ESP of future events) has also seen further progress. Not only have new contributors been brought to the support of the case for precognition, but new devices have been used to improve the tests so as to insure that the order of cards to be precognized be so made up that nothing but true precognition could give significant results. Outstanding in these contributions is the work of Dr. Karlis Osis and that of Dr. Gordon Mangan, both of the Parapsychology Laboratory at Duke University.

Paralleling these experimental studies is the exploratory search for new ideas about precognition which Dr. Louisa E. Rhine of that laboratory is making in the analysis of her collection of many thousand cases of psychic experiences apparently involving the future. She is concentrating particularly on the question of whether precognition necessarily implies the inevitability of the event precognized. Dr. Remi Cadoret of the Duke Parapsychology Laboratory is convinced he has a method now developed that can make even small traces of ESP ability reliably applicable to practical use. The method has two phases, one being used to evaluate the other and give it a measure of prediction value.

J. B. RHINE,
Parapsychology Laboratory, Duke University.

PARKS, National. See NATIONAL PARKS.

PATENTS AND TRADEMARKS. For the fiscal year ending June 30, 1955, the U.S. Patent Office granted 32,308 patents, including designs and reissues. Patent applications pending on June 30, 1955, approximated 222,000, excluding designs, of which about 140,000 were before the office examiners for consideration. The office received 84,233 new patent applications during the 1955 fiscal year, and applications for so-called "mechanical" patents, as distinguished from design patents, numbered 78,480, higher than in any year since 1931.

The Patent Office registered and renewed 20,697 trademarks (excluding republications), and applications for registration and renewal totaled 25,446. On June 30, 1955, approximately 26,234 applications for registration, renewal, and republication were pending, of which 12,527, slightly less than half, were awaiting action by the examiners.

Over 2,700,000 patents had been issued by June 30, 1955. Complete classified and numerical sets are available to the public in the Patent Office search room. Information concerning the patents issued each week is provided in condensed form in the *Official Gazette of the United States Patent Office*, which is available in about 340 government depository libraries. Copies of patents may be inspected in some 22 libraries, or may be purchased for 25 cents each; designs and trademarks cost 10 cents each. During the 1955 fiscal year the Patent Office distributed nearly 7,000,000 copies of United States patents and trademarks: more than 4,500,000 sold, 650,000 deposited in libraries, and over 1,100,000 shipped under exchange agreements to foreign countries.

The service previously afforded by the Register of Patents Available for Licensing or Sale, abolished June 30, 1954, was reinstated in a modified form on Oct. 29, 1954. Owners of patents under the substitute procedure may publicize the availability of their patented inventions on payment of a fee.

An Advisory Committee on the Application of Machines to Patent Office Operations, appointed

Oct. 22, 1954, and headed by Dr. Vannevar Bush, submitted its report on Dec. 22, 1954. Material progress has been made in carrying out its recommendations.

The Patent Office had 1,612 employees on June 30, 1955. Office operations during the 1954 and 1955 fiscal years were on a reduced budget, which, coupled with a high filing rate of applications, reduced the number of patents issued and the number of printed copies distributed, and raised the backlog of pending applications by 27,252 above the figure at the end of fiscal 1954. To rectify this condition, appropriations for the Patent Office in 1956 were increased and additional personnel were being recruited.

Net receipts for the fiscal year ended June 30, 1955, were \$5,860,833. Obligations incurred under all Patent Office appropriations amounted to \$11,629,328.

ROBERT C. WATSON,
Commissioner of Patents.

PEARS. See FRUITS.

PEARSON, Lester Bowles, Canadian secretary of state for external affairs: b. Toronto, Canada, April 23, 1897. A member of Canada's diplomatic corps since 1928, he served in a number of capacities before he was named secretary of state for external affairs on Sept. 10, 1948. These included posts as minister-counselor at the Canadian legation in Washington, D.C. (1942); Canadian ambassador to the United States (1945-46); and undersecretary of state for external affairs (1946-48). He was also senior adviser to the Canadian delegation at the San Francisco Conference in 1945, and since 1947 has headed the Canadian delegation to the U.N. General Assembly, serving also as assembly president in 1952-53. Since 1948 he has been a Liberal member of the Canadian Parliament.

In 1955, Lester Pearson's moderate voice in international affairs served as an ameliorant in

Lester B. Pearson

© GABY, COURTESY CANADIAN INFORMATION OFFICE, NEW YORK.

areas where high tension had been generated between East and West. At the height of the Formosa crisis, after the United States had indicated its intention to defend the coastal islands against a threatened Communist Chinese invasion—if it should be determined that such an action was ultimately directed at Formosa—he told the Canadian Parliament on March 24 that although Canada was bound to aid the United States in a major war, he did not consider a conflict over the possession of the coastal islands to warrant such support. Later, with the situation unaltered, he insisted (April 13) that if the problems of the

Far East were to be settled, "either the Communist Chinese must come to the United Nations or the United Nations must go to them."

In October 1955, Pearson paid an official visit to the Soviet Union, the first of its kind made by a Western foreign minister since the commencement of the cold war. During his week's stay he discussed with Soviet leaders the possibilities of concluding a trade pact and of removing barriers to freer cultural, scientific, and technological contacts. After the failure of the Geneva Conference (q.v.) of foreign ministers in October–November, Pearson, dubious of the value of rigid Western diplomacy, declared that it behooved the West to re-examine its policies on German reunification.

Pearson's views on modern diplomacy and international affairs are expressed in his book *Democracy in World Politics*, which was published in October 1955.

PEAS. See **VEGETABLES**.

PEAT. Although used as a fuel in some countries, in the United States peat is put to various agricultural uses—chiefly as a soil conditioner, for which it is becoming increasingly popular. World production figures, compiled by the U.S. Bureau of Mines, are shown in the accompanying table.

WORLD PRODUCTION OF PEAT
(In thousands of metric tons)

	1951	1952	1953	1954
Canada.....	70	68	74	79
Denmark.....	2,014	1,626	574	544

United States.....	176	191	185	221
Total*.....	54,000	54,000	53,000	53,000

* Estimated.

Peat production in the United States reached a new record of 243,257 short tons in 1954, as compared with 204,209 tons in 1953. Imports increased from 199,887 tons in 1953 to 240,940 tons in 1954. Peat production of domestic origin sold in 1954 included 202,280 short tons applied to soil improvement and 36,916 tons in mixed fertilizers, the balance being used for such purposes as stock bedding and as a packing material for plants, shrubbery, fruits, and vegetables.

PECANS. See **NUTS**.

PEDIATRICS. Pulmonary Hyaline Membranes.—A condition known as pulmonary hyaline membranes has engaged the attention of many investigators over the entire world because of the important role it plays as a cause of death in newborn infants. Pulmonary hyaline membranes consist of a pink-staining, homogeneous material which lines the air spaces of the lungs and presents a barrier to the passage of oxygen from the air into the blood vessels. It has been estimated that 25,000 infants die each year in the United States alone as a result of this condition.

During the past year, several reports in the medical literature lent further emphasis to the importance of this disease. At the University of Zurich it was found that 44 per cent of premature infants dying within a few days of birth had the condition. A University of Oslo study simi-

larly revealed that roughly half of all premature infants who died within the first three days of life had pulmonary hyaline membranes in the lungs. At Johns Hopkins University a group of investigators found pulmonary hyaline membranes in the lungs of one out of every four newborns who die. It is clearly evident that this disease is probably the most important cause of death in newborn infants at the present time.

Of interest is the fact that stillborn babies show no evidence of pulmonary hyaline membranes; an infant must breathe for at least one to two hours before succumbing in order that the membranes may be revealed microscopically. The condition is found most frequently in premature infants, infants delivered by Caesarean section, and infants of mothers with diabetes.

The clinical picture shown by the newborn infant with pulmonary hyaline membranes is a striking one. Usually the infant appears to be in good condition immediately after birth, but shortly afterward its respirations become more rapid and the soft tissues of the chest wall begin to pull inwardly with each breath. As the respirations become more labored and less efficient, the infant's color changes from its normal pink to a dusky blue. In the fatal cases the respirations become increasingly difficult and the infant finally dies of suffocation as the membranes extend to larger areas of lung and effectively bar the diffusion of oxygen into the blood vessels of the lungs.

Many theories have been advanced to explain the origin of the membranes. Several investigators have argued that they are formed from amniotic fluid by which the infant is surrounded during intrauterine life. It is thought that this fluid aspirated deeply into the infant's lung just before or during birth is the basis for the development of membranes. During the past year an important step forward in the study of the disease resulted when experimental work revealed that the membrane originates from fluid passing from the infant's blood vessels into his own lung spaces. Further studies to determine the cause of this disease are under way.

Rheumatic Fever.—A joint report on the treatment of rheumatic fever in children with ACTH, cortisone, and aspirin, representing a cooperative undertaking of 12 medical centers in the United States, Canada, and Great Britain, was published during the past year. (For details of the study, see **HEART DISEASE**.) Over the course of a year no significant differences in results were noted among the three groups. Treatment with hormones produced more prompt control of fever, joint pains, laboratory changes, etc., but the ultimate course of the disease was not altered. More recent studies, however, suggest that higher doses of hormones than those used in the joint investigation, given over a long period of time until all symptoms and laboratory determinations indicative of activity of the rheumatic process are no longer present, will affect the natural course of the disease and prevent heart damage. (See also **ARTHRITIS**.)

Phenylketonuria.—Phenylketonuria is a rare type of mental deficiency, and patients with the disease represent only a minute percentage of the total number of mentally retarded children. During the past year much progress has been made in the control of this disease.

In phenylketonuria the patients are typically blond and blue-eyed with mental retardation which is severely progressive. The disease has been diagnosed for many years by the finding in

the urine of phenylpyruvic acid. The recent studies suggest that the mental defect is due to an injury to the brain by an excess of phenylalanine, an amino acid which is a normal constituent of protein food. These children are unable to metabolize this amino acid apparently because of an inherited defect in the enzyme system involved in handling the amino acid. During the past year, British pediatricians and investigators in the United States have presented evidence that artificial diets freed from phenylalanine by passage through a charcoal filter result in improvement in the mental status of patients with phenylketonuria. It appears essential that such diets be started as soon as possible after birth, for the longer the infant is subjected to high levels of phenylalanine the more severely damaged his brain will be. (See also POLIOMYELITIS.)

Executive.—Chief state officers for 1955:
Governor: George M. Leader (Democrat)
Lieutenant Governor: Roy E. Furman
Secretary of State: James A. Finnegan
Treasurer: Weldon B. Heyburn
Secretary of Internal Affairs: Genevieve Blatt
Attorney General: Herbert B. Cohen
Acting Superintendent of Public Instruction:
Ralph C. Swan

Constitution and Judiciary.—The present constitution went into effect in 1874. The Supreme Court comprises 7 justices; chief justice in 1955: Horace Stern.

Legislature.—The General Assembly (Senate, 50 members; House of Representatives, 210) meets in odd-numbered years commencing the first Tuesday in January.

At the 1955 meeting of the General Assembly, enactments included provision for the reorganization of agencies and functions of the state government by the governor, subject to the approval of the General Assembly; authorization of the sale of forest and game land for aircraft testing or manufacturing, for power plants, or for other scientific purposes primarily in the interest of national defense; authorization for an east-west turnpike through the northern part of the state and connection of the present Pennsylvania Turnpike with that of West Virginia; a multimillion dollar dam on the Delaware River at Wallpack Bend, Pike County; and a toll bridge by the Delaware River Port Authority over the Delaware River between Philadelphia and Palmyra, N.J. The statute governing legislative salaries was amended to

provide a \$3,000 annual instead of a biennial salary if annual legislative sessions are adopted. A new boxing and wrestling code was adopted, and penalty was provided for wilful obstruction of emergency telephone calls. (See also below, *Principal Events, 1955.*)

Finances.—State treasury receipts (1954-55 fiscal year), \$2,334,270,202.21; expenditures, \$2,348,027,435.45; treasury balance, \$92,184,147.84, exclusive of \$59,393,461.41 invested in United States government short-term obligations; gross debt, \$380,950,000.

Taxation.—State tax revenue (1954-55 fiscal year): \$681,452,248, including \$83,263,969 from a 1% general sales tax (expired Aug. 31, 1955) and selective sales and gross receipts taxes; \$89,393,337 from licensing; and \$97,696,791 from corporate income taxes. The state has no individual income or poll tax.

Banking.—As of June 30, 1955, the state's 536 national banks had \$8,130,249,000 in assets, \$4,974,231,000 in demand deposits, and \$2,272,039,000 in time deposits; the state's 310 other banks had \$7,013,885,181.28 in assets, \$3,406,090,395.11 in demand deposits, and \$2,878,626,491.37 in time deposits.

Education.—School attendance is compulsory for all between the ages of 8 and 17, inclusive. Operating expenditures of \$503,949,837 (\$268.42 per pupil) for public elementary and secondary education in the 1953-54 school year comprised \$281,911,510 from local school districts, \$218,538,327 from the state, and \$3,500,000 from the federal government. Expenditures for construction and improvements amounted to \$126,000,000. Teachers' salaries averaged \$4,262 (elementary school teachers, \$4,013; high school teachers, \$4,275).

PENNSYLVANIA SCHOOL STATISTICS, 1953-54

Type of school	No.	Teachers	Students

Pennsylvania State University, which celebrated its 100th anniversary on Feb. 22, 1955, completed construction of a \$300,000 nuclear research reactor which was in full operation before the end of the 1954-55 school year. Lafayette College received a grant of \$1,249,892.60 from the Olin Foundation for a new building dedicated to the sciences basic to engineering. Temple University laid the cornerstone of its new \$10 million medical center on October 6.

Social Welfare.—Public assistance expenditures from federal and state funds in the 1954-55 fiscal year (excluding operating costs) totaled

PENNSYLVANIA WELFARE INSTITUTIONS

Type of institution	No.	Pop. ¹
Hospitals for mentally deficient and epileptic.....	4	9,003
Hospitals for the mentally ill.....	17	40,920
Sanatoriums for the tubercular (Aug. 31, 1955).....	4	2,184

Prisons.....	5	5,036

¹ As of May 31, 1955, unless otherwise indicated.

² Ground was broken on Jan. 13, 1955, for a \$10 million state institution for defective delinquents at Jackson Township, near Wilkes-Barre.

\$125,360,000, including \$30,484,000 for old-age assistance, \$34,669,000 for dependent children, and \$9,683,000 for the needy blind; a monthly

PENNSYLVANIA

average of 269,086 persons received public assistance. Operating expenditures for health and welfare institutions totaled \$72,090,215.56; for correctional and penal institutions, \$9,723,089.36.

Labor Force.—The labor force in July 1955 numbered 4,467,000, including 184,000 agricultural workers. Nonfarm employment was 3,987,000 and for the year ending July 1955 averaged 3,939,000. There were 296,000 unemployed workers in July 1955, and the state paid \$235,078,773 in unemployment compensation for the year ending June 1955.

Manufacturing.—Establishments numbering 20,491 in 1954 employed 1,635,000 persons, who received \$5,944,965,100 in salaries and wages. Value added by manufacture was \$9,549,463,000, and expenditures for new plant and equipment (1953) amounted to \$774,946,000. Earnings of production workers in manufacturing averaged \$70.10 for an average work week of 38.4 hours in 1954, and \$76.05 for 40 hours in the first six months of 1955.

MAJOR PENNSYLVANIA MANUFACTURES, 1954

Product or industry	No. of employ-ees ¹	Salaries and wages	Value added by mfr. ²

Mining.—Pennsylvania normally ranks first among the states in production of cement, anthracite coal, slate, and crushed stone, and second in clays, bituminous coal, and lime. In 1953 it stood second as a producer of graphite and cobalt, and third in tripoli; and was 3d in total value of its mineral products, with 7.80% of the United States total. There were 133,285 persons employed in the state's mineral industries in 1953.

Agriculture.—Cash farm income in the first half of 1955 totaled \$362,209,000, and for the full year 1954 comprised \$579,010,000 from livestock and livestock products, \$181,036,000 from crops, and \$4,002,000 from government payments. Receipts from principal crops and livestock in 1954 included: dairy products, \$260,016,000; eggs, \$148,702,000; cattle, \$63,132,000; greenhouse and nursery products, \$49,835,000; hogs, \$37,609,000; and chickens, \$30,530,000.

The state's 128,876 farms (13,162,093 acres; harvested cropland, 5,433,491) averaged 102.1 acres and \$13,529 in value of land and buildings per farm in 1954. There were 88,674 farms with telephones and 124,244 with electricity. Livestock on farms on Jan. 1, 1955, included 1,954,000 cattle, 262,000 sheep, 604,000 hogs, and 27,782,000 chickens (excluding commercial broilers). During the week of Sept. 26-Oct. 2, 1954, 270,975 family and hired workers were engaged in farming.

PENNSYLVANIA CROP STATISTICS

Crop (and unit of production)	Average 1944-53	1954	Est. 1955

(Source: U.S. Dept. of Agriculture.)

Transportation and Communications.—State and federal funds spent for highways in the 1953-54 fiscal year totaled \$138,570,000, and newly completed construction and reconstruction aggregated 8,463 miles.

Highways and roads totaled 101,000 miles in 1953 (67,871 surfaced). Registered *motor vehicles* numbered 3,557,000 on Dec. 30, 1954, including 3,036,000 passenger cars. There were 63 *railroads* (1955) operating (1953) 9,555 track miles, and (1955) 15 regularly scheduled *airlines* and 413 *airports and airfields* (195 commercial and municipal, 4 military, 203 private, and 11 others).

Communications media (1955) included 132 AM *radio stations* and 38 operating *television outlets* (the General Electric Company announced on Oct. 22, 1955, that it had contracted to build the world's most powerful television outlet at Scranton); 132 daily *newspapers* (circulation, 4,130,992) and 280 other newspapers; and (Jan. 1, 1955) 990,907 business and 2,808,788 residential *telephones*.

Principal Events, 1955.—During 1955 the people of Pennsylvania witnessed a year-long partisan struggle over a tax program essential to produce \$450,000,000, which the governor estimated would be necessary to balance his biennial budget of \$1.8 billion, the largest in the state's history. The deadlock on the tax program between Democratic Gov. George M. Leader and the Democratic House of Representatives on the one hand, and the Republican-controlled Senate on the other, stemmed from the governor's campaign pledge to end the state retail sales tax. In lieu of the sales tax, Governor Leader initially proposed a state income tax, with certain exemptions to favor low income groups. After this proposal was rejected by the Senate, he submitted a 3½ per cent manufacturers' excise tax, which was quickly passed by the Democratic House of

Representatives but which was turned down by the Senate on December 14.

There were no general elections of state officials in 1955, but the Democrats registered impressive gains in local elections throughout the state in November, especially in the city of Philadelphia (q.v.) and other large urban centers. In the one by-election to fill a vacancy in the state Senate, created by the death of a Democrat, the Republicans were victorious, increasing their Senate margin from 2 to 4.

After many years of frustration, proponents of Fair Employment Practices legislation in Pennsylvania managed to secure legislative approval of an FEP act early in the fall of 1955. The governor promptly signed the measure and it became effective in late November.

Pennsylvania experienced one of the most disastrous floods in its history as the aftermath of hurricane Diane on August 18-19. Eighty-eight persons lost their lives in the catastrophe—centered principally in the Pocono Mountains in the Stroudsburg area—and direct property losses were estimated close to \$100,000,000. The Pennsylvania General Assembly imposed an extra 1-cent tax on gasoline and another cent per package on cigarettes to provide funds for flood relief and emergency purposes.

One of the most bitter and dramatic group conflicts, involving the railroads and trucking interests, temporarily subsided with the enactment of the so-called Big Truck Bill. This act increased the gross weight limit of tractor and single axle semitrailers from 45,000 pounds to 60,000 pounds, but it retained the gross weight limit for a commercial motor vehicle and trailer combined at 62,000 pounds.

PERU. Crossed by the Andes and bounded on the north by Ecuador and Colombia, on the east by Brazil and Bolivia, on the south by Chile, and on the west by the Pacific Ocean, this third largest South American republic has an area of 514,059 square miles and a population (U.N. est., July 1955) of 9,396,000. Lima, the capital, has a population (est. 1955) of more than one million. The population of Arequipa, the second largest city, is about 120,000. Other leading cities (with 1950 populations) are Callao (87,587), Cuzco (55,634), Trujillo (47,728), and Iquitos (42,018). Official estimates of racial distribution are: white and mestizo (mixed stock), 52.9%; Indian, 45.9%; Asian (mainly Japanese), 0.7%; and Negro, 0.5%. Although the official language is Spanish, it is estimated that about 51% of the people speak the Indian languages of Quechua and Aymara.

Government.—Peru is governed by a president (Gen. Manuel A. Odría) and two vice presidents, elected on July 2, 1950, for 6-year terms; a Chamber of Deputies (182 members), elected by direct suffrage for 6 years and renewed completely at the end of each term; and a functional Senate (52 members, 6-year tenure, renewed entirely). The judiciary is headed by a Supreme Court of 16 members, elected by Congress. Suffrage has been extended to literate males of 21 years of age (18, if married), and to women in municipal elections. The Aprista

Party, main opposition group to the administration, and the Communist Party have both been outlawed as international parties. President Odría declared in his annual message before the opening session of Congress (July 29, 1955) that he would relinquish power to the next chief of state when his term expires on July 28, 1956. He promised elections and stated that he would not consider *continuismo* (changing the constitution to permit him to continue in office).

Education and Religion.—In 1955, the budget allotted 466,050,919.28 soles (13.88% of the total) for public education. In 1953 there were 11,720 primary schools, with 26,942 teachers and about 1,200,000 students. More than 37,000 Indian children in rural areas were receiving instruction. There were also 144 kindergartens, 97 urban prevocational schools with 887 teachers, and 16 schools for the blind and physically handicapped. The National University of San Marcos (founded at Lima in 1551) was closed in May 1955 because of a student strike and was not reopened until June 22. Other universities are at Arequipa, Cuzco, and Trujillo, aside from a Catholic university at Lima. Although about 58% of the adult population is illiterate, free and compulsory elementary education for both sexes between the ages of 7 and 16 is reducing this figure.

The constitution declares that "the state protects the Apostolic Roman Catholic religion," but freedom of worship is legally guaranteed. In 1955 Peru had 816 parishes and 1,446 priests. The Roman Catholic Church operated 3,997 schools, with 97,998 students.

Finance.—The budget for 1955 was fixed at 3,358,738,000 soles, as compared with 3,011,518,000 soles in 1954. Indirect taxes provide about 36.4% of the revenue. The free exchange rate for the sol as of October 1955 was 19.69 to U.S.\$1. The net gold and foreign-exchange position of the Central Reserve Bank was \$30,564,797 on July 31, 1955. The total money supply as of June 1955, was 4,025,700,000 soles.

Foreign Trade.—In 1954 the value of Peruvian exports was \$247.6 million, and of imports, \$249.7 million. In the first seven months of 1955, exports were valued at \$137 million and imports at \$157 million, leaving a cumulative foreign trade deficit of \$20 million, in comparison with \$15,200,000 for the same period in 1954. After Peru extended most favored nation treatment to Japan, beginning Sept. 10, 1955, trade with that country accelerated. German trade has also increased. United States exports to Peru in the first half of 1955 totaled \$51.3 million, and imports from Peru, \$47 million.

Agriculture and Industry.—Cotton and sugar are Peru's chief export crops. Production of cotton for 1955 was estimated at 2,250,000 quintals, or 470,000 bales, in 1955, a decline of about 6% as compared with 1954. Sugar production was expected to show a slight increase over 1954 and probably would total about 600,000 metric tons. Rice production was expected to be below the 1954 level because of short water supplies during the transplanting season. Cottonseed oil production for 1955 was estimated at 25,000 short tons, about 6% less than in 1954. The Peruvian tobacco monopoly, established in 1904, was abolished on June 17, and free production, processing, and trade in tobacco was restored.

A contract was let for the construction of irrigation works in the Department of Ica, which the government will pay for with loans up to \$20 million. Plans were developed in 1955 to irrigate about 74,000 acres in the Chincha Valley south of Lima, using private Peruvian and Venezuelan capital of about 150 million soles. The \$28 million second phase of the Quiroz River irrigation project in the Piura Valley in the extreme north was begun; the project will make 125,000 acres of new land available for cultivation.

Copper and oil are Peru's most important minerals. Production of blister and refined copper through August 1955 totaled 1,809,000 metric tons. In 1955 the Cerro de Pasco Corporation, with the Phelps Dodge Corporation, the American Smelting and Refining Company, and the Newmont Mining Company, began an important

copper development in southern Peru, involving the expenditure of more than \$200 million, of which the Export-Import Bank of Washington is providing \$100 million. Crude oil production for 1954 was 17,161,394 barrels, as compared with 15,998,443 in 1953. Oil production for the first six months of 1955 was slightly over 8,500,000 barrels, almost identical with 1954 production for the same period. About 95% of Peru's oil production comes from the International Petroleum and Lobitos companies.

On the basis of the first six months' exports, more than 100,000 metric tons of lead and 125,000 tons of zinc will be shipped from Peru in 1955. The Marcona Mining Company is now exporting about 150,000 tons of iron ore per month to the United States. A loan of \$2,500,000 was made in April 1955, by the World Bank to help finance the construction at Pacasmayo in northern Peru of a portland cement plant, which is scheduled to start operations in 1957. A \$3 million tire and rubber company, an affiliate of the B. F. Goodrich Company, began a new factory, Peru's second tire plant, in 1955.

In a country where about 80% of the population is dependent on agriculture, textiles are the most important industry. Of 33,430 production workers in 1951, nearly 18,000 were employed in textile mills.

Transportation.—There are about 2,700 miles of railways, and over 22,000 miles of roads. In August 1955 the World Bank loaned Peru \$5 million for highway maintenance. The government also awarded a contract to R. G. LeTourneau, Inc., to build a penetration highway from Olmos to the Marañón River in the northern jungle region, at a cost of about \$19,650,000.

Principal Events, 1955.—The disagreement with the United States over offshore fishing continued. The United States recognizes the 3-mile limit, but on May 6, 1955, the Peruvian Congress ratified a 1954 agreement with Ecuador, Peru, and Chile, establishing as national law the extension of sovereignty as far as 200 miles offshore. Peru and the other two countries refused to submit the issue to the International Court at The Hague.

On July 1 Peru signed the standard agreement admitting the country to President Eisenhower's "atoms for peace" program. President Victor Paz Estenssoro of Bolivia visited Peru in July. A declaration of economic co-operation was signed, along with two agreements concerning the railway by-pass of Lake Titicaca and utilization of the waters of the lake for power and irrigation. A minor border dispute with Ecuador in September was quickly settled by negotiation.

Political disorders in December caused President Odría to appoint a new cabinet made up entirely of military men.

PETERS, John Punnett, American medical scientist: b. Philadelphia, Pa., Dec. 4, 1887; d. New Haven, Conn., Dec. 29, 1955. An internationally famous pathologist and professor of internal medicine, he was the center of a widely publicized civil liberties case in which his dismissal by a government agency in 1953, for alleged disloyalty, was declared illegal by the U.S. Supreme Court in June 1955.

After graduation from Yale University in 1908, he studied medicine at the College of

Physicians and Surgeons of Columbia University (M.D., 1913). Following a period of overseas duty as a captain in the U.S. Army Medical Reserve Corps, he held posts as research fellow and instructor at Cornell Medical College (1917-20); adjutant attendant physician at Bellevue Hospital (1919-20); and associate professor of medicine at Vanderbilt University (1920-21). In 1921 he was appointed assistant professor of internal medicine at the Yale School of Medicine, and in 1927, John Slade Ely professor of medicine, a chair he held until his death.

He was the author of 150 books, monographs, and articles on medicine, including *Body Water* (1935) and *Quantitative Clinical Chemistry* (2 vols.; 1931 and 1946), each well known in the field.

In June 1953 the former Loyalty Review Board of the U.S. Civil Service Commission, charging that there was sufficient reason to suspect his loyalty, discharged Peters from the part-time position of consultant to the U.S. Public Health Service. Two years later, on June 6, 1955, the U.S. Supreme Court ruled in a 7-2 decision that his dismissal had been illegal, on the grounds that the board had exceeded its authority in discharging him when he had been previously cleared by two other security boards. (See also CIVIL LIBERTIES.)

PETROLEUM. The petroleum industry enjoyed a prosperous year in 1955, with world demand for oil products rising 8.75%, to 5,731 million barrels. Increases in consumption were general in both Eastern and Western hemispheres. In the East, domestic demand averaged 5,503,000 barrels daily, compared with 5,012,000 barrels in 1954, an increase of 9.8%. Western Hemisphere consumption was 8.2% higher, averaging 10,198,000 barrels daily, compared with 9,428,000 barrels in 1954.

After marking time in 1954, the United States petroleum industry increased its domestic sales 7.5% in 1955. Average daily usage was 8,334,000 barrels, compared with 7,752,000 barrels in 1954 and 7,604,000 barrels in 1953. Canadian demand was up 11%, to 600,000 barrels daily, and Latin America did even better, with demand rising 120,000 barrels daily, to an average of 1,032,000 barrels.

Production.—World output of crude petroleum in 1955 rose 10.9%, to 5,529 million barrels, and the recovery of liquid hydrocarbons from natural gas increased 6.2%, to 323 million barrels. The new supply of petroleum thus was 5,852 million barrels, an average of just over 16 million barrels daily. The indicated inventory accumulation was about 110 million barrels. Some 14 million barrels were added to aboveground stocks in the United States, and about 96 million barrels in other countries. United States storage and transit stocks at the end of the year represented 87 days' supply at the current rate of consumption. (Details on foreign inventories are not generally available.)

At the beginning of 1955, below-ground reserves of crude petroleum and natural gas liquids were estimated at 162,884 million barrels (this figure includes only oil blocked out by drilling and economically recoverable by current methods). United States reserves increased by 422 million barrels in 1954, and Canadian reserves were 372 million barrels higher.

Eastern Hemisphere.—An important influence in the supply of crude petroleum in 1955 was the return of Iranian oil to world commerce. When

a consortium of international companies began operations in Iran in October 1954, it did so under an agreement to restore Iranian oil to world markets gradually over a three-year period. Under the plan, 1955 production was about 320,000 barrels daily, and output was to be restored to the 1950 level of 635,000 barrels by 1957.

* Preliminary. (Source: *World Petroleum*.)

The Agha Jari field is being called on to produce 75% of Iran's oil. Older fields will be restricted to assure maximum ultimate recovery, and new development work will be done in Agha Jari and in the Gach Saran field, which is being held in reserve. A force of 4,500 men was engaged in 1955 in reconditioning the world's largest refinery at Abadan. By October, one third of its operating capacity had been restored, and crude runs were up to 141,000 barrels daily. It

was planned to have 80% of the overhaul job completed by the end of 1956. (See also IRAN.)

Iranian crude absorbed about 60% of the growth in oil demand in the Eastern Hemisphere in 1955. To avoid a market glut, it was necessary to restrict the rate of increase enjoyed by other major producing nations in recent years. Saudi Arabian output rose by only 11,500 barrels daily, compared with an increase of 106,000 barrels in 1954, and Iraq's production was up by 53,000 barrels daily, compared with 58,000 in 1954. Kuwait was the only Persian Gulf state to continue expanding its growth at the previous explosive rate. Total Middle East production increased by 496,200 barrels daily, or 17.8%. Eastward shipments of oil from Latin America were reduced further as the Eastern Hemisphere neared a balance between supply and demand. (See also ARABIA; IRAQ; SAUDI ARABIA; YEMEN.)

(Source: *World Petroleum*.)

Western Hemisphere.—In 1955, daily Western Hemisphere production increased by 773,300 barrels, to 9,829,000 barrels, or 64.9% of the world supply. The largest increases occurred in Venezuela, Canada, and the United States. As a result of greatly improved markets for heavy fuel oil in Europe and the United States and the excellent growth of Latin American markets, Venezuela (q.v.) was able to increase its output over 13%. Western Canadian fields increased their production nearly one third as two large new refineries in the State of Washington began importing oil through an international pipeline across the Canadian Rockies. United States fields produced a daily average of 6,752,000 barrels of crude in 1955, an increase of 406,000 barrels over 1954, but their percentage share of world production continued to decline, to 44.6%. (See also ALBERTA; BRITISH COLUMBIA; CANADA.)

An intensive search for oil has been undertaken in Cuba. Most of the favorable sedimentary area has been leased, and a \$35 million wildcatting program was under way in 1955. Guatemala also was being opened to exploration under a group of new concessions, but the overthrow of President Juan D. Perón in Argentina halted consideration by the Argentine Congress of two large proposed concessions to United States companies.

Refining.—Still capacity of the world's oil refineries has continued to expand at a rate approximating the growth in consumption. In mid-1955 capacity stood at 17,185,800 barrels daily, an increase of 1,100,300 barrels over the same date in 1954. United States capacity rose by 177,000 barrels during the period, to 8,420,000 barrels. Near the close of 1955, stills in the United States were being operated at 93% of capacity, compared with about 84% a year earlier.

SHELL OIL COMPANY

Oil drilling rigs in Lake Texoma, between Texas and Oklahoma, are built on islands dredged from the lake bottom.

Construction of facilities has centered on special process units for the production of higher-octane motor fuels and petrochemicals. Octane requirements of some new automobiles have tended to wipe out the 2-octane cushion maintained by the industry, and some companies have raised their standard to 98-octane. To provide fuel of this quality, some refiners are resorting to alkylation as a supplement to catalytic reforming of naphthas. As much as 15% alkylate may be required to produce a 98-octane premium fuel—a product almost equal to aviation standards of a few years before.

Research.—Atomic radiation is employed by both refining and producing branches of the oil industry in an intensive research program. While radioactive tracers have been used for several years by refiners to study the mechanism of cracking, the new approach lies in the use of radioactivity in the processing of hydrocarbons. The theory is that the radioactive materials can be employed not to supply the total energy required, but as reaction promoters. Cobalt-60 obtained from the Atomic Energy Commission is being used in experimental work by some researchers,

and several companies have purchased Van de Graaff particle accelerators. In the producing fields, gamma rays have been used in formation logging for many years. More recently, radioactive tracers have been employed to obtain additional information about subsurface conditions as a guide to optimum recovery methods. (See also BACTERIOLOGY.)

Two new drilling methods were unveiled by researchers in 1955. Both use hydraulic energy: in one case the drilling bit is driven by a turbine, and in the other metal spheres propelled by drilling fluid bombard the face of the rock at the base of the bore hole. Research has confirmed Russian reports that drilling can be radically accelerated by adding certain chemicals to the drilling fluid. Bit studies have shown the importance of removing rock chips promptly from the bore hole by proper jet design. (See also CHEMISTRY; MINING.)

Transportation.—A shortage of coal in Great Britain and the European continent increased intercontinental fuel oil shipments late in 1955, with an attendant rise in tanker charter rates. Large numbers of T-2 tankers have been made obsolete by new high-speed supertankers in the 30,000-ton class, and shipyards were busy in 1955 producing tankers of up to 45,000 dead-weight tons for long ocean hauls.

The construction of products pipelines was active during the year. A notable project was the laying of 842 miles of pipe from El Paso, Texas, to Los Angeles, Calif., by the Southern Pacific Company, marking the first entry of a railroad into the pipeline business. The line, which will deliver Texas products to California, is of importance in national defense. Other defense pipeline projects include a 625-mile line to Alaska and a series of products lines in various European countries designed, in case of war, to supply inland military establishments without resorting to surface transportation.

Natural Gas.—Consumption of natural gas in the United States increased 8.5% in 1955, to 9.3 trillion cubic feet. At the end of the year, 15.2 million homes were being heated by gas, an increase of 1.3 million during the year. Homes heated with distillate fuel oil increased by 700,000 in 1955, to 8,272,000.

The oil industry has been losing customers to gas at an increased rate, and the loss of domestic fuel oil consumers was about 75,000 in 1955, compared with 50,000 in 1954. Cooperative advertising campaigns have been undertaken in a number of communities to minimize gas competition. Meanwhile, gas pipelines are being extended to new areas. In the 12 months ended June 30, 1955, the Federal Power Commission (FPC) authorized 4,900 miles of new transmis-

sion lines to increase gas delivery capacity by 1.75 billion cubic feet. The new construction was to cost \$465 million.

In Canada natural gas expansion is about to get under way. A 30-inch line from western Canada to Ontario and Quebec seems assured for construction in 1957. In British Columbia work has begun on a line from the Peace River fields to the United States border, where 300 million cubic feet per day will be exported to the United States under FPC approval. Natural gas markets also are being expanded through the construction of new lines in Pakistan and Mexico. (See also CHEMISTRY; GAS; MINING; PUBLIC UTILITIES.)

J. C. CHATFIELD,
Editor, "World Petroleum."

PEURIFOY, John Emil, American diplomat: b. Walterboro, S.C., Aug. 9, 1907; d. near Hua Hin, Thailand, Aug. 12, 1955. A career diplomat in the U.S. Department of State, he gained international prominence for his role in the overthrow in 1954 of the Communist-led regime in Guatemala.

Peurifoy attended the U.S. Military Academy from 1926 to 1928 before resigning because of ill health. After working in Kansas City and New York, he went to Washington in 1934 to seek a position in the State Department. In 1938, following employment in the Treasury and Labor departments, he finally joined the State Department in a division that handled export licenses under the Neutrality Act. By 1942 he had been promoted several grades to that of senior divisional assistant. In the meantime he attended evening classes in business administration at American University (1935) and in international law at George Washington University (1939-40).

During World War II, Peurifoy served as State Department representative on a number of important committees of the Board of Economic Warfare (1942-43) and the War Production Board (1942-44). He was also executive officer of the State Department's Office of Public Information (1944-45), and special assistant in the Office of Public Affairs and acting deputy director of the Office of International Information and Cultural Affairs (1945-46). One of his most important assignments during this period was that of making arrangements for the United Nations Conference on International Organization held in San Francisco in 1945.

In March 1946, Peurifoy was named special assistant to the then undersecretary of state, Dean Acheson. In January 1947, after George C. Marshall had become secretary of state, he was appointed deputy assistant secretary of state for administration, and on March 17 took office as assistant secretary of state for administration. In that capacity he reorganized the administrative establishment of the department under what was known as the Peurifoy Plan. On May 26, 1949, he was named deputy undersecretary of state for administration.

Peurifoy was the State Department's trouble shooter in countries where Communist activity was widespread. From July 1950 to August 1953 he served as ambassador to Greece, helping to consolidate the loyalist victory over the Communists, and from October 1953 to September 1954 he was ambassador to Guatemala, where he was influential in bringing about the overthrow of the pro-Communist regime of Jacobo Arbenz Guzmán and in resolving disputes among its successors. On Sept. 15, 1954, he was appointed ambassador to Thailand, where he was killed with

his younger son, Daniel Byrd, in an automobile accident about 150 miles south of Bangkok.

PHILADELPHIA. Third most populous city in the United States, Philadelphia, Pa., had a population of 2,071,605 in 1950, and covers an area of 127.2 square miles.

Completing its first four years under a new home-rule charter in 1955, Philadelphia is governed by a mayor, a managing director appointed by and responsible to the mayor, and a City Council of 17 members. Budgetary estimates for 1956 totaled \$206,622,939, largest in the city's history. City tax rates for 1955 were: realty, \$1.70 per \$100 of assessed valuation; wage and profits, 1¼%; mercantile tax, 3 mills; personal property, 4 mills; and real estate transfers, 1%. The net long-term debt in 1955 was \$528,776,502. Public school enrollment (Oct. 31, 1955) was 227,375. The tentative school budget for 1956 was \$76,308,465. School taxes for 1955 were: realty, \$1.325 per \$100 of assessed valuation; personal property, 4 mills; gross receipts (general business), 1%.

In 1954, for the first time in more than a century, Philadelphia handled more import tons (approximately 30 million) than any other American port. Chief commodities imported were petroleum and iron ore.

In addition to output of metals and metal products and of petroleum products, major industries in Philadelphia in 1955 included: textiles, chemical products, paper and printing, and food products. While Philadelphia's more than 5,200 industrial establishments furnished employment to over 360,000 workers, approximately 7.5% of the city's labor force was unemployed, in contrast with the national average of 3.7%.

On Oct. 31, 1955, the city and the Philadelphia Transportation Company opened for formal use a tunnel under the Schuylkill River which had remained idle since its initial construction 22 years earlier. PTC trains now operate underground from Front Street (at the Delaware River) to 40th Street. Plans have already been made for the removal of 16 blocks of overhead railway structure between the Schuylkill River and 46th Street and for redevelopment of this area. Other developments in 1955 included the dedications of the new four-story, two-block-long plant of the *Evening and Sunday Bulletin* (June 1); of the \$10 million Gimbels-Cheltenham store, with parking facilities for 8,000 cars (August 29); and of a new \$6 million, 13-story Mall Building (November 10). Ground was broken on July 8 for a \$20 million, 18-story transportation building at Penn Center.

Politically the most important news from Philadelphia was the triumph of the Democratic Party in the municipal election of Nov. 8, 1955. Former District Attorney Richardson Dilworth was elected mayor over the Republican opposition of W. Thacher Longstreth, by a plurality of 132,000 votes. This exceeded the margin of 126,000 which Joseph S. Clark, Jr., attained in 1951 in becoming the city's first Democratic mayor in 67 years. The Democrats also elected the district attorney, sheriff, clerk of the courts, two of the three city commissioners (election board), 14 of 17 councilmen, and 4 of 7 magistrates. More than 700,000 voters, about 70% of those registered, participated in the election, which in the main was devoid of dramatic issues. The margin of Democratic victory, in a city where Republican registrants outnumber the Democrats by more than 3 to 2, was attributed in large measure to the excellent record of the Democratic administration under Mayor Joseph S. Clark, Jr. While fewer than 25% of the voters took the trouble to decide on the two loan proposals on the ballot, five out of every six who did vote favored the authorization of loans (endorsed by both parties) for \$42,470,000 to help finance civic improvements. (See also BRIDGES.)

J. CASS PHILLIPS,
Professor of Political Science, University of Pennsylvania.

PHILANTHROPY. American philanthropy, according to available indices, apparently reached new highs in 1954, exceeding \$5.5 billion in gifts and bequests. A study of publicly announced gifts and bequests in ten major cities, which provide a fair sampling of national philanthropy, indicated that in 1955 American givers had increased their 1954 generosity by at least 17%.

Government statistics on 1952 income tax returns show that of the 56,500,000 Americans filing returns for that year, only 11,900,000 claimed deductions for philanthropic contributions totaling \$3,116,483,000. It is estimated that the remaining 44,600,000 taxpayers made charitable gifts totaling from \$1 billion to \$1¼ billion.

Corporations reported contributions of \$343,039,000 for 1952, an all-time high; and it was expected that gifts from this source in 1955 would total more than \$650,000,000. An increasing number of large corporations are announcing expanded aid to institutions of higher education, while they continue to support generously their local civic, health, and welfare activities.

Churches and other religious organizations received about 55% of the \$5.5 billion total, or \$3,025,000,000. In 1955, gifts to religious organizations were responsible for \$700,000,000 in new religious building construction—an all-time high.

American social welfare agencies receive the next greatest share, about 16.5%; hospitals and health, about 10.2%; higher education, 7.5%; and other educational institutions, 2.8%. The remaining 8% is distributed among foundations, foreign relief organizations, and other causes.

JOHN PRICE JONES,
Chairman of the Board, John Price Jones Company, Inc.

PHILATELY. For United States stamp collectors the outstanding event in 1955 was the Post Office Department's several departures from precedent in issuing new stamps. On several occasions Postmaster General Arthur E. Summerfield reiterated his conviction that philately plays an important part in giving the world information about America's history and heritage. This point

of view he translated into action by selecting pertinent themes as subjects of commemorative postal adhesives—notably President Eisenhower's "Atoms for Peace" program, the opening of the Great Lakes to navigation, and the establishment of land grant colleges.

The release of the "atoms for peace" stamp on July 28, 1955, was marked by a special ceremony on the White House grounds, at which President Eisenhower spoke. A 3-cent blue, the stamp shows the two hemispheres bound together by a symbol of atomic power. Framing the design is a quotation from an address before the United Nations by the president in 1953, which reads: "... to find the way by which the ... inventiveness of man shall ... be ... consecrated to his life."

In 1955 Postmaster General Summerfield began carrying out a recommendation, made to the president in 1953 by the Commission of Fine Arts, that the Post Office consider measures to increase "the prestige and authority of the art factor in the design of stamps." In preparing the design of the Fort Ticonderoga bicentennial stamp issued on September 18, the Post Office Department, instead of having a government artist make a design, followed a new course by using one of several designs submitted by Enrico Arno, a New York artist.

During 1955 the Post Office Department issued several commemorative stamps. These, with places of first-day sale, were as follows:

- Jan. 15: Pennsylvania Academy of Fine Arts sesquicentennial, 3-cent rose-brown (Philadelphia).
- Feb. 12: The founding of the land grant colleges centennial, 3-cent green (East Lansing, Mich.).
- Feb. 23: International Rotary semicentennial, 8-cent deep blue (Chicago).
- May 21: Armed Forces Reserve, 3-cent purple (Washington, D.C.).
- June 21: Old Man of the Mountains sesquicentennial, 3-cent green (Franconia, N.H.).
- June 28: Great Lakes navigation centennial, 3-cent blue (Sault Ste. Marie, Mich.).
- Sept. 18: Fort Ticonderoga bicentennial, 3-cent sepia (Fort Ticonderoga, N.Y.).
- Dec. 20: Andrew W. Mellon birth centennial, 3-cent maroon (Washington, D.C.).

In addition, six of what Mr. Summerfield called "warm portrait" stamps of the new definitive series inaugurated in 1954 appeared:

- Aug. 25: Susan B. Anthony, 50-cent purple (Louisville, Ky.).
- Sept. 21: Robert E. Lee, 30-cent gray (Norfolk, Va.).
- Sept. 24: John Marshall, 40-cent brown (Richmond, Va.).
- Oct. 7: Patrick Henry, \$1 purple (Joplin, Mo.).
- Oct. 20: Benjamin Franklin, ½-cent orange (Washington, D.C.).
- Nov. 18: Theodore Roosevelt, 6-cent carmine (New York, N.Y.).

For the first-day sale of the Theodore Roosevelt 6-cent stamp, Mr. Summerfield designated Nov. 18, 1955, the opening day of the three-day National Postage Stamp Show in New York, sponsored by the American Stamp Dealers' Association. At this exhibition, the government displayed more than \$1 million worth of stamps and autographed die proofs of stamps from the federal archives in Washington.

Besides the commemorative and regular issues, Mr. Summerfield released at Washington on June 6 a 15-cent red certified mail stamp, which was wholly new to philately.

The government's Philatelic Agency sold to collectors and dealers during the fiscal year ending June 30, 1955, nearly \$2 million worth of mint stamps. This amount raised to some \$43,700,000 the total income from such sales since the bureau was established late in 1921. The

U.S. POST OFFICE DEPARTMENT

Postmaster General Summerfield (in light suit) presents President Eisenhower with "Atoms for Peace" postage stamps in the presence of Secretary of State Dulles and Atomic Energy Commission Chairman Strauss (both at left).

Post Office Department has estimated that the agency and all post offices sell about \$25 million worth of unused stamps annually to philatelists.

Throughout the world more than 150 governments issued approximately 27,000 varieties of stamps in 1955. Many of these adhesives, particularly in the Iron Curtain countries, were printed not primarily to meet postage needs but for export to English-speaking countries in order to raise money to help meet governmental expenses.

KENT B. STILES,

Stamp Editor, "The New York Times."

PHILIPPINES, Republic of the. The Republic of the Philippines comprises about 7,100 islands lying just off southeastern Asia, north of the Republic of Indonesia. Total area of the republic is 115,707 square miles (land area, 114,830). Four of the largest islands—Luzon (40,420 square miles), Mindanao (36,537), Samar (5,050), and Palawan (4,550)—account for over 70% of the total area.

Population.—The estimated official population of the Philippines in mid-1954 was 21,440,000, an increase of 48% in 20 years. Manila, the capital, had a population of 1,200,000 in 1953. The most heavily populated provinces (1948 census) are Cebu (1,123,107), Negros Occidental (1,038,758), Leyte (1,006,891), Pangasinan (920,491), and Iloilo (816, 382). Of foreign residents in the country, there were (1948 census) 150,585 Chinese; 6,147 Americans; 2,820 Spaniards; 1,661 Dutch; 1,217 East Indians; and 857 British.

Government.—The chief executive of the Republic of the Philippines, established July 4, 1946, is Ramon Magsaysay, who was inaugurated as president on Dec. 30, 1953, for a four-year term. Assisting him is a cabinet composed of the secretaries of departments and the vice president, Carlos P. Garcia, who holds concurrently the secretaryship of foreign affairs. The Congress of the Philippines consists of a Senate of 24 members elected for overlapping 6-year terms, and a 102-member House of Representatives chosen for a 4-year term.

Education.—In the school year 1953-54 there were 25,197 government schools with an enrollment of 3,580,741 pupils. Private schools numbered 1,798, with an enrollment of 697,235. The state-supported University of the Philippines enrolled 12,028 students in the first semester of the 1953-54 school year. Educational expenditures for 1952-53 were 150,733,890 pesos (U.S.\$1 = 2.004 pesos).

Language. English is the medium of instruction, and Tagalog, the national language, is taught in all the schools. The National Board of Education, with the secretary of education as chairman, formulates general educational objectives and policies, and coordinates the functions of all educational institutions in the country.

Religion.—The constitution guarantees religious freedom and permits religious instruction in the schools. About 93% of the population is Christian, 83% being Roman Catholic, and the remaining 10% being members of the Philippine Independent Church, which denies Roman

papal authority. Other religious groups include 791,817 Moslems, 444,491 Protestants, and 42,751 Buddhists. Pagan groups number 353,842 adherents.

Finance.—The 1954 revenue of the Philippine government from all sources was 670.89 million pesos. Total expenditures amounted to 787.45 million pesos. The public debt as of Dec. 31, 1954, stood at 1,168.96 million pesos, of which 848 million was incurred by the national government, 253 million by government corporations, and 67 million by provincial, city, and municipal governments. The 1954 public debt was 65.31 million pesos over that of 1953, owing to the expansion of the government's economic development activities.

Production.—In 1954 agricultural production, engaging about 70% of the gainfully employed (including agricultural crops, livestock, forestry, and fishing) was 9.3% above that of 1953. The production of rice (3,226 metric tons), root crops (1,354), and corn (957), along with beans and other vegetables and fruits and nuts exceeded normal consumption requirements.

The 1954 value of industrial production was 748,824,860 pesos, 12.3% over that of 1953. The government policy of granting tax exemptions for new needed industries furnished a stimulus to the establishment of new businesses by local and foreign industries. The total number of new manufacturing establishments registered during the 1950-54 period was 158.5% above that of the 1945-49 level.

Base metal production in 1954 was 4.5% higher than in 1953. Increased production was marked particularly in iron (1,217,868 metric tons) and copper (12,720 metric tons). Gold production in 1954 (276,500 fine ounces) decreased, however, by 16% below the 1953 level (327,952 fine ounces), due primarily to the high costs of operation.

The gross national product rose from 7,925 million pesos in 1952 to 8,454 million in 1954, and the index of the peso's purchasing power increased from 0.2946 in 1952 to 0.3196 in 1954 (1941 = 1.00).

Foreign Trade.—Total trade in 1954, based on f.o.b. values, amounted to 1,775.6 million pesos, 8.3% higher than in 1953. The value of exports was 793.212 million pesos; imports, 965.284 million.

LEADING EXPORTS AND IMPORTS, 1954

Export items	Value (1,000 pesos)	Import items	Value (1,000 pesos)
Cocoon products . . .	328,220	Textiles	171,702
Sugar	220,252	Mineral fuels	108,286
Lumber	71,180	Machinery	88,524
Minerals	70,911	Base metals	60,438
Fibers	58,794	Cereals	51,712
Cotton fabrics . . .	12,326	Transport equipment	50,701
Fruits	9,916	Dairy products . . .	47,970
Tobacco products . .	8,617	Metal manufactures .	35,839

In 1953 the value of exports to the United States was \$260,331,000 (68% of total exports), and to Japan, \$48,000,000 (12%). The value of imports from the United States was \$324,342,000 (75% of total imports), and from Japan, \$20,400,000 (5%).

Transportation and Communications.—As of June 30, 1954, the republic had 18,504 miles of highways, of which 9,889.6 miles were first-class roads and 5,491 miles, second-class roads. The number of motor vehicles registered in 1954 was 110,000. Total railroad mileage in 1954 was 711.5, including the government-operated Manila Railroad Company, which carried a total of 7,259,682 passengers, 7.7% more than in 1953. The Philippine Air Lines, Inc., maintains domestic and international service.

Of the 41,807 telephones in the Philippines

in 1954, 29,827 were in Manila. Post offices in that year numbered 1,206, and telegraph offices, 464.

Principal Events, 1955.—In the second year of President Ramón Magsaysay's administration, the government continued to give much of its attention to problems affecting the national economy. An important step toward the solution of economic problems was taken with the reorganization of the National Economic Council so that it might serve as an effective agency to plan and put into effect the government's economic development program. Alfredo Montelibano, formerly economic coordinator, was made chairman of the council.

In a special session of Congress, convened July 7, 1955, approval was given to President Magsaysay's request for a law authorizing the purchase or expropriation of large estates to be resold on easy terms to their occupants and to landless workers. The reform was designed to accelerate the administration's rural development program.

The election campaign in 1955 saw the defection from their respective parties of two outstanding political figures, both incumbents. Senator Carlo M. Recto, an outspoken critic of the administration's pro-American foreign policies, having been excluded from the Nacionalista lineup of senatorial candidates, joined the Liberals as a "guest candidate." Senator Quintin Paredes, who in the Liberal Party convention had been nominated by a large majority, resigned from the Liberal Party in protest against Recto's admission, and subsequently accepted the Nacionalista invitation to join its senatorial ticket. The November 9 election resulted in a decisive Nacionalista victory, with its candidates winning 8 of the 9 senatorial seats and a majority of the gubernatorial contests.

In the field of foreign relations, the outstanding event of the year was the signing at Washington on Sept. 6, 1955, of the Laurel-Langley agreement concluded in December 1954. The agreement revises the commercial arrangements established by the Bell Trade Act in 1946, with a view to helping the Philippines strengthen its economy and enabling it "to contribute more effectively to the peace and prosperity of the free world."

The pending reparations issue with Japan remained to be settled. A new formula for the settlement of the issue was worked out by a special Philippine-Japanese mission and accepted by President Magsaysay on June 14, 1955. It fixed the amount of the reparations at \$800 million, of which \$500 million was to be in capital goods, \$250 million in loans, and \$50 million in cash and services. Formal acceptance by the Japanese government of the new formula was being awaited in the Philippines.

Other important developments in the foreign affairs of the republic in 1955 were Philippine participation in the Asian-African Conference (q.v.) held at Bandung, Indonesia, April 18-24; recognition of the government of South Vietnam in July; and the conference, held in Camp Murphy, Quezon City, P.I., September 12-17, of representatives of the signatory nations of the Southeast Asia Collective Defense Treaty of Sept. 8, 1954, to formulate plans against Communist subversion and infiltration in the treaty area.

Several serious disasters visited the southern Philippines during 1955. On January 10, 63 persons were killed in a storm in the area. On April

1, 16 persons perished in an earthquake near Lake Lanao on Mindanao Island; and the next day, earthquakes in the same area brought the toll to about 442.

PHILOLOGY. See LINGUISTICS.

PHILOSOPHY. In a year not especially notable for original American works in philosophy, it may be that the two most important developments were in publishing practices rather than in books printed. The first of these was the making available in inexpensive paperback editions of many volumes long out of print, by such authors as William James, Josiah Royce, and George Santayana. In this field, Dover Publications, Inc., Noonday Press, and the new firm of George Braziller, Inc., were particularly active. The second development was the greatly increased use, because of the price differential, of foreign printing facilities in the Netherlands and Belgium for the publication of both philosophical books and periodicals.

The year 1955 was marked by three notable anthologies of departed "greats." Alfred N. Whitehead's writings were presented in selections by F. S. C. Northrop and Mason Gross; John Dewey's, by the late Irwin Edman; and Edman's, by Charles Frankel, under the title *The Uses of Philosophy*. In addition, Daniel Cory edited *The Letters of George Santayana*. Studies were made of two recent British philosophers: of Samuel Alexander's conception of the deity, by Alfred P. Stiernotte, published in late 1954, and of F. C. S. Schiller's pragmatism, by Reuben Abel. Published late in 1954 were *Royce: On the Human Self*, by J. Harry Cotton, and Paul E. Pfuertze's *The Social Self*, the latter comparing the theories of George H. Mead and Martin Buber.

By far the most impressive biography of a philosopher to appear was Ernest C. Mossner's full-dress *Life of David Hume*. Parallels between Leibniz and modern analysts were explored by Robert M. Yost in *Leibniz and Philosophical Analysis* (1954). Morton White of Harvard undertook to sum up this century as *The Age of Analysis*, by means of selections and comments in a widely circulated Mentor book.

Among nonhistorical works, C. I. Lewis presented his Woodbridge Lectures in *The Ground and Nature of the Right*; Ernest Nagel collected 16 of his articles in *Sovereign Reason* (1954); and Nelson Goodman assembled several of his lectures and articles as *Fact, Fiction, and Forecast*. In ethics, the emotive theory was restated by Paul Edwards in *The Logic of Moral Discourse*; Abraham Edel wrote on *Ethical Judgment: The Use of Science in Ethics*; and Maurice Mandelbaum produced *The Phenomenology of Moral Experience*.

In social and political philosophy, much energy was expended in attempts to state "our side" in the world contest with communism, as in Marten ten Hoor's *Freedom Limited*, John H. Hallowell's *The Moral Foundation of Democracy*; and, in popular language, by Russell W. Davenport's *The Dignity of Man*. An anthology of *The Social Philosophy of Jacques Maritain* was edited by Joseph W. Evans and Leo R. Ward; and Herbert A. Deane made a critical examination of *The Political Ideas of Harold J. Laski*. American political philosophy was illuminated by a pair of works by political scientists:

Clinton Rossiter's *Conservatism in America* and Louis Hartz's *The Liberal Tradition in America*. Special studies of American thinkers continued to multiply: Harvey C. Townsend wrote on the philosophy of Jonathan Edwards from the latter's private notebooks; Alvan S. Ryan edited *The Brownson Reader* from the works of Orestes A. Brownson; and Charles A. Barker and David P. Edgell produced works on Henry George and W. E. Channing, respectively.

In aesthetics, Stephen C. Pepper published *The Work of Art*. Willard Arnett wrote *Santayana and the Sense of Beauty*, and Philip Wheelwright published *The Burning Fountain: A Study in the Language of Symbolism* (1954). There were the usual number of textbooks on logic, but relatively few advanced contributions. This situation was also true of books dealing with the philosophy of religion. There was a notable falling off of interest in Existentialism, although John Wild sought to expand that philosophy "positively" in his *The Challenge of Existentialism*.

John H. Melzer compiled the answers of about 300 teachers of philosophy to a questionnaire in his *Philosophy in the Classroom*; and Albert G. A. Balz saved for historical purposes the academic records and bibliographies of about 150 *Southern Teachers of Philosophy*. A new periodical named *Ideas* was launched as a quarterly by Yale University graduate students to serve as a medium for articles by undergraduates and graduates.

The palm for stylistic excellence should go to Brand Blanshard of Yale for one of the shortest books of the year: *On Philosophical Style*. Not only is it one of the first books on the subject by a noted thinker, but it also exemplifies the very qualities of lucidity, rhythm, and readableness which it recommends to others.

HAROLD A. LARRABEE,

Ichabod Spencer Professor of Philosophy, Union College; and Director of Editorial Center, U.S.A. of "Bibliography of Philosophy."

PHOSPHATES. See Index entry.

PHOSPHORUS. See Index entry.

PHOTOGRAPHY. It may be said that "there is nothing new under the sun" and that the photographic procedures used today are fundamentally the same as those used during the latter part of the 19th century. Nevertheless, the many new and exciting developments of recent years continue to multiply in equipment design and versatility, in the innumerable and varied applications of the photographic process.

Camera operation is becoming more simplified and automatic, enlargers are more versatile, projectors throw more light on the screen, film speeds continue to climb with little or no increase in graininess, the photographic image is sharper, and processing is more rapid with an ever-growing interest and participation by amateurs, professionals, and commercial establishments in the processing of color film and print materials.

A perusal of the statistics on domestic and foreign sales of photographic materials and of the reports on such trade shows as the Atlantic City Trade Show and the Biennale Photo Ciné held in Paris confirms the availability of new equipment, materials, and processes. In the United States alone the total sales of photographic products has increased at least four times since 1940, and it has been estimated that retail photo equip-

ment sales alone in 1954 exceeded \$1 billion. During 1955 imports of cameras, lenses, film, and paper increased markedly; but at the same time exports exceeded the imports and advanced considerably over the exports for 1954, especially of still cameras, slide projectors, lenses, and photocopy equipment. It is also interesting in this connection that the Bureau of Labor Statistics stated that there are 172 plants in the United States manufacturing photographic equipment and supplies, and employing more than 38,000 persons classified as production workers. Some price reductions have been announced in some lines.

No progress report for the year 1955 would be complete without mention of the international significance of the tremendous "Family of Man" exhibit at the Museum of Modern Art in New York, organized by Edward Steichen. The more than 400 prints submitted by 280 photographers from 68 countries were selected from 10,000 pictures sent by more than 900 photographers. The show was planned as an exhibition of photography portraying the universal elements and emotions and the oneness of human beings throughout the world.

Another historic occasion was The First Festival of Film Artists held at the Eastman Theater on November 19 in Rochester, N.Y. Mr. Jesse Lasky presented "George" awards to the 20 outstanding actors, actresses, directors, and cameramen who made motion picture history from 1915 to 1925.

Still Photography.—Although improved and new models of box- and roll-film cameras were introduced in considerable numbers in 1955, the miniature or 35-mm. camera continued to enjoy the greatest boom in its history. New cameras and lenses set mechanical and optical standards exceeding the highest previously considered possible, but other technological advances helped to provide image quality approaching that of larger negatives, and contributed to the rapidly growing use and versatility of miniature cameras. New high-speed emulsions, super-fine-grain films, high-energy fine-grain developers, and new color products were significant.

In 1954 the single-lens reflex camera became very popular with features such as the five-sided roof prism for viewing an erect full-frame-size image through the taking lens; the split-image rangefinder; preset and automatic diaphragms; and exchangeable lenses. The ability to utilize any focal length lens for composition, focusing, and picture taking without additional accessories, while avoiding parallax, in an almost automatic operation was intriguing. The trend has continued in 1955 as evidenced by the improved models, even with the addition of some of these miniature camera features to larger cameras.

There was evidence that Germany was favoring the more extensive use of light-value-scale shutters like those introduced on the Retina and Rolleiflex cameras in 1954. The shutter speeds are arranged in arithmetical order, each twice as great as the preceding one, rather than in the nonlinear scale commonly used. The light-value scale takes into account the film speed and the brightness of illumination.

Carl Zeiss Inc. built in an ASA-calibrated photoelectric exposure meter on the Contaflex II 35-mm. camera with the scales in plain view from the normal operating position. Two accessories for this camera included a new right-angle viewfinder to permit use of the camera at right angles to the normal position, and a six-element

"Teleskop 1.7x" optical attachment to obtain 70 per cent larger negative images. This is one method to provide a variety of image magnifications with a Compur-type shutter. The Voigtlander Vitessa Automatic makes possible 36 exposures in less than a minute, while the Corbina single-lens reflex camera has a built-in optical viewfinder allowing study of the subject to the instant of exposure. By means of an interchangeable 60-foot film cassette, 480 exposures can be made without reloading.

The redesigned Japanese Nikon S-2 35-mm. camera reached a new high in precision to make it faster and easier to operate because of the first available viewfinder to give a 1:1 finder image, a rangefinder to form a more contrasty image, and 1/1,000 second exposure. The Robot Royal 400 Shot camera was unique in the miniature field because it was the first 35-mm. camera since 1940 equipped with an oversize film magazine to allow 400 1-by-1-inch negatives.

The Graphic 35 camera introduced in the United States was the first camera with push-button focusing, a system called "Spectramatic" to do away with guide numbers and arithmetic in the exposure of Kodachrome, Kodachrome Type A, and AnscoColor films. The camera is equipped with a distance dial marked in different colors for different distances and an aperture dial marked in colors for each of the products. By means of push buttons the camera is focused and the aperture scale arrow placed on the color corresponding to the focus-distance scale color.

Of the more than 40 available models of twin-lens reflex cameras, the Japanese Tele-Koniflex camera was the first to be equipped with interchangeable lenses permitting changes in focal length from 85-mm. to 135-mm. by means of replaceable front elements—a principle similar to that used on the Retina IIIc 35-mm. camera.

Generally, the improvements in camera and lens design have provided the ability to make exposures at higher shutter speeds and smaller lens apertures, resulting in new action-stopping power, optical quality, and depth of field. However, the combination of improved camera design and the new higher-speed emulsions, with or without special processing, has extended the so-called "available light" technique and also provided quality improvement in the work of experienced photographers. The introduction in 1954 of Ilford HPS fast film, DuPont Superior press film, and Kodak's Royal Pan and Tri-X films provided a new class of materials with respect to speed and exposure latitude. In 1955 Kodak Super-XX film was discontinued and replaced by an improved Plus-X film rated at an ASA daylight exposure index of 80 and tungsten index of 64—a medium-speed, high-quality panchromatic type. Ansco All-Weather Pan film, having an ASA daylight exposure index of 64 and tungsten index of 50, was introduced as the first pansensitized amateur roll film in this speed range. The Polaroid Corporation introduced three new panchromatic films with ASA daylight exposure indexes of 200 and 400, including Professional Pan film on an acetate support. It is expected that these films will expand the frontiers of 60-second photography to a considerable degree.

By taking advantage of the improved exposure and development latitude of such films as the Kodak Royal Pan and Tri-X, and special developers, shorter exposures than recommended can be used and good image quality obtained. The new Ilford Microphen developer gives an

excellent combination of fine grain and high speed with a two-times increase in emulsion speed claimed, compared with Kodak D-76 developer, and little or no change in graininess and sensitometric characteristics (*Popular Photography*, 37:100-108, No. 1, July 1955).

The 25th anniversary of the flashlamp was recognized in 1955. The use of the General Electric M-2 tiny flashbulbs with a pinless miniature base increased markedly during the past year as indicated by the announcement in April that over 10 million had been placed on the market in only eight months. Several new lamps in this general class were introduced in Germany and England. The Philips PF-1 flashbulb and the Osram XM-1 flashbulb have no metal base and are used with a special adapter permanently placed in the conventional flashbulb holder. The light output is 6,500 lumen-seconds, and the contacts are made directly through the wires leading into the bulb. The Mazda No. 1 and the G.E.C. No. 1 lamps were announced in England by the British Thomson-Houston Company and the General Electric Company, Ltd. respectively.

In the electronic flash field the trend toward lightweight dry battery units continued. However, a serious problem is the degradation of the battery when the switch is left on during the standby time between shots. The General Electric Company described a new 75-watt-second flash tube powered by an Eveready No. 491 battery which is claimed to overcome this deficiency in dry-battery units. The Dormitzer Synctron 208-B speedlight, which operates on either alternating current or with rechargeable storage batteries, contains a hermetically sealed power unit claimed to last indefinitely without maintenance. The speedlight is said to provide low cost per flash, consistent light output, and unvarying recharge time without the maintenance problems of wet-cell units.

There was also a trend toward the design of precision enlargers as revealed at the Atlantic City Trade Show. Of particular interest was the distortion control device shown by Simmon Bros. The Durst line of enlargers introduced by the Italian industry incorporated many ingenious features, conversion facilities, and accessories, particularly the Micromat-color enlarger for 35-mm. negatives.

Amateur Stereo Photography.—A significant advance in this field was the publication of the *Stereo Realist Manual* by Morgan and Lester with printed color stereo pictures and a plastic stereo viewer developed by the authors and the American Optical Company. The manufacturers of the Linex stereo camera and viewer, which uses 16-mm. double-frame pictures, announced subsequently the availability of full color prints from any Linex stereo slides. A box-type stereo camera was introduced by Sears, Roebuck and Co. and consists of two box cameras on a mounting bar with lenses spaced to human interocular distance. Graflex Inc. made its entry in the amateur stereo field with the Stereo Graphic camera, while the new Realist-45 stereo camera was the first stereo product of the Revere Company to sell at less than \$100. The Miniature Camera Stereo is a rotational beam-splitting attachment for miniature cameras with controls for convergence, focal length, and lens aperture. A two-piece subattachment with variable and interaxial spacing converts the beam splitter into a viewer (*Brit. J. Phot.*, 102:103-6, March 4, 1955).

Amateur Motion Picture Photography.—Greater

U.S. NAVY

This composite photograph, made at a height of 100 miles from a rocket fired at White Sands Proving Ground, N. Mex., on Oct. 5, 1955, shows about two fifths of the land area of the continental United States, or approximately 1.25 million square miles. Included is what is believed to be the first complete photograph of a hurricane (upper left).

brilliance has been needed in 16-mm. projection to permit the use of larger screen sizes required today, but faster lenses and lamps of greater capacity have only provided a partial solution to the problem. The new automatic-shifting Super-40 shutter featured in the new Kodascope Pageant projectors has provided the first all-purpose 16-mm. projectors and represents one of the greatest advances ever achieved in 16-mm. sound projection. The new shutter presents three blades and flicker-free 48 light interruptions per second at 16 frames silent speed, but only two blades at sound speed because of the additional centrifugal force; and it transmits, at sound speed, over 40 per cent additional illumination, maintaining the 48 flicker-free ratio.

The Keystone Camera Company introduced the K-25 Capri 8-mm. roll-film camera with f/2.5 lens and three new 8-mm. projectors featuring "magna-scope" images that practically fill a 30-by 40-inch screen at 12 feet. The Cinemax-8 camera with f/1.9 Nikkor lens was the first 8-mm. cine camera produced in Japan. Besides the new pocket-size 8-mm. Cine-Kodak Medalion camera, an 8-mm. three-lens turret version of the Brownie movie camera was introduced.

Possibly the Vistascope lens may have a great effect on the future trends in amateur motion pictures because it provides an anamorphic lens for use on 8-, 16-, or 35-mm. cameras and projectors. The final screen image has the exact proportions of the CinemaScope projection. The early history of amateur motion picture film from 1898 to the present was ably reviewed (*Jour. Soc. Mot. Pict. and Tel. Eng.*, 64:105-116, March 1955).

Kodak Tri-X emulsion, introduced in 1954 for sheet and roll film, was made available on 16-mm. reversal film and is known as Cine-Kodak Tri-X C-P reversal film. The ASA exposure indexes are daylight 200 and tungsten 160, which are the same as given for the earlier Tri-X. A neutral density filter, the Kodak ND-3 filter, was announced as a means to make it possible to take pictures in bright sunlight on Tri-X film with the

lens and shutter adjustments on most fixed-shutter-speed, home movie cameras.

Professional Motion Picture Photography.—An interesting trend has been evident in Hollywood during the past two years. Regardless of the particular processes involved, there has been emphasis on quality rather than quantity in motion pictures, which could well be the reason for a definite upturn in theater business across the country. At the end of 1954 it was estimated that the total box office increased 18.2 per cent over the previous year. (See also *MOTION PICTURES*.)

The experimentation with wide-screen processes appears to have subsided somewhat with the major production interest being in the CinemaScope and VistaVision systems. The Todd-AO process used in the production of *Oklahoma!* is unique in wide-screen processes because it utilizes 70-mm. film for both photography and projection and is said to be a superior picture process from the optical viewpoint, providing crisp definition in color and ideal picture proportions (*Projectionist*, 30:11-13, No. 2, February 1955). The technical success of the Todd-AO system has rekindled interest in other studios in the use of wider and larger area negatives.

Cinerama has continued to retain public interest in those areas where it is being shown, despite objections to the technical aspects of the process. A new system called "Cine-Miracle" was demonstrated (*Motion Picture Herald*, 200:13, 16, July 2, 1955) which achieves the essential vignetting of the panels in the photography, rather than exclusively in the projection stage. The system provides a 145-degree picture projected onto a curved screen 23 feet high by 63 feet wide and 53 feet from edge to edge.

Television.—Up to 65 per cent of television presentation "air time" employs motion pictures, and this percentage is expected to increase materially in the next few years. In fact the production of films for television has already grown to such proportions that much new studio space and more efficient production methods are required. Republic Pictures Corporation has con-

sidered making only films for television (*Business Week*, April 9, 1955, p. 34).

Television engineers and photographic film manufacturers have been working closely together with the object of improving definition and overall picture quality from films on TV. The subject lighting contrast should be controlled at 2:1 in order to limit the luminescence range on the motion picture film for good reproduction by color television (*Amer. Cinemat.*, 36:378, July 1955).

Motion pictures taken from the face of a picture tube in the TV studio are not adequate for rebroadcasting by small local stations. Consequently the television networks have been trying to design a practical unit for televising a live show as it is being put on, and for recording the same show on movie film. The new video-film cameras introduced by McCadden Products and Allen B. DuMont Laboratories use a single lens to feed the picture to both cameras. Both images are identical in field, which has actually made possible an electronic viewfinder, eliminating parallax (*Amer. Cinemat.*, 36:140-141, March 1955). In a third camera system made by Camera Vision Productions, Inc., a motion picture camera is joined with and calibrated to a TV camera and supplied with a system of parallel controls that enable the two cameras to move, focus, and "see" almost as one (*ibid.*, 36:340-1, 364, June 1955).

The new Eastman 16-mm. Continuous Projector, Model 300, is designed to improve the quality of color television programs by providing a continuous, uniformly illuminated image. A flying spot television tube is used as the light source, and a 3-inch f/1.6 objective lens employed.

A new system for kinescope recording of color television programs was demonstrated by the Eastman Kodak Company. This involves recording the image on the color receiver on a special black-and-white lenticular film through suitable light filters or other optical equipment. The images on the black-and-white film effectively control the color signals in the color television transmitter during retelecasting. The special film has a great number of tiny cylindrical lenticles embossed in the film base and can be processed in about one hour ready for retelecasting.

Color Photography.—Three major events occurred in color photography during 1955: the introduction of higher-speed color films by Ansco and Kodak; the introduction of new color print papers; and the availability of all Kodak amateur color products without a processing charge included in the sale price. This elimination of processing charges means that the processing of color products can be done either by commercial service laboratories or by the Eastman Kodak Company, which will continue to process Kodachrome film. On the other hand, Pathé-Color, Inc., a new division of Pathé Laboratories, Inc., in New York City, has announced that a plant is being established for processing 35-mm. Kodachrome film and other color products.

Coincident with the above change, new Kodachrome film, Type F, in 35-mm. and 828 sizes, was announced as color balanced for clear, wire-filled flashlamps without the use of a filter to replace the Type A film. This change in color balance was made to simplify amateur color flash photography with clear flashlamps such as the No. 5 and 25 (or Class M) which are now the most popular sources of artificial light.

Both new daylight and Type F Kodak Ektachrome films were introduced in E135, E828, 160, and 620 roll-film sizes. The new films have improved definition and are rated at approximately three times the speed of Kodachrome film. The ASA daylight and tungsten exposure indexes are 32 and 16, respectively, for the two films, with the Type F being balanced for use with clear flashbulbs. However, the latter can be used with photographic floodlamps at an ASA exposure index of 16 with a Kodak Wratten filter, No. 82A.

A new and faster color film called Anscochrome, in daylight type only, with an ASA exposure index of 32, was introduced by Ansco. This product is said to differ from AnscoColor film in speed, development latitude, color fidelity, and resolving power, and to represent a major departure from conventional methods of producing reversal color film emulsions. Reciprocity failure was claimed to be less serious than with AnscoColor film, with little change in film speed or color balance through the range of exposures encountered in practice (*Modern Photography*, 19:71, No. 7, July 1955).

New color print papers were shown by Kodak at the Chicago convention of the Photographers' Association of America, including Kodak Color Print Material, Type C, for prints from Ektacolor and Kodacolor negatives, and Kodak Color Print Material, Type R, for prints from Ektachrome and Kodachrome transparencies. The introduction of these color print materials represents a major advance in color photography because they are the first color print emulsions coated on a paper support that can be readily processed by the user.

The Photographic Process.—Significant contributions have been made in the scientific literature relative to the theory of the photographic process, particularly in regard to latent image formation and the mechanism of development. This phase of scientific research in photography has occupied the attention of scientists throughout the world and good progress has been accomplished. Similarly very extensive investigations are being conducted in the study of the structure of the developed photographic image, particularly with respect to the effects of the optics used in exposure and the processing techniques employed.

Some attention has been given during 1955 to photographic processing in regard to equipment for stabilization processing and the efficiency of washing motion picture film. The Oscar Fisher Co., Inc. introduced a new "Process-All" processor claimed to be capable of processing paper or film up to 12 inches in width at speeds up to 15 feet per minute without plumbing or special installation. DuPont also announced a stabilization procedure for processing oscillograph records on its Lino-Writ paper. This method of processing involves two essential steps: development, and then conversion of the unexposed silver halides to a relatively stable colorless or white compound.

As a result of investigating water flow rates and methods of hypo removal, it has been stated that the maximum efficiency of washing motion picture film by immersion can be obtained by using a long, narrow tube as a special type of cascade system. Flow rates with a minimum waste of water can be calculated (*Jour. Soc. Mot. Pict. and Tel. Eng.*, 64:248-53, May 1955).

Documentary and Industrial Photography.—The applications of the photographic process in business, industry, and science are multiplying so rapidly that only a few can be cited here.

The recording of printed, written, or drawn information on film is part of three significant systems, all of which differ from conventional microfilming, at least with regard to the method of use of the film record. The Lawyers Co-operative Publishing Company in Rochester, N.Y., using a process developed by Microlex Corporation, condenses 400 lawbook pages on a single card smaller than an ordinary business letterhead. Each microprinted page is enlarged in a desktop viewer to larger than original size. With this process, for example, all U.S. Supreme Court decisions since 1790, which are in 341 printed volumes, can be stored in four small book-size containers.

The Kodak Minicard System combines the storage capabilities of microfilming and the mechanical handling facility of punched cards. Documents up to $8\frac{1}{2}$ by 14 inches are copied at 60X reduction onto special 16-mm. film, which is cut into Minicards after processing. Each Minicard is 16 by 32 mm. in size and can take up to 12 pages of graphic information along with digital data. The Minicards have a perforation at each end to permit loading onto sticks that hold 2,000 cards each. These sticks are placed in sorting equipment, and the Minicards are sorted according to the code pattern selected by the operator. The system is essentially a low-contrast copying procedure suitable for either line-copy or continuous-tone work.

The announcement of the new Kodak Listomatic camera, Model 1, provides a high degree of automation to the mechanical preparation of type listings for directories and similar material. The unit will rapidly photograph one, two, or three lines of type from IBM or similar punched cards at high speeds and in column form. The resulting film negative can be quickly and easily reproduced by photolithography or photoengraving.

Low-cost offset printing plates for office-type duplicators can be produced in one minute using the Polychrome V-Kote Plate and V-Kote Etch in conjunction with the Kodak Verifax Copier. The exposed and processed Verifax Matrix image is transferred to the Polychrome Plate under room-light-handling conditions.

The uses of cameras in industry and business are almost limitless. A few selected applications described in the literature of 1955 include: the Land camera used in the Sears Posture-Matic tailoring system; the Robot installation camera equipped with a Tele-Xenar $f/3.8$, 75-mm. lens and remote-control shutter release for checking the structural condition of sewers; the Foto-Patrol 35-mm. camera with stroboscopic flash for recording the license number of speeding motorists; the Debie 35-mm. camera used by the Markel Service, Inc., to check on truck drivers insured by the company and to record unsafe practices; the Watson-Holmes fingerprint camera for taking pictures of fingerprints, coins, stamps, etc. on $2\frac{1}{4}$ -by- $3\frac{1}{4}$ -inch film; and individual or sequence pictures of activities at the New York State Thruway booths as protection against fraud, made by remote-control cameras.

Scientific Photography.—In the study of the structure of matter—nuclear physics—a new “event” was recorded in a little stack of photographic film flown in a Skylook balloon from Goodfellow Air Force Base, Texas, over 19 miles up. The event was the first case of an extraordinary “pure proton shower” in cosmic rays at 100,000 feet altitude, assumed to be the result of an annihilation process of an antiproton (nega-

tive) from outer space with the incredibly high energy of more than 10 million billion electron volts (*Science News Letter*, July 17, 1954).

A microautoradiographic technique for use with aluminum alloys is capable of producing a resolution of at least 9 microns with X-radiation and supplying quantitative information as to the distribution of the radioactive material in metallurgical structure (*Rev. Sci. Inst.*, 26:489, No. 5, May 1955).

A new color microscope-television camera that can transmit microscopic studies over a closed circuit between laboratories has been developed by General Motors Laboratories, Bausch and Lomb, and Thompson Products Corporation. A further development of this system is the cytoanalyzer or electronic cancer spotter which can spot abnormal cells in about one minute (*Life*, 38: April 1955).

The Kenyon Instrument Company announced its Rapromatic Model 4000 rapid-processing camera-projector which holds 200-foot rolls of 35-mm. film, sufficient for 3,200 pictures. Single-frame exposures are taken and processed within a few seconds, using packaged chemicals (*Rev. Sci. Inst.*, 26:640–1, June 1955).

The Navy Bureau of Aeronautics described a new gun camera device that tilts a system of mirrors downward in proportion to the pull of gravity so that a rocket is under the camera's scrutiny for the full run of the target. Gordon Enterprises has designed a night recording camera that may be used for tracing missile trajectories on 9-by-9-inch film exposed through an Aero Ektar $f/2.5$ lens with a 12-inch focal length.

Some rotating drum cameras were described in the literature, including a new series introduced by the Allegany Instrument Company, having 6-inch- and 12-inch-diameter drums. With the film speed of 2,400 inches per second, multi-channel recording from a string galvanometer or Bourdon tube is possible. In friction tests at fairly high speed, the signals from wire-strain gauges are fed to a cathode-ray tube whose 5-inch screen was photographed on 27-inch lengths of 35-mm. film placed on 15-inch-diameter drum cameras (*Ind. Phot.*, 40–47, Jan.–Feb. 1955).

GEORGE T. EATON,
Technical Staff Assistant, Kodak Research
Laboratories.

PHYSICS. The year 1955 will be remembered by physicists as the year in which the existence of the anti-proton (negative proton) was experimentally verified.

Verification of the Anti-Proton.—The anti-proton is a nuclear particle having the mass of a proton, but negatively charged. The magnitude of the charges on the proton and anti-proton are exactly equal. Like the proton, the anti-proton is not radioactive, but on contact with any atom of which the earth is composed it is destroyed, together with part or all of the atom contacted; and in this process, energy is produced, as required by the Einstein mass-energy equivalence relation. For each anti-proton this energy amounts to approximately ten times that liberated in the fission of a uranium atom.

Since publication of the theoretical researches of P. M. A. Dirac in 1928, there has been speculation that a type of matter not found on earth, identical with ordinary matter except that the sign of all electrical quantities is reversed, might exist or be made in the laboratory. An example would be an anti-hydrogen atom made up of a negative proton and a positive electron. Contact

between the two kinds of matter would result in instant destruction of both and the production of nothing but energy; conversely, under certain conditions, energy would disappear with the production of the two kinds of matter in equal amounts.

This was little more than an interesting speculation until the identification of a positron, or positive electron (anti-electron), by Dr. Carl Anderson in 1932, and shortly thereafter the discovery that positive electrons could be produced by annihilation of gamma rays of one million volts or more energy, and were produced in some types of decay of artificially produced radioactive atoms; and further, that these positive electrons were destroyed on contact with matter, with production of a pair of gamma rays of exactly the expected energy.

The next logical step was to produce the anti-proton, since it, together with the available anti-electron, could combine to form anti-hydrogen, the simplest of the anti-elements. Theoretical calculations showed that to produce it, atoms, electrons, or photons of approximately 6 billion volts energy would be required. This was far beyond the reach of apparatus available in the late 1930's.

The military atomic energy program then opened the way to far more powerful machines, and one of the first acts of the postwar Atomic Energy Commission was to begin the construction, at the Radiation Laboratory of the University of California, of the bevatron, designed to accelerate ordinary protons to energies of 6.25 billion electron volts. In 1955 this machine, which cost \$10 million, was brought to full power.

In the experiment which produced the anti-proton, a beam of 6.2 Bev. protons was focused on a block of copper. The reaction was not clear-cut. Many particles, mostly mesons, were produced by various nuclear reactions of the high-speed protons with copper atoms. Only one in 50,000 of these was an anti-proton, and the task of identification was correspondingly difficult. It was accomplished by devising a maze of electrostatic and magnetic fields which could be threaded only by particles having very nearly the same mass and very nearly the opposite charge of the proton. Neither the particle tracks nor their effects were photographed; recording was done with counters.

This verification is primarily of long-term significance. There is no obvious way in which anti-matter can be used in weapons or atomic power plants. Rather, detailed studies of the reactions of anti-matter on ordinary matter—the types and energies of particles and photons produced by mutual annihilation, as dependent on the speed of the impinging anti-protons and the choice of target material—will lead to a broader and more detailed understanding of all nuclear processes, which in turn will lead to nuclear devices different, and presumably more powerful and versatile, than those known today.

The next step will be production of anti-protons as relatively pure beams and in much larger amounts than are possible in the bevatron. On theoretical grounds it is to be expected that both the yield and the purity of the product will increase rapidly as the voltage of the machine rises above the threshold of anti-proton production. The Atomic Energy Commission now has under construction at the Brookhaven National Laboratory a machine expected to accelerate protons to 25 billion electron volts.

Upper Atmosphere.—The National Academy of Sciences and the Department of Defense have jointly announced an undertaking to launch one or more earth satellites within the next few years, as part of the United States contribution to the International Geophysical Year, 1957–58. The USSR has announced its intention to do the same. In both programs the satellite will be unmanned and, according to preliminary reports, approximately 30 inches in diameter. It will carry instruments but will not be recoverable, and any data from it will have to be transmitted to the earth by radio. (See also *SPACE FLIGHT*.)

If there were no collisions between the satellites and atoms of the atmosphere, the satellite would continue on its course indefinitely, as does the moon. Individual collisions which the satellite suffers may either speed it up or slow it down, but the cumulative effect of many collisions will be to retard it. By tracking the satellite through astronomical telescopes from the ground, both its height and its speed can be recorded as functions of time. From the change of speed with time and altitude, a numerical relationship between the average number of collisions and the average speed and weight of the participating atoms can be deduced. This information, taken together with data from reflection of radio waves, from balloon observations at lesser altitudes, and from meteor tracks, may make it possible to separate out and identify these speeds, weights, and numbers, which are needed for the design of space ships. The ultimate effect of retardation of the satellites will be to bring them into the lower atmosphere where they will burn up completely as meteorites.

The satellites may also provide the answer to another problem of space flight. It is known that the penetrating component of the cosmic rays of outer space is not intense enough to have physiological significance in space flight, but it is suspected that there is also a soft component, undetectable at the surface of the earth, but possibly sufficiently intense to be fatal to humans after a few hours' exposure. If the small satellites currently contemplated can be designed to carry equipment for measuring this radiation and transmitting the information to the earth, this question may be answered.

In this connection it is interesting to note that the U.S. Air Force has succeeded in 1955 in getting plastic balloons up to a height of 20 miles. At this elevation only one-half of 1% of the weight of the atmosphere shields the observation platform from outer space. This shielding is equivalent to that of two inches of water or one-fourth inch of steel. Thus, if the cosmic radiation at this height is tolerable to unshielded humans, that of outer space will be tolerable to humans inside any practical space ship. The U.S. Air Force has attempted to expose and recover animals at this height, but up to late 1955 it had been balked by technical failures. It may be anticipated that the answer to the problem of soft radiation in outer space will be solved more quickly and definitely by balloon techniques than by satellites.

In 1955 the Department of Defense made an interesting attempt to tap the latent energy of the upper atmosphere for night illumination of large areas. It is known that during the day individual atoms of the upper atmosphere trap solar energy and hold it for as long as a matter of hours. It was surmised that when atoms containing this trapped energy came in contact with sodium atoms the energy would be transferred to

the sodium and promptly emitted as visible light. (This is the principle of the familiar yellow sodium electric lamps used to illuminate highways.) Two pounds of sodium was vaporized into the upper atmosphere from a rocket. The expected light was observed, but in less than the predicted intensity. The phenomenon was visible as a faint glow which lasted through the night of the observation.

Nuclear Science.—As usual, most of the effort in pure physics in 1955 went into nuclear science, mostly of a routine mopping-up character.

Much of the present information about nuclear particles has been obtained from cloud chambers, in which droplets of liquids from supersaturated vapors condense on the track of the particles and can be visually observed and photographed. Heretofore the utility of this method has been limited by the low density of the vapors, with correspondingly small probability of a nuclear collision in the field of view. Donald A. Glaser of the University of Michigan turned the technique inside out, photographing the formation of gas bubbles in a superheated liquid along a nuclear track, thus increasing the density of his working medium and the probability of nuclear events in it by five hundredfold.

A similar approach is being used at the Radiation Laboratory of the University of California, where liquid hydrogen is being used as the working medium, in the study of meson tracks. This chamber is as sensitive as an ordinary cloud chamber would be if it were operated at 700 atmospheres, and has the further advantage that only protons and electrons are present in it, thus simplifying the interpretation of the observed nuclear collisions. (See also *ATOMIC ENERGY*.)

Low-Temperature Research.—Like the earth, many nuclear particles have permanent magnetic poles. At ordinary temperatures atoms are so jostled about by thermal agitation that these magnetic poles are randomly oriented and there is no bulk effect. It was anticipated theoretically that at very low temperatures these nuclear magnets would line up to produce a net effect, just as magnetic domains do in permanent magnets made of steel. This effect has been observed at the Oak Ridge National Laboratory. Metallic indium was cooled to less than one degree absolute between the poles of a powerful electromagnet. Under these conditions the small nuclear magnets lined up with the magnetic field, and this was verified by observing the scattering effect of the lattice produced on a beam of polarized neutrons.

Besides tidying up a point of theory, this effect may have important applications. The lowest temperatures now attainable are reached by lining up molecules having permanent magnetic poles at liquid helium temperatures in a strong external magnetic field. The solid constituted by these aligned molecules is then thermally isolated from its surroundings and the external magnetic field is turned off. Released from the magnetic force, the magnets constituted by the molecules again assume random orientation and the matter which they comprise is thus cooled by a factor of approximately 10 on the absolute scale. Temperatures below one-tenth degree absolute have been reached in this way. It is anticipated that by using atomic rather than molecular magnets it may be possible, in a similar way, to reach temperatures as low as one-thousandth degree absolute.

Applied Physics.—In the field of applied physics, 1955 may well be remembered as the year in

which the physics of the solid state came into its own.

The gaseous and liquid states of matter were first explored by physicists primarily because they present easier experimental problems than solids. Paradoxically, the completely chaotic conditions prevailing in liquids and gases simplified the mathematical theory, which was able to keep pace with the experiments. The result on the theoretical side included brilliant achievements in thermodynamics and the kinetic theory of gases; and on the practical side, in the steam turbine and internal combustion engines.

Progress in the study of solids was much slower. The principal tool was X-ray diffraction, but the mathematical background of this was dull and difficult. It was soon found that quantum mechanical effects, negligible in gases and liquids except near absolute zero, were important in solids even at room temperatures, and this further complicated the mathematics. On the experimental side it was found that minute amounts of impurities, which would have had a negligible effect on the properties of gases or liquids, had profound effects on the properties of solids.

In spite of all these difficulties there has been steady progress for more than 50 years in understanding the solid state of matter. On the applications side, the first products to appear were marginally competitive devices, such as the copper oxide rectifier and the transistor. Now, however, devices are appearing which open whole new fields. Small and very efficient germanium rectifiers are permitting types of electrolocomotive construction otherwise totally impractical. Solid photosensitive materials, including cadmium sulfide, combined in circuits with transistors and magnetic amplifiers, are being used to great advantage in the industrial control field. Bell Laboratories has developed power photocells with efficiencies as high as 10%. When it is remembered that the efficiency of photosynthesis is at best 4%, the significance of these devices in the utilization of solar energy can be appreciated.

EDWARD S. GILFILLAN, JR.,

Consultant to the National Research Council and Other Government Agencies.

PINAY, Antoine, French foreign minister: b. Saint-Symphorien-sur-Coise, Rhône Department, France, Dec. 30, 1891. A moderate conservative in politics and a strong advocate of Western military unity, he was appointed minister of foreign affairs in the cabinet of Edgar Faure on Feb. 19, 1955.

After graduating from the Marist Fathers' school at Saint-Chamond, Loire Department, Antoine Pinay entered a tannery business in the community and soon became prominent in organizations related to the industry. During World War I, serving as a noncommissioned artillery officer in the French Army, he won the Croix de Guerre and Médaille Militaire.

His political career began in 1932, when he was elected mayor of Saint-Chamond. In 1936 Pinay was elected to the Chamber of Deputies as a member of the moderate Independent Radical group, and his election to the Senate followed in 1938. Throughout World War II, as mayor of Saint-Chamond, Pinay strongly resisted Nazi pressures.

Returning to national politics in 1946, he was

elected to the 2d Constituent Assembly as a member of the moderately conservative Independent Republican Party; later in the same year he was elected to the first National Assembly of the Fourth Republic. From September 1948 to October 1949, he served as secretary of state for economic affairs in the first cabinet of Henri Queuille, and on July 12, 1950, he was appointed minister of public works, transportation, and tourism in the René Plevin ministry, a post he held through successive cabinets.

Pinay became premier of France on March 6, 1952. Supported by the right and center parties, he initiated a broad fiscal program in a partially successful attempt to stabilize the tottering French economy. Despite the results, he was forced to resign the premiership on Dec. 23, 1952, when an adverse vote of confidence on his economic measures became imminent.

Shortly after taking office in 1955 as foreign minister, he negotiated a settlement of the Saar question with its premier, Johannes Hoffmann, and West German Chancellor Konrad Adenauer (concluded May 3, 1955); represented France in the ministerial meetings of the North Atlantic Council; served as chief French delegate to the Vienna conference at which the Austrian State Treaty was signed (May 15); and attended the meetings of the Big Four foreign ministers in San Francisco (June 20) prior to the Geneva Conference (q.v.).

As chief delegate, Pinay led the walkout of the French delegation on September 30 from the U.N. General Assembly after the assembly had voted to place the Algerian nationalist question on the agenda. Pinay was scheduled to attend the Big Four foreign ministers conference at Geneva in October 1955. (See also FRANCE.)

PINEAPPLES. See FRUITS.

PITCAIRN ISLAND. Lying equidistant between Tahiti and Easter Island in the South Pacific, this volcanic island (area, 2 square miles; pop., 143 in December 1953) constitutes a British colony, settled in 1790 by mutineers from the *Bounty* and women from Otaheite, who were the forebears of the present inhabitants. From 1898 the Pitcairn group, including the uninhabited islands of Ducie, Henderson, and Oeno, was administered by the High Commissioner for the Western Pacific until April 1952; thereafter, by the governor of Fiji (q.v.). An Island Council of 4 members is headed by a chief magistrate (John Christian), elected triennially. A government school, with one teacher, had 20 pupils in 1953. The resident nurse is assisted in emergencies by doctors from passing ships. Oranges and pineapples are exported to New Zealand; some further revenue is gained from the sale of curios and "Pitcairn Islands" postage stamps.

PITTSBURGH. Twelfth most populous city in the United States, Pittsburgh, Pa. (54.2 square miles in area) is the center of a 3,053 square mile four-county metropolitan area (Allegheny, Beaver, Washington, and Westmoreland) which ranks eighth in population. Latest census estimates (1953) show 678,000 for the city and 2,253,000 for the metropolitan area.

The city is governed by a mayor (David E. Lawrence, Democrat, serving a third term in 1955) and a nine-member City Council. Budget (1955): \$48,320,473; real estate tax, 3.2% of assessed land valuation (\$411,613,575) and 1.6% of assessed buildings (\$701,224,268). The city also levies an income tax on residents and on nonresidents deriving wages and income from sources within the city limits. Value of city bonds retired in 1955: \$5,116,100; value of new bonds issued: \$3,000,000 for

public improvements, of which \$1,566,600 is for improvement of the water system. In addition the Water Department budget included \$850,000 for rehabilitation of the system.

Public school enrollment (1955-56 term): 77,364 (elementary and kindergarten, 45,001; junior-senior high school, 23,235; vocational high school, 2,815; shut-ins, 417; and part-time pupils, 5,896).

Tonnage handled in river port (1955 est.): 45.5 million. Freight loadings through Pittsburgh: 170 million tons. Air freight (mail and express): 31 million pounds. Air travel: 170,000 flights carrying 1.5 million passengers.

Total employment average for metropolitan area: 840,000, including 374,000 in manufacturing, 113,000 in retail trade, and 38,000 in wholesale trade. Retail sales (1954): \$1.7 billion; wholesale sales: \$2.6 billion. Retail sales in 1954 were 2.5% less than in 1953, but January-August 1955 statistics show a 1.3% increase over 1953. In 1954 there were 6,330 individual homes built in Allegheny County, at an approximate cost of \$96 million. It is expected by the Home Builders Association that construction in 1955 will prove greater.

During 1955 numerous strikes occurred in local plants of the Westinghouse Electric Corporation. The huge East Pittsburgh works had 17 work stoppages and two full-scale strikes. The first strike lasted five weeks during August and September; the second began on October 16. An estimated 61,000 workers were involved.

In August 1955 the city's first heliport was established on top of a parking garage in downtown Pittsburgh, cutting to six minutes the length of time required to get to the airport. Formerly the trip took 45 minutes by limousine.

Dr. Edward H. Litchfield was named on July 18, 1955, as chancellor of the University of Pittsburgh, succeeding Dr. Rufus H. Fitzgerald, who retired on June 30 after 10 years in that post. The university dedicated a new seven-story Engineering Hall during the year. Pennsylvania College for Women (founded in 1869), the fourth oldest college for women in the nation, changed its name to Chatham College.

A War Memorial fountain, costing \$275,000, was dedicated at the Greater Pittsburgh airport. The Mellon family gave to the city the completed \$8 million Mellon Square Park, in memory of R. B. and A. W. Mellon. It covers a city block in the heart of the downtown area.

PIUS XII (EUGENIO PACELLI), pope: b. Rome, Italy, March 2, 1876. Gravely ill in 1954, he recovered his health in 1955 and was able to resume his full duties as supreme pontiff of the Roman Catholic Church.

A member of a family long associated with the papal court, Eugenio Pacelli began a distinguished career in the legal and diplomatic branches of the papal government after his ordination in 1899. He was papal nuncio to Bavaria from 1917 to 1920, and from then until 1929 to the German Republic. Created a cardinal on Dec. 16, 1929, he was appointed papal secretary of state on Feb. 11, 1930. A trip to Buenos Aires in 1934, followed by an 8,000-mile tour of the United States in 1936, made him the first pope (he was then a cardinal) to visit the New World. On March 2, 1939, three weeks after the death of Pius XI, Cardinal Pacelli was elected to succeed him.

During World War II, Pius XII worked tirelessly to restore peace by means of crusades of prayer, appeals to the heads of the warring nations, speeches broadcast throughout the world, and the usual methods of diplomacy. In the years immediately after the war his principal concern was the struggle against communism. His influence is thought to have been decisive in the vic-

tory of the Christian Democrats over the Communists in the crucial Italian elections of 1948.

Pius XII has issued a large number of encyclicals on a variety of subjects. These include many aspects of the social order, the nature of the state, world peace, the family, some phases of the relation between science and religion, and matters of theological doctrine. Moreover, in numerous letters and addresses he has expounded his views on a wide range of contemporary issues, especially social questions, frequently urging that the working and living conditions of the poor be improved.

On November 1 in the Holy Year of 1950, he proclaimed as a dogma of the Roman Catholic Church the corporal assumption into heaven of the Virgin Mary. This was the first definition of a dogma by a pope since the dogma of papal infallibility was decreed at the Vatican Council of 1870. On Nov. 21, 1955, it was officially confirmed by the Vatican that the pope had seen a vision of Christ on Dec. 2, 1954, during the crisis of his illness.

In his annual Christmas message, broadcast on Dec. 24, 1955, the pontiff urged that experimentation with nuclear weapons be abandoned, the use of atomic weapons be prohibited by international agreement, and armaments in general be controlled. (See also RELIGION—*Catholicism*.)

PLANT RESEARCH. See Index entry.

PLASTICS. Activities in the field of plastics continued at a prosperous level throughout 1955, as measured by increased sales and continued high-level production of basic materials. Significant to the industry was the acquisition by private industry of numerous basic monomer and synthetic rubber plants owned by the federal government, thus making available additional facilities for the preparation of basic raw materials required by plastics.

Although production of basic plastics materials continued to rise, increasing attention was given to newer materials. For example, polyethylene, which will probably become the first plastic to reach production of a billion pounds per year, received impetus by new discoveries in Germany and the United States during 1955 of a low-pressure, catalytic polymerization process. This also made available a much stiffer polyethylene with heat resistance of up to 240°F. Companies such as Phillips Petroleum announced their entry into this phase of the industry. Irradiated high-temperature polyethylene, which had won earlier interest, may have been made obsolete by these discoveries.

Polyisocyanates and their polymers (polyurethanes) were beginning to expand rapidly through activities of such companies as, du Pont, National Aniline, and Mobay Chemical. The polyisocyanates, originally a German development, offer innumerable rigid and flexible adhesives, coatings, and foams. The latter, adaptable to stiffening sheet metal structures, were in 1955 beginning to find their way into many consumer goods, such as sponges and cushions.

Epoxy resin manufacture was on the increase in 1955, with additional chemical companies entering this promising field. Structural laminates, prototype tooling, protective coatings, and potting compounds for electronic components were a few of the more important commercial uses which were being established from the highly versatile epoxy resins. It was likely that in the near future the molding industry would become active in the field of epoxy molding compounds.

Vinyl resins continued to grow and expand in several categories. Not only were new plants placed into operation in 1955 for producing basic vinyl chloride monomer, but also a substantial price break of several cents per pound in the polymer created a more competitive but larger market for the resins. Unsupported, decorative films and sheets became standard materials in re-

U.S. PRODUCTION OF PLASTICS, 1954

Material	Pounds
<i>Cellulose ester plastics:</i>	
Sheets and tubes	35,832,000
Molding compounds	76,562,000
<i>Phenolics and other tar acid resins:</i>	
Laminating	62,203,000
Adhesives	53,428,000
Molding (including casting)	177,564,000
Coating	23,622,000
<i>Urea and melamine resins:</i>	
Adhesives and laminating	102,671,000
Textile and paper-treating	35,880,000
Protective coatings	27,950,000
<i>Styrene resins:</i>	
Molding	325,105,000
Protective coatings	85,519,000
Miscellaneous	90,335,000
<i>Vinyl resins (based on resin content):</i>	
Sheeting and film	126,530,000
Adhesives	26,609,000
Textile and paper-treating	49,545,000
Molding and extrusion	147,284,000
Protective coatings	23,672,000
Miscellaneous	99,237,000
<i>Miscellaneous resins:</i>	
Coumarone-indenes	203,146,000
Molding (acrylic, nylon, and polyethylene)	173,846,000

(Source: U.S. Tariff Commission.)

tail dry goods stores, and rigid polyvinyl chloride (PVC) continued to find more and more application as corrosion-resistant pipes and fittings in chemical plants.

Polyesters, in combination with isocyanates, form tough rubber-like compounds which are of use in foams and long-wearing rubber goods. Research efforts were being directed to make them independently more flame-resistant. Special compounds such as Mylar, serving as remarkable heat and electrical insulating films, were available in 1955 for many industrial requirements. (See also CHEMISTRY.)

Consulting Engineer and General Manager,
Furane Plastics, Inc.

PLATINUM GROUP METALS. Recovery of new platinum group metals by refiners declined from 60,267 troy ounces in 1953 to 56,771 ounces in 1954, of which 24,596 ounces were from domestic sources and 32,175 ounces were from imported crude metals. Total recovery included 47,408 ounces of platinum, 4,605 ounces of palladium, and smaller quantities of iridium, osmium, rhodium, and ruthenium. Secondary recovery increased from 64,857 ounces in 1953 to 65,267 ounces in 1954, including 31,010 ounces of platinum and 31,124 ounces of palladium. Imports declined from 635,524 ounces in 1953 to 601,601 ounces in 1954, including 53,276 ounces of crude metals and 548,325 ounces of refined metals. Of the 1954 imports, 339,490 ounces consisted of platinum and 188,839 ounces of palladium. Canada, supplying 31% of the total, is the chief foreign source for the United States.

Total sales increased from 533,298 ounces in 1953 to 581,946 ounces in 1954. Sales of platinum to domestic consumers amounted to 320,215 ounces, equivalent to 55% of the total sales of platinum group minerals. The substantial gain from the 276,580 ounces of platinum sold in 1953 was due largely to increased use in the chemical

and jewelry industries. Of the 1954 total sales of platinum group metals, the chemical industry used 240,772 ounces; the electrical industry, 209,447 ounces; the jewelry industry, 70,846 ounces; and the dental and medical professions, 40,793 ounces. (See MINERAL PRODUCTION for table showing output of major producing countries.)

POINT FOUR PROGRAM. See Index entry.

POLAND. A republic in east-central Europe, Poland came under the domination of the Soviet Union on July 22, 1944, after five years of German occupation. With the constitution of July 22, 1952, the nation became a full-fledged Communist people's republic.

Area and Population.—Poland's postwar area, after the loss of territory in the east to the Soviet Union and the gain of territory in the west from Germany, is 120,359 square miles, as opposed to a prewar area of 150,433 square miles. Its population in 1955 was estimated at 28,000,000 (census of Dec. 3, 1950: 24,976,926), whereas its prewar population (Jan. 1, 1937) was estimated at 34,221,000. The rapid postwar increase in population of one-half million annually is particularly great in the northern Baltic Sea provinces, which include the important ports of Danzig (Gdańsk) and Stettin (Szczecin). These cities, with estimated populations (1955) of 226,000 and 209,000, respectively, are approaching their prewar populations, and Gdynia, another principal port, with an estimated 1955 population of 120,000, has exceeded it. Population estimates (1955) of other important cities are: Warsaw, the capital, 965,000; Łódź, 670,000; and Cracow (Kraków), including its new industrial center, Nowa Huta, 400,000.

Government in Exile.—The exiled Polish government in London is headed by a president, August Zaleski, and a premier, Antoni Pajak, and is represented by diplomatic missions, the most important of which is to the Vatican. The activities of the coalition, composed of the Pilsudski Party, the National Democratic and Socialist parties, and the Peasant and Democrat parties, are directed by a "Council of Three," organized on Aug. 3, 1954, with the following members: Gen. Wladyslaw Anders, Tomasz Arciszewski (who died on Nov. 29, 1955, and by the end of the year had not been replaced), and Edward Raczyński.

In 1955 the Warsaw government invited the *émigrés* to return home, but the only major defection was that of Premier Hugo Hanke in September, who was replaced by Premier Pajak on September 12. In November the Soviet government announced that Gen. Leopold Okulicki, the last commander in chief of the Polish Home Army (the wartime underground forces), who had been sentenced to ten years' imprisonment in 1945, had died in prison on Dec. 24, 1946.

Warsaw Government.—The Sejm (Parliament) and the Council of State (with Alexander Zawadzki as president) are the chief representative bodies of state authority. The Council of Ministers (cabinet), with J. Cyrankiewicz as premier, is the chief executive and administrative body. The Council of State, among other functions, supervises the work of the people's councils, which are elected for three years as local organs of state authority. Supreme *de facto* power is held by the Politburo of the United Polish Workers' (Communist) Party (PZPR).

On April 17, 1955, Franciszek Jozwiak-Witold became one of nine vice premiers, and was replaced as minister of state by Roman Zambrowski. On April 5 the Sejm elected three new members to the Council of State, including Prof. Oskar Lange, a former ambassador to Washington and now rector of the School of Planning and Statistics.

Among the eight secretaries of the Central Committee of the PZPR, Boleslaw Bierut, first secretary, is considered to be the leader. There seems to be some disagreement, however, between him and Secretary Edward Ochab, a representative of the party's left wing. Although Ochab was under attack at the January plenary session of the Central Committee, his influence appears to be growing.

Finance.—Revenues for 1955 were estimated at 122 billion zlotys (4 zlotys = U.S. \$1), and expenditures, 114.9 billion zlotys—an increase over the 1954 budget (115.5 billion zlotys for revenues and 103.4 billion zlotys for expenditures). The 1955 budget included 11.9 billion zlotys for defense (10.6 billion in 1954) and 60.8 billion for the national economy, which includes various items for military purposes. Expenditures for social and cultural services were raised from 25.3 billion zlotys in 1954 to 28.9 billion in 1955.

Religion and Education.—The principal religion in Poland is Roman Catholicism. The church, however, is becoming increasingly state-controlled. Despite rumors of his impending liberation, the cardinal primate of Poland, Archbishop Stefan Wyszyński, arrested in September 1953, continued to be held in strict custody in 1955. Particularly dangerous for the church are the diversionist activities of the "Progressive Catholics," who, under the leadership of Boleslaw Piasecki, have come to control, since July 1955, most religious organizations and publications, the latter having been condemned by the Vatican on June 28, 1955. Although the group claims that complete religious freedom exists in Poland, religious faculties in Polish universities have been disbanded and replaced by "academies" under the control of the Communist authorities.

Education in Poland is free and compulsory up to 14 years of age. In 1952–53 there were 22,977 elementary schools, with 3,300,000 pupils; 768 secondary schools, with 340,000 pupils; and 72 institutions of higher learning (including 8 universities). The teaching of the Russian language is compulsory in all schools and universities. Research is now directed by the Academy of Science, established on Oct. 30, 1951, with headquarters in the new 750-foot skyscraper, the Palace of Science and Culture, completed in July 1955 and erected as a gift from the Soviet Union.

Production.—The goals of the Six-Year Plan, ending in 1955, were fulfilled, according to Boleslaw Bierut, by 102% in 1954 and by 103% in the first half of 1955. Although the progress in heavy industry (see accompanying table) is particularly satisfactory, the production of consumer goods remained below assignments. The crisis in agricultural production, the only item on the agenda of the July 1955 meeting of the Central Committee of the PZPR, necessitated substantial imports of corn. This crisis, revealing the difficulty of promoting increased agricultural production and farm collectivization, is a result of the low output of collective farms and the fear of noncollectivized farmers of losing their lands.

POLAND'S OUTPUT OF SELECTED PRODUCTS, 1954

(Figures in millions)

Product and Unit of Production	Amount
Coal, metric tons.....	91.3
Iron ore, metric tons.....	1,614.0
Pig iron, metric tons.....	2.7
Crude steel, metric tons.....	4.0
Electric power, kw.-hr.....	15,400.0
Bread grains, tons.....	8.7*
Potatoes, tons.....	33.8*
Sugar beets, tons.....	7.7*

* Provisional.

Without changing the principle of fighting the Kulaks (peasant "capitalists"), more cautious methods of collectivization will be applied, although Bierut, who is preparing the next Six-Year Plan, considers the development of the collective farms the main problem. (Instead of the planned 3,000 new such farms in 1954, only 1,848 were established.) At the end of 1954

there were 9,712 collective farms (kolkhozes), and in 1955 the number was estimated at over 10,000 (about 8.5% of total farm area).

Foreign Trade.—Approximately 70% of Poland's foreign trade is with countries of the Communist bloc, and 38% is with the Soviet Union alone. Yearly imports from the West, about 150 million tons, remain almost stationary. Exports to the West, however, are decreasing (231 million tons in 1953; 193 million in 1954), due to increased domestic coal consumption (66.6 million tons in 1954). In 1950 the value of total Polish imports equaled \$527 million, and exports equaled \$447 million.

On Feb. 25, 1955, a trade agreement with the Soviet Union was signed in Moscow, which regulated Polish-Soviet trade for the year. A special effort was being made on Poland's part to develop export trade with Asian and Latin American countries and trade agreements were signed during the year with Egypt, India, and Syria. Many Asian countries were represented at the international fair held at Poznań in July, and Poland participated strongly in the international fair at New Delhi in the fall.

Principal Events, 1955. Domestic Affairs.—The reorganization of the public security system following the removal of Gen. Stanislaw Radkiewicz and his ministry (announced Dec. 8, 1954) brought little reduction in police power. A new series of political trials began in 1955, and on March 14, six alleged American and British spies were sentenced to death or to long prison terms. On June 29, A. Jaroszewicz, a former vice minister who had been arrested as early as 1948, was condemned to 12 years' imprisonment.

The annual session of the Sejm, which ended on April 5, was attended by a large delegation of Soviet parliamentarians. The second congress of the Polish (Communist) Youth Organization, held in Warsaw from Jan. 28 to Feb. 1, 1955, was attended by 1,113 Polish delegates and many foreign guests. Although this organization has more than 2 million members, it constitutes only 37% of Poland's youth. On September 3 it was announced that Poland's armed forces, estimated in 1955 at 277,000 men, would be reduced by 47,000.

Foreign Affairs.—On Feb. 18, 1955, the Polish government ended the state of war with Germany, and on July 6 the Polish and East German governments issued a joint statement, fixing the Oder-Neisse line as "definitely and irrevocably" the frontier between the two countries.

Premier Josef Cyrankiewicz attended in Moscow the tenth anniversary of the signing of the Polish-Soviet pact on April 21, 1945, and called for a single command of East European forces under the leadership of Soviet Marshal Ivan Konev. Such a command was established with the signing on May 14, 1955, in Warsaw of a treaty of mutual assistance by the 8-nation East European Communist bloc. From June 23 to 25, Indian Premier Jawaharlal Nehru visited Warsaw and signed, with Premier Cyrankiewicz, a declaration of nonaggression, nonintervention, and mutual respect of national integrity and sovereignty between the two nations.

Although the British and Polish navies exchanged visits at Gdynia, Poland, in July, and at Portsmouth, England, in September, and despite the reduction in Poland's armed forces and the general relaxation of East-West tensions, there seemed to be little improvement in Poland's relations with the West in 1955. Because of Po-

land's obvious adherence to Soviet policy, the United States successfully opposed her election to the U.N. Security Council.

President of the Polish Institute of Arts and Sciences in America; Professor of Eastern European History, Fordham University.

POLAR EXPLORATION. See ANTARCTICA; ARCTIC EXPLORATION; GEOGRAPHY AND EXPLORATION.

POLICE. Indicative of growing efforts by police to combat juvenile delinquency were new steps being taken in 1955 by the Chicago Police Department. The department's juvenile division was enlarged by 40 persons (new total, 141) and by six two-man squad cars. Recruits for the division received a one-week training course in police procedure for the handling of juvenile delinquents. Officers are required to make complete records of violations of the curfew. Juveniles who repeat violations, together with their parents, are referred to the Family Court.

The chief of the division has started a file of juvenile gang members. Recent vandalism, it is believed, could have been averted had knowledge of gang personnel been available. Police have heretofore often learned of undesirable gangs only after their members had become involved in criminal acts.

Many officers believe that urban delinquency is attributable, in large measure, to motorization of patrolmen. Swift movement makes it impossible for them to maintain personal touch with actual and potential delinquents on their beats. With this in mind, the mayor of Chicago anticipates reinforcement of the foot patrolmen from among 2,000 prospective police recruits.

New Tools for Crime Detection.—A research program announced at the University of California aims at finding a relatively quick and simple method of identifying substances which are most commonly associated with certain types of criminal action. They include blood, ink, metals, barbiturates, and poisons. Methods have already been developed to identify particular types of soil, ashes, textiles, and glass fragments.

The work calls for use of two laboratory procedures. The first is paper chromatography, which consists of dissolving a substance and allowing drops of the mixture to seep down over vertically suspended filter paper. Because the individual substances which compose the test material have different degrees of solubility, they separate at different levels as the liquid seeps downward. A given type of ink or poison will produce a characteristic blot on the sheet. From this procedure a trained person can compare the test materials with that of known materials for identification.

The second method, called paper electrophoresis, works similarly except that the substances in the dissolved test material are made to move across the paper under the influence of electricity. The pattern formed is somewhat unlike that produced by chromatography. Thus a test substance can be double-checked for identification.

Illegal Search.—A significant case of illegal search developed from the fact that a federal narcotics agent "led a police officer to believe" that another person was transporting narcotics across the Mexican border. The officer took this individual without either arrest or search warrant and found several packages of marihuana in his car. The person was convicted of obtaining the

narcotics without paying the transfer tax. He appealed, alleging illegal search, and held that the evidence was, therefore, invalid. The Court of Appeals held that the search was illegal because the officer had not obtained a search warrant, but it ruled that the evidence was admissible because there was no evidence that the narcotics agent had deliberately used the policeman for the purpose of obtaining evidence, even though illegally. (The decision was later reversed, but on other grounds.)

Police Training.—The Foreign Operations Administration and the International Association of Chiefs of Police have made an agreement whereby 225 foreign police administrators and technicians will be trained in the United States. The police association will arrange with universities and police agencies for the training program, for technical literature, and for supervision. (See also **CRIME; FEDERAL BUREAU OF INVESTIGATION.**)

ROBERT H. GAULT,

Editor, "Journal of Criminal Law, Criminology, and Political Science."

POLIOMYELITIS. In the spring of 1954 the field test of the Salk vaccine against poliomyelitis was begun; this was the largest field test of a vaccine ever undertaken in the history of medicine.¹ In the year which followed, ensuing events made newspaper headlines for many weeks. In order to properly evaluate these events, it is necessary to recapitulate the history of the vaccine.

In 1951, Dr. John F. Enders and his co-workers announced the discovery of a technic whereby poliomyelitis virus could be successfully grown in tissue culture. This important discovery made possible the development of a vaccine against this disease, and in the forefront of investigators developing such a vaccine was Dr. Jonas E. Salk (q.v.) of the University of Pittsburgh, who had had previous experience in the preparation of a vaccine against influenza. Dr. Salk's vaccine contained the three known strains of poliomyelitis virus, which had been grown in tissue culture and then had been inactivated with a formalin solution. As a result of initial reports of success with this vaccine in animal experiments and later in a small group of children, the National Foundation for Infantile Paralysis embarked on a plan to test the vaccine on children throughout the country.

Children of Baltimore County, Md., are given Salk polio vaccine during nationwide inoculations in 1955.

NATIONAL FOUNDATION FOR INFANTILE PARALYSIS

On Nov. 11, 1953, the foundation decided to offer several manufacturers the opportunity to supply vaccine for the field trials which were scheduled for 1954. Of ten companies with whom the plan was discussed, five accepted—Parke Davis, Eli Lilly, Pitman-Moore, Cutter Laboratories, and Wyeth Laboratories. The foundation agreed to underwrite the costs of production of vaccine to be used in the trials. The technics used in the production of the vaccine were those recommended by Dr. Salk. To prevent the use of vaccine containing live virus, every batch of vaccine for the 1954 trial was to be tested by the manufacturer, by the U.S. Public Health Service, and by Dr. Salk. The presence of live virus would be detected by test inoculations into monkeys which would develop paralysis. The companies which chose to produce vaccine for the foundation would be free, once their obligation to the foundation was ended, to continue to produce vaccine for the commercial markets when the field tests had been concluded and the companies were licensed for commercial production.

All five companies ran into technical difficulties with production, for the inactivation of the live virus by formalin did not proceed uniformly, and testing by the manufacturers revealed batches of vaccine containing live virus, which were rejected.

The field trials began on April 26, 1954, in Fairfax County, Virginia, and by July 10, 1954, when the field trials ended, had involved 1,800,000 children, of whom approximately 440,000 in 44 states received vaccine. Responsibility for the evaluation of the vaccine was placed in the hands of Dr. Thomas Francis, Jr., as head of the Poliomyelitis Vaccine Evaluation Center established at the University of Michigan.

In October 1954 the National Foundation for Infantile Paralysis released an announcement that it was ordering enough vaccine to immunize 9,000,000 children, despite the fact that the results of the field trials were not yet known.

The date set by Dr. Francis for the announcement of the results of the field trials—April 12, 1955, was significant because it marked the 10th anniversary of the death of Franklin Delano Roosevelt, one of the most famous victims of poliomyelitis. Dr. Francis subsequently stated that the date had been chosen purely by chance.

Accordingly on April 12, 1955, in Ann Arbor, Michigan, Dr. Francis reported on the findings. In essence the field study revealed that few reactions had resulted from the vaccine, and that these had been mild; also that the vaccine could be considered to be between 60 and 90 per cent effective against paralytic poliomyelitis, and possibly even more effective against the bulbar type.

Later that day licenses for the manufacture of the vaccine were issued by Oveta Culp Hobby, secretary of health, education, and welfare, and within two days the national vaccination program was under way. On April 14, Secretary Hobby was directed by President Eisenhower to organize a national distribution system for the vaccine, on a voluntary basis. In accordance with the plan of the National Foundation for Infantile Paralysis, first and second graders began receiving vaccine. Two injections were recommended for each child, to be given in the spring, with a third injection to be given seven months later. The demand for vaccine and the shortage of the material gave rise to stories of black markets in vac-

¹ See *THE AMERICANA ANNUAL*, 1955, p. 575.

cine, and led to the introduction in Congress of bills controlling distribution.²

The demand by the public for vaccine continued unabated until April 26, 1955, when paralytic poliomyelitis was reported in six children (five in California, one in Chicago) who had received vaccine prepared by the Cutter Laboratories. Dr. Leonard A. Scheele, surgeon general of the United States, called a halt on April 27 to further use of Cutter vaccine, but with additional cases reported from the use of vaccine prepared by other companies, uncertainty and fear attacked not only the public but also local health boards, many of which ordered inoculations discontinued.

On May 7, 1955, the surgeon general ordered the entire program to be temporarily halted pending an investigation of methods of manufacture and testing of the vaccine. Dr. Louis B. Gebhardt of the University of Utah announced (unofficially) on June 4 that he had induced poliomyelitis in monkeys given the Cutter vaccine which had been under suspicion. Later investigations by the U.S. Public Health Service indicated that the field trials had been conducted without incident as a result of stringent testing for live virus, but that testing of subsequent vaccine had been somewhat relaxed, owing to the tremendous quantities produced.

On May 25, the surgeon general named a standing Poliomyelitis Vaccine Clearance Panel to advise on the release and testing of vaccine, and to foster further research. Two days later, on May 27, new safety standards were accepted by the six licensed manufacturers, and the program was renewed.³ On October 1, Marion B. Folsom, who had succeeded Mrs. Hobby on August 1 as secretary of health, education, and welfare, revealed that sufficient vaccine had already been released to permit second injections for three fourths of the 15,903,000 children in the 5-9 age group, and that the rate of poliomyelitis incidence among children already inoculated (most of them with one injection) was 25 to 50 per cent below that of children in the same age group who had not received the vaccine.

During the entire vaccine controversy, several scientists argued against the type of vaccine produced, maintaining that the vaccine should be prepared from a living but weak virus instead of attempting to attenuate a virulent strain of virus. Late in 1955, studies along these lines were being conducted both in the United States and abroad. It is obvious that present methods of producing a killed vaccine are not foolproof, and careful testing of the final product must be employed to detect batches containing live virus. That the large-scale use of such a vaccine is nonetheless feasible is evidenced by the experience in Canada, where inoculations were safely performed, careful safety testing having eliminated unsatisfactory batches. (See also BACTERIOLOGY; MEDICINE.)

SYDNEY S. GELLIS,

Assistant Professor of Pediatrics, Harvard Medical School; Editor, "Year Book of Pediatrics."

² A plan giving the states full control over allocation of the vaccine was announced on July 31. Each state's supply was to be based on the number of its children aged 5 through 9 years.

³ Among the changes required of the manufacturing companies were the following: larger samples from each lot of vaccine were to be tested for live virus; treatment with formalin was to be prolonged, and two (instead of one) negative tests for live virus were required; and the final bottled product was also to be tested again for live virus.

POLITICAL PARTIES. See DEMOCRATIC PARTY; ELECTIONS, U.S.; REPUBLICAN PARTY.

POLITICAL SCIENCE. In 1955 the American Political Science Association, with a membership of over 5,500, acquired a building in Washington, D.C., which will be known as the Political Science Building and which will be shared as a headquarters with the association's affiliate, the Governmental Affairs Institute.

The association held its 51st annual meeting at Boulder, Colo., Sept. 7-9, 1955. Harold D. Lasswell of Yale University had been chosen in 1954 to succeed to the association presidency, and at the annual meeting in 1955, E. E. Schattschneider of Wesleyan University was chosen president-elect. Conferences were held in the fields of comparative government, international law and relations, national government,

Scientists draw Salk vaccine from tank in which three poliomyelitis strains are pooled. Vaccine is then stored until the safety and potency of each lot are determined.

PARKE, DAVIS AND COMPANY

political parties, political theory, and public law and administration. Special panels were also organized on the relation between political science and political analysis and on the international exchange of political scientists.

A list of over 1,200 doctoral theses in preparation or just completed indicated that the field of international relations, including international organization, international politics, and international law, attracted the most attention, accounting for nearly a third of all of the theses. The fields of foreign and comparative government and of public administration in the United States were next most popular.

Empirical studies and studies looking beyond the national frontiers have been increasingly attractive to political scientists in the United States. A similar emphasis in political science studies throughout the world was noted in a publication by UNESCO, entitled *The University Teaching of Social Sciences: Political Science* (Paris 1954).

At the annual meeting of the American Political Science Association, arrangements were made for establishing the annual Birkhead Award of \$500 for the best doctoral dissertation in the field of democratic government. The annual Woodrow Wilson Award for the best book in the field of government and democracy was given to *Prejudice, War, and the Constitution* (1954), by Jacobus Ten Broek, E. N. Barnhart, and F. W. Matson. Honorable mention was given to Leonard D. White's *The Jacksonians: A Study in Administrative History, 1829-1861* (1954) and Don K. Price's *Government and Science, Their Dynamic Relation in American Democracy* (1954).

The association continued its congressional internship program, which enables young political scientists and journalists to gain the practical experience of working as staff members of congressional committees in the offices of members of the House of Representatives and the Senate in Washington. Ten such internships were given in 1955, five to graduate students in political science and five to journalists and teachers of journalism.

The research program of the association in 1955 included studies of metropolitan areas, of national security and civil liberties, and of resources and personnel in the field of political science in the United States.

Perhaps the most important political science investigation of the year was the report to the president of the Commission on Intergovernmental Relations under the chairmanship of Meyer Kestnbaum. The report embraces the entire field of relations between the federal government and the states.

The International Political Science Association held its triennial congress from August 21 to 27, 1955, in the Swedish Parliament buildings at Stockholm. Representatives of 36 nations were present. The retiring president, William A. Robson, of the London School of Economics and Political Science, was succeeded by James K. Pollock of the University of Michigan. Jean Meynaud, who had served as general secretary since the organization of the association in 1949, was succeeded by John Goormaghtigh of Belgium. The offices of the association, which had been in Paris, were transferred to Geneva, Switzerland.

Among the topics discussed at the congress were the government of great cities, political parties and public opinion, political implications of economic development programs, and the position of small and large states in international

organization. Research topics on the agenda included the participation of women in politics, comparative public administration, the teaching of political science, and comparative government.

During 1955, national political science associations in Australia, the Netherlands, and Ceylon became members of the international association, increasing to 21 the number of such collective members. In addition, 21 scientific institutes and universities were associate members and there were 250 individual members. The association continued the publication of international political science abstracts and was preparing a political science bibliography.

POPULATION STUDIES. See CENSUS DATA, U.S.; POPULATION TRENDS; and Index entry, *Population Studies*.

POPULATION TRENDS, World. The population of the world in mid-1954 was estimated at 2,526 million, an increase of about 39% since 1920* (see Table 1). This growth in general derives from the steady decline in death rates (particularly in infant mortality) brought about by improved health conditions and medical advances over the past few decades.

TABLE 1—WORLD POPULATION ESTIMATES
(Estimates are as of midyear of dates shown.)

¹ Exclusive of USSR but inclusive of European Turkey.

² Exclusive of USSR and European Turkey. ³ 1926. (Based on sources from the Statistical Office of the United Nations.)

In recent years the region with the highest rate of population growth has been South America, where birth rates (for selected countries) in 1953 averaged 37.4, as compared with 28.6 for North America, and 18.2 for Europe. The industrialized nations of western Europe and northern America have comparatively low birth, death, and infant mortality rates, and high life expectancy. In most other areas, death rates are higher than in the industrialized countries; however, the higher birth rates in the nonindustrialized and semi-industrialized countries result in significantly higher rates of natural increase (see Table 2 on page 603).

PORTS AND HARBORS. As construction began in earnest on the St. Lawrence Seaway in early 1955, many major Great Lakes port centers were in the process of developing economic and engineering studies, which would predict the expansion necessary for ocean shipping. Among ports retaining independent consultants experienced in the seaboard port field were Buffalo, N.Y., Detroit, Mich., and Cleveland and Toledo, Ohio. Some lake port construction, preparatory to com-

* Population totals, compiled by the United Nations Statistical Office, are in the nature of estimates, since accurate enumerations have never been taken in some areas inhabited by large sections of the world's population.

NOTE—Symbol "C" indicates data is complete or virtually complete, "I" indicates incomplete or subject to considerable irregularity of registration, and "..." indicates quality is unknown. *Birth Rate*—crude rate (number of births per 1,000 persons). *Death Rate*—crude rate (number of deaths, exclusive of stillbirths, per 1,000 persons). *Rate of Natural Increase*—excess of birth rate over death rate (shown in preceding columns). *Infant Mortality Rate*—deaths of infants under one year of age per 1,000 live births, excluding stillbirths. *Life Expectancy*—average expectation of length of life (in years) at birth, based on mortality conditions of period indicated. *Population Per Sq. Km.*—total area, including inland water (1 sq. km. = 0.3861 sq. mi.)

¹ 1953. ² 1952. ³ 630 in inhabited and cultivated territory. ⁴ Total population. ⁵ Whites only; figures for nonwhites were: male, 59.4; female, 63.7. ⁶ 1950. ⁷ England and Wales. (Sources: *Statistical Yearbook 1954*; *Population and Vital Statistics Reports*, October 1955, Statistical Office of the United Nations.)

pletion of the seaway, was already under way in 1955.

Ground was broken for the Calumet Harbor development of the Chicago Regional Port District; and the Port of Toronto completed a deep-water terminal, especially designed to meet the needs of lakes-ocean shipping. At Toledo, meanwhile, the first full use of the port authority system on the Great Lakes took place when the Ohio State legislature passed a bill permitting the state to have autonomous port authorities, endowed with the powers of taxation, eminent domain, and bond issuance with approval of the voters. (See also CANALS.)

Not dismayed by the competitive aspects of the seaway, seaboard ports continued and even accelerated development and modernization programs in 1955. In June the Port of New York Authority purchased the 2-mile-long Brooklyn waterfront properties of the New York Dock Company for \$13,750,000, and announced overall modernization of the area at a total cost of \$85 million, under a 10-year redevelopment plan, which will provide 25 ultramodern ship berths.

Also, the Port of New York Authority announced that on Feb. 1, 1956, construction of a \$9,300,000 4-berth marine terminal would begin at Port Newark. Also announced was the development of a 400-acre tract of privately owned unused tideland and of a mile-long, 750-foot-wide channel to establish a new Port Elizabeth near Port Newark in New Jersey.

These developments followed closely on the heels of the formal opening of Pier 57 in New York Harbor on Dec. 28, 1954. The new pier is a \$9 million 4-berth project of the Department of Marine and Aviation, City of New York. In addition, the Port of New York Authority completed and placed in operation the \$6,300,000 Pier C at Hoboken, N.J., on March 1, 1955.

Other seaboard areas which will be in competition with the seaway were proportionately vigorous in their continued development plans. The Port of Brownsville, Texas, embarked on a \$3 million wharf construction project; the Port of Lake Charles, La., completed a modern phosphate rock and barite ore grinding plant; and the Port of Corpus Christi, Texas, announced a \$57

million port improvement, bridge building, and construction program. Western Maryland Railway at Port Covington, Baltimore Harbor, launched a \$4,250,000 improvement program for general cargo piers and a \$1,300,000 grain elevator expansion. The Port of Baton Rouge, La., completed a \$4 million grain elevator facility as the initial phase of a \$12.5 million Port of Greater Baton Rouge expansion program; new iron ore handling facilities were completed by the Tennessee Coal and Iron division of the United States Steel Corporation at the Port of Mobile, Ala. At Galveston, Texas, a rail-highway bridge, begun in 1955, will make available new waterfront land on Pelican Island, directly opposite the Galveston wharves on the main channel.

Developments Abroad.—Notable among port development efforts on a worldwide basis during 1955 was the continued expansion of the port at Genoa, Italy, in a westward direction along the Basino di Sampierdana area, in an effort to recapture the port's status as a trans-shipment center for the Mediterranean. At Tyneside, England, completion at Tyne Dock of one of the most modern iron ore discharging plants in the world aimed at boosting iron ore imports to well over a million tons a year. At Kobe, Japan, the Kobe International House—a cooperative venture of the Kobe Municipality, Hyogo Prefectural Government, Kobe Chamber of Commerce and Industry, and Kobe Foreign Trade Association—was opened to stimulate the port area's trade and traffic.

A chemical fertilizer terminal, 1,470 feet long, with a 35-foot water depth alongside, was completed in Alexandria, Egypt. Announced in 1955 were plans for new construction at Alexandria, encompassing a heavy cargo terminal, three general cargo warehouses, a new drydock, a modern grain elevator, several new passenger terminals, and the installation of five radio beacon stations at Egyptian ports and a harbor-controlled radar system.

In Hawaii in 1955 the \$5.5 million Diamond Head Terminal for ocean shipping was completed at Honolulu by the Territorial Board of Harbor Commissioners. In Puerto Rico, the Puerto Rico Transportation Authority dedicated in May 1955 its \$15 million International Airport near San Juan, in connection with a combined seaport-airport development program for the island.

PAUL A. AMUNDSEN,
Editor and Publisher, "World Ports"; Executive Secretary, The American Association of Port Authorities.

PORTUGAL. A republic on the west coast of the Iberian Peninsula of southwestern Europe. Area (including the Azores and Madeira Islands, qq.v.), 35,579 square miles; pop. (est. Aug. 1, 1955), 8,771,000. Chief cities and populations (1950): Lisbon, the capital, 790,434; Oporto, 284,842; Setúbal, 44,034; and Coimbra, 42,640.

Government.—The constitution of 1933 established a corporate state in Portugal. The electorate is limited by voting qualifications and plays a minor role. The president, whose functions are chiefly titular, is elected for 7 years. Gen. Francisco Higinio Craveiro Lopes took office as president on Aug. 9, 1951. Parliament consists of a National Assembly of 120 members elected for 4 years, and a Corporative Chamber of appointed representatives of the corporative associations. The cabinet is not responsible to Parliament. Premier António de Oliveira Salazar has exercised personal control of the government since 1933. Salazar heads the National Union, an association of pro-government forces. In the elections to the National Assembly on Nov. 8, 1953, all 120 members elected were National Union candidates.

Education and Religion.—In 1950, 40.4% of the population over 7 years of age was illiterate. In 1952-53 there were 13,355 primary schools with 726,498 pupils, with an additional 32,682 pupils attending private schools. On the secondary level, 44 liceus had 24,909 pupils, and 23,185 attended private schools. Professional and technical instruction was given in 74 state schools (32,125 pupils) and vocational training in 8 schools (2,736 pupils). The universities at Lisbon, Coimbra, and Oporto had a total of 10,818 students in 1952-53; and the Technical University at Lisbon, 2,591; and special colleges for music and art, 2,214. Roman Catholicism is predominant. There is separation of church and state, and freedom of worship exists.

Finance.—On ordinary and extraordinary accounts, revenue in 1955 was estimated at 7,335 million escudos (7,075.9 million in 1954); expenditure, 7,335 million (7,061.3 million in 1954). The escudo equals 3.478 cents in United States currency.

Production.—Per capita annual income averages less than \$200, among the lowest in western Europe. Agriculture, which engages over half the population, is featured by primitive techniques, large estates, and impoverished farm workers. Industrial growth has been hampered by insufficient venture capital and power shortages. The 6-year development plan (1953-58) is aimed at expanding industry (chiefly electric power), transport and communications, agriculture, and technical education. Gross national product totaled 49.5 billion escudos in 1954, a rise of 3.1% over 1953.

Manufacturing and Mining.—Chief manufactures are textiles, leather, building materials, chemicals, glass, wood and paper products, tobacco products, household goods, soap, and other light items. Production of cotton yarn in 1954 (40,200 metric tons) and woven cotton fabrics (32,760) were at record levels. Cement output totaled 784,800 metric tons, a rise of 7% over 1953; electricity, 1,639.2 million kw.-hr., a rise of 19% (1954 output was over twice that of 1948). Chief minerals and 1953 outputs in metric tons (metal content) were: manganese ore, 5,300; copper ore, 2,600; lead ore, 1,640; tin concentrates, 1,544; tungsten ore, 2,939; pyrites, 651,000. Coal production in 1954 totaled 432,000 metric tons, a decline of 10% from 1953.

Agriculture.—Chief crops and 1954 yields in thousands of bushels were: wheat, 27,470; rye, 7,480; corn, 15,200; barley, 5,580; and oats, 8,700. Production of rough rice in 1954-55 (prelim.) was 318.1 million pounds; potatoes (1954 prelim.), 1,003,009 metric tons. Output of olive oil in 1954 (prelim.) was 53,500 short tons (134,400 in 1953); and wine (1954 prelim.), 11,249,000 hectoliters.

Forestry and Fisheries.—Portugal is the world's leading producer of cork, output totaling 136,726 metric tons in 1953. Portugal is also a major producer of naval stores. Resin exports in 1953 amounted to 39,875 metric tons; turpentine, 7,030. Fish landings in 1953 (prelim.) totaled 392,400 metric tons, of which the important sardine catch was 96,848.

Foreign Trade.—Exports in 1954 totaled 7,297 million escudos; imports, 10,084 million. Cork exports were valued at 1,440 million escudos; fish, 801 million; and wine, 642 million. Imports are mainly machinery and vehicles, fuels, steel mill products, raw cotton, and wheat. Continental European Payments Union (EPU) countries and their dependencies took 53% of Portugal's 1954 exports and provided 61% of imports.

Transportation and Communications.—Portugal's railways aggregated 2,236 miles (route length) in 1954; roads (1953), 17,897 miles (of which about 3,508 were first-class). Portugal's merchant marine in January 1954 included 322 vessels totaling 518,616 tons. Transportes Aereos Portu-

gueses (TAP) provides air service; some 15 foreign lines operate regular services to Lisbon. Passenger cars numbered 89,766 in 1955; trucks, 37,792; telephones, 231,373; radio receiver licenses, 378,000 (1953). In 1952 there were 32 daily newspapers with a total circulation of 549,000.

Principal Events, 1955.—A report submitted to the National Assembly in April revealed that wages in the lower-paid brackets of Portuguese workers were insufficient to maintain a family. The average daily wage for men was said to range between the equivalent of \$0.66 and \$1.05, and legislators called for action to improve living conditions. In November it was revealed that the government planned to increase investments in the remaining years of the 6-year development plan (1953-58) by 2.24 billion escudos over the original goals, the increases to be concentrated chiefly in industry, communications, and transport. The plan as a whole was said to be behind schedule in 1955, due largely to the scarcity of technical skill.

Among the internal political developments of the year was the sentencing in Oporto of Prof. Ruy Luis Gomes to 18 months in prison on June 30. The professor, an allegedly Communist-backed opponent of the Salazar regime who had been ruled ineligible as a presidential candidate in 1951, was charged with "subversive propaganda and attempts against the security of the state." Premier Salazar reorganized the cabinet on July 6, appointing five new ministers, including Dr. Pinto Barbosa as minister of finance.

The National Assembly on January 25 unanimously approved the 1954 Paris agreements on West German rearmament. On August 8 the Portuguese legation in New Delhi was closed and direct diplomatic ties between Portugal and India were severed as a result of the Portuguese-Indian dispute concerning Portuguese India (see PORTUGUESE TERRITORIES). During a two-week visit to the United States and Canada, November 28-December 13, Portuguese Foreign Minister Dr. Paulo Cunha conferred with U.S. Secretary of State John Foster Dulles in Washington. A joint communiqué issued on December 2 stated that the discussion had concerned statements by Soviet leaders visiting India regarding "the Portuguese provinces in the Far East." India subsequently protested to the United States against the use of the term "provinces," but the United States declared that the reference indicated no stand on the dispute.

On Dec. 14, 1955, Portugal, along with 15 other nations, was elected to membership in the United Nations.

PORTUGUESE TERRITORIES. Portugal's overseas possessions have a total area of 803,835 square miles and a population of about 12,357,000. Politically the territories are overseas provinces of Portugal. Each province is under a governor or governor general appointed in Lisbon, and in certain instances has a limited degree of financial and administrative autonomy. Native participation in government is slight or nonexistent. In Africa the Portuguese policy of racial assimilation officially aims at full citizenship for natives. Thus far, however, only a few thousand natives in Angola and Mozambique have been accorded "civilized" status. Forced labor of natives has been reported in Mozambique, where about 250,000 native contractees depart annually for work in the mines of South Africa and the Rhodesias. Over 95% of the native population in the two

major African territories is illiterate. Education is mainly in the hands of Roman Catholic missions. In Mozambique there is a substantial Moslem minority. In the Asian provinces there are small groups of Catholic converts.

The territories of Angola and Mozambique are rich in resources but are largely undeveloped. These territories supply Portugal with cotton, sugar, coffee, and oils, and provide foreign exchange from sales to foreign countries. Under Portugal's six-year development plan (1953-58) there has been some expansion of hydroelectric power, agriculture, transport and communications, and public health facilities.

¹ The Portuguese escudo is equal to 3.478 cents in U.S. currency. ² 1955. ³ Imports, 1952, 191 million patacas (about \$40 million); exports, 99 million patacas (\$21 million). Trade is largely transit.

Territories in Africa: Cape Verde Islands.—A group of 9 inhabited and several barren islands in the Atlantic, about 370 miles west of Dakar. Europeans numbered 3,034 in 1950. Praia (9,880) on São Thiago is the capital. Revenue in 1953 totaled 37,524,000 escudos; expenditure, 35,452,000. In 1953 the island of São Vicente had 119 primary schools (6,167 pupils) and a secondary school (637). Sal Island Airport handles transatlantic traffic. São Vicente is a fueling station for ships. Chief products are canned fish, coffee, mustard, salt, oranges, and brandy.

Portuguese Guinea.—A tropical territory on Africa's west coast about 175 miles south of Dakar. Europeans numbered 2,263 in 1950. Bissau (5,700) is the capital. In 1950 there were 60 elementary schools (3,295 pupils), a secondary school (46), and 4 technical schools (67). Chief exports are groundnuts, palm kernels, hides, wax, rice, and timber. Roads total about 1,800 miles.

São Tomé and Príncipe.—Two islands 125 miles off the African coast in the Gulf of Guinea. Europeans number 1,152 (1950). São Tomé (7,817) is the capital. Revenue in 1952 totaled 50,532,000 escudos; expenditure, 52,394,000. In 1952 there were 17 elementary schools (2,546 pupils), a secondary school (40), and a technical school (68). Chief exports are cacao (10,900 metric tons in 1953), palm kernels, palm oil, copra, coffee, and cinchona. Roads total about 104 miles.

Angola.—A territory on Africa's west coast, south of the Belgian Congo. Europeans number 78,826 (1950). Luanda (137,139) is the capital; Lobito (23,897), an important port. In 1953, revenue totaled 1,184,792,000 escudos; expenditure, 1,078,862,050. Elementary schools in 1953 numbered 1,030 (51,407 pupils); secondary schools, 21 (2,582); professional schools, 164 (4,276). Chief products are coffee (exports, 1954; 45,953 tons), diamonds (exports, 1953; 724,195 carats), manganese ore (output, 1953; 31,600 metric tons, Mn content), sisal fiber, sugar, cotton, corn, rice, wax, palm kernels, and coconuts. Fish landings in 1953 totaled 222,400 metric tons. Manufactures include palm, whale, and fish oils, preserved meats, footwear, paper products, tobacco products, and vegetable fiber. Angola has 1,472 miles of railways (1950); 20,378 motor vehicles (1955); and 2,518 telephones (1955). In 1955 the equivalent of \$39.79 million was earmarked for hydroelectric and irrigation projects, and construction of railways, roads, port facilities, native housing, and other works.

Mozambique.—A territory extending some 1,500 miles along Africa's east coast. Lourenço Marques (93,303) is the capital and chief port; Beira (42,539) is also an important port. The estimated 1955 budget totaled 2,479.1 million escudos, 4% above the 1954 budget. In 1953 there were 1,574 primary schools (198,609 pupils), 6 secondary schools (956), 67 technical

and professional schools (5,925), and 12 normal and theological schools (466). Cash crops comprise the bulk of exports. Chief crops are cotton (103,000 metric tons in 1954), sugar (91,730), copra (38,624 in 1953), cashew nuts, tea, sisal, palm oil, palm kernels, sesame seed, and castor beans. Manufactures are chiefly cement, leather, textiles, footwear, beer, rope, soap, tobacco products, refined sugar, and ginned cotton. Coal (161,673 metric tons in 1953), bauxite (3,107), salt, and chrome are mined. Railways totaled 2,324 miles in 1952; main roads, 2,551 (1953). Motor vehicles numbered 18,629 in 1954; telephones, 7,331 (1955). Regular air services operate out of Lourenço Marques. On Aug. 1, 1955, the new 200-mile Limpopo Railway was inaugurated, linking Lourenço Marques with the railway system of Southern Rhodesia. In 1955 the equivalent of \$31.88 million was allocated for work on a hydroelectric project, railroads, roads, airfields, and other projects.

Territories in Asia: Portuguese India.—Three settlements along India's west coast: Goa, the largest (1,301 sq. mi.), near the southern end of Bombay Province; Damão (Daman), an island some 100 miles north of Bombay; and Diu, an island across the Gulf of Cambay, opposite Damão. The capital is Pangim (14,213), in Goa. In 1953 the budget totaled 148,996,012 escudos. There were 162 elementary schools (not including 177 mission schools) in 1952 with 12,453 pupils; 4 secondary schools (895 pupils); a technical school (30); a medical school (195); and a teacher-training school (31). Minerals include iron ore (944,000 metric tons of crude ore produced in 1953), manganese ore (63,000 metric tons Mn content), and salt. Japan and the United States are the chief purchasers of ore exports. Other products are coconuts, fish, spices, cashew nuts, and copra. Since India became an independent nation, the New Delhi government has sought the incorporation of the Portuguese settlements within India. The Lisbon government, refusing to consider the territories' cession. Demonstrations and other activities by Indian nationalists in 1955 culminated in the attempted entry into the territories of some 3,000 nonviolent demonstrators on August 15. Portuguese police halted the incursions by force, killing over 20 Indians. A new statute providing for the election of some members of the Legislative Council for the Portuguese settlements came into effect on August 1, and elections took place on August 22. Only about 50,000 persons entered their names on the electoral register. (See also INDIA, REPUBLIC OF; PORTUGAL.)

Macao.—An island opposite Hong Kong, and 3 smaller offshore islands. Europeans number 2,719 (1950). An entrepôt port for commerce with China, Macao is noted as a pleasure and gambling resort and as a center for smuggling. The 1953 budget totaled 122,302,621 escudos. In 1950 there were 64 primary schools (15,281 pupils), 21 secondary schools (3,572), and 17 technical schools (1,290). On Oct. 25, 1955, a Peking radio broadcast declared that Macao was Chinese and that the Chinese people had not given up their claims to the territory.

Portuguese Timor.—This province lies between the Celebes and Australia and comprises the eastern part of the island of Timor, the territory of Oe-Cusse (Ambeno), and 2 small islands in the Lesser Sundas. Dili (1,795) is the capital and chief port. Revenue in 1953 totaled 63,266,000 escudos; expenditures, 64,164,000. In 1953 there were 99 primary schools (6,014 pupils) and 3 secondary schools (107). Chief products are coffee, rice, sugar, sandalwood, wax, and copra. Roads total about 1,320 miles.

POST OFFICE DEPARTMENT. Operations of the Post Office Department during the fiscal year 1954 set new records in mail volume and revenue. Revenue for the year increased \$184,890,023, or 8.82%, over the previous fiscal year, to reach a record \$2,277,767,124. Expenses totaled \$2,676,913,890, representing a decrease of \$83,097,071, or 3.01%, from 1953.

The volume of mail handled during the fiscal year 1954 increased in terms of originating mail to reach 52,213,170,387 pieces. Special service transactions (money orders, postal savings, registry, insured, collect on delivery, and special delivery) numbered 823,249,650.

With 507,000 employees at the end of the 1954 fiscal year, the Post Office Department had more employees than any other nonmilitary department of the federal government. Included were 39,405 postmasters, 4,009 assistant postmasters, 121,761 city delivery carriers, 49,935 rural delivery carriers, and 37,265 postal transportation employees.

On June 30, 1954, there were 39,405 post offices, including 248 in Alaska, 101 in Hawaii, 107 in Puerto Rico, 5 in the Virgin Islands, and 10 on Pacific islands other than Hawaii.

Rural delivery routes as of June 30, 1954, numbered 32,370 and covered 1,527,289 miles. Railway post offices traveled 163,380,962 miles; there were 57 domestic airmail routes; and foreign air service involved 28,187,271 ton-miles flown by United States international carriers during the 1954 fiscal year.

Postage collected on all mail matter in the 1954 fiscal year totaled \$2,052,172,000 (90.1% of all postal revenue). The sale of postage stamps and stamped paper yielded \$998,965,000; of documentary internal revenue stamps, \$21,465,212.78; and of migratory bird hunting stamps, \$4,542,860. Revenue from money orders totaled \$67,476,762 for 361,338,020 orders issued.

The Postal Savings System had 2,934,795 depositors on June 30, 1954, to whom were credited \$2,251,419,237 in outstanding principal in active accounts. (See also PHILATELY.)

PRESBYTERIAN CHURCHES.* At the meetings in May 1955 of the general assemblies of the Presbyterian Church in the United States of America, the Presbyterian Church in the United States (commonly called Southern), and the United Presbyterian Church of North America, it was reported that the Plan of Union, which had been transmitted to their respective presbyteries for a vote of approval or disapproval, had been defeated because of the overwhelming rejection of the plan in the Southern Presbyterian Church.

PRESBYTERIAN CHURCH STATISTICS

Church	Ministers	No. of churches	No. of members

The 167th General Assembly of the Presbyterian Church in the U.S.A. elected Dr. Paul S. Wright, pastor of the First Presbyterian Church of Portland, Oreg., as moderator.

The church's Building Funds Commission reported that the churches had subscribed \$11,742,942, as of March 31, 1955, toward the \$12,000,000 goal, and had paid in over \$9,000,000 in cash. The funds will be used to build new

* Distinctively Presbyterian churches in the United States include the Presbyterian Church in the United States of America; Presbyterian Church in the United States (commonly called the Southern Presbyterian Church); United Presbyterian Church of North America; Reformed Presbyterian Church Synod; Associate Reformed Presbyterian Church General Synod; Cumberland Presbyterian Church; Cumberland Presbyterian Church (Colored); Orthodox Presbyterian Church; and Bible Presbyterian Church.

churches and construct needed seminary buildings.

The reconstituted special committee on deacons and trustees presented its report, and three proposals were made providing for: (1) clarification and delineation of the authority and responsibility of the session in the local congregation; (2) strengthening the work of deacons in the local congregations; and (3) the mandatory rotary system in the election of church officers, with the creation of representative nominating committees in churches. The functions of trustees are also to be greatly clarified.

A special committee on licensure and ordination presented proposals seeking to: (1) control more effectively the ordination and licensure of candidates for the ministry; and (2) in synods where the presbyteries desire it, to create a synod committee on the examination of the intellectual competence of all candidates for ordination.

The 168th General Assembly of the Presbyterian Church in the United States of America is scheduled to meet in Philadelphia, Pa., on May 24, 1956, and will celebrate the 250th anniversary of the organization of the first presbytery in the United States. During 1954, a net gain of 77,225 members was recorded, and contributions totaled \$158,775,755.

PRIBILOF, or FUR SEAL ISLANDS. Four islands (St. Paul, St. George, and the uninhabited Otter and Walrus) and several islets, situated in the Bering Sea, politically part of the Territory of Alaska. Area, about 180 square miles; pop. (1950), 546, mainly Aleuts. The islands are the breeding grounds of a major part of the world's fur seal population. In 1955 the herd yielded 65,638 skins which were sold at public auction for an average price of \$94.14 each. The fur seal industry, which includes production of oil and meal as byproducts, is operated by the Fish and Wildlife Service of the U.S. Department of the Interior.

PRINCE EDWARD ISLAND. Located in the Gulf of Saint Lawrence north of Nova Scotia and northeast of New Brunswick, and separated from the two provinces by Northumberland Strait, Prince Edward Island is the smallest of the Canadian provinces. The area is 2,184 square miles, and the population in 1951 was 98,429 (official est., June 1954, 105,000). Charlottetown, the capital, has a population of 15,689. Other urban centers are Summerside, 6,547; Souris East, 1,183; and Montague, 1,068.

Government.—The province is governed by a lieutenant governor (T. William L. Prowse, commissioned on Oct. 4, 1950); an Executive Council (premier and president of the council, Hon. Alexander W. Matheson); and a Legislative Assembly of 30 members (15 councillors elected by property owners, and 15 assemblymen elected by universal suffrage). The province sends 4 representatives to the Canadian House of Commons and 4 to the Senate in Ottawa.

Education.—In the 1953-54 school year there were 19,933 pupils and 766 teachers. Expendi-

tures for schools amounted to \$2,126,974. The province's two colleges, Prince of Wales College and St. Dunstan's University, are in Charlottetown.

Religion.—The percentages of the population belonging to the different denominations in 1951 were as follows: Roman Catholic, 45; United Church, 25; Presbyterian, 15.5; Anglican, 6; Baptist, 5.7; and others, or not stated, 2.5.

Finance.—On Jan. 1, 1955, there were 24 branches of chartered banks in operation in the province. The gross funded debt was \$18,600,000, less sinking funds. There were outstanding liabilities of \$17,833,720 for the year ending March 31, 1955.

Production.—The economy of the province is based in large part on agriculture; in 1953 field crops totaled about \$25,600,000. The landed value of the island's fisheries in 1953 was \$3,832,686. Income from the tourist industry is estimated at about \$5 million annually. The production of pulpwood and sawn lumber amounts to about \$2 million a year. There are a number of industrial establishments.

Communications.—On March 31, 1955, there were 12,551 passenger cars and 3,180 miles of provincial roads, of which 350 miles were paved. On March 31, 1955, there were two airports. During 1955 there were 13,790 telephones and 22,000 radios in use. The province is connected with the mainland by four car ferries during the summer months and in the winter by the world's largest ice-breaking ferry of its type. There are daily airplane flights from Charlottetown and Summerside to the mainland.

PRISONERS OF WAR. See Index entry.

PRISONS. There are in the United States approximately 230 state and federal institutions of various kinds—reformatories, prisons, prison farms, and camps—for adult offenders. These do not include the local and county jails, about 3,000 in number, which frequently handle both sentenced and unsentenced prisoners. At the end of 1954, the state and federal institutions had a total prison population of 182,051, representing the highest number of persons in adult institutions since the collection of uniform statistics on prison population was started in 1939.

Prisoners in state institutions numbered 162,048 at the end of 1954, an increase of 8,642 over the previous year. In the federal institutions, the year-end population rose to 20,003, an increase of 640. At the same time, the number of persons committed by the courts to both state and federal institutions increased even more sharply. A total of 79,946 persons were sent to prison in 1954, as compared with 73,299 in 1953, a rise of over 9 per cent.

Of importance also in these population statistics is the fact that the number of prisoners released from prison has increased at a much slower rate. During 1954, a total of 78,184 persons were released from prison, as compared with 75,125 in 1953, an increase of only a little over 4 per cent.

In the face of this growing problem of overcrowding in prisons throughout the country, the

UNITED PRESS

Guards use tear gas to subdue rioting inmates of the Nebraska Men's Reformatory, at Lincoln, on Sept. 9, 1955.

SENTENCED PRISONERS IN U.S. PRISONS AND REFORMATORIES (December 31 of each year)

Year	Federal institutions	State institutions	Total	Rate per 100,000 population
1954.	20,003	162,048	182,051	114.4

1944.	18,139	113,835	131,974	104.2
1943.	16,113	120,254	136,367	107.0

continuing rash of prison riots starting in 1952 takes on added significance. Between January and November 1955, twenty riots occurred in ten state prisons and reformatories, one state hospital for the criminal insane, and two county jails. The most serious of these rebellions took place in the state prisons of Nebraska, Washington, and Massachusetts. Others occurred in prisons in Texas, Wyoming, Michigan, and Rhode Island. These were followed by the usual investigations, but by little significant legislation or concerted action toward the improvement of basic conditions or expansion of facilities.

The conditions which make these flare-ups of mass violence possible continue to be overcrowding; untrained, underpaid, and frequently superannuated personnel; lack of a sound system of inmate classification; political meddling in prison administration; harsh and unfair treatment; idleness; and, in most instances, an almost total lack of rehabilitative programs. The problem of providing constructive employment for the many thousands of prisoners in state prisons is probably the most persistent problem in prison administration, and a solution is nowhere in sight. And as for overcrowding, with a few exceptions, no general prison reconstruction program is under way to expand facilities or to establish modern correctional programs.

The federal prison system, too, has not been immune from this problem of overcrowding or from the need for expanded facilities. The federal prison system comprises 29 institutions located in 19 states and the District of Columbia. Designed for a normal capacity of about 19,000, the federal institutions as of Sept. 8, 1955, had to handle a total population of 19,913.

For the fiscal year 1954-55, the total appropriation of funds for the administration of the

federal prison system was \$27,634,845. The cost averages \$3.53 per day per prisoner, which covers salaries, maintenance of plant and equipment, food, clothing, education, case-work services, and other treatment programs.

The industrial production program is operated by Federal Prison Industries, Inc., a government-owned corporation, but administered as an integral part of the Bureau of Prisons. During the 1955 fiscal year, this industrial production employed about 20 per cent of the federal prison population and produced goods valued at \$20,362,250 for sale to other government agencies. Out of the earnings, the corporation financed the vocational training program, paid out to inmates employed in the shops \$1,185,978 in wages, which are sent home to dependents or kept for them in anticipation of their release. In addition, the corporation has returned in excess of \$28,500,000 to the U.S. Treasury over the past nine years—in itself a substantial return to the taxpayer for the cost of operating the federal prisons.

A noteworthy event in 1955 was the first United Nations World Congress on the Prevention of Crime and the Treatment of Offenders, held in Geneva, August 22-September 3. This was a continuation of similar congresses previously called by the International Penal and Penitentiary Commission, whose functions have now been taken over by the United Nations. Some 500 delegates attending represented a wide gamut of professional interests focusing on the treatment of the offender. Psychiatrists, social workers, judges, and prison administrators and other professional groups discussed the adoption of minimum standards of treatment, training of institutional personnel, the relative merits of the open-type institution, and the universal problem of the utilization of prison labor.

Prison reform has traveled a long road since the days of the fortress prison, the galley ship, the whipping post, and the pillory, and while

many prisons today still reflect these old traditions, the spirit of this international congress and the topics discussed there reflect the slowly moving worldwide trend toward a criminal policy that has a social rather than a punitive purpose, that seeks rehabilitation rather than punishment for its own sake. (See also CRIME—Crime Prevention; POLICE.)

J. V. BENNETT,
Director, U.S. Bureau of Prisons.

PRIZES AND AWARDS. The principal prizes and awards announced in 1955 include those in the following list, classified by subject. For other awards not listed here, see the Index entry, *Prizes and Awards*.

NOBEL PRIZES

Chemistry.—Dr. Vincent du Vigneaud (q.v.) of Cornell University Medical College, for his synthesis of the hormone oxytocin and his work in typing the hormone vasopressin.

Literature.—Halldór Kiljan Laxness (q.v.), Icelandic novelist, for his "vivid epic writing, which has renewed the great Icelandic narrative art."

Peace.—Office of the U.N. High Commissioner for Refugees, 1954 prize.

Physics.—Dr. Willis E. Lamb, Jr. (q.v.), of Stanford University, "for his discoveries regarding the hyperfine structure of the hydrogen spectrum"; and Dr. Polykarp Kusch (q.v.) of Columbia University "for the precision determination of the magnetic moment of the electron."

Physiology and Medicine.—Dr. Hugo Theorell (q.v.), Swedish biochemist, for his discoveries on oxidation enzymes.

The 1955 awards were equivalent to \$36,720 in each field; the 1954 peace prize, to \$35,066.

PULITZER PRIZES

Announced by the trustees of Columbia University on May 2, 1955, the Pulitzer Prize awards for 1954 were as follows:

Journalism.—Most disinterested and meritorious public service rendered by a United States newspaper: Columbus (Ga.) *Ledger* and Sunday *Ledger-Enquirer*, for its news coverage and editorials on corruption in Phenix City, Ala. Distinguished local reporting (under pressure of edition time): Mrs. Caro Brown of the Alice (Texas) *Daily Echo*, for an article on the one-man political rule of George B. Parr in Duval County. Distinguished local reporting (showing initiative and resourcefulness, not under pressure): Roland K. Towery of the *Cuero (Texas) Record*, for a series of articles on fraud in the administration of the state veterans' land program. Distinguished reporting on national affairs: Anthony Lewis of the Washington (D.C.) *Daily News*, for a series of articles which led to the clearance and reinstatement of Abraham Chasanow, dismissed by the Navy Department as a security risk. Distinguished reporting on international affairs: Harrison E. Salisbury of the New York *Times*, for his series of articles entitled "Russia Re-viewed." Distinguished editorial writing: Detroit *Free Press*, for an editorial by Royce Howes on a Chrysler Corporation strike. Distinguished editorial cartoon: Daniel R. Fitzpatrick of the St. Louis *Post-Dispatch*, for a cartoon on Indochina entitled "How Would Another Mistake Help?" and for the body of his work. Outstanding news photography: John L. Gaunt, Jr., of the Los Angeles *Times*, for his picture of a couple whose 19-month-old son had just been drowned in the surf.

Letters.—Fiction in book form: William Faulkner (q.v.), for *A Fable*. Original American play: Tennessee Williams (q.v.), for *Cat on a Hot Tin Roof*. Book on United States history: Paul Horgan (q.v.), for *Great River: The Rio Grande in North American History*. American biography: William S. White, for *The Taft Story*. Volume of verse: The late Wallace Stevens (q.v.), for *The Collected Poems of Wallace Stevens*.

Music.—Gian-Carlo Menotti (q.v.), for *The Saint of Bleeker Street*.

ART AND MUSIC

Alice M. Ditson Award (\$1,000) for "the aid and encouragement of American musicians": Robert Shaw. American Institute of Architects Fine Arts Medal: Ivan Mestrovic.

American Institute of Graphic Arts Medal: P. K. Conkright, Princeton University Press.

American Watercolor Society Gold Medal: W. Emerton Heitland, for *Quince Street*.

American Watercolor Society Grand Prize (\$1,000): Chen Chi, for *A Man*.

Art Institute of Chicago annual exhibition prizes: Joseph Goto, first prize (\$1,500), for his sculpture *Struggle*; Gerald McLaughlin, second prize (\$1,000), for his painting *The Orator and the Ladies*.

Audubon Artists gold medals: Francis de Erdely, for his painting *The Wanderer*; Jerri Ricci, for her water color *Lower Manhattan*; Constance Scharf, for her drawing *Magnolia Leaves with Vase*; Polygnotos Vagis, for his sculpture *Dancer*.

Benjamin Altman Prize (\$1,500) for figure painting: Isabel Bishop, for *Girls in the Subway Station*.

Benjamin Altman Prize (\$1,500) for landscape painting: Furman Finck, for *Recollections of an English Abbey*.

Edwin Palmer Memorial Prize (\$1,200): Gifford Beal, for *Mending the Nets Off Strattsouth*.

Jean Sibelius Prize (7.5 million markkaa): Paul Hindemith.

National Institute of Arts and Letters Award for Distinguished Service to the Arts: Henry Allen Moe.

National Institute of Arts and Letters First Prize in Architecture: Gordon Bunshaft, designer of Lever House and the Manufacturers Trust Company building in New York.

National Institute of Arts and Letters Gold Medal for Painting: Edward Hopper.

New York Music Critics Circle awards for 1954: Dimitri Shostakovich, for his Symphony No. 10, best orchestral work; Vittorio Rieti, for his String Quartet No. 3, best chamber work; Gian-Carlo Menotti (q.v.), for *The Saint of Bleeker Street*, best opera; Carl Orff, for *Carmina Burana*, best choral work; Vittorio Giannini, for *The Taming of the Shrew*, special citation.

Royal Gold Medal for Architecture for 1956: Walter Gropius.

Sibelius Gold Medal: Igor Stravinsky.

JOURNALISM

F. Wayland Ayer Cup for mechanical excellence in journalism: New York *Herald Tribune*.

George Polk Memorial awards for 1954: Foreign reporting—George Weller, Chicago *Daily News Syndicate*; international affairs—Thomas J. Hamilton, New York *Times*; national reporting—Luther Huston, New York *Times*; metropolitan reporting—James McGlinchey and Sydney Mirkin, New York *Daily News*; wire service reporting—Alan J. Gould and a team of reporters, Associated Press; suburban reporting—Thomas Finnegan, Long Island City (N.Y.) *Star-Journal*; special page—Jacob Jacowitz, New York *World-Telegram and Sun*; news photography—Maurice Johnson, International News Photos; community service—Station WNYC; radio-television reporting—Eric Seavard, Columbia Broadcasting System; special awards—Public Affairs Department, National Broadcasting Company, for *Three Two One . . . Zero*; Leo Rosten, for article in *Look*, "Is Fear Destroying Freedom?"; Dan Parker, New York *Daily Mirror*, for articles on boxing racketeering.

Heywood Broun Award (\$500) for 1954: Anthony Lewis, Washington (D.C.) *Daily News*.

Lasker journalism awards (\$1,000) for 1954: Alton L. Blakeslee, Associated Press, for articles on research at Woods Hole; John Robert Coughlan, *Life*, for an article on the Salk poliomyelitis vaccine; Milton Silverman, for an article in the *Saturday Evening Post* on the use of drugs in hypertension and mental diseases.

Lauterbach Award (\$1,000) of the Authors Guild: Joseph and Stewart Alsop, for their article "We Accuse" in *Harper's Magazine*.

Maria Moors Cabot awards for "advancement of international friendship in the Americas": Pedro G. Beltrán, director, *La Prensa*, Lima, Peru; Breno Caldas, director, *Correio do Povo*, Porto Alegre, Brazil; John Oliver La Gorce, editor, *National Geographic Magazine*; Roberto J. Noble, proprietor and director, *Clarín*, Buenos Aires, Argentina; Archibald T. Steele, New York *Herald Tribune*.

Overseas Press Club awards: Best consistent reporting of domestic or United Nations news that has an effect on foreign affairs—James Reston, New York *Times*; best consistent press reporting from abroad—New York *Times*; best consistent radio reporting from abroad—Columbia Broadcasting System; best consistent television presentation of foreign affairs—See *It Now*; best press interpretation of foreign news—New York *Times*; best radio interpretation of foreign news—CBS *World News Roundup*; best photographic reporting from abroad—*Life*; George Polk Memorial Award—the late Robert Capa, *Life* photographer.

Raymond Clapper Memorial Award (\$500) for Washington reporting in 1954: James Reston, New York *Times*.

LITERATURE

American Academy of Arts and Letters Award of Merit (medal and \$1,000): Jorge Guillin.

Bancroft prizes (\$2,000) of Columbia University "for distinguished writings in American history": Leonard D. White, for *The Jacksonians*; Paul Horgan (q.v.), for *Great River: The Rio Grande in North American History*.

Bollingen Prize in Poetry (\$1,000) for 1954: Louise Bogan, for *Collected Poems, 1923-53*; Léonie Adams, for *Poems: A Selection*.

Carey-Thomas Award for the best example of creative publishing: Doubleday & Co., for Anchor Books.

PRIZES AND AWARDS

Edgar Allan Poe awards of the Mystery Writers of America, Inc., for 1954: Raymond Chandler, for *The Long Goodbye*, best mystery novel; Jean Potts, for *Go, Lovely Rose*, best first mystery novel; Stanley Ellin, for *The House Party*, best short story; Charles Boswell and Lewis Thompson, for *The Girl with the Scarlet Brand*, best fact crime writing; John Michael Hays, for *Rear Window*, best mystery film; Gore Vidal, for *Smoke*, best television mystery program; Stanley Niss, for *The Tree*, best radio mystery program; Agatha Christie, for *Witness for the Prosecution*, best mystery play; Drexel Drake of the *Chicago Tribune*, Dell Books, and Berton Rouché, special awards.

Governor General's awards to Canadians for the best books of 1954: Fiction—*Fall of a Titan*, by Igor Gouzenko; creative nonfiction—*Thirty & Three*, by Hugh MacLennan; academic nonfiction—*This Most Famous Stream*, by A. R. M. Lower; poetry—*The Metal and the Flower*, by P. K. Page; juvenile—*The Nor' Westers*, by Marjorie Wilkins Campbell.

Grand Prix for the writer whose work is considered to have conferred the greatest luster on French letters: Jean Schlumberger.

Leacock Medal for humor: Robertson Davies, for *Leaven of Malice*.

National Book awards: Fiction—William Faulkner (q.v.), for *A Fable*; nonfiction—Joseph Wood Krutch, for *The Measure of Man*; poetry—the late Wallace Stevens (q.v.), for *The Collected Poems of Wallace Stevens*; special citation—E. E. Cummings, for *Poems, 1923-1954*.

National Institute of Arts and Letters Gold Medal for Essays and Criticism: Edmund Wilson.

Poetry Society of America Gold Medal for Distinguished Achievement: Mrs. Leonora Speyer.

Prix Femina: André Dhôtel, for *Le pays où l'on n'arrive jamais*.

Prix Goncourt: Roger Ikor, for *Les eaux mêlées*.

Prix Interallié: Félicien Marceau, for *Les élans du coeur*.

Prix Théophraste Renaudot: Georges Govy, for *Le moissonneur d'épines*.

RADIO AND TELEVISION

Academy of Television Arts and Sciences awards for 1954: George Gobel, outstanding new personality; John Daly, best news reporter or commentator; *Operation Undersea* (*Disneynland*), best individual program of the year; *This Is Your Life*, best audience or guest participation or panel program; *Lassie*, best children's program; *Omnibus*, best cultural, religious, or educational program; *Art Linkletter's House Party*, best daytime program; *Gillette Cavalcade of Sports*, best sports program; *United States Steel Hour*, best dramatic series; *Dragnet*, best mystery or intrigue series; *Make Room for Daddy*, best situation comedy series; *Disneynland*, best variety series; *Stories of the Century*, best Western or adventure series; Robert Cummings, best actor in a single performance (*Twelve Angry Men*); Danny Thomas, best actor starring in a regular series; Art Carney, best supporting actor in a regular series; Judith Anderson, best actress in a single performance (*Macbeth*); Loretta Young, best actress starring in a regular series; Audrey Meadows, best supporting actress in a regular series; Perry Como, best male singer; Dinah Shore, best female singer; *Twelve Angry Men*, best dramatic script; *George Gobel Show*, best comedy script; Bob Markell, best live-show direction, for *Tragedy on Mount Everest (You Are There)*; Ralph Berger and Albert Pyke, best filmed-show direction, for *Christmas Carol (Shower of Stars)*.

Alfred I. du Pont awards for public service in radio and television: Eric Sevareid, Columbia Broadcasting System; Station KCAK, Gallup, N. Mex.; Station WHAS, Louisville, Ky.

George Foster Peabody awards for 1954: *Radio*.—*Conversation*, best entertainment; *Man's Right to Knowledge*, best educational program; *Pauline Frederick at the U.N.*, award for contribution to international understanding; Station KCAK, Gallup, N. Mex., cited for local public service; Boris Goldovsky, cited for conducting musical quiz program during Metropolitan Opera broadcast intermissions. *Television*.—George Gobel, best entertainment; *Adventure*, best educational program; *Disneynland*, best youth and children's program; *Omnibus* and *The Search*, special awards; *Industry on Parade*, cited for national public service; Station WJAR-TV, Providence, R.I., cited for regional public service. *Radio and Television*.—John Daly, best news analysis.

Sylvania Television awards for 1955: *Peter Pan*, most outstanding program; *The \$64,000 Question*, best new television series; *You'll Never Get Rich*, best comedy show; *Kraft Television Theatre*, best dramatic series; *Patterns*, best dramatic show; *The Vice Presidency—the Great American Lottery (See It Now)*, best documentary program; *The Voice of Firestone*, best musical series; *Mickey Mouse Club*, best network children's show; *Omnibus*, best network educational series; *The Search*, outstanding network public service; *Home*, best network woman's show; *The Ed Sullivan Show*, best showmanship in variety entertainment; *A Man Is Ten Feet Tall*, most original play; Sidney Poitier, best performance by

an actor (*A Man Is Ten Feet Tall*); José Ferrer, best performance in a classical role (*Cyrano de Bergerac*); Ed Begley, best performance by an actor in a supporting role (*Patterns*); Julie Harris, best performance by an actress (*Wind from the South*); Mildred Dunnock, best performance by an actress in a supporting role (*A Child Is Born*); *Focus on Delinquency*, outstanding local public service; Station WBZ-TV, Boston, Mass., best local news coverage; *Your Future Unlimited*, best local educational series; *Children's Corner*, best local children's show; James C. Hagerly, cited for opening presidential press conferences to television; Sylvester L. Weaver, Jr., cited for "the greatest contributions to creative television techniques"; the broadcasting industry, cited for its coverage of the 1955 Northeastern floods.

SCIENCE

Albert Lasker Award (\$1,000) of the American Heart Association for 1955: Dr. Carl J. Wiggers, Bunts Educational Institute, Cleveland, Ohio.

Albert Lasker awards in medical research and public health administration: Dr. Karl Paul Link, University of Wisconsin; Dr. Robert D. Defries, University of Toronto; Dr. C. Walton Lillehei and others, University of Minnesota; Menninger Foundation and Clinic; Nursing Services of the U.S. Public Health Service; Drs. Walsh McDermott and Carl Muschenheim of New York Hospital-Cornell University Medical Center and other tuberculosis researchers.

American Cancer Society National Award: Dr. Cornelius P. Rhoads, Sloan-Kettering Institute for Cancer Research.

American Chemical Society Award (\$1,000) for nuclear applications in chemistry: Dr. Willard F. Libby, University of Chicago.

American Chemical Society Award (\$1,000) in pure chemistry: Dr. Paul M. Doty, Harvard University.

American Institute of Chemists Gold Medal for service to chemistry: Raymond Stevens of Arthur D. Little, Inc.

American Meteorological Society awards for 1955: Jerome Niamas, U.S. Weather Bureau; Dr. Charles F. Brooks, Blue Hill Observatory; Science Service, Inc.

American Society of Mechanical Engineers Medal: Granville M. Read, E. I. du Pont de Nemours & Co., Inc.

Arthur L. Day Medal of the Geological Society of America: Dr. Earl Ingerson, U.S. Geological Survey.

Benjamin G. Lamme Medal of the American Institute of Electrical Engineers for 1954: A. M. de Bellis, Consolidated Edison Company.

Borden Award (gold medal and \$1,000) of the Association of American Medical Colleges: Dr. Charles Huggins, University of Chicago.

Borden Award (\$1,000) in milk chemistry: Dr. Samuel R. Hoover, U.S. Department of Agriculture.

Collier Trophy "for the greatest achievement in aviation in 1954": Richard T. Whitcomb, National Advisory Committee for Aeronautics.

Daniel Guggenheim Medal of the American Society of Mechanical Engineers: Dr. Theodore von Kármán.

Dr. C. C. Criss Award (gold medal and \$10,000) for 1955: Dr. Jonas E. Salk (q.v.).

Egleston Medal of Columbia University for "distinguished engineering achievement": Rear Admiral Hyman G. Rickover.

Eli Lilly and Company Award (gold medal and \$1,000) in biological chemistry: Dr. Robert A. Alberty, University of Wisconsin.

Fisher Award (\$1,000) in analytical chemistry: Dr. Harvey C. Diehl, Iowa State College.

Francis P. Garvan Medal of the American Chemical Society: Dr. Allene Jeanes, U.S. Department of Agriculture.

Frank H. Lahey Award "for outstanding leadership in medical education": Herbert Hoover.

Fritzsch Award (gold medal and \$1,000) for work in essential oils: Dr. Herman Pines, Northwestern University.

Grosvenor Medal of the National Geographic Society: Dr. John Oliver La Gorce.

Holley Medal of the American Society of Mechanical Engineers: Dr. George J. Hood.

Hoover Gold Medal for distinguished public service by an engineer for 1955: Charles F. Kettering.

Institute of Radio Engineers Medal of Honor for 1956: John V. L. Hogan, Hogan Laboratories, Inc.

James Watt International Medal of the Institution of Mechanical Engineers: Igor Sikorsky.

John Scott Award (medal and \$1,000): Dr. Walter H. Brattain, Bell Telephone Laboratories, Inc.; Dr. John Bardeen, University of Illinois.

Kalinga Prize (£1,000) of the U.N. Educational, Scientific and Cultural Organization: Dr. Augusto Pi-Suñer, Central University of Venezuela.

Kendall Company Award (\$1,000) in colloid chemistry: Dr. Victor K. La Mer, Columbia University.

Langley Gold Medal of the Smithsonian Institution for research in aerodynamics: Dr. Jerome C. Hunsaker, Massachusetts Institute of Technology.

Max Planck Medal for distinguished service to world

science: Professor Hans A. Bethe, Cornell University.
Octave Chanute Award of the Institute of the Aeronautical Sciences: Maj. Gen. Albert Boyd, Wright Air Development Center, U.S. Air Force.

Passano Foundation Award (\$5,000) for distinguished medical research: Dr. Vincent du Vigneaud (q.v.).

Paul-Lewis Laboratories Award (\$1,000) in enzyme chemistry: Dr. Merton F. Utter, Western Reserve University.

Penrose Medal of the Geological Society of America: The late Dr. Maurice Gignoux, University of Grenoble.

Precision Scientific Company Award (\$1,000) in petroleum chemistry: Milburn J. O'Neal, Shell Oil Company.

Priestley Medal of the American Chemical Society: Dr. Charles Allen Thomas, Monsanto Chemical Company.

Research Corporation Scientific Award (\$2,500) for 1954: Dr. Willis E. Lamb, Jr. (q.v.).

Rittenhouse Medal of the Franklin Institute: Sir Harold Spencer Jones, astronomer royal.

Robert M. Losey Award of the Institute of the Aeronautical Sciences: Herman B. Wobus, U.S. Navy Fleet Weather Central, Norfolk, Va.

Royal Geographical Society Patron's Medal: Dr. John K. Wright, American Geographical Society.

Rumford Award of the American Academy of Arts and Sciences: Professor James Franck, University of Chicago.

Scientific Apparatus Makers' Award (\$1,000) in chemical education: Dr. Otto M. Smith, Oklahoma Agricultural and Mechanical College.

Sedgwick Memorial Medal of the American Public Health Association: The late Dr. Albert J. Chesley, Minnesota State Board of Health.

Thomas A. Edison Medal of the American Institute of Electrical Engineers: Dr. Oliver E. Buckley, Bell Telephone Laboratories, Inc., medal for 1954; Leonid A. Umansky, General Electric Company, medal for 1955.

Thurman H. Bane Award of the Institute of the Aeronautical Sciences: Dr. Gottfried Guderley, Wright Air Development Center, U.S. Air Force.

Trudeau Medal of the National Tuberculosis Association: Dr. William H. Feldman, Mayo Foundation.

Willard Gibbs Medal of the American Chemical Society for 1956: Dr. Vincent du Vigneaud (q.v.).

Wright Brothers Medal of the Society of Automotive Engineers for 1954: John Tyler and E. C. Perry, Jr., Pratt & Whitney Aircraft.

THEATER AND MOTION PICTURES

Academy of Motion Picture Arts and Sciences awards for 1954: Best picture of 1954—*On the Waterfront*; best film actress—Grace Kelly (q.v.), for performance in *The Country Girl*; best film actor—Marlon Brando (q.v.), for performance in *On the Waterfront*; best director—Elia Kazan, for *On the Waterfront*; best supporting actress—Eva Marie Saint, in *On the Waterfront*; best supporting actor—Edmond O'Brien, in *The Barefoot Contessa*; best foreign-language film—*Gate of Hell* (Japanese); best feature-length documentary film—*The Vanishing Prairie*; best short documentary film—*Thursday's Children*; best story and screenplay—Budd Schulberg, for *On the Waterfront*; best screenplay—George Seaton, for *The Country Girl*; best film story—Philip Yordan, for *Broken Lance*; best music score for drama or comedy—Dimitri Tiomkin, for *The High and the Mighty*; best scoring of a musical film, Saul Chaplin and Adolph Deutsch, for *Seven Brides for Seven Brothers*; best original song—*Three Coins in the Fountain* (Jule Styne and Sammy Cahn); best cinematography (black and white)—Boris Kaufman, for *On the Waterfront*; best cinematography (color)—Milton Crasner, for *Three Coins in the Fountain*; best set decoration (black and white)—Richard Day, for *On the Waterfront*; best set decoration (color)—Emile Curi, for *Twenty Thousand Leagues Under the Sea*; best art direction (black and white)—Richard Day, for *On the Waterfront*; best art direction (color)—John Meehan, for *Twenty Thousand Leagues Under the Sea*; best special effects—*Twenty Thousand Leagues Under the Sea*; best costume design (black and white)—Edith Head, for *Sabrina*; best costume design (color)—Sanzo Wada, for *Gate of Hell*; best film editing—Gene Milford, for *On the Waterfront*; best sound recording—*The Glenn Miller Story*; best cartoon short subject—*When Magoo Flew*; best one-reel short subject—*This Mechanical Age*; best two-reel short subject—*A Time Out of War*; special awards—Greta Garbo; Paramount Pictures Corporation, for its development of VistaVision; Danny Kaye, for *Assignment Children*, made for the U.N. Children's Fund.

Antoinette Perry awards: *The Desperate Hours*, play by Joseph Hayes; *The Pajama Game*, musical by George Abbott and Richard Bissell, with lyrics and music by Richard Adler and Jerry Ross; Nancy Kelly, for performance in *The Bad Seed*; Alfred Lunt, for performance in *Quadrille*; Mary Martin and Cyril Ritchard, for performances in *Peter Pan*; Walter Slezak, for performance in *Fanny*; Patricia Jessel and Francis L. Sullivan, for per-

formances in *Witness for the Prosecution*; Carol Haney, for performance in *The Pajama Game*; Robert Montgomery, for direction of *The Desperate Hours*; Cecil Beaton, for costumes of *Quadrille*; Thomas Schippers, for conducting orchestra of *The Saint of Bleecker Street*; Oliver Messel, for sets of *House of Flowers*; Robert Fosse, for choreography of *The Pajama Game*; Richard Rodda, with *Peter Pan*, for work as stage technician; Proscenium Productions, for consistently good work by an off-Broadway group.

Barter Theater Award: Mary Martin, for performance in *Peter Pan*.

British Film Academy awards for 1954: Best film—*The Wages of Fear* (French); best British film—*Hobson's Choice*; best British actress—Yvonne Mitchell, for performance in *The Divided Heart*; best British actor—Kenneth More, for performance in *Doctor in the House*; best non-British actress—Cornell Borchers, for performance in *The Divided Heart*; best non-British actor—Marlon Brando (q.v.), for performance in *On the Waterfront*; most promising newcomer—David Kossoff, for performance in *The Young Lovers*; best documentary film—*The Great Adventure* (Swedish); United Nations Award—*The Divided Heart*.

Cannes International Film Festival prizes: Golden Palm—*Marty*; best dramatic film—*East of Eden*; best actor—Spencer Tracy, for performance in *Bad Day at Black Rock*; best actress—Haya Harari, for performance in *Hill 24 Doesn't Answer*; best documentary—*The Isle of Fire* (Italian); best reporting—*La grande pêche* (French); best cartoon—*Blinkety Blank* (Canadian); international prizes—*Romeo and Juliet* (Russian) and *The Great Family* (Russian); International Critics Association Award—*Raíces* (Mexican); best director—Jules Dassin, for *Du ruff chez les hommes* (French), and Serge Vassiliev, for *The Heroes of Chippka* (Russian-Bulgarian); special awards—*Lost Continent* (Italian) and *The Golden Antelope* (Russian).

Clarence Derwent awards (\$500) for best non-featured performances by an actress and an actor for 1954-55: Vivian Nathan, for performance in *Anastasia*; Fritz Weaver, for performance in *The White Devil*.

David O. Selznick Golden Laurel film award for 1955: *Ugetsu* (Japanese).

Donaldson awards for 1954-55: Best play—*Cat on a Hot Tin Roof*; best musical—*The Pajama Game*; best acting in a play—Kim Stanley, for performance in *Bus Stop*, and Paul Muni, for performance in *Inherit the Wind*; best acting in a musical—Mary Martin and Cyril Ritchard, for performances in *Peter Pan*.

Milestone Award of the Screen Producers Guild: Cecil B. de Mille.

New York Drama Critics Circle awards: *Cat on a Hot Tin Roof*, best American play of the 1954-55 season; *Witness for the Prosecution*, best foreign play; *The Saint of Bleecker Street*, best musical.

New York Film Critics awards: Best picture—*Marty*; best actress—Anna Magnani, for performance in *The Rose Tattoo*; best actor—Ernest Borgnine, for performance in *Marty*; best director—David Lean, for *Summertime*; best foreign-language film—*Diabolique* (French) and *Umberto D.* (Italian).

Screen Directors Guild of America citation for 1954: Elia Kazan, for *On the Waterfront*.

Venice International Film Festival awards: Golden Lion of St. Mark—*Ordet* (Danish); Silver lions of St. Mark—*Le amiche* (Italian); *The Cricket* (Russian); *Ciske de rat* (Dutch); best actor—Kenneth More, for performance in *The Deep Blue Sea*, and Kurt Jürgens, for performance in *Des Teufels General*; best actress—no award made.

Writers Guild of America awards for 1954: Laurel Award for Achievement—Robert Riskin; best drama—Budd Schulberg, for *On the Waterfront*; best comedy—Billy Wilder, Ernest Lehman, and Samuel Taylor, for *Sabrina*; best musical—Albert Hackett, Frances Goodrich, and Dorothy Kingsley, for *Seven Brides for Seven Brothers*.

MISCELLANEOUS

Florina Lasker Social Work Award (\$1,000): Jane M. Hoey.

Franklin medals of the Franklin Institute: Sir Winston Churchill; Mrs. Franklin D. Roosevelt.

Freedom Award of Freedom House: Sir Winston Churchill.

Freedoms Foundation awards for 1954: Freedom Leadership Medal—Columbia University, for its bicentennial program; special awards (\$1,000)—Rev. Billy Graham; faculty of St. John's University; first-place awards (\$1,000)—Kiwanis International, Hawaii Residents' Association, and All-American Conference to Combat Communism, general awards; Clarence G. Allen of the Tulsa (Okla.) *Tribune*, cartoon award; Eldorado (Ill.) Community Study and Development Group, community program award; J. Oliver Emmerich of the McComb (Miss.) *Enterprise-Journal*, editorial award; Esther Sharp Sanderson, Huntsville, Tenn., essay award; Corp. James R. Odermatt, Fort Ord, Calif., award for a letter from a member of the armed forces; Vincent Godfrey Burns, Annapolis, Md., public address award;

PRODUCTION — PROFITS AND DIVIDENDS

Dr. Lowell R. Ditzen, Bronxville, N.Y., sermon award; University of Southern California, college campus program award.

Grolier Society Award (\$500) for an unusual contribution by a librarian to the stimulation and guidance of reading by children and young people: Mrs. Charlesmae Rollins, Hall Branch, Chicago Public Library.

Harmon International Aviation awards for 1955: Aviator—Lieut. Col. James F. Coleman, U.S. Marine Corps; aeronaut—Capt. Marion H. Eppes, U.S. Navy.

Horatio Alger awards: Roger W. Babson; Hugh Roy Cullen; Percy J. Ebbott; William E. Lewis; James W. McAfee; Frank B. Rackley; Arthur Rubloff; James C. Self; Carl J. Sharp; Donald S. Smith.

Howard W. Blakeslee awards (\$500) of the American Heart Association: Jane Stafford, for coverage of cardiovascular developments supplied to newspapers and magazines through *Science Service*; Frances Burns, for a series of 13 articles in the Boston *Daily Globe* on heart research and advances in treatment and prevention of heart circulatory diseases; William Peters, for his article "New Heart for Pamela" in *Cosmopolitan*; Columbia Broadcasting System for the television program *Gate 27 (The Search)*.

Joseph W. Lippincott Award (\$500) of the American Library Association: Emerson Greenaway, director, Free Library of Philadelphia.

Lactare Medal of the University of Notre Dame: George Meany (q.v.).

Nansen Medal for "services to the humanitarian cause of refugees": Mrs. Franklin D. Roosevelt, medal for 1954; Queen Juliana, medal for 1955.

National Conference of Christians and Jews Gold Brotherhood Award: Benjamin F. Fairless, chairman of the board, United States Steel Corporation.

Pan American Institute Distinguished Service Medal for 1955: Dr. Joaquim de Siqueira Coutinho, Georgetown University.

Stephen Wise awards (\$1,000) for 1954: Elmer Davis; Louis Lipsky; Professor Franz Boehm; Yale University.

Theodore Roosevelt medals for distinguished service: Thomas E. Dewey; Dr. Arthur H. Compton.

Williamsburg Award (\$10,000) of Colonial Williamsburg: Sir Winston Churchill.

Wright Brothers Memorial Trophy for 1955: Dr. Hugh L. Dryden, director, National Advisory Committee for Aeronautics.

PRODUCTION, Industrial. See **INDUSTRIAL PRODUCTION.**

PROFITS AND DIVIDENDS, Corporate. Profits.—

Before-tax net income of corporations organized for profit in the United States was at a seasonally adjusted annual rate of \$42 billion in the first half of 1955. This was \$8.5 billion, or over 25%, higher than the total for 1954.*

The highest such rate recorded for any previous half-year had been \$48 billion for the latter part of 1950. That all-time peak figure, however, had included over \$8 billion realized because of price advances occurring while inventory goods were being processed or held for use or sale.

Profits earned in current production, exclusive of such inventory gains, in the first half of 1955 were at an annual rate just under \$41 billion. The best previous half-yearly rate on this basis had been about \$40 billion, reached in 1951 and again in the early part of 1953. From its peak in the latter year, the seasonally adjusted annual rate fell to \$34 billion in the second half of 1953 and to \$33 billion in the first half of 1954. It turned upward in the autumn of 1954 with an advance which continued into 1955.

The recent two-year swing in profits accompanied an extensive market readjustment, involving a temporary shift from accumulation to net liquidation of inventories by business, a cutback in national security purchases by the federal government, and some hesitation in the flow of business and consumer funds into the markets for durable manufactures in particular. This read-

* Annual rates, used to facilitate comparisons of part-year with full-year results, represent seasonally adjusted quarterly or semiannual totals multiplied by 4 or by 2 as required to put them on a full-year equivalent basis.

TABLE 1—DISPOSITION OF CORPORATE PROFITS, HALF-YEARLY, 1953–55

(Billions of dollars, seasonally adjusted at annual rates)

	1953		1954		1955
	1st half	2d half	1st half	2d half	1st half
Profits and inventory valuation adjustment.....	40.3	34.1	33.3	34.3	40.9
Profits before tax.....	41.4	35.2	33.2	34.8	41.9
Profits tax liability.....	23.0	19.6	16.6	17.4	21.0
Profits after tax.....	18.4	15.6	16.6	17.3	20.9

* Under 0.05. (Source: U.S. Department of Commerce, Office of Business Economics.)

justment is discussed in more detail under **INCOME—Gross National Product.**) Like most such shifts, its impact on corporate business was more apparent in the characteristically volatile profits share of total income than in the share represented by compensation of employees.

A considerable part of the 1953–54 decline in before-tax profits was absorbed by the portion of this total going for taxes on income. The combined effective rate of federal, state, and local taxes on corporation profits is approximately 50%. Because of this fact, and the termination of the federal excess profits tax at the end of 1953, the drop of \$8 billion in before-tax profits from early 1953 to early 1954 was accompanied by a cut of less than \$2 billion in profits after taxes. With the overall tax rate indicated to have been approximately stable since the beginning of 1954, after-tax profits have fluctuated proportionately with profits before taxes, rising from \$17 billion in 1954 to a seasonally adjusted annual rate of \$21 billion in the first half of 1955. This 1955 figure is the highest for any half-year since late 1950, when a level of \$26.5 billion was recorded with the combination of the record high book profits and an effective tax rate significantly lower than those of later years.

TABLE 2—U.S. CORPORATE PROFITS BEFORE TAX, BY MAJOR INDUSTRIES, HALF-YEARLY, 1953–55

(Billions of dollars, unadjusted for seasonal variation)

	1953		1954		1955
	1st half	2d half	1st half	2d half	1st half
All industries, total.....	20.0	18.3	16.0	18.1	20.6
Mining.....	.6	.7	.6	.6	.8
Manufacturing.....	12.0	9.4	9.0	8.8	12.0
Durable-goods industries..	7.4	5.3	5.2	4.8	7.3
Nondurable-goods industries.....	4.6	4.1	3.9	4.0	4.7
Transportation.....	.9	.7	.4	.6	.6
Communications and public utilities.....	1.7	1.6	1.8	1.8	2.0
All other industries.....	4.7	5.8	4.0	6.3	5.1

(Source: U.S. Department of Commerce, Office of Business Economics.)

Recent shifts in the industrial pattern of profits before taxes are reflected in Table 2. These data are half-yearly dollar totals, unadjusted for seasonal variation. The all-industry aggregate is shown to have ranged from \$20 billion in the first half of 1953 down to \$16 billion in early 1954 and up to \$20.5 billion in the first half of 1955.

The fluctuations centered largely in manufacturing—which has generally accounted for somewhat more than half of all corporate profits—and in such economically related lines as transportation and the large wholesale and retail trade components of "All other industries." Within

manufacturing, the metals groups and other durable-goods industries collectively have shown sharper swings in profits than have the nondurables. The 1954-55 recovery was sparked by a sharp improvement in the auto industry, in particular, and seems to have spread progressively to other lines of durables manufacturing and to basic nondurables-manufacturing groups, and at the same time to mining, transportation, and other related industries.

Dividends.—Net dividend payments by corporations in the United States moved up from quarter to quarter, on a seasonally adjusted basis, during the first nine months of 1954. The annual rate of \$10.5 billion recorded for the first half of 1955 compares with the previous high of \$10 billion reached in 1954.

The dividend total has generally fluctuated much less from year to year than have total after-tax profits. It held level or expanded during the dips in profits recorded for 1944-45, 1949, 1952, and 1954. The same tendency to relative stability of disbursements has been apparent for years of rapidly rising profits, when expansion of dividends has usually not kept pace. Thus the advance of one fourth in seasonally adjusted profits after taxes from the first half of 1954 to the same period of 1955 was accompanied by an increase of only about one twelfth in dividends.

The rise in payments from 1954 to 1955 was widespread among the various industry groups. Publicly reported cash dividends for the first three quarters of 1955 were up from the January-September period of 1954 in all eight of the nonmanufacturing groups distinguished in the Commerce Department's tabulation, and in nearly all of the twelve manufacturing groups, with above-average gains reported for mining and finance and for metals, transportation equipment, chemicals, and electrical machinery manufacturing.

National Income Division, Office of Business Economics, U.S. Department of Commerce.

PROPAGANDA. See Index entry.

PROTESTANT EPISCOPAL CHURCH. The Episcopal Church moved forward with power in 1955 as witnessed by its concern for such vital contemporary questions as segregation, the changing urban-industrial scene, Southeast Asia, radio-TV as modern evangelistic media, relief for stricken peoples in all parts of the world, and the relation of man and his work to religion.

Many of these subjects emerged in the General Convention, held Sept. 4-15, 1955, in Honolulu, Hawaii. This triennial assembly, modeled on the Congress of the United States, is the supreme legislative body of the church. The 1955 meeting also established some interesting firsts. For the first time since the first meeting in Philadelphia in 1785, the convention met outside of continental United States and in an overseas missionary district. For the first time, too, it met on a church property, the campus of Iolani School. The convention at its opening service received the Builders for Christ offering, the result of an effort inaugurated by the 1952 convention to raise \$4,150,000 to provide an enlarged physical plant for the church's work in strategic areas both in the United States and overseas. During the convention the women of the church presented a record \$3,149,197.83 as their triennial United Thank Offering.

The convention reflected the spirit of the church itself and the setting in which it was

meeting by adopting the largest budget ever approved for the church's national and international work. Among the increases included in this record annual budget of \$6,807,947.84 is an annual appropriation of \$100,000 to enable the church to begin to use radio-TV more effectively.

The great interest of the church in Southeast Asia was reflected in the pastoral letter issued by the House of Bishops at the close of the convention. Six months prior to the meeting of the General Convention, the Council of the Episcopal Church in Southeast Asia met in Hong Kong. This council, organized as an outgrowth of the Anglican Congress of 1954 and the Committee on Missionary Strategy of the Anglican Communion, discussed the church's responsibility to the millions of Chinese living outside Communist China; work among Mohammedan peoples of the area; and responsibility to begin missionary work in Thailand. Present at the meeting were the bishops of Hong Kong, Singapore, Borneo, Korea, and the Philippines.

The movement begun at the General Convention of 1946 to provide the Episcopal Church with an official curriculum for the Christian education of its people reached its first goal in 1955 with the publication on May 1 of the first courses in the Seabury Series. These courses are for grades 1, 4, and 7, and will be followed in 1956 and 1957 with courses for other grades in the church school.

Soon after the U.S. Supreme Court decision on segregation in the public schools, the National Council, through its Division of Christian Citizenship, issued a study of segregation entitled *Just Right and Necessary*. The church also continued its interest in and concern for stricken people throughout the world, and cooperated with Church World Service, World Council of Churches, and other agencies in relief work.

Headquarters of the National Council, which is the board of directors of the Domestic and Foreign Missionary Society, are at Church Missions House, 281 Fourth Avenue, New York 10, N.Y. The official publication is *Forth*, William E. Leidt, Publisher. The president of the National Council is the presiding bishop, the Rt. Rev. Henry Knox Sherrill.

PSYCHIATRY. Psychiatry's major advances in 1955 were in electronic and drug therapies. Psychotherapy continued to hold the center of the stage in clinic and office treatment, but research focused largely on organic changes in mental disorders.

Drugs.—The year 1955 marked the 20th anniversary of the use of insulin in psychiatry. Generally, insulin has stood up remarkably well. Surveys of two decades show that insulin remission rates have stabilized at about 65 per cent. While relapses are frequent, most relapsing patients respond to second courses. Reserpine and chlorpromazine, catapulted into prominence in 1954, continue to be widely used. Though not without undesirable side effects, they have been effective in tranquilizing the disturbed patient. (See CHEMOTHERAPY.) With paranoid and depressed patients, however, results have been less spectacular.

From Europe come encouraging reports of placental tissue implants in depressed patients.

WIDE WORLD

A nurse demonstrates the use of electronic therapy at Essex County Hospital, Cedar Grove, N.J. Dr. Henry Davidson (at right), author of the accompanying article, *Psychiatry*, prepares to administer a low voltage "shock."

Since fructose is more easily metabolized than is its sister-sugar, glucose, it is now being used to supply nutritional needs in seniles and in alcoholics. Current interest is reported in sex steroids and synthetic hormones, but psychiatric journals warn against overuse of such potent medications. A new drug, pipradol, has now been added to the family of stimulants useful in treating depressed patients. Pharmacologists in 1955 also turned their attention to carbonic anhydrase inhibitors for the control of seizures.

Electronic Therapies.—Electronic therapies continue to head the list of treatment technics in mental hospitals. Their value seems now to be accepted by nearly all psychiatrists, and current studies concern modifications to make these therapies safer or more effective. Reports reveal success in combining electronic therapy with photic or pharmacologic stimulants, in immediate repetition of the "shock," in prolonging the period of current passage, in the use of relaxants and antispasmodics to soften the muscle reaction, in pretreatment anesthesia, in varying the electrode positions, and in the use of unidirectional currents.

Somatic Nonshock Therapies.—In 1955 there was a rising tide of interest in somatic nonshock therapies. Promising results have been reported in using ether drip, carbon dioxide, focal stimulation, histamine, nitrous oxide, subshock insulin, and photic stimulation. It is generally agreed, however, that none of these can replace deeper shock, coma, or convulsive therapies.

Psychosurgery.—Earlier fears of psychosurgery now appear to be groundless. At one time it was expected that the lobotomized patient might become a living vegetable. Technical refinements and more precise testing methods now show no significant deterioration after properly accomplished lobotomy. Encouraging reports have also been submitted on ultrasonic vibrations to destroy deep white matter without surgical removal.

Experimental Psychiatry.—An upsurge of interest in experimental psychiatry was a milestone of 1955. It was shown that certain drugs could produce psychotic symptoms. It has been argued that if drugs (or other reproducible external stimuli) can cause psychoses, perhaps antidotes to these drugs (or forces to neutralize the stimuli) can heal the psychoses. Reproduction of psychoses by drugs suggests that more attention might fruitfully be paid to biochemical causes of

mental disorders. This has also led to a renaissance of interest in vitamin therapy. The ability to reproduce at will a model of a schizophrenic psychosis has greatly expanded the frontiers of psychiatric research.

Family Care.—With the overcrowding of public mental hospitals has come expanding interest in placing appropriate patients in homes other than their own. Foster home and family care programs have grown. Throughout 1955 there was an average of about 8,000 psychotic patients in foster homes. In most places it costs the state less to pay for such placements than to maintain the patient in an institution. These programs also encourage recovery, free scarce hospital beds, and offer a bridge between the hospital and the outside world.

Administrative Psychiatry.—The growing status of administration as a medical subspecialty within psychiatry was signaled in 1955 by the general acceptance of the certification of mental hospital administrators through examination under auspices of the American Psychiatric Association. Also rapidly advancing in 1955 was the new subspecialty of industrial psychiatry. With a grant from the Carnegie Corporation, Cornell University in 1955 developed a training program in industrial psychiatry. And, for the first time, the number of psychiatrists in private practice exceeded the number of salaried psychiatrists. The American Psychiatric Association, in a pioneer move to study the economic facets of private practice psychiatry, appointed a committee on the subject.

Reporting at the association's 1955 convention, this committee highlighted difficulties in the general hospital placement of neurotic or mildly psychotic patients under existing Blue Cross medical insurance contracts. It was reported that most such insurance plans failed to cover—or discriminated against—emotional disorders. Development of better insurance coverage for psychiatric illness is announced as one of the profession's goals for 1956.

The greatest overall challenge to American psychiatry continued to be the senile patient. The trend toward smaller homes, the lessening stigma of the mental hospital, and the increasing longevity of the population, all conspire to push higher and higher the hospital admission rate for senior citizens. (See also NERVOUS SYSTEM.)

HENRY A. DAVIDSON,
Assistant Medical Director, Essex County
Hospital, Cedar Grove, N.J.

PSYCHICAL RESEARCH. See PARAPSYCHOLOGY.

PSYCHOLOGY. The American Psychological Association.—The 1955 annual meetings of the APA were held in San Francisco, September 1–7. In spite of the distant location relative to the Eastern concentration of population, attendance was in every way comparable to other meetings of the association during the last several years. There was the usual rich fare of formal research and theoretical papers, symposia, business sessions, and informal discussions. The complete program of these meetings is published in the *American Psychologist* for August 1955, which also contains short synopses of all formal papers that were presented.

Publications.—The main outlets for psychological publication, besides books and monographs, comprise an impressive list of somewhat over 100 journals devoted to various aspects of the subject. To help readers keep abreast of this volume of output, modern devices have been developed for

the cooperative systematization and classification of the work. This is accomplished by the *Psychological Abstracts*, which lists and summarizes all books and articles of psychological interest as soon as feasible after their appearance in print, and in the *Annual Review of Psychology* (Stanford, Calif.), which summarizes the achievements of the year within each of several large subareas of research. These sources, together with the programs of the APA and the several regional psychological associations, provide an efficient guide to the literature of any given year and make possible the following summary for 1955.

Some 10,000 books, monographs, and research articles were published during 1955 through regular channels of publication, and no fewer than 1,500 additional papers were presented in the various psychological meetings, including that of the APA. Using the *Abstracts* as a basis of estimation, 35% of the published output falls within the area of behavior pathology and its amelioration; 25% falls within the area of experimental psychology, including the general fields of learning, sensory-perceptual processes, response processes, thinking and problem solving, comparative psychology, and physiological psychology; 15% falls within the applied areas of educational, industrial, military, and personnel psychology; 10% falls in the field of social psychology; and 5% falls within the area of developmental psychology. The remaining 10% of the work consists of general publications and articles dealing with the affairs and problems of psychologists and psychological associations.

Experimental Psychology.—The scope of experimental psychology may best be discerned from such a compendium as Robert S. Woodworth's and Harold Schlossberg's *Experimental Psychology* (New York 1954). It comprises the more rigorous and exacting scientific efforts of psychologists in such fields as sensation, perception, learning, thinking, comparative psychology, and psychophysiology.

Learning.—The field of learning continues to stand in the forefront of experimental and theoretical interest and productivity, and the year's output revealed a steady and continued attack on the problems of learning. As one author (Kenneth MacCorquodale in the *Annual Review of Psychology*, 1955) said, after having read over 200 articles in preparation for his review of the year's output on learning, learning has been studied in almost every type of organism from earthworms to college sophomores. He might well have added that ingenious model-makers, intent on reducing organismic phenomena to the simplicities and regularities of mechanics, have even built machines that exhibit what these ambitious men have fondly called "learning"!

Though learning is a subject that has universally meaningful and practical implications that build up expectations of immediate applicability, the experimental and theoretical literature concerning it is highly technical and difficult to translate into a more widely understood vernacular. The learning psychologist seeks to understand the conditions and processes through which modifications occur in the behavior of man and animals as a result of the behavior itself rather than of other agencies. Among the problems this involves are the conditions of drive or motivation that instigate learning, the stimuli and other situational variables that enter into the learning process as conditioning factors, the nature and types of responses that are made and that are

modified, the rate of acquisition, the permanency of learning, and the conditions that result in its extinction. Other problems concern the interrelations and interactions among learned systems, and most of all, perhaps, the building of a comprehensive theory within which all the significant factors are accounted for and systematically related.

Sensation and Perception.—Sensory psychology, formerly the province of the "experience" psychologist and introspectionist, has come strongly under the wing of behavior, and tends to appear on the input side of studies in learning, motivation, personality, and the like. However, there continue to be those who study visual, auditory, and other modal sensory phenomena in their own right and for the insights they provide. The determination of thresholds, both absolute and relative, time-honored in the psychological laboratory, is still a fruitful enterprise, and so is the phenomenology of sensory-perceptual events. With the development of electronics and its application especially to photic and acoustic phenomena, and with the increasing improvement of engineering devices requiring matching to the sensory-perceptual and motor capacities of the human user, new problems of practical as well as theoretical import are constantly arising. In the service of the sensorily handicapped such sensory-perceptual measurements as audiometry provide an important adjunct to the weapons for healing used by the practitioner and diagnostician.

An important publication in the field of hearing is Ernest G. Wever's and Merle Lawrence's *Physiological Acoustics* (Princeton 1954). This book presents many experiments dealing with various parts of the hearing mechanism as they operate in sound transmission. These authors also incorporate a chapter in which they evaluate modern auditory theory.

In other areas of sensory psychology the pace is much slower. Some work is being done in somesthetic responses, particularly pain and thermal sensitivity; and in the chemical senses of smell and taste. The difficulty of isolating and identifying basic response dimensions, as well as the imbeddedness of the receptor mechanisms, constitutes a considerable handicap in the investigation of these phenomena.

Thinking.—An important area of experimental psychology which is showing new life is that of thought, judgment, imagination, and the higher psychological processes in general. Several books in this area have recently been published, including Donald M. Johnson's *The Psychology of Thought and Judgment* (New York 1955). This book comprehensively treats the important problems and theories dealing with the human activities of thinking, imagining, inventing, judging, and problem solving, and reviews the pertinent experiments in these areas. In their review of the subject in the *Annual Review*, Taylor and McNemar state that of 125 doctoral dissertations written on relevant problems since 1949, 35 have appeared during the past year. These reviewers stress the problem areas of concept formation; set, rigidity, and functional fixedness; individual problem solving; and group problem solving.

Applied Psychology.—The largest area of applied psychology is concerned with the amelioration of behavior pathology (see *PSYCHIATRY* and the Index entry, *Mental Health*). In the field of industrial psychology, research is being done on job satisfaction and morale, problems of leadership training, job analysis and evaluation, equip-

ment design, and the establishment of criteria for assessment. Educational psychology is concerned with problems of school learning, social behavior in children, child development, measurement of educational outcome, teacher activity, and the treatment of exceptional children. More and more studies are appearing in the field of gerontology, and the area of psychological counseling is producing its share of research and theoretical contributions. (See also PARAPSYCHOLOGY.)

PUBLIC HEALTH. The year 1955 saw many developments in the field of public health which offered promise of vast improvements in the health status of the United States.

On April 12, 1955, the Poliomyelitis Vaccine Evaluation Center of the University of Michigan reported that the 1954 field trials of the Salk vaccine showed that it was safe and effective in reducing the risk of paralytic poliomyelitis. On the recommendation of the U.S. Public Health Service, the secretary of health, education, and welfare licensed the vaccine. The National Foundation for Infantile Paralysis provided the states with enough vaccine for two of the three recommended inoculations for all first- and second-grade children whose parents requested them.¹

By late fall, more than 10 million children and pregnant women had received at least one injection of the vaccine. Preliminary reports on the effectiveness of the vaccine indicated that the attack rate of paralytic poliomyelitis was two to five times greater among unvaccinated than among vaccinated children. (See also POLIOMYELITIS.)

Early in 1955 a program was started to combat another scourge of childhood, rheumatic fever. The Public Health Service and the American Heart Association are cooperating in a program to help communities establish rheumatic fever prevention programs in which emphasis is placed on eradication of streptococcal infections from the throat by full doses of penicillin.

On July 14, President Eisenhower signed the Air Pollution Control Act, which authorizes the Public Health Service to provide research and technical assistance relating to this problem. An appropriation of \$500,000 was made for this program, which is the first of its kind.

During the year Congress also enacted the Mental Health Study Act, which provides \$250,000 to be allocated by the surgeon general to nongovernmental agencies for research into all aspects of mental illness.

The Nation's Health.—The general death rate in the United States in 1954 was 9.2 per 1,000 population. This was the seventh consecutive year that the death rate had been below 10 per 1,000. The infant death rate was 26.6 per 1,000 live births, and the maternal death rate was 5.3 per 10,000. Both infant and maternal death rates

continued the downward trend. The tuberculosis death rate dropped from 12.6 per 100,000 population in 1953 to 10.5 in 1954. The principal diseases of childhood, scarlet fever and streptococcal sore throat, diphtheria, whooping cough, and measles, which together caused about 15 deaths per 100,000 in 1944, were responsible for only about 2 per 100,000 in 1954. Major heart and blood vessel diseases accounted for 53% of all deaths in 1954, and malignant neoplasms (cancer), 16%. (See also DEATH, CAUSES OF.)

Increases were reported in the number of cases of infectious encephalitis, infectious hepatitis, measles, poliomyelitis, scarlet fever and streptococcal sore throat, whooping cough, and psittacosis. There was a marked reduction in cases of malaria.

There were an estimated 4,021,000 births and 1,476,000 marriages in 1954.

Local Health Services.—The number of local health units in the United States increased only slightly in 1955. There are 1,442 local units serving 2,323 counties and covering approximately 88% of the population.

Plans have been approved for the first nursing home and the first diagnostic or treatment centers to be built under the Hospital and Medical Facilities and Construction Act as amended in 1954.²

By Sept. 30, 1955, the total number of hospital construction projects approved under the original program was 2,571. When all are completed, 120,740 beds and 560 health centers will have been added to the nation's health resources. (See also HOSPITALS.)

Federal appropriations for grants in aid for state and local health services totaled \$21,263,000, a decrease of about 7% from the previous year. State appropriations available to state health departments amounted to \$122,689,233, or 5.5% more than 1954.

The Public Health Service.—The principal federal health agency, the Public Health Service of the Department of Health, Education, and Welfare, continued its program of research, medical care for designated groups, and technical assistance to state and local health agencies. The Commissioned Reserve Corps of the service was being expanded and reorganized in 1955 to provide a large reserve force that can be mobilized in a national emergency. The service also was given responsibility for the health and medical care of the American Indians.

Research.—Outstanding among research accomplishments during 1955 was development of an experimental vaccine for one of the adenoidal-pharyngeal-conjunctival viruses. Clinical trials of the antirheumatic drugs prednisone and prednisolone indicated that they are four times as potent as—and in some respects less hazardous than—cortisone.

The cancer chemotherapy program was accelerated and the pilot program in Memphis, Tenn., for detection of cancer of the cervix, completed its third year. New evidence that diet can influence the development of dental caries was discovered, and further investigations of fluorides in drinking water showed that they have no effect on growth or calcium metabolism in bones of young rats.

A simple color test has been devised by

¹ Late in April, cases of poliomyelitis were reported among children who had received vaccine manufactured by one of the producers. The Public Health Service requested withdrawal of this product and conducted a comprehensive investigation of the production and testing of the vaccine. This review led to revisions in the requirements for manufacture and testing of the vaccine.

² This amendment broadened the Hospital Survey and Construction Program by authorizing additional aid for the construction of chronic disease hospitals and by permitting federal assistance to states and communities in building nursing homes, diagnostic and treatment centers, and in rehabilitation facilities.

which a tumor originating in the small intestine and spreading to other abdominal organs can be detected. Heart disease research was carried out on the use of the tranquilizing drug, reserpine, in hypertension, and on the effect of injections of heparin on the fat-clearing factor in the blood. (See also HEART DISEASE.)

Medical Services.—The service continued to supply medical services to merchant seamen and other federal beneficiaries, and to assist other federal agencies in providing needed medical care. The service maintains 16 hospitals, including two for the treatment of narcotic addiction, one for tuberculosis, and one for the treatment of leprosy; 25 outpatient clinics; and 96 outpatient offices.

Services to States.—Consultative and technical assistance was given to states and communities in health education, public health nursing, disease control, and collection of vital statistics. Programs of interstate carrier sanitation and vessel inspection were continued. Comprehensive water pollution control programs for river basins in half of the nation's area have been developed.

Experimental studies proved that in guinea pigs tuberculosis can be completely prevented by giving isoniazid at the time of infection. A national study, to involve ultimately 1,000 children, was initiated to determine whether isoniazid will prevent tuberculosis, meningitis, and other complications.

Occupational health studies included a field epidemiological survey of the diatomaceous earth industry and the continuation of a long-term study of the effect of industrial noise.

In its international health activities the service staffed health programs in 42 countries and aided 771 persons from 68 countries who came to the United States for additional training in 111 fields of health study.

PUBLIC UTILITIES. Electric Power.—Installed capacity of electric public utility generating plants in service in the United States as of June 30, 1955, according to tentative data from the Federal Power Commission (q.v.), was 107.6 million kilowatts, or an increase of 12.9% since June

(Source: Federal Power Commission.)

1954. Electric energy production by utilities for the 12 months ending June 30, 1955, was 503.2 billion kilowatt-hours, the highest for any 12 months to date, and 11% above the total production for the year ending June 30, 1954.

Sales of electric energy to ultimate consumers for the year ending June 30, 1955, compared

with the year ending June 30, 1954, indicate that the greatest gain for any geographical area was 37% in the East South Central division; the least gain was 5.1% in the Middle Atlantic states. The accompanying table shows the percentage gain in sales of electric power for all geographical divisions and for the entire United States. (See also ELECTRICAL DEVELOPMENTS.)

Natural Gas.—The American Gas Association Committee on Gas Supply, Transmission and Storage reported in May 1955 that the volume of natural gas in underground storage in the United States in 1954 was 1,011 billion cubic feet. This represented an increase of 125 billion over the previous year. The volume of gas in storage was reported to have risen in five years to over 2.45 times the amount in storage in 1950. The ultimate capacity of all underground storage reservoirs in the United States as of Oct. 31, 1954, was reported as 1,859 billion cubic feet. At the end of 1954 there were 6,395 wells operating 172 pools located in 17 states. Pennsylvania continued to lead all other states in underground storage operations; Ohio was second, and West Virginia ranked third. For the 12 months ending March 31, 1955, compared with the same period of 1954, the greatest gain in gas revenues was from residential customers, an increase of 12.8%; for commercial consumers the gain was 12.6%; and for industrial customers the gain was 8.8%. (See also GAS.)

In 1954 the FPC authorized the Pacific Northwest Pipe Line Corporation of Houston, Texas, to construct a natural gas pipeline from New Mexico through Colorado, Wyoming, and other oilfields along the route, to furnish natural gas to the Pacific Northwest. Competing applications to furnish Canadian natural gas in the State of Washington were denied. Later a compromise was before the FPC whereby the Pacific Northwest Pipe Line Corporation would buy a portion of the natural gas supply from the West Coast Transmission Company, Ltd. at the international boundary in western Washington.

Local Mass Transit Companies.—Those transit companies which during recent years have failed to improve their financial position by increasing rates, secured some financial advantages during 1955 by other means. Examples include a 1955 Illinois law which it is estimated will save the Chicago Transit Authority about \$1,500,000 by exempting the company from certain obligations to the state, especially from the payment of state gasoline taxes. In Wisconsin a 1955 law exempts transit companies from local license taxes and permits deductions on state returns of federal taxes and increased depreciation allowances.

As a consequence of the 52-day transit strike in the District of Columbia (q.v.), which ended in August, fares were increased to provide revenue for higher hourly wage rates, and the Capital Transit Company's franchise was to be terminated within a year.

Supreme Court Decisions.—Regional competition of natural gas pipeline companies was upheld by refusal of the U.S. Supreme Court (75 S.Ct. 598) to review a decision of the U.S. Circuit Court of Appeals of the District of Columbia. This decision permitted the American Louisiana Pipe Line Company to serve natural gas to the Michigan area as a competitor of Panhandle Eastern Pipe Line Company.

The U.S. Supreme Court in April 1955 handed down two identical *per curiam* opinions reversing the Oklahoma Supreme Court on two cases in which that court upheld natural gas

rates set by the Oklahoma Corporation Commission. The court's brief opinion (75 S. Ct. 576 and 578) was guided by its decision in the case of *Phillips Petroleum Co. v. Wisconsin* (347 U.S. 672). The opinion held that even if a regulatory gap existed because the FPC had not fully exercised its power to set rates for natural gas sold in interstate commerce after its production and gathering had ended, a state could not regulate such rates.

PUBLISHING. See BOOK PUBLISHING AND SALES; GRAPHIC ARTS; JOURNALISM; MAGAZINE PUBLISHING.

PUERTO RICO, Commonwealth of. A commonwealth associated with the United States, the island of Puerto Rico, smallest and easternmost of the Greater Antilles, lies 1,000 miles southeast of Florida. It is approximately 100 miles long and 36 miles wide, and has an area (including several small nearby islands) of 3,435 square miles, divided into 75 municipalities.

Population.—Puerto Rico's total population in 1954 (U.S. Census Bureau est.) was 2,229,000, as against 2,210,703 in 1950. This slight increase, by far the lowest for any similar period in this century, is accounted for by the effects of emigration and a falling birth rate. Chief cities, with their populations as of 1950, are: San Juan, the capital and main port, 357,205; Ponce, 99,492; Mayagüez, 58,944; and Caguas, 33,759.

Vital Statistics.—The birth rate, which had dropped to 34.5 per thousand population in 1954, rose slightly to 35.0 in 1955. The death rate continues to fluctuate between 8 and 9 per thousand. Leading causes of death are heart diseases, cancer, and pneumonia (in the order named) for the middle-aged and elderly; and diarrhea and enteritis for children.

Emigration.—Emigration of Puerto Ricans to the United States (69,124 in 1953) fell off in 1954 to 21,531, but showed signs of rising again in 1955. The exact number of Puerto Ricans in the United States is unknown, but best estimates placed the figure at close to 600,000 in 1955. There is a growing tendency for emigrants now to go beyond New York City to industrial centers all over the country. During 1955 there were intentions of developing emigration to Costa Rica, but workers manifested little enthusiasm for the project and it was dropped.

Government.—Since 1952, all Puerto Rican officials have been elected, or named, locally. Elections are held every four years, coincidental with presidential elections in the United States. At present the governor, two thirds of the legislators, and all the mayors of the 75 cities and towns are members of the Popular Democratic Party, which has dominated the Puerto Rican political scene since 1940. There is a high degree of centralization of government services, with schools, the

police force, health programs, water and electricity, being the responsibility of the insular government. Municipal authorities confine themselves largely to housekeeping duties. Puerto Rico elects a resident commissioner to represent it in Washington; in Congress he has a voice and committee assignments, but no vote. Puerto Ricans are American citizens, with all of the rights and obligations inherent in that citizenship. Thus, they may enter the continental United States freely, settle wherever they wish, and participate in elections. They are also subject to the same terms of military service as are those born within the continental United States.

Puerto Rico's chief officials in 1955 were Luis Muñoz Marín, governor; Roberto Sánchez Vilella, secretary of state; A. Cecil Snyder, chief justice of the supreme court; Jaime Benítez, chancellor of the university; José Trias Monge, attorney general; and Antonio Fernós Isern, resident commissioner in Washington.

Finance.—Net income of the commonwealth for the fiscal year 1954-55 was \$990 million. Of this amount, \$201 million came from trade, \$168 million from agriculture, and \$148 million from manufactures. Per capita income continued to rise slowly, and in 1955 reached \$436—low in comparison with that in the United States, high in relation to that in most Latin American areas.

Total revenue for 1954-55 rose to \$161 million, including \$130 million in taxes collected locally and \$31 million in federal grants-in-aid and United States excise taxes on offshore shipments, which taxes are retained by the Puerto Rican government by authority of federal law. The public debt, including insular and municipal governments, was \$55.3 million on June 30, 1955. In addition, the public corporations, which are self-liquidating, had a debt of \$127.6 million.

Final insular budgetary expenditures for the fiscal year 1954-55 amounted to \$181.5 million. Total bank assets in June 1955 were 414 million, as against \$391 million in June 1954. Total bank deposits in June 1955 were \$330 million, and total loans, as of the same date, were \$217 million.

Education.—Total enrollment in public and private schools for 1955-56 was 547,210 (90% in the public schools); there were more than 12,000 teachers. The University of Puerto Rico in its various branches, including extramural courses, has an enrollment of 16,000. Puerto Rico continues to spend over one fourth of its income on education; and, although it had 9,312 public school classrooms in 1955, it still lacked the requisite facilities for providing schooling for all of its children and for keeping the majority of pupils in school beyond the sixth grade. The illiteracy rate remains at about 22% of the population over 10 years of age, and the campaign to reduce the number of adult illiterates has not been as effective as hoped.

Agriculture and Industry.—There was a decline in value of agricultural products in 1954-55 to \$207,830,000; for the previous year it had been \$219,960,000. Over \$10 million of this decline was in sugar production and sales. Because of drought and labor shortage in some areas, sugar production fell to 1,163,000 short tons, or 17,000 tons less than the federal marketing quota. Sugar prices also fell off somewhat. Coffee production fell sharply, as expected, to 193,000 hundred-weight; however, it is expected that there will be a crop of 309,000 hundredweight in 1955-56. Other crops, including tobacco, fruits, and vegetables, did well. A great problem in agricultural areas of the island is the migration of workers to the cities and to the United States. Between 1950 and 1955, the working force in farm sections fell from 200,000 to 164,000. It is expected that the problem will eventually be taken care of by increased mechanization.

The industrialization program of the government of Puerto Rico continues to make headway. New industries (412 between 1948 and 1955) had a combined payroll in 1955 of \$25 million. Employment has been created for 25,000 workers, and it is estimated a similar number have profited indirectly. Invested capital in new factories rose from \$115 million in 1953-54 to \$188 million in 1954-55. Production of electric power rose to 963 million kilowatt-hours in 1955 from 895 million in 1954. Much of the strength of the industrialization lies in the diversity of products, of which 263 different kinds were being manufactured in 1955. Among the new in-

Governor Muñoz Marín of Puerto Rico (right) greets Vice President and Mrs. Nixon at San Juan, Feb. 27, 1955.

WIDE WORLD

dustries established in 1955 were two oil refineries, the first in the island's history; both will begin operating by early 1956. Wages in industry are low by United States standards, averaging 56 cents per hour, with home needleworkers getting as little as 23 cents. There is universal agreement that wages must be raised, but it is feared that the intentions of some congressmen to apply the \$1 per hour federal minimum can only bring economic disaster to the island. The government of Puerto Rico continues its program of tax exemption for new industries, but emphatically does not want those that seek refuge from tax laws in those states in which the industries are already established.

Trade.—Total exports for 1954-55 were valued at \$546.8 million, largely to the United States. Principal exports were sugar, rum, and needlework. Total imports for the same year were \$642.7 million, mostly from the United States. Principal imports were foodstuffs, automobiles, machinery, shoes, and chemical products. The tourist trade increases yearly, but lack of hotels has impeded its greater development. Tourists spent an estimated \$21 million on the island in 1954.

Communications.—Travel in Puerto Rico is mainly by bus or car. The one railroad on the island is slowly giving way to competition by trucks. There are over 3,000 miles of paved roads, with a program already initiated for more. In 1953-54, over 4,300 ships, both steam and sail, touched island ports. The new international airport in San Juan was dedicated on May 20, 1955, and put into use four days later. There were 653,000 air passengers, carried by 15 airlines, in and out of Puerto Rico in 1954-55. There are 23 radio stations and 3 television stations on the island.

Principal Events, 1955.—Puerto Rico had a quiet year in 1955. There were no labor troubles of any dimensions. Although some hurricanes came close, they did not strike. Sporadic debate during the year over the political status of the island held public attention. Despite repeated assurances by Governor Muñoz Marín that the commonwealth status, subject in time to improvements, is what he and the majority of the people want, there has been uneasiness in some quarters that nationalistic ambitions are being nurtured by a small but influential group within the Popular Democratic Party. That party appeared to be assured of again winning the election over a weak opposition in 1956.

THOMAS S. HAYES,

Librarian, University of Puerto Rico.

PULITZER, Joseph, 2d, American newspaper publisher and editor; b. New York, N.Y., March 21, 1885; d. St. Louis, Mo., March 30, 1955. As publisher and editor of the St. Louis *Post-Dispatch* he carried on the tradition of militant journalism dedicated to social justice, a policy established by his father, Joseph Pulitzer, the newspaper's founder.

After preparing for college at St. Mark's School in Southboro, Mass., Joseph Pulitzer entered Harvard College in 1904. At the end of his sophomore year he withdrew to begin his apprenticeship as a newspaperman with the New York *World*, which his father owned. In 1907 his father sent him to the St. Louis *Post-Dispatch* with a letter of introduction to the editor, which read: "This is my son Joseph. Will you try to knock some newspaper sense into his head?"

With the death of the elder Pulitzer on Oct.

29, 1911, the operation of the newspapers, according to his will, was delegated to a trust in which his three sons were to have equal votes. Only a tenth of the annual dividends was bequeathed to Joseph, as compared with three fifths to the youngest son, Herbert, and one fifth to the oldest, Ralph. Whereas the latter took over the reins of the more important *World* (sold in 1931 to Scripps-Howard), Young Joe, as he came to be known, remained in St. Louis with the *Post-Dispatch*. In 1912 he was given full authority over the midwestern newspaper by his brothers.

In the 43 years of his editorship, Pulitzer gave the *Post-Dispatch* an individual character, established it as one of the leading newspapers in the country, and fulfilled his father's aggressive and altruistic journalistic ideals. Under his personal direction, the *Post-Dispatch* often championed unpopular causes and spoke out forcefully and clearly in behalf of what it believed to be the truth. For its meritorious public service the newspaper won five Pulitzer prizes: for its exposure of vote registration frauds in St. Louis (1936); for its campaign to eliminate smoke in that city (1941); for its investigation of the mine disaster in Centralia, Ill. (1948); for its disclosure that newspapermen were on the Illinois state payroll (1950); and for its exposure of corruption in the U.S. Bureau of Internal Revenue (1952). Theoretically nonpartisan, the newspaper usually supported the Democratic Party, although in 1936 and 1948 it backed the Republican presidential candidates.

Like his father, to whom he bore a striking resemblance, Pulitzer suffered from failing eyesight in his later years. In order to accomplish the prodigious amount of work he set for himself, he employed three full-time secretaries who read to him as much as eight hours a day. He was succeeded as publisher and editor by his son, Joseph Pulitzer, 3d.

PULITZER PRIZES. See PRIZES AND AWARDS.

PUTNAM, Herbert, former librarian of Congress; b. New York, N.Y., Sept. 20, 1861; d. Woods Hole, Mass., Aug. 14, 1955. As head of the Library of Congress for 40 years, he directed its transformation into one of the greatest libraries in the world.

The son of the founder of the publishing house of G. P. Putnam's Sons, he was graduated from Harvard College in 1883 and studied law at Columbia University for a year. While awaiting admission to the Minnesota bar (1886), he accepted in 1884 a position as librarian of the Minneapolis Athenaeum. His able administration of the Minneapolis Public Library, which he headed from 1887 to 1891, led to his selection in 1895 as librarian of the public library in Boston, where he had gone to practice law in 1891. During his 4-year stewardship of the Boston library, he helped make it one of the most efficient in the United States.

Appointed librarian of Congress by President William McKinley in 1899, Putnam was the first professional librarian to fill that post. He found the library in a chaotic condition; the staff was small, and there was little money available for adding to the collection of fewer than 1 million poorly catalogued books. By the time he became librarian emeritus in 1939, the library was one of the largest in the world, containing over 5.5 million volumes and pamphlets, as well as extensive and important collections of maps, music, prints, and manuscripts. The system of book classification which he introduced is now in wide use in

the United States and various other countries.

Successful in securing large sums of money from Congress for expanding the library and its collections, Putnam obtained an appropriation of \$1.5 million in 1930 in order to buy Europe's greatest collection of incunabula, the Vollbehr

Collection, which included a copy of the Gutenberg Bible. During his administration, the library's large annex was built, and gifts totaling more than \$4 million were received.

PYRITE. See MINERAL PRODUCTION.

ATAR. See ARABIA.

QUAKERS. See FRIENDS, RELIGIOUS SOCIETY OF.

QUARLES, Donald Aubrey, American public official: b. Van Buren, Ark., July 30, 1894. A research electrical engineer and a business executive, he became secretary of the air force on Aug. 15, 1955.

After his graduation from Yale University in 1916, Quarles enlisted in the army in World War I and served in France as captain of field artillery (1917-19) in the Rainbow Division. Returning to civilian life in 1919, he joined the Western Electric Company's engineering department (which became the Bell Telephone Laboratories in 1925) and, while working as a transmission research engineer, attended graduate courses in theoretical physics at Columbia University. From 1924 to 1940, first as head of apparatus inspection engineering and later as head of outside plant improvements, he was instrumental in the development of much new telephone equipment, including open-wire insulation and the coaxial cable.

During World War II, Quarles was in charge of the Bell Telephone Laboratories' radar research development program. He was named a vice president of the Laboratories in 1947. In August 1946 he was appointed to the Joint Research and Development Board (later called the Research and Development Board), becoming chairman of its electronics committee in 1949.

In 1952, Quarles became a vice president of the Western Electric Company and president of the Sandia Corporation, a nonprofit subsidiary of Western Electric engaged in atomic research and development. On July 28, 1953, he was appointed assistant secretary of defense for research and development, in which position he played a major part in the development of guided missiles and the planning of a man-made earth satellite.

On Aug. 11, 1955, President Eisenhower appointed Quarles secretary of the air force, succeeding Harold Talbott. He assumed office four days later.

QUARTZ CRYSTAL. In the United States the most important use of quartz crystal, which is imported from Brazil, is for making piezoelectric units used in the electronics industry. Such units are of great importance in the military defense program. Imports in 1952 amounted to 1,049,300 pounds and in 1953 to 1,119,200 pounds, but they declined to 613,100 pounds in 1954. Synthetic quartz crystal of excellent quality is now being manufactured experimentally in pilot plants. (For data on crude, crushed, and ground quartz, see ABRASIVES.)

QUEBEC. The largest of the Canadian provinces, Quebec has an area of 594,860 square

miles (15.5% of the total area of Canada). The population as of June 1955 was estimated at 4,520,000. The overwhelming majority of the population is of French origin (83%) and Roman Catholic (88%). Approximately 33% of the population is rural. Principal cities, with 1955 populations, are: Montreal, 1,068,000; Quebec, the capital, 175,000; Verdun, 80,500; Trois-Rivières, 55,000; Sherbrooke, 58,000; and Hull, 48,000. Montreal is the metropolis of Canada and the second largest French-speaking city in the world, ranking second only to Paris.

Government and Administration.—The government comprises a lieutenant-governor, named by the government of Canada; an Executive Council of 21 members, 5 of whom have no portfolio; a Legislative Council of 24 members, appointed for life by the lieutenant-governor in council; and a Legislative Assembly of 92 members, elected for 5 years. The present lieutenant-governor is the Hon. Gaspard Fautoux, while the Hon. Maurice L. Duplessis, leader of the Union Nationale Party, is premier. Membership in the Legislative Assembly is divided as follows: Union Nationale, 68 members; Liberal, 23, Independent, 1. The province is represented in the Canadian Parliament by 24 members in the Senate and 73 in the House of Commons.

Finance.—For the fiscal year 1954-55, the ordinary revenue of the province amounted to \$335,076,456; ordinary expenditure, \$298,441,589; and net capital expenditure, \$57,937,155. The net funded debt was \$373,744,378. Municipal revenue rose to \$163,503,000, and expenditure to \$157,063,000. The debenture debt of municipalities amounted to \$429,800,000.

Education.—The schools governed by the Education Act are either Catholic or Protestant, and French and English are taught therein. In 1954 the entire school system included over 10,700 schools, 45,800 teachers, and 1,014,000 pupils. Teacher training is given in 98 normal schools; secondary school education is given in 77 classical colleges, and in three colleges where a more modern trend is followed. Superior or higher education is provided by 5 universities.

Hydroelectric Power.—Quebec possesses greater wealth in water power resources than any other Canadian province. The actual capacity of turbines in Quebec represents nearly 52% of total turbine installation in Canada. In addition, Quebec owns the two largest power plants in Canada.

The work carried out at the Bersimis development during 1954 comprised the construction of a temporary 15,000-hp. generating plant at Lac Cassé and a new wharf at Forestville, the clearing of land and building of roads and camps, as well as the continuation of digging operations for the tunnel and at the site of the power plant. (See also TUNNELS.) During the summer and autumn of 1954, the 31-mile-long submarine cables were also laid across the bed of the St. Lawrence River for the purpose of transmitting electric power to the mining developments in the Gaspé Peninsula. The cables which link Baie des Outardes on the north shore of the St. Lawrence with Les Boules on the south shore will have an initial capacity of 40,000 hp. and eventually a total capacity of 100,000 hp. An overhead 154-kw. transmission line, covering a distance of 135 miles from Les Boules to Cooper Mountain in Holland Township, was completed in 1954, while a double-circuit 300-kw. line to link Bersimis River with Quebec (240 miles distant) and Montreal (165 miles beyond Quebec) was under construction in 1955. In the northern part of the province, construction of a 154-kw. line between St. Félix and the rich mining region of Chibougamau, a distance of 150 miles, was nearing completion.

Purchasing Power.—The purchasing power of Quebec's population reached \$4.6 billion during 1954; salaries and wages totaling \$3,080 million make up the greater part of the amount. Retail trade in 1954 amounted to \$2,761,085,000.

Agriculture.—Agricultural land covers an area of 66,615 square miles, or about 12% of the total area of the province. According to the 1951 census, the number of farms occupied was 134,336. The area under cultivation (including pastures) in 1955 was estimated at 8,253,000 acres. The three leading crops are hay and clover, oats, and potatoes. Gross values of production for 1954 totaled \$491 million. Farm cash income reached \$408 million and was derived from the sale of dairy products (\$154,029,000), livestock (\$113,670,000), forest products (\$46,151,000), poultry (\$25,799,000), eggs (\$19,577,000), field crops (\$9,157,000), vegetables (\$11,916,000), wool, fruits, maple products, tobacco, honey, and other products (\$27,648,000).

Forestry.—The commercial forests of the province cover an area of 264,170 square miles. The wood cut during 1953 was valued at \$272,410,000 and comprised pulpwood, \$169,781,000; lumber, \$82,269,000; veneer, excelsior, matches, \$6,311,812; and charcoal and firewood, \$11,495,000. In 1954 the pulp and paper industry employed 25,000 persons, and had a payroll of \$100 million and a gross value of production exceeding \$520 million. Newsprint production was estimated to have been 3,100,000 tons, worth approximately \$346 million. In 1953 the lumber industry included 2,150 saw-mills which employed 17,550 persons. Lumber production amounted to 1,234,152,000 board feet.

Mines and Quarries.—The total output from mines and quarries in 1954 amounted to \$275,500,000, subdivided as follows: metals, \$126,212,500; industrial minerals, \$94,920,000; and building materials, \$54,418,000. Gold output was valued at \$37,295,000 (standard rate); copper, \$48,170,000; zinc, \$25,283,000; asbestos, \$79,285,000; and cement, \$19,212,000.

Manufactures.—Manufacturing establishments during 1954 paid out \$1,204,263,000 in salaries and wages to 424,205 workers. The gross value of factory shipments was estimated at \$5,361,-

568,000. Chief industries include pulp and paper, nonferrous metal smelting and refining, petroleum products, slaughtering and meatpacking, cotton yarn and cloth, railway rolling stock, electrical appliances, and synthetic textiles.

Transportation and Communication.—Quebec had 41,938 miles of roads, 28,952 of which were surfaced, in 1954; 674,114 motor vehicle registrations were issued, 478,286 of which were for passenger cars. In 1953 there were 5,108 miles of railways, 932,830 telephones, 2,516 post offices, and 807 telegraph offices.

Principal Events, 1955.—In the municipal elections held in Montreal on Oct. 25, 1954, Jean Drapeau, Q.C., was elected chief magistrate of the city. The former mayor, Camille Houde, did not run because of ill health.

The premier of the province, the Hon. Maurice Duplessis, made known the appointment of six parliamentary assistants: Daniel Johnson, Emile Lesage, Hormidas Langlais, J. J. Bertrand, Francis Boudreau, and Redmond Roche, all members of the Provincial Legislature. In a statement issued early in 1955, the Rt. Hon. Louis St. Laurent, prime minister of Canada, announced that taxpayers in the Canadian provinces where no tax agreement had been signed with the federal government would be allowed a 10% reduction from the federal income tax. The Rt. Hon. Thibaudeau Rinfret, retired chief justice of the Supreme Court of Canada, was entrusted by the provincial government with the revision of Quebec's Civil Code.

In June 1955 the Hon. J. Bourque, Minister of Hydraulic Resources, presided at the ceremonies marking the official opening of a tunnel, 35 feet in diameter and 7½ miles in length, which will supply water power for the huge power station which the Quebec Hydro-Electric Commission has under construction at Labrieville in New Quebec. RADIO AND TELEVISION. Developments in radio and television in 1955 are reviewed in this article under three headings, as follows:

- (1) The Radio-Electronics-TV Industry
- (2) Radio and Television Programs
- (3) Radio and Television Engineering

THE RADIO-ELECTRONICS-TV INDUSTRY

The year 1955 was one of record production and sales, high employment, and rising profits for the radio-TV-electronics industry. This upward trend was the more remarkable because fewer new TV markets opened and fewer new TV stations went on the air than in 1954. Military electronics advanced despite a general decline in defense expenditures.

Perhaps the most significant development was the break-through of color television after

an abortive attempt to establish itself commercially a year earlier.

With more than 450 TV stations on the air, television programs were available to an estimated 83 per cent of American homes. TV sets in use at the close of the year numbered about 37,100,000, with the ratio of second sets per family rising sharply. Radio showed new life as set sales rose and the transistor promised to make the personal radio more commonplace. The phonograph, with notable electronic improvements, has again become a fixture in the living room.

Set Output and Sales.—Production of black-and-white TV receivers in 1955 reached a new peak of 7,700,000—more than 300,000 higher than in any previous year. Consumers bought about 7,400,000, a new record and 75,000 above 1954.

Radio receiver production was near 15,000,000—over 4,500,000 above 1954—to make 1955 one of the best radio years since 1947 when 20,000,000 radios were manufactured to meet a postwar demand. Auto radios reached a new high of 7,260,000—about 3,000,000 above 1954—

while home, clock, and portable sets totaled 7,686,000, as against 6,276,000 in the previous year.

Color TV.—After an unsuccessful promotion of small-screen color TV sets in 1954, the industry began making and selling 21-inch color television receivers at a steady, though small, rate in the fall of 1955. While accurate figures were unavailable, up to between 1,200 and 1,500 such sets were reportedly being sold weekly at prices three to four times those of monochrome receivers. Total sales for the year were estimated at 40,000 to 45,000 sets. Industry expectations were that color TV receiver sales in 1956 would reach small-volume proportions of 250,000 or more, and thereafter rise sharply in the next few years.

Military and Industrial Electronics.—Following a slight dip in 1954, the production of electronic devices for the armed services rose slightly in 1955 to approach the 1953 level of \$2.5 billion. The industry's share of the Defense Department's procurement dollar continued to rise as guided missiles, computers, and other electronically controlled apparatus moved out of research laboratories into production facilities.

Industrial electronics took a forward spurt as automation machinery moved into many industrial fields. Moreover, new electronic devices for the home and the car presaged a growing family market for the industry's products, in addition to those of the amusement type.

Economic Trends.—While the radio-TV business became more competitive in 1955, and a few manufacturers were eliminated, electronics attracted a wide variety of nonelectronic manufacturers who desired to diversify their output. There also was a noticeable increase in mergers and the acquisition of small electronic producers by more strongly capitalized companies, frequently from outside the electronics industry.

Despite intense competition, prices and profits in the radio-TV business rose in 1955. One of the significant consumer buying trends was a rising public preference for higher-priced TV models over cheaper "economy" types.

The growing popularity of hi-fi (high-fidelity) equipment among music lovers greatly stimulated the production and sale of phonographs, in both unassembled custom kits and ready-to-play models. This had incidentally added to listening audiences of FM radio stations specializing in musical programs.

Employment.—Higher production wiped out the 1954 declines in factory employment and brought the total close to wartime levels. Production workers in August 1955 numbered 375,000, as compared with about 350,000 a year earlier, while the total employment by manufacturers was in excess of 520,000, according to the U.S. Bureau of Labor Statistics. Weekly and hourly earnings also were well above those of 1954.

Exports.—Total exports of American nonmilitary radio, television, and electronic equipment and components exceeded \$281 million in 1954; reports for the first 10 months of 1955 indicated that a small decline could be expected for the year. The American industry is finding it more and more difficult to sell its products abroad as the British, Dutch, Germans, and Japanese fight for more dominant positions in the world market. Cuba, Venezuela, Italy, and Colombia were the major purchasers of American television receivers, while the greatest number of television chassis went to Mexico and Brazil. Television has expanded rapidly in Canada, West Germany, and Italy.

An estimated 10½ million television receivers are in use throughout the world outside the United States, with the greatest concentrations in the United Kingdom, Canada, and the USSR.

JAMES D. SECREST,
Executive Vice President, Radio-Electronics-
Television Manufacturers Association.

RADIO AND TELEVISION PROGRAMS

A nationwide survey undertaken in the fall of 1955, after the bow of the 1955-56 television season, showed that 7 out of every 10 viewers expressed themselves as being satisfied, on the whole, with TV's program content. This, in itself, is most revealing; but coming at a time when television generally has been upgraded to encompass a totally new dimension in entertainment, it definitely adds up to a plus commentary on America's 37.1 million TV set owners.

Reflecting back on what has transpired in the past 12 months in altering the program concepts in television, one can only come to the conclusion that, as the mainstream of the future of American entertainment, TV has done a remarkable job in proving beyond doubt that it is possible to mass-produce quality. True, there has been a lot of the cliché and the stereotype in programing while catering to inferior tastes, but on the whole TV demonstrated in 1955 that as a medium for entertainment, information, and enlightenment, it need not take a back seat to the motion picture, the legitimate theater, or the concert stage. For it was a year that brought to complete fruition (in its acceptance by advertisers and the viewing public alike) the concept of "big" programing—the "spectacular," as incepted by Sylvester L. Weaver, the imaginative president of the National Broadcasting Company (who has since become chairman of the board). With Weaver walking off with the "man of the year" accolades in TV, it was not surprising that the advent of the 1955-56 season in September also saw the Columbia Broadcasting System embracing the same 90-minute show pattern. as board chairman William S. Paley let it be known that he, too, could "spec up the spectrum," color and all.

Whereas for a full year all the TV excitement and noise—and there was plenty of it—had been generated by NBC, the entrance of CBS into the realm of the spectacular, geared to the same "no talent or production is too big for us" precepts inaugurated by Weaver, was the signal for the most competitive talent race in broadcasting annals. The viewer was the winner as the NBC-CBS roster of spectaculars (practically all of them budgeted in the area of \$250,000 to \$350,000) alternately brought forth Mary Martin in an adaptation of her Broadway success, *Peter Pan*; Frank Sinatra and Eva Marie Saint in *Our Town*; Helen Hayes, Mary Martin, and George Abbott in *Skin Of Our Teeth*; a 90-minute Noel Coward-Mary Martin song frolic; a Sadler's Wells Ballet performance of *Sleeping Beauty*; an imaginatively conceived, star-studded production of *Alice in Wonderland*, as produced by Maurice Evans; José Ferrer in *Cyrano de Bergerac*; or a gripping production of *The Caine Mutiny Court Martial*. Considering NBC's grand total of 75 "big shows" a season, plus an additional 50 from the rival CBS camp, the fact that television's total program cost came to \$500 million in 1955 becomes more understandable.

And as the spectacular began to inscribe for itself a permanent niche in the archives of show business, it was interesting to note on the A. C.

(LEFT) NBC; (RIGHT) CBS

(Left) José Ferrer (l.) plays Cyrano in TV production of *Cyrano de Bergerac*, with Christopher Plummer and Claire Bloom, Oct. 17, 1955. (Right) Noel Coward and Mary Martin in *Together with Music* (Ford Star Jubilee), Oct. 22, 1955.

Nielsen audience popularity charts the virtually complete disappearance of the half-hour shows from the top 10 listings. It took *The \$64,000 Question* to crash through the top 10 "charmed circle," but otherwise it was the "big show" of the 60- and 90-minute variety that ran off with the laurels when the ratings were tallied up at the end of each month.

There were, quite obviously, fears that the overnight success of *The \$64,000 Question* would inspire a whole new wave of network quiz entries. A few other shows did try to duplicate its success, with an NBC entry (*The Big Surprise*) increasing the grand prize to \$100,000. But *The \$64,000 Question* remained alone and unique, demonstrating that the big prize money was not in itself the major lure. What this show possessed—a fine sense of the dramatic and inherent showmanship values—was lacking in the others. TV, it seemed, would not be taken over by the "gimmick boys."

But a sizable portion of the medium was taken over, for better or for worse, by the Hollywood fraternity as a big-time claim was staked in video by the major picture studios, notably 20th Century-Fox, MGM, and Warners. As of the year's end this venture remained a dubious flirtation. Since TV has always been the natural enemy of the film exhibitor, everyone was wondering whether the film companies could afford to pay more than lip service to the TV medium.

Would they use it more or less to exploit the studios' theatrical product? Certainly in terms of programing for TV, nothing of great moment emerged in 1955. Most of it, as demonstrated in the Warner Bros. *Presents* weekly series on ABC, the 20th Century-Fox alternate-week CBS series, and the MGM weekly series on ABC, was nothing more than rank-and-file material.

Both CBS and NBC began budgeting more and more for color TV programing, with NBC even launching a full-hour, five-times-a-week matinee dramatic series in color. Sales of color receiving sets remained practically at a standstill, however, because of their high cost. RCA and other manufacturers were promising a \$500 set ceiling "within a year," but until that happens color will remain beyond the means of the majority of viewers.

As TV continued to entrench itself to the point where it represented nearly 60% of all media billings in the top advertising agencies* (radio in its best days never siphoned off more than 30%), network radio business continued its tragic decline. NBC, successfully concealing the figures under the corporate umbrella of the RCA consolidated statement, nevertheless emerged

* The Federal Communications Commission reported total radio and TV revenues in 1954 as \$1,042,500,000, as compared with \$908,000,000 in 1953. Of the 1954 total, TV accounted for \$593,000,000 (37% more than in 1953), and radio for \$449,500,000 (a drop of 5.4% from 1953).

(Left) U.S. Marine Capt. Richard McCutchen, first top prize winner on *The \$64,000 Question*, is congratulated by his father (left) and Hal March, Sept. 13, 1955. (Center) Edward R. (LEFT AND CENTER) CBS; (RIGHT) NBC

from 1955 some \$2 million in the red. The network, flushed with TV riches, simply took it in stride, inaugurated its week-end *Monitor* program pattern in a desperate bid to generate some enthusiasm for the aural medium, and followed it up with a similar *Weekday* service.

The fact that the affiliated stations were not too happy about this innovation in programing, fearing encroachments on local and national spot advertising business, was indicative of today's radio trend: a station would prefer an independent rather than a network status. On a local level, the radio station can make a satisfactory profit. Network radio is something else again. Clients want selective markets, and every network has reframed its operation, chopping up shows to fit any sponsor's wish or inclination. Every possible rate formula and program variation has been tested and retested by the networks—for example, Mutual with its "Companionate Radio" and skel-tonized staff, CBS with its "Segmentation Radio," and ABC with its Five-Minute Plan—all working feverishly to ward off the day when successful radio networks may become a matter of history. (See also EDUCATION; PRIZES AND AWARDS.)

GEORGE ROSEN,
Radio-Television Editor, "Variety."

RADIO AND TELEVISION ENGINEERING

Television broadcasting continued a steady expansion in 1955, although the rapid pace of new station construction which had characterized the preceding years slackened. During 1955, 59 new stations began operation in the United States, while a few of the operating stations went off the air. The total number of stations in the United States (including Alaska, Hawaii, Puerto Rico and the Virgin Islands) was 459, as compared with 426 stations at the end of 1954.

Television Facilities.—The established stations in the United States continued to improve their facilities. High-power transmitting equipment was installed and taller transmitting towers were erected to improve television signals. Stations KRLD-TV and WFAA-TV, Dallas, Texas, installed new antennas on top of a common tower. The completed structure is 1,521 feet above ground, the tallest multiple antenna installation in existence and one of the highest structures in the world.

Work was continued to improve the service rendered by stations operating on the ultra-high-frequency (UHF) channels (Channels 14-83). Several UHF stations increased their radiated power to 1 million watts, and others planned increases up to 5 million watts—far greater than that authorized for any other broadcasting service.

The rate of new station construction in other countries increased. By the end of 1955, there was regular television service in 28 countries, and many other administrations had announced experimental operation or construction plans which indicate that the industry may expect a continued rapid growth throughout the world. The accompanying table lists the countries which were known to have regular television stations in operation at the end of 1955, giving the latest available information as to the number of transmitting installations and the number of receiving sets in use in each country.

In addition to the stations listed in the table, the United States armed forces operate 8 low-power stations at widely scattered locations throughout the world (including one at Lime-

stone Air Force Base, Maine) for providing television service to American troops at remote installations.

SUMMARY OF WORLD TELEVISION, 1955

Country	Transmitting stations	Receiving sets
Argentina.....	1	70,000
Austria.....	4	4,000
Belgium.....	4	70,000
Brazil.....	6	150,000
Bulgaria.....	1	150
Canada.....	33	1,800,000

Color TV.—Color television broadcasting continued to expand during 1955. The major networks completed large color studio installations in New York and Hollywood, and the National Broadcasting Company (NBC) announced plans for the expansion of these facilities and the construction of new all-color studios in Chicago. At the end of the year, from 40 to 50 hours of television broadcasts were being produced in color each month by the networks, and many independent stations were producing color broadcasts on a regular schedule.

Improved color television receivers became available during 1955 at reduced prices. Receivers having viewing screens of 19 inches and 21 inches were offered at prices from \$700 to \$900, compared with a price of almost \$1,000 for the early 14½-inch color receivers. The new color receivers featured improved and simplified circuits.

A new color picture tube, still in the developmental stage, was announced by the General Electric Company. This tube employs an improved type of color selection which greatly increases the picture brightness. Still in the early development stages is a "flat" picture tube, only three inches deep, in which the scanning electron beam is introduced from the side. This tube, which is being developed by Willys Motors for military applications, will also be suitable for monochrome picture presentation. When eventually perfected, it will eliminate the need for a deep receiver cabinet to accommodate the long picture tube. (See also ELECTRONICS.)

Subscription TV.—Considerable attention was attracted by publicity given in 1955 to various proposals for "subscription television," in which the viewer would pay to watch certain programs. A number of technical systems have been developed for the transmission of "scrambled" programs, which cannot be satisfactorily received on the ordinary home receiver. In order to receive the desired program, a special attachment to the television receiver is required; the required fee

must be paid before satisfactory reception of the program is possible. These systems have been fully developed technically for several years, but came into prominence during 1955 when the Federal Communications Commission (FCC) announced that proposals would be considered for instituting such a service on a regular basis.

Closed-Circuit TV.—Closed-circuit (nonbroadcast) television presentations of entertainment and sporting events continued, with showings in theaters and large hotels of athletic events, including championship prize fights and college football games.

Television systems for a myriad of applications other than broadcast service continued to expand. These systems, commonly referred to as "industrial television systems," are already used for such diversified applications as reading freight car numbers and comparing depositors' signatures in banks. The new applications for industrial television in 1955 were variegated. A "survival television network" was set up near Washington, D.C., for use in case of enemy attack, linking a secret White House "dispersal" headquarters with 35 secret places already set up outside the city. The U.S.S. *Forrestal*, the U.S. Navy's new aircraft carrier commissioned on Oct. 1, 1955, uses closed-circuit television to keep the ship's officers in visual contact with all parts of the ship. The system includes underwater television cameras which can be swung over the side to inspect the hull in case of battle damage. An elaborate closed-circuit color television system was installed by Radio Corporation of America (RCA) at the army's Walter Reed Hospital in Washington, D.C., for clinical and other uses. The city of Detroit installed closed-circuit television cameras for traffic surveillance. Closed-circuit television cameras were installed in unattended elevators in large office buildings; and one enterprising parking lot operator on the west coast installed a closed-circuit television camera to help him find empty parking spaces in his lot.

Radio Broadcasting.—Radio broadcasting continued to expand during 1955, with 152 new stations going on the air in the United States. This brought the total number of standard (AM) broadcast stations operating in the United States to 2,814. A new 50-kw. standard broadcast transmitter was announced by RCA during 1955, which features considerably more efficient operation than the older types of transmitter. Many broadcast stations installed automatic programing machinery, using prerecorded magnetic tape, which provides many hours of continuous programs and commercials without attention.

Several manufacturers introduced new automobile and portable receivers employing transistors instead of vacuum tubes. Transistors require only a fraction of the current needed by vacuum tubes, are more rugged, and have longer life. They require so little current that a portable receiver using them is capable of operating for hundreds of hours on a single set of batteries. Several new experimental items of equipment employing transistors also were announced, including receivers powered entirely by solar batteries, and experimental transmitters which derive their required energy from the voice of the operator.

New studios and control rooms for the Voice of America were dedicated in Washington, D.C., by Secretary of State John Foster Dulles late in 1954. These studios, representing some of the most extensive installations in the world, originate programs in 39 languages which are relayed

to the Voice of America transmitters throughout the world.

Frequency modulation (FM) radio received a new boost in 1955 when the FCC authorized a system of multiplex operation in which a second and even a third program may be transmitted simultaneously on the same channel with the main program. The additional programs are transmitted by using them to modulate subcarriers above the audible frequency range, which are used in turn to modulate the main carrier. These systems are used for supplying background or "functional" music to stores and other public places.

Consulting Radio Engineer.

RADIOACTIVITY. See Index entry.

RADIOLOGY. See X-RAY.

RAILROAD RETIREMENT BOARD. See Index entry.

RAILROADS. Traffic and earnings of railroads,* which in 1954 suffered serious declines were in 1955 restored to approximately the levels of 1953. Traffic increases were usual in most commodities, reflecting generally higher economic activity throughout the United States. The large daily car surpluses of 1954 disappeared with the increased traffic, and car supply actually fell short of demand. To meet the shortage, railroads moved to acquire new cars, repair others, and to obtain higher utilization from existing serviceable cars. New freight cars on order at the end of 1955 totaled 135,000, compared with 15,000 in December 1954.

Increases occurred in the wages of railroad employees and in the cost of fuel, materials, and supplies, those items which together make up about 90% of railroad operating expenses. The effect of these increases was minimized, however, by an increase in operating efficiency, resulting from continuing improvements to plant and equipment, on which railroads have spent an average of more than \$1 billion a year for ten years. These expenditures continued in 1955, but at a level of about \$110 million below the post-war average. They included the purchase of 40,000 new freight cars, 450 new passenger-train cars, and 1,000 units of motive power, mostly diesel. These purchases raised the totals of post-war additions to 603,300 new freight cars, 6,200 new passenger-train cars, and 21,200 new locomotives, also mostly diesel. Diesel locomotives in 1955 handled upwards of 90% of all railroad motive power needs.

Other improvements included additional installations of continuous welded rail, completion of the world's first fully automatic freight classification yards, the first permanent installations of television for railroad use, additional mileage brought under centralized control, and use of the latest electronic computing machines. Railroads made these improvements and absorbed the increased costs of operation without benefit of increased rates or fares, other than slight upward adjustments in some commuter fares.

Railroads continued in 1955 to suffer heavy deficits in passenger service, due largely to inroads made by the private automobile and air coach. New lightweight trains, low in initial cost, up-

* Figures and statements refer to Class I railroads, which account for 95% or more of all railway performance in the United States. All 1955 figures are partly estimated.

ELGIN, JOLIET AND EASTERN RAILWAY

Kirk Yard, Gary, Ind., completely equipped with automation, uses radar, electronic scales, automatic retarders, electronic computer, and automatic switching system.

keep, and operation, were ordered by several railroads in an effort to win back some of the traffic and cut losses. At the year's end, two were in experimental service.

Midway in 1955 Congress received recommendations of a Presidential Advisory Committee on Transport Policy and Organization calling principally for greater freedom for the several forms of transportation to make rates competitively, and for strengthening the nation's system of common-carrier transportation. One congressional committee held preliminary hearings on the recommendations after Congress adjourned, but postponed action to 1956.

Facilities.—Railroad plant and equipment in 1955 comprised 352,000 miles of track, including 212,000 miles of first main track, 33,000 locomotives, 34,100 passenger-train cars, and 2,025,000 freight-carrying cars.

Earnings.—Railroads in 1955 had gross revenues of \$10,100 million, an increase of 7.7% over 1954, and total operating expenses of \$7,611 million, an increase of 3% over 1954. Operating expenses were 75% of revenues in 1955, and 79% in 1954. Net railway operating income (the amount remaining after deducting operating expenses, taxes, net rents, and other costs of operation) was \$1,110 million, an increase of \$236 million over 1954. In Table 1, net railway operating income is shown as a rate of return on depreciated and amortized investment in railroad property used in transportation service.

TABLE 1—EARNINGS OF CLASS I RAILROADS

Period	Annual rate (%) of return on investment
1926-30 average.....	4.80
1936-40 ".....	2.51
1941-45 ".....	4.97
1946-50 ".....	3.54
1954.....	3.28
1955 (estimated).....	4.15

Passenger Traffic.—The postwar decline in passenger traffic continued in 1955. Railroads carried 400 million passengers and operated 28,500 million passenger-miles. (See Table 2.)

Freight and Passenger Rates.—The levels of freight rates and passenger fares, as measured by the amounts which railroads receive for moving a ton of freight, or a passenger, one mile, did not rise in 1955. Railroads received on the average 1.4 cents for moving a ton one mile, and 2.6 cents a passenger-mile. Compared with 1928, the 10th year after World War I, the freight average

TABLE 2—PASSENGER TRAFFIC

Year	Passenger- miles (millions)	Per cent increase over 1939
1939.....	22,651	...
1944.....	95,549	321.8
1954.....	29,292	29.3
1955 (estimated).....	28,500	25.8

increased only 31%, while the passenger average decreased 8%.

Freight Traffic.—Railroad freight traffic increased over that for 1954, both in tons originated and in ton-miles (see Table 3).

TABLE 3—FREIGHT TRAFFIC

Year	Tons originated (millions)	Ton-miles (millions)	Ton-miles (% increase over 1939)
1939.....	901.7	333,438	...
1944.....	1,491.5	737,246	121.1
1954.....	1,300.0	549,240	64.7
1955 (estimated).....	1,375.0	620,000	85.9

Fuel and Material Costs.—Prices of fuel, materials, and supplies used in railroad operation rose to all-time highs, as shown by the weighted index figures in Table 4.

TABLE 4—COST OF MATERIALS AND FUEL

Period	Materials and supplies (excluding fuel)	Fuel (coal and oil)	Fuel and all other materials and supplies
1947-49 average.....	100.0	100.0	100.0
December 1939.....	55.5	47.5	52.6
October 1954.....	132.8	109.1	123.9
October 1955.....	141.6	110.1	130.2

Employment.—Railroad employment remained at approximately the 1954 level, while employee compensation (total and average) was at an all-time peak. Agreements made with several classes of employees in the latter half of 1955 were estimated to increase the railroad wage bill by \$413 million a year. Railroad employment and compensation trends are indicated in Table 5.

TABLE 5—EMPLOYMENT AND COMPENSATION

Year	Average number of employees	Total compen- sation (millions)	Average straight- time hourly rate	Average annual compen- sation per employee
1939.....	987,943	\$1,864	\$0.74	\$1,886
1944.....	1,413,672	3,853	0.93	2,726
1954.....	1,064,705	4,855	1.94	4,560
1955 (est.).....	1,056,000	4,970	1.96	4,700

Taxes.—Class I railroads in 1955 paid \$1,120 million in taxes, an average of about \$3 million a day. This figure does not include excise taxes paid on gasoline and other materials or those on freight and passenger traffic collected by railroads and paid to the government.

Research.—Particular attention was given, with good results, to the problem of overheated freight car axles (hot boxes), to more efficient ticket-selling and reservation systems and procedures (see TELEGRAPHY—Ticketfax), to increased mechanization of track construction and maintenance work, and to hauling trucks and trailers on railroad flat cars ("piggy-backing"). At the end of 1955, some 34 railroads in the United States and Canada offered some form of "piggy-back" service.

Nerve center of the widespread research program was the research and testing laboratory of the Association of American Railroads, which at

GENERAL MOTORS CORPORATION

General Motors Aerotrain weighs 50% less than conventional trains and takes curves at higher speeds.

the year's end was pressing ahead on some 200 separate research activities. Other research was conducted by numerous individual railroads and by railroad supply companies.

RAILWAY TRAFFIC, BY MAJOR COUNTRIES

(In millions of passenger-kilometers and freight net ton-kilometers; one kilometer equals 0.62137 mile)

RECLAMATION.—Greater participation by state governments and local communities, private industries, and individual citizens marked the progress of the federal reclamation program for the development of the water resources in 17 Western states and Alaska during the fiscal year ending June 30, 1955. The program, administered by the Bureau of Reclamation in the U.S. Department of the Interior, made available facilities capable of delivering irrigation water to more than 7 million acres of land on which approximately 125,000 family-size farms and more than 125,000 suburban units have been developed. The area for which water can be supplied from bureau-constructed works comprises about one fourth of the total irrigated area of the western United States. Approximately 1,600,000 persons, who are directly dependent on these reclamation developments, live in project towns and villages.

The Bureau of Reclamation also provided municipal and industrial water service from bureau-constructed works to more than 2,000,000 people. The bureau is also responsible for protection through proper supervision of the \$2.8 billion federal investment in constructed works. These facilities include 126 storage dams and 80 diversion dams, more than 19,500 miles of canals and laterals, over 5,700 miles of drains, 386 pumping plants, and an estimated 11,300 miles of operating roads.

During the year, the bureau operated 34 power plants with a total nameplate capacity of 4,854,550 kw. Sales of electric power from bureau multipurpose projects and from projects for which the bureau is responsible for marketing the power aggregated 25,031,525,608 kw.-hr., with revenues totaling \$51,764,256.48.

Crop production on irrigated lands within the service area of federal reclamation projects was valued at \$865,025,682 in 1954, the latest crop year reported. Next to 1952, this was the most productive year in Bureau of Reclamation history. The year 1954 was also the fourth consecutive year in which the total crop value exceeded the three-quarter-billion-dollar mark, increasing the cumulative value of all reclamation harvests through 1954 to about \$10.6 billion.

During the fiscal year 1955, the bureau conducted 4 land openings on 2 projects, making 243 farm units embracing 23,514 irrigable acres of new land available for settlement. Since the close of World War II, 48 land openings have been held on 13 reclamation projects. A total of 2,166 new farm units encompassing nearly 183,000 irrigable acres of public land has thus been made available for selection by qualified applicants.

Construction completed during the fiscal year 1955 on Bureau of Reclamation projects provided irrigation facilities to serve about 315,000 acres of land; 133,500 kw. of hydroelectric generating capacity; 785 miles of canals, pipelines, laterals, and drains; and more than 470 miles of transmission lines. The investment in this new construction work and in related water resource and land development features totaled \$152 million. The 186 construction contracts in progress at the end of the fiscal year had a total value of more than \$145 million.

The 1956 fiscal year saw the completion of the Eklutna Project in Alaska, and the placing in service of the 30,000-kw. Eklutna power plant;

the "holing through" of the 6-mile long Tecolote Tunnel on the Cachuma Project in California; completion of the Nimbus Dam and its 13,500-kw. power plant for the Central Valley Project in California; and completion of the 36,000-kw. Alcoa power plant for the Kendrick Project in Wyoming.

Other outstanding construction events were the completion of the Sly Park Dam in the Central Valley Project in California; the completion of the 3.3-mile-long Gateway Tunnel for the Weber Basin Project in Utah; the dedication of the Kirwin Dam in the Missouri River Basin Project in Kansas; and the start of construction in the Missouri River Basin of the Glendo Dam in Wyoming and the Lovewell Dam in Kansas. (See also DAMS.)

WILBUR A. DEXHEIMER,
Commissioner, Bureau of Reclamation.

RECORDS, Phonograph. The year 1955 was distinguished by two significant developments in the merchandising of recorded music. First, a new low price was established by most manufacturers for the popular 12-inch long-play record; and second, the sale of records through the so-called record clubs became increasingly important.

Early in January 1955, RCA Victor announced an overall repricing of its entire line of records, including a reduction in the price of 12-inch long-play records from approximately \$6 to \$4 each. Within a few weeks most of the other record companies followed suit with similar reductions. By mid-1955, sales reports indicated that these price reductions had increased the sale of 12-inch long-play records by as much as 40%.

This new low price for long-play records points up sharply the substantial spread between today's prices and those which existed prior to World War II. The modern 12-inch long-play record with a turntable speed of 33½ rpm. will provide about 25 minutes of music on each side, or a total of 50 minutes' entertainment. Since many of the finest records of this type are now generally priced at about \$4 each, the owner of such a record is buying a minute of recorded music for 8 cents. Prior to the development of the long-play record, the same type of music was supplied on a 12-inch, 78-rpm. record which provided only 3½ minutes of music per side, or a total of 7 minutes per record. These records were ordinarily sold for \$1.50, or the equivalent of 21 cents per minute.

During the late summer of 1955 an important move was also made by Columbia Records, Inc., when it was announced that this company would organize its own record club, and was prepared for the first time to deal directly with consumers. Although other mail order operations of this type have been growing in importance during the last few years, Columbia is the first of the old-line record companies to use this plan of merchandising. The operation set up by Columbia closely follows the formula long and successfully followed in the book publishing field. Each month one or more records are featured, and additional bonus records are provided without charge to regular purchasers. Differing from most other record clubs, the Columbia plan provides for a partial participation by its franchised dealers in the operation of the club.

Principally as a result of price reduction the record industry was expected to sell far more units (possibly 20% more) in 1955 than in any year prior to the development of the long-play

record. Dollar volume, however, was not expected to show so high an increase (possibly 10% over 1954) because of the lower unit prices. This means that the total retail value of records sold in the United States in 1955 was somewhat in excess of \$200 million.

POPULAR RECORDS

In the field of popular music, Frank Sinatra, a Capitol artist, duplicated his recent great success in motion pictures. In a poll of disk jockeys conducted by *Billboard*, a leading trade magazine, he was not only named top artist whose records were most often played during the year by disk jockeys, but was also acclaimed by them as their favorite male singer. His single record, *Learnin' the Blues*, and his album, *In the Wee, Small Hours*, were also voted tops in their categories.

The year 1955 will probably be remembered for *The Ballad of Davey Crockett*. Nearly every record company made one or more versions of this highly popular song, and for several months it seemed to the casual listener that radio stations played this selection almost exclusively. The top recording of this selection was sung by Bill Hayes for Cadence Records.

The Yellow Rose of Texas was a big hit with the disk jockeys, in the juke boxes, and with the public generally, during the summer of 1955. It was an adaptation of a song sung by the Confederate troops during the Civil War, and the new arrangement was another triumph for Mitch Miller of Columbia.

The Decca Company also had its share of outstanding popular successes as, for instance; *Love is a Many-Splendored Thing*, recorded by the Four Aces, and *Rock Around the Clock*, with Bill Haley.

The year 1955 was also distinguished by the fact that some of the smaller record companies were able to come up with several of the really big hits in the popular field. *Autumn Leaves*, by Roger Williams for Kapp Records; Billy Vaughan's recording of *Melody of Love* for Dot Records; and *Hearts of Stone*, by the Fontane Sisters for the same label, are good examples of this trend.

In addition to the records listed above, the following popular records had a large sale during 1955:

Sincerely, McGuire Sisters
Unchained Melody, Les Baxter
Cherry Pink and Apple Blossom White, Perez Prado
Let Me Go Lover, Joan Weber
Mr. Sandman, Chordettes
Unchained Melody, Al Hibbler
Dance With Me Henry, Georgia Gibbs
Ain't That a Shame, Pat Boone
Blossom Fell, Nat (King) Cole
That's All I Want from You, Jaye P. Morgan
Tweedle Dee, Georgia Gibbs
Ko-Ko-Mo, Perry Como
How Important Can It Be, Joni James
Naughty Lady of Shady Lane, Ames Brothers
Sixteen Tons, (Tennessee) Ernie Ford
Crazy Otto, Johnny Maddox
Something's Gotta Give, McGuire Sisters
Hard to Get, Gisele MacKenzie
Honey Babe, Art Mooney
Seventeen, Fontane Sisters

Among individual artists, Doris Day, a Columbia artist, held first position as the favorite female vocalist, as she did in 1954. In this field, Jaye P. Morgan, recording for RCA Victor, jumped to second place, although she was not mentioned among the first ten in 1954. Ella Fitzgerald, of Decca, regained third position after slipping to ninth a year earlier.

Among the men vocalists, Sinatra was, of

course, far out in front. He was followed, as was to be expected, by RCA's Perry Como and Eddie Fisher, and then by Nat (King) Cole, of Capitol.

Among the vocal groups, Decca's Four Aces were outstanding, and Les Elgart's Band, recording for Columbia, jumped from fifth place in 1954 to first place in popularity in 1955.

JOHN W. GRIFFIN,

Executive Secretary, Record Industry Association of America, Inc.

CLASSICAL RECORDS

The following, although it is by no means a complete list of 1955's classical record releases, was selected as indicative of the work of major composers, orchestras, conductors, and musicians.

Beethoven, Violin Concerto: Nathan Milstein, soloist; Pittsburgh Symphony Orchestra, William Steinberg, conductor (Capitol).

Brahms, Orchestral Music: Philharmonic Promenade Orchestra, Sir Adrian Boult, conductor (Westminster).

Couperin, Harpsichord Music: Ruggero Gerlin, soloist (Oiseau-Lyre).

Debussy, *Images pour orchestre*: Amsterdam Concertgebouw, Eduard van Beinum, conductor (Epic).

Elgar, *Enigma Variations*: Royal Philharmonic Orchestra, Sir Thomas Beecham, conductor (Columbia).

Handel, Concerti Grossi, Opus 6: English Baroque Orchestra, Hermann Scherchen, conductor (Westminster).

Handel, *Water Music*: Berlin Philharmonic Orchestra, Fritz Lehmann, conductor (Archive).

Haydn, Mass No. 9 in D Minor (Nelson): Soloists; Akademie Chamber Chorus and Vienna State Opera, Mario Rossi, conductor (Vanguard).

Mozart, *Così fan Tutte*: Elisabeth Schwarzkopf, Nan Merriman, Leopold Simoneau, and others, soloists; Chorus and Philharmonia Orchestra, Herbert von Karajan, conductor (Angel).

Mozart, *Le Nozze di Figaro*: Lisa della Casa, Hilde Gueden, Suzanne Danco, Cesare Siepi, and others, soloists; Chorus and Vienna Philharmonic Orchestra, Erich Kleiber, conductor (London).

Mozart, Symphony No. 36 in C (Linz), K. 425: Rehearsal and performance by Columbia Symphony Orchestra, Bruno Walter, conductor (Columbia).

Puccini, *Manon Lescaut*: Renata Tebaldi, Mario del Monaco, and others, soloists; Chorus and Orchestra of l'Accademia di Santa Cecilia, Francesco Molinari-Pradelli, conductor (London).

Ravel, *Daphnis and Chloë*: Boston Symphony Orchestra, Charles Munch, conductor (RCA Victor).

Satie, Piano Music: William Masselos, soloist (MGM).

Scarlatti, Sixty Sonatas for Harpsichord: Ralph Kirkpatrick, soloist (Columbia).

Strauss, Richard, *Don Juan*; *Till Eulenspiegel*: Vienna Philharmonic Orchestra, Wilhelm Furtwängler, conductor (RCA Victor).

Tchaikovsky, Piano Concerto No. 1: Emil Gilels, soloist; Chicago Symphony Orchestra, Fritz Reiner, conductor (RCA Victor).

Verdi, *Un Ballo in Maschera*: Herva Nelli, Claramae Turner, Jan Peerce, and others, soloists; Robert Shaw Chorale and NBC Symphony, Arturo Toscanini, conductor (RCA Victor).

The Art of the Organ: A recital by E. Power Biggs on 20 European organs (Columbia).

Fifty Years of Great Operatic Singing: A collection of 68 vocal recordings from 1903 to 1951 (RCA Victor).

ROLAND GELATT,

New York Editor, "High Fidelity" Magazine, Author of "The Fabulous Phonograph: From Tin Foil to High Fidelity."

RED CROSS, American National. During 1955 the American Red Cross spent 40 per cent of its budget in services for members of the armed forces, veterans, and their families. Red Cross field directors on United States military installations and in hospitals throughout the world aided servicemen and their families through counseling, financial assistance, communications, assistance in applying for government benefits, and referral.

Chapters also helped approximately 46,000 veterans and their families monthly with somewhat similar services, providing more than \$750,000 in assistance. Each month nearly 21,000 volunteers served patients in 127 military hos-

pitals in the United States and overseas. A slightly larger number served patients in 176 Veterans Administration hospitals.

Recreational services were provided for armed forces stationed in isolated sections of Korea, and five recreational centers were in operation in France and North Africa.

Some 300 disaster relief operations were carried on in 44 states, Alaska, and 2 insular territories during 1955. More than 91,000 persons received emergency mass care—food, shelter, rescue, evacuation, and medical and nursing services. Rehabilitation assistance, including building and repair, long-term medical and nursing care, household furnishings, basic maintenance, and occupational supplies and equipment, was given to 14,400 families. In 1955, about 80 cents of every disaster relief dollar was spent for rehabilitation.

Internationally, the American Red Cross assisted 19 other societies in relief measures for the victims of disasters. Medicines, soap, and mobile dispensaries were also sent to the Viet-Nam Red Cross to help in the care of hundreds of thousands of refugees who voluntarily fled the Communist-occupied section of the country.

The Red Cross Blood Program collected nearly 2,210,000 blood donations in 40 states and the District of Columbia for civilian use and national defense. Blood was provided to 3,800 hospitals. Each month, 16,000 volunteers, including doctors and nurses, served in the program.

Approximately two million certificates were issued to persons who successfully completed training in first aid, water safety, and home nursing. Most of the teaching was done by volunteer Red Cross instructors. Thirty aquatic schools attracted 3,000 students who qualified as instructors in water safety, small craft, and first aid.

Volunteers, the majority specially trained for their assignments, served 600 federal hospitals and installations, 120 civilian mental hospitals, 5,400 other civilian hospitals, and 3,900 community agencies.

Members of the Junior Red Cross, enrolled in 74,000 elementary and secondary schools, participated in chapter volunteer activities as well as in national and international projects. They packed more than 400,000 gift boxes, which were sent overseas to 35 countries; prepared 317 school chests, each containing a year's supplies for 50 pupils; and exchanged school correspondence albums, paintings, and music recordings. The value of these shipments exceeded \$900,000. Most of the aid went to children in disaster-stricken areas.

REFUGEES AND DISPLACED PERSONS. Migration is one of the most important and powerful links between the nations of western Europe and the Americas. During the past year, the South American countries have benefited especially because of the migration from Europe of skilled workers and professional people. This movement, by and large, was better than that into the United States because of the partial failure of operations under the U.S. Refugee Relief Act of 1953.

No one knows accurately how many people there are in Europe who could be classed as refugees or displaced persons. It is a fact that many of the millions who remain are living in poverty

NEW YORK WORLD TELEGRAM AND SUN

Austrian woman and her grandchild are among 1,200 refugees arriving in the United States on July 12, 1955.

and are the objects of charity supplied by local agencies and church groups. The problem has never been confined to Europe, however. It continues to be worldwide. More than three million people in the Far East are victims of war and political upheavals. Wars in Asian colonies have increased the flow of refugees from Communist-controlled countries in Europe.

The immigrants to western European countries encounter a new nationalism created by the fear of communism in those countries. This results in serious tensions. There is a vicious circle in which areas of tension create the uprooting and dislocation, and by their very dislocation the people concerned create areas of tension in some areas where they are resettled.

The agencies which have operated in Europe and elsewhere, and cooperate with the United Nations high commissioner for refugees, are: the Intergovernmental Committee for European Migration (ICEM), the U.S. Committee for Refugees, the U.S. Escapee and Refugee Program, the Foreign Operations Administration (now the International Cooperation Administration), and private agencies such as the National Catholic Welfare Conference, the World Council of Churches, the United Hias Societies, the Lutheran Refugee Services, and committees from other religious and nationality groups. The work of church groups, through refugee programs of aid, education, and resettlement, has made a distinct contribution unhampered by political fights and fears which have slowed up some governmental operations.

The Office of the U.N. High Commissioner for Refugees has not been seriously handicapped by political confusion. That office continues to act with a minimum of resistance and interference from national governments, particularly in its program of emergency assistance. High Commissioner G. J. van Heuven Goedhart proposed a program directed at a permanent solution of the refugee problem. It will center on

special efforts to achieve repatriation and resettlement. This will be done in cooperation with the ICEM. In the year 1954, the ICEM assisted in the resettlement of 16,224 refugees within the mandate of the high commissioner's office.

In 1955, the ICEM's operational plan provided for the movement of 142,165 migrants, of which 25,000 would be within the mandate of the high commissioner's office. That office is also working with the U.S. Escapee and Refugee Program (1953); approximately 35,000 persons have been registered in Germany and Austria, of whom only 15,672 were resettled by July 1955.

The high commissioner reported that under the U.S. Refugee Relief Act of 1953, only 24,217 visas had been issued by April 1955. The majority of these were for close relatives of United States citizens, and only a small number of visas were granted to escapees and refugees. No visas under the act were issued for European refugees in the Far East.

The ICEM and religious groups are resettling European refugees in Australia, Canada, New Zealand, and 12 South American countries. It is estimated that the total resettlement during 1955 in these countries will exceed 200,000.

Repatriation is more difficult because of the lack of response to numerous appeals made to certain countries of origin of the refugees. Efforts to achieve repatriation will continue on behalf of any refugee who asks assistance in this respect.

As a part of the new program toward a permanent solution, the U.N. General Assembly has authorized the high commissioner to make appeals for funds for the purposes set forth. As a target for 1955 the sum was set at \$4,600,000, which consisted of \$3,350,000 for repatriation and resettlement, and \$1,250,000 for emergency assistance.

The geographical distribution of funds for a permanent solution of the problem would provide as follows: Austria, \$1,500,000; Greece, \$700,000; Italy, \$280,000; Germany, \$450,000; promotion in countries of resettlement, \$260,000. (The balance will go to other purposes for resettlement.) The funds for assistance would be distributed as follows: European refugees in China, \$321,000; Austria, Italy, and the Near East, \$210,000; difficult cases requiring special care, \$675,000. (The balance will be spent in other programs of assistance.)

This camp, near Jericho, Jordan, is one of four main camps maintained by UNRWA for 75,000 Palestine Arab refugees.

UNITED NATIONS RELIEF AND WORKS AGENCY

The U.N. Relief and Works Agency for Palestine Refugees in the Near East (UNRWA) has a budget totaling \$26,800,000 for 1955-56. Of this amount, \$24,566,000 will be spent for operations including feeding, housing, medical care, etc., and \$2,210,000 will be allocated for construction and equipment. This total is an increase of \$3,600,000 over 1954-55 for operating costs, and is due to the increased number of beneficiaries, additional requirements for health care and social welfare services, and for cloth and special consumer goods and equipment, plus increased camp maintenance costs.

The United States refugee relief program has emphasized the great need for assurances, particularly in the Germany-Austria area. These are individual commitments on the need for special skills required in the work force. Assurances carry the "promise" of a job if the qualifications of the worker meet the needs set forth. There are 73,000 jobs certified—5,000 in clerical and professional work, 23,000 in services (domestic, hotels, restaurants, and hospitals), and 7,000 in agriculture. Others are in scattered fields such as engineering and other scientific work, and trades.

A conference of governor's committees (37 states represented) was held in Washington, Aug. 1-2, 1955, to stimulate efforts for securing assurances and to plan for resettlement of the future citizens. A total of 47,925 assurances came from 20 states led by New York with 12,421; Illinois, with 6,861; and California with 4,399.

State Department officials announced that visas were increased 62.5% since the beginning of 1955. As of August 12, a total of 45,418 visas were recorded as issued under the 1953 Refugee Relief Act. The State Department reported that 33,523 persons had entered the United States under the refugee relief program as of Sept. 2, 1955.

The general improvement in economic conditions in Europe has led to a change in the type of person available for migration—or rather the type of person whose emigration would be most advantageous to the European countries and would contribute most to relief of the excess population problems which they face. RELIGION. Major developments among the principal religions of the world in 1955 are reviewed in this article under the following headings: (1) Introduction: A General Survey; (2) Protestantism; (3) Catholicism; (4) Oriental Religions, Islam, and the Eastern Orthodox Church; and (5) Judaism. The largest individual religious bodies in the United States and Canada are treated under separate headings—for example, BAPTIST CHURCHES, CHRISTIAN SCIENCE, CONGREGATIONAL CHRISTIAN CHURCHES, etc.; and membership figures are tabulated in the article, CHURCH MEMBERSHIP, U.S.

INTRODUCTION: A GENERAL SURVEY

Among contemporary primitive communities the age-old process of cultural change continued in 1955, bringing revolutionary changes in religious outlook. Some recent evidences of this

change have appeared in the conversion of hill tribes in India to Hinduism, in the extension of Semitic and Western cultures among the peoples of central and southern Africa where Moslems and Christians have been active, and in the pressure of Western culture and Christianity among Indians of the Americas, including primitive tribes in the United States.

Among advanced cultures, the year's developments included pronounced opposition to atheism, increased influences of socialism and nationalism, and efforts toward the promotion of religious freedom. These and other trends are reviewed below.

Atheism.—The tide of feeling in 1955 continued high on a wide front against Communistic atheism. Born and nurtured within the areas of Western and Semitic cultures, Communist atheism was condemned as heresy and was attacked on religious grounds by Moslems, Christians, and Jews. In India and China, deep-seated opposition to communism as a religion did not exist, in part because it represented a Western atheism, alien to the native cultures. Moreover, native religions in India tended to insulate the people against Communistic atheism.

Socialism and Nationalism.—In parts of Asia the drift more deeply into socialism affected the ideas and practices of the religious systems. Organized faiths took increased interest in the steps taken by reform governments to improve the fortunes of the lower social classes. More effort was expended in preserving the traditional religious customs than in initiating reforms. Religion in the various cultures became more deeply infused with the spirit of nationalism. In the national struggles for greater social justice, religious leaders became possessed of a new hope and a new fear: the new hope that social justice could be obtained within the cultural framework of the old established religions; and the new fear that if the religions did not bring social justice, a communist leadership, promising a new order of social justice, might take control.

The governments of India and Communist China have continued to pursue the policy of eliminating foreign missionaries on the ground that they are non-nationals who represent vestiges of the old imperialism and who are not in full unity with the new spirit of the country. In support of the contention that governments were not opposed to Christianity as such, however, the governments of India and Communist China recognized the native Christians in the status of national organizations.

Religious Freedom.—In the West, agitation for religious freedom was augmented on many fronts. There were numerous issues related to the principle of separation of church and state and its violation, and to the curbing of unequal privileges enjoyed by an established or state religion. In nations of non-Western culture, inspired governments of new national states have sought to insure equal treatment for all faiths in the hope of gaining the support of all religious groups in the causes of national freedom and social welfare. And in eastern and southern Europe an easing of some of the restrictions on religious freedom has been noted.

Faith and Practice.—At Rangoon, Burma, the two-year session of the Sixth Buddhist Great Council (convened May 18, 1954) continued in 1955. There the Buddhists set about the re-examination of their scriptures, the consideration of ways to strengthen spiritual ties among Buddhists, and the fostering of understanding be-

tween the East and West. In India, new attention has been directed to the study of world religions, through the lead of the Union for the Study of the Great Religions. With the sanction of the national government, steps have been taken to translate the teachings of Gandhi into all the languages of India, and to bring the study of Gandhian philosophy into the country's schools.

In the United States there was a marked increase in church membership. Large numbers voluntarily sought aid from religious tradition. Many seekers having no preference attached themselves to whatever religious society happened to be at hand in the community. This grass-roots movement pointed up acutely the common man's need for a more adequate integration of traditional faith with his culture of modern science.

Numerous declarations of faith by organized religion indicated the continued rejection of the assumption that all religious systems were valid for salvation, an assumption long accepted in the religious traditions of Indian and Chinese cultures.

FRED L. PARRISH,

Head of the Department of History, Government, and Philosophy, Kansas State College.

PROTESTANTISM

There are about 57,124,142 Protestants in the United States (1954) representing approximately 35.3 per cent of the population and 58.6 per cent of the church members in the country (*Yearbook of American Churches*, 1956 edition). There are over 200 religious bodies which can be called Protestant, but this figure is highly misleading because the vast majority are in less than 50 such denominations, and 85 per cent of all Protestants belong to nine large families of denominations such as Lutherans, Baptists, Presbyterians, etc. The statistics which have been released in the *Yearbook of American Churches* indicate that during the year 1954 the number of Protestants increased 2.3 per cent over the previous annual total, whereas the population of continental United States increased 1.7 per cent.

There are many external indexes that show the continuation of the upward trend in Protestantism that has been noted for several years. There has been a marked increase in church at-

tendance and church giving in recent years, and there is a general climate that is favorable to religion and to the churches. Much has been written about these evidences of religious revival, but a great deal of it has been critical of the types of religion that are most popular. Such leaders as Dr. Eugene Carson Blake, president of the National Council of the Churches of Christ in the U.S.A., Dean Liston Pope, and Dr. Reinhold Niebuhr have been forthright in their criticisms. They and many other religious leaders have emphasized the one-sidedness of popular religion with its emphasis on "peace of mind" and its neglect of the prophetic criticism of culture. The tendency for religion to be regarded as chiefly a support for the American way of life has been widely criticized in influential circles in the churches.

Evidences of religious revival are frequently compared with evidences of widespread religious illiteracy and with the increase in juvenile delinquency. The success of the Rev. Billy Graham in his mission in Scotland has been widely noted in the United States, and has greatly increased his influence in circles which had been highly critical of his emphasis and methods. For the first time the Protestant Council of New York City has invited Graham to conduct a mission in that city.

Several denominations have had to face conflicts over the issue of racial segregation on local and regional levels. The national bodies of the denominations and the National Council of Churches have consistently opposed segregation, but in many Southern states there is great resistance to this view, and in local situations there have been a number of ministers who have lost their jobs when they have supported the process of desegregation in the schools. It is noteworthy that the General Assembly of the Presbyterian Church in the U.S. (Southern) passed a resolution against segregation in the schools by a vote of 293-109, a larger majority than was the case the year before. The Protestant Episcopal Church decided to change its plan to hold its general convention in Houston, Texas, because it could not secure a guarantee against discrimination on racial grounds against some of its delegates in that city and, instead, held the convention in Honolulu.

One proposed union between denominations—that of the Presbyterian Church in the U.S.A. (Northern), the Presbyterian Church in the U.S. (Southern), and the United Presbyterian Church of North America—was defeated for the present by the failure of enough presbyteries in the Southern church to approve the union. (See PRESBYTERIAN CHURCHES.) Another proposed union between denominations was advanced as plans were made for the consummation of the union between the Congregational Christian Churches (q.v.) and the Evangelical and Reformed Church in June 1957.

It was announced, after years of controversy, that the permanent headquarters of the National Council of Churches will be located in New York City on Morningside Heights. This organization called the first National Conference on the Churches and Social Welfare in Cleveland, Ohio, on Nov. 1-4, 1955; it was attended by 700 delegates.

Union Theological Seminary.

CATHOLICISM

At the end of 1954 and during the first months of 1955, anxiety gripped the world as Pope Pius XII suffered the recurrence of a serious ailment. On Jan. 3, 1955, his annual Christmas message was published unpronounced and broadcast by an anonymous voice. In this grave address he called on all nations to live in peace and harmony. This can be achieved, he wrote, if "a bridge of truth" between East and West is built on the principles of Bethlehem and founded "on the divine moral order" and on the human beings living in these two worlds.

On April 10, Easter Sunday, Pius XII, recovered at last, delivered his traditional message of hope. He urged international talks to achieve "progressive disarmament" and "lasting understanding" between the two power blocs. The main part of his message was devoted to the hope and terrors of the nuclear age.

A few days later, at the occasion of the seating of newly appointed scholars in the Pontifical Academy of Sciences, Pope Pius XII defined the mission of the scientist. "The mission confided to you," he said, "ranks among the most noble, for you should be in a sense the discoverers of the intentions of God. It pertains to you to interpret the book of nature, to describe its contents and to draw the consequences therefrom for the good of all."

On Oct. 3, 1955, Pius XII addressed mayors and representatives of many of the world's principal cities, including seven in the United States. He reminded them that even in the modern centralized state, the city remains the mother cell of civilization. The pope praised the growing movement in which cities in various countries seek to establish close ties of friendship and to promote cultural exchange and mutual help when needed.

Delegates attending a Rome congress of the International Union of Theater Owners and Film Distributors were received in audience by Pope Pius XII on Oct. 31, 1955. In the course of his address the pope emphasized that for the present generation the motion picture has become "a spiritual and moral problem of immense importance" that cannot be neglected by the church.

The 36th International Eucharistic Congress opened in Rio de Janeiro, Brazil, on July 17, 1955. More than a million persons attended this grandiose manifestation of fidelity to the Sacrament, including over 10,000 pilgrims from many countries. Francis Cardinal Spellman of New York and Samuel Cardinal Stritch of Chicago, followed by 12 United States archbishops and five bishops, participated in the ceremonies. One of the most memorable events of the congress took place when over 200,000 of the faithful joined in prayer for more than 60 million Catholics behind the Iron Curtain. They knelt before 14 black crosses erected in front of a monumental altar. Grouped at the foot of each cross stood delegations of the 14 countries where the church is suffering Communist-inspired persecution: Albania, East Germany, Bulgaria, Communist

a collection of manuscripts and fragments found during the years 1947-55 in ten caves in the region of Qumran on the northwest shore of the Dead Sea. (Consult Wilson, Edmund, *The Scrolls from the Dead Sea*, New York, 1955.)

UNITED PRESS

Pope Pius XII, who recovered from a serious ailment in 1955, participates in ceremony at St. Peter's on June 22.

China, Yugoslavia, Hungary, Lithuania, Latvia, Poland, Czechoslovakia, Estonia, the USSR, Ukraine, and North Viet-Nam.

On Sept. 5, 1955, Labor Day, before an estimated 120,000 pilgrims, Bishop Fulton J. Sheen, of New York, celebrated the first pontifical mass ever sung in English (except for the canon which was chanted in Old Slavonic) and the first in the Byzantine rite to be celebrated by a bishop of the Latin rite. The liturgy which Bishop Sheen celebrated was the concluding event of the 121st annual pilgrimage by members of the Pittsburgh Greek rite diocese to the Shrine of Our Lady of Perpetual Help at Mount Saint Macrina, mother house of the sisters of Saint Basil the Great. Before Bishop Sheen's mass, the liturgy was also celebrated in the Latin, Maronite, and Syro-Malankarese rites, and in forms of the Byzantine, Hungarian, Melchite, Rumanian, and Old Slavonic rites. ORIENTAL RELIGIONS, ISLAM, AND THE EASTERN ORTHODOX CHURCH

A conference of world religions, called by a committee representing various religious organizations in Japan, was held in Tokyo early in August 1955 in order to consider how the religions of the world might work together for world peace. Representatives of 11 faiths from 13 countries were present. A resolution was passed calling for the creation of an intercreedal council to "channel the energies of all religions toward permanent cooperation in the field of world peace and betterment of social conditions."

It is reported that the Communists, far from prohibiting Lamaism in Tibet, have sponsored something closely resembling a revival. A substantial sum has been spent by the Chinese government in repairing and refurbishing the great Lama Temple in Peking. At the same time, the Temple of Confucius is being used for a study room of the Marxist-Leninist Institute of China, and is falling into disrepair.

A thousand young Buddhists, men and women, met in San Francisco, Calif., for the 13th annual conference of the Western Young Buddhists League. The theme of the conference was "Oneness Through the Buddha, Dharma [the teaching], and the Sangha [the brotherhood]."

In spite of the vigorous opposition of several Hindu groups to continuing Christian missions in India, the *Christian Handbook of India* indicates that the number of missionaries has increased steadily during the last few years. Including missionaries on furlough, there are now 5,300. But the conditions of entry of new missionaries and the re-entry of furloughed workers have become increasingly strict. All Commonwealth missionaries must obtain annual renewals of their endorsements in order to remain in India.

A recent Moslem census published in the *Islamic Review* (vol. 42, no. 11, pp. 18-19) gives the total Moslem population of the world as 427,996,558, a much higher figure than that usually given. China is credited with 50,000,000 Moslems, although other estimates are as low as 12,000,000, and the claim of 28,500,000 for the USSR is more than double the latest estimate of non-Moslem authorities.

The *Islamic Review* reports that there are 80,000 Moslems and 12 mosques in the United States and Canada. The larger number of these Moslems are immigrants from Islamic lands, but it is claimed that there are at least 3,000 converts among the Negroes of New York City, 1,000 in Philadelphia, 2,000 in Detroit, and 2,000 in Chicago. The Federation of Islamic Associations in the United States and Canada was organized in 1954.

The rector of the University of al-Azhar in Cairo, Egypt, unhappy at the lack of uniformity existing with respect to the date of the observance of the principal Islamic festivals, and in particular the proper date of the beginning of the fast of Ramadan, has formed a committee of Moslem jurists and scientists to make a detailed investigation of the matter. On receipt of its findings, he will announce them and try to obtain agreement of all Moslems everywhere to observe these dates.

The *Islamic Review* calls polygamy one of the formidable reproaches with which Moslems contend when opponents criticize their social system, and advocates legislation in Moslem states placing legal restrictions on its practice. In no sense would such legislation run counter to the Koran, it asserts.

A four-man delegation from the Netherlands Ecumenical Council of Churches visited the Russian Orthodox Church recently and spoke in various churches to capacity crowds. The members of the delegation were cordially received by the patriarch of Moscow. They estimate that 30% of the Russian people are loyal to the church and contribute to its support. They found little awareness of ecumenicity among rank-and-file priests, but a great deal of interest among the top-ranking clergy. A little later a delegation of Russian churchmen, including Lutherans, Baptists, and Orthodox, made an official visit to the British Council of Churches. The Orthodox group included three theological professors, a fact which leads some observers to believe that the Russian Orthodox Church is prepared to assume its place in the area of theological learning.

CHARLES S. BRADEN,

Professor Emeritus, History and Literature of Religions, Northwestern University; Visiting Professor of Religion, Scripps College.

JUDAISM

Although there was no nationwide study of synagogue affiliation among Jews in the United States, the results of several sample polls taken during 1954-55, as well as other evidence,

tended to show a movement of Jews into the synagogue parallel to that of other Americans to the church. The principal synagogue bodies, representing the three branches of American Judaism (Orthodox, Conservative, Reform), reported the following numbers of affiliated congregations: Union of Orthodox Jewish Congregations, 700; United Synagogue of America (Conservative), 585; Union of American Hebrew Congregations (Reform), 520.

Each of the three religious groupings continued to maintain institutions of higher education. The enrollment figures for 1954-55 in the principal institutions were as follows: Yeshiva University (Orthodox), 2,672, of which 744 were in the theological seminary; Jewish Theological Seminary of America (Conservative), 1,970, of which 241 were in the Rabbinical School; and Hebrew Union College-Jewish Institute of Religion (Reform), 1,700, of which 150 were in the Rabbinical School. These institutions also conducted other schools for the training of Hebrew teachers, cantors, other religious functionaries, and an informed laity.

The Commission on Jewish Chaplaincy, on which were represented the Rabbinical Council of America (Orthodox), the Rabbinical Assembly of America (Conservative), and the Central Conference of American Rabbis (Reform), was the agency through which the National Jewish Welfare Board (JWB) was authorized by the U.S. Department of Defense to recruit and ecclesiastically endorse rabbis for service as chaplains in the various branches of the armed forces. In 1954 the commission recruited and processed 32 full-time chaplains. There was a total of 95 full-time Jewish chaplains in the armed services and in other federal governmental services at the end of 1954. In addition, 249 part-time chaplains served military posts and veterans facilities.

In addition to the ongoing program of research and scholarship, several institutions inaugurated new projects. At the close of 1954 arrangements were concluded with representative scholars of the Hebrew University for the joint production of a history of the Jewish people by the scholars of Israel and the United States, including also a number of European scholars. The final work would appear in 20 volumes in two editions: an English and a Hebrew version, published simultaneously.

In June 1955 the Jewish Theological Seminary of America launched an Institute for Ethical Studies in the Atomic Age, "on the premise that the most perplexing and urgent problems of our time lie in the neglected domains of ethics and theology." It would grant fellowships to exceptional students who would be enabled to devote all of their time to the study of ethics, theology, and philosophy.

Jewish religious institutions played a major role in the celebration of the American Jewish Tercentenary. This event was also the occasion for a tercentenary celebration by Congregation Shearith Israel in New York City.

Pending the completion of a nationwide survey of Jewish education, there were no new enrollment figures to report for 1955. In 1954 there were 400,000 children attending Jewish schools in the United States, compared with 240,000 in 1948. As part of the national survey, pilot studies were undertaken by the Jewish communities of Cleveland and Savannah. (See also JEWISH AFFAIRS.)

RENT CONTROL. See Index entry, *Rent and Rent Control*.

REPRESENTATIVES, House of. For list of members, see UNITED STATES; and for legislation, see Index entry, *Congress, U.S.*

REPUBLICAN PARTY. In 1955, Republicans were in the minority in both houses of Congress, as a result of the elections of 1954. The year brought remarkably few serious conflicts between the Democratic Congress and the Republican administration. The Senate Republican leader, William F. Knowland of California, stated that Republicans supported the president "about three fourths of the time" on roll-call votes in the Senate and House on issues involving presidential proposals, while "Democrats supported the president only a little more than half of the time."

Republican leaders were virtually unanimous in their obvious desire that President Dwight D. Eisenhower should again be the party's candidate for president in 1956. On September 9 the 48 state chairmen, at the close of a three-day conference in Washington, telegraphed the president in Denver, "We are looking forward to supporting you again in 1956." When the chairmen visited the president at his Colorado headquarters the next day, he cautioned them not to depend too heavily on one man. Speculation over the president's intentions changed abruptly to party gloom when the president suffered a heart attack on September 24. Ensuing weeks, with the president's steady recovery, brought renewed but less confident speculation about his probable candidacy. Many party leaders clearly hoped, if the president should not run, that he would express his preference for a nominee and put the weight of the administration behind him in the campaign. Others, whose opinion was publicly voiced by Senator Knowland, believed that any presidential decision not to seek re-election should be followed by a free and uninfluenced nominating convention.

Other possible Republican candidates for the presidency necessarily withheld any public indication of candidacy pending the president's decision. Among leading possibilities were Vice President Richard M. Nixon (q.v.) of California, former Gov. Harold E. Stassen (q.v.) of Minnesota, and Senator Knowland. Gov. Goodwin J. Knight of California made it clear that he would be a "favorite son" candidate if the president should not seek re-election. Chief Justice Earl Warren (q.v.), also of California, announced that he would not leave the Supreme Court for any political purpose, but there were public comments that he ought to be drafted if the president should decline to run.

Developments in 1955 continued to give promise that Republicans could campaign in 1956 on a slogan of "Peace and Prosperity." This advantage might be marred, it appeared, by falling agricultural prices and political unrest among farmers. President Eisenhower indicated that he would continue to support Ezra T. Benson, secretary of agriculture, and his policy of flexible rather than rigid farm price supports. Because of support from such Democratic leaders as Walter F. George of Georgia, chairman of the Senate Committee on Foreign Relations, administration foreign policy was not a major political issue during the year.

The Republican National Committee, under Chairman Leonard W. Hall, chose San Francisco for the 1956 national convention, to convene

August 20. At their September conference, the state chairmen developed a plan to double the party's local organizational strength by recruiting men and women of ages 21-30 as alternate district leaders. Party leaders estimated that this program would provide an additional 200,000 young workers for the 1956 campaign.

State and local election returns in 1955, with a few scattered exceptions, did not bring Republicans encouraging signs of party voting strength. The loss, on April 4, of several statewide school and judicial posts in Michigan was unexpected. A net loss of 40 mayoralties in Indiana on November 8 was a major disappointment resulting partly from bitter party factionalism in the state. Elsewhere losses were not so apparent as was failure to make gains. (See also ELECTIONS; UNITED STATES—*The United States in 1954.*)

RESINS. See Index entry.

RESPIRATORY DISEASES. Acute upper respiratory tract infections, commonly considered to be minor diseases, account for approximately 50 per cent of all cases of total and disabling illness and continue to be the principal cause of absenteeism from work, school, military training, and play. The economic cost of these illnesses is staggering, and there is as yet no effective means of controlling them.

The majority of acute respiratory tract infections are nonbacterial (virus) in origin. In a study of their incidence in Cleveland families, only 3 per cent could be assigned a definite etiology. Likewise, only one half of the febrile respiratory infections during a six-year study at the Great Lakes Naval Training Center could be identified etiologically. The clinical characteristics of these so-called "virus" infections are not well defined and vary from the simple afebrile "common cold" on the one hand to severe debilitating bronchitis and pneumonia on the other. Various clinical syndromes designated as the common cold, nonstreptococcal pharyngitis, acute respiratory disease, epidemic influenza, and atypical pneumonia have been described.

During the past three years significant progress has been made in the development of methods for isolation and identification of nonbacterial respiratory disease agents. Recently, Dr. R. J. Huebner and his associates of the U.S. Public Health Service have isolated a number of viral agents "in tissue culture from adenoid and tonsillar tissue removed at surgery and from nasopharyngeal and conjunctival secretions and feces of persons with respiratory illness." They refer to these viruses as adenoidal-pharyngeal-conjunctival agents (APC viruses) and have divided them into at least eight immunologically distinct types. Thus far, types 3, 4, and 7 have been associated with reasonably well-defined clinical respiratory illnesses. The extent to which these viruses cause acute respiratory disease in different population groups is now under study by a number of different investigators.

HeLa cell (human cancer strain) and kidney cell (monkey) cultures are now routinely employed for the isolation and identification of respiratory disease agents. Recent studies indicate that the monkey kidney cell culture is also suitable for the isolation of influenza virus types A and B. Thus far there is no evidence that any of a number of agents isolated in tissue culture has an etiological relationship to the common cold or to primary atypical pneumonia associated with blood cold agglutinins.

Nonbacterial pneumonias have recently been

associated with influenza and APC Type 4 viruses. Psittacosis and Q fever are primarily pulmonary virus infections, and occur in individuals respectively associated with infected psittacine birds (parakeets) and infected cattle and sheep. During the past two years little has been published on Q fever, which was previously reported to be prevalent in California. Pneumonia caused by the psittacosis virus, however, appears to be on the increase. During 1954 a total of 445 cases was reported to the U.S. Public Health Service. These came from 29 states and the District of Columbia. The greatest number of cases were among psittacine (parakeet) bird handlers. In one state (Texas), 169 cases occurred among employees of turkey processing plants. Recent reports reveal that pigeons, chickens, ducks, and other domestic fowl may be infected and transmit their disease to man.

Since the fall and winter of 1953, epidemic influenza has occurred only sporadically in the United States. Reported cases have been due mainly to influenza virus types B and C. In the absence of annual vaccinations, the immune state of the population can be expected to be low. It was predicted, on the basis of our knowledge of the epidemiology of influenza, that the respiratory disease season of 1955-56 would witness an epidemic outbreak.

The acute nonbacterial respiratory tract infections are most prevalent in all age groups during the fall, winter, and spring months. Several studies have shown that the highest incidence is among children under six years of age, averaging approximately 6.5 infections per person per year. Respiratory illnesses become less frequent with increasing age but are more prevalent among mothers than fathers. These observations suggest that many infections among adults are acquired from their children and that the children in turn acquire their infections from intimate contact with others at school, at play, etc.

There is a great diversity of opinion concerning the mode of transmission of respiratory diseases. The respiratory disease viruses are found in the nose and throat secretions of ill and asymptomatic carriers, and presumably are dispersed during the course of coughing, sneezing, laughing, talking, blowing the nose, and hand-to-mouth activities. The virus-carrying droplets vary greatly in size. The large ones fall quickly to contaminate the immediate environment, while the smaller ones evaporate and remain suspended for longer periods of time in the air as "droplet nuclei." Some observers consider that the viruses causing acute respiratory disease are spread by means of the air from the inhalation of infectious droplet nuclei. Others consider the opportunities for spread by immediate contact to be more important. Individuals with respiratory tract infections undoubtedly contaminate themselves and their environments with the offending viruses and thus provide many opportunities for transfer of these agents to others. The available evidence indicates that the implantation of viral agents on the nasal and throat mucous membranes by the inhalation of contaminated dust or droplet nuclei, the direct implantation of infectious droplets on the conjunctivae, and the indirect contact with contaminated objects or with soiled hands all operate in the transmission of respiratory infections but vary in importance with different age groups, disease, environments, and seasons of the year.

The acute bacterial infections of the respiratory tract are now successfully treated with the sulfonamides and antibiotics, but psittacosis and

Q fever pneumonia are the only infections of viral etiology which respond to certain of the antibiotics. Although effective influenza vaccines are available for protection against this disease, successful control over the other respiratory infections of viral etiology awaits the further identification of the agents and the preparation of suitable vaccines. Professor of Preventive Medicine, University of Chicago.

RETAIL STORE SALES. Retail store sales of \$177 billion set an all-time record in the fiscal year ended June 30, 1955. Sales rose 5% above the previous fiscal year. Dollar volume was one fourth above the pre-Korean War level and two and one-third times the level at the termination of World War II, with about half of these gains attributable to price rises.

In February 1954 sales began to recover from the 1953 economic downturn. The rate of gain accelerated sharply in November 1954, and sales climbed steadily at the rate of \$100 million a month for the balance of the fiscal year. Sales gains persisted in the first half of the fiscal year 1956. With prices virtually unchanged since 1952, rising sales reflected an actual increase in units sold.

The steadily expanding flow of income to consumers was the primary factor stimulating buying in the fiscal year ended June 30, 1955. Consumers also showed less disposition to save. Expanding consumer credit furnished additional impetus for purchasing, particularly in the durable goods categories.

Consumers spent 68% of their disposable income at retail stores in the fiscal year ended June 30, 1955. The high level of prosperity resulted in a heavier flow of purchases into the durable goods stores. By the end of the fiscal year 1955 one fourth of consumer income was being expended in these outlets. Reflecting sustained interest in automobiles, this ratio has remained well above one fifth throughout the postwar period, compared with 17% in prewar years.

Nondurable goods stores received 44% of the consumer dollar. This ratio has been maintained over the long-term period largely because of the nonluxury, day-by-day buying represented by most of these outlets.

Sparked by the introduction of the 1955 models, automotive sales reached record volume at the close of the calendar year 1954 and climbed steadily in successive months (see AUTOMOBILES). With automobile registrations at 49 million, gasoline service station sales rose an ad-

ditional 9% from the fiscal year 1954 to 1955. The remaining groups of retail stores each registered gains of from 2% to 4%.

Of every dollar spent at retail stores, food outlets received 24 cents; automotive stores, 20; general merchandise stores, 11; eating and drinking places and gasoline service stations, 7 each; apparel stores, 6; lumber, building, and hardware stores, 6; furniture and appliance stores, 5; drug stores, 3; and miscellaneous retail stores, 11.

Retailers' inventories totaled \$23 billion at the end of the fiscal year 1955. With high sales siphoning stocks from retailers' shelves, inventory accumulation was negligible and the stock-sales ratio fell slightly during the year.

MARIE P. HERTZBERG,

Office of Business Economics, U.S. Department of Commerce.

REUNION. An island in the Indian Ocean, 420 miles east of Madagascar, forming an overseas department of France. Area, 970 square miles; pop. (1954 census), 274,370, chiefly French Creole. Saint-Denis (41,863) is the capital. Réunion is governed by a prefect and an elected General Council of 36 members. The island has 241 primary schools (46,036 pupils) and 2 lycées (1,017).

Chief crops are sugarcane, manioc, tapioca, vanilla, and vegetable essences. The sugar crop for 1954 (prelim.) was estimated at 200,000 short tons (189,000 in 1953). Industry consists chiefly of the manufacture of industrial alcohol and rum, chocolate, flour, vegetable oils, cigarettes, canned goods, and fiber sacks. Exports in 1954 totaled 6,291 million francs CFA; imports, 6,473 million. Chief exports were: sugar, 169,210 metric tons (5,070 million francs CFA); rum, 49,551 hectoliters; essential oils, 149 metric tons; and vanilla, 51 metric tons. Réunion has a 78-mile coastal railway and 456 miles of roads. Air France maintains regular air services to the island. Telephones numbered 3,869 in 1955; motor vehicles, 7,000 (1954); licensed radio receivers, 3,000 (1952). In 1952 there were 3 daily newspapers with a total circulation of 17,000.

RHODE ISLAND (officially **RHODE ISLAND AND PROVIDENCE PLANTATIONS**). New England state, United States, one of the original 13 states. "Little Rhody" ranks last in area and 37th in population (1955) among the 48 states.

Area and Population.—Area: 1,214 square miles (land, 1,058; inland water, 156), divided into 5 counties. Population: (1950) 791,896; (est., July 1, 1955) 814,000. Towns (defining civil divisions) and incorporated places with 1950 populations above 10,000 are as follows:

Bristol town.....	12,320	N. Kingstown town.	14,810
Bristol.....	10,335	N. Providence town.	13,927
Central Falls.....	23,550	Pawtucket.....	81,436
Cranston.....	55,060	Providence.....	248,674
Cumberland town.....	12,842	S. Kingstown town.....	10,148
E. Providence town.....	35,871	Warwick.....	43,028
Johnston town.....	12,725	Westerly town.....	12,380
Lincoln town.....	11,270	West Warwick town.	19,096
Newport.....	37,564	Woonsocket.....	50,211

¹ Unincorporated place within town. ² Capital.

Executive.—Chief state officers in 1955:

Governor: Dennis J. Roberts (Democrat)
Lieutenant Governor: John S. McKiernan
Secretary of State: Armand H. Coté
Treasurer: Raymond H. Hawksley
Attorney General: William E. Powers

Commissioner of Education: Michael F. Walsh

Constitution and Judiciary.—The present constitution went into effect in 1843. The Supreme Court comprises five justices; chief justice in 1955 was Edmund W. Flynn.
Legislature.—The General Assembly (Senate, 44

members; House of Representatives, 100) meets annually commencing the first Tuesday in January.

In its regular 1955 session, the General Assembly appropriated about \$54 million for the 1955-56 fiscal year. Other enactments increased maximum unemployment insurance payments to \$30 a week, extended coverage to state employees and firms with one or more employees, and increased maximum sickness and disability benefits to \$30 a week; and created three local health districts to service the entire state. The legislature extended \$1.9 million in additional state aid to public schools; established a single salary schedule for teachers; and provided for the instruction of mentally retarded minors. It also revised the adoption laws; enacted penalties for illegal purveying of barbiturates; established arbitration procedure in labor disputes; set up an Atomic Energy Commission, a Water Resources Coordinating Board, and a commission to study misleading advertising; passed the Shore Development Act; set up state nursing scholarships; and amended state accounting procedures.

Of the three amendments proposed at the 1955 session, the voters in a special June election defeated a plan to raise legislative salaries from \$300 to \$1,500 and one to give permanent tenure to high court judges. They approved a third amendment proposing a slum clearance program.

Finances.—State treasury receipts (1954-55 fiscal year), \$74,007,731; expenditures, \$74,024,286.79; treasury balance, \$19,743,596.92; long-term indebtedness, \$46,689,909.52.

Taxation.—State tax revenue (1954-55 fiscal year); \$58,612,396, including \$18,212,523 from a 2% general sales tax and selective sales and gross receipt taxes, and \$5,841,505 from corporate business taxes. There are no individual income or poll taxes.

Banking.—As of June 30, 1955, the state's 5 national banks had \$499,532,000 in assets, \$253,489,000 in demand deposits, and \$199,519,000 in time deposits; the state's 7 other banks had \$372,314,018.72 in assets, \$231,160,526.23 in demand deposits, and \$104,357,993.73 in time deposits.

Education.—School attendance is compulsory for all between the ages of 7 and 16, inclusive. Operating expenditures comprised \$24,400,431 from local school districts, \$3,536,009 from the state, and \$95,878.70 from the federal government (totaling \$286 per pupil) for public elementary and secondary education in the 1954-55 fiscal year. Expenditures for construction and improvements totaled \$4,439,272.30. Teachers' salaries averaged \$4,085.33.

RHODE ISLAND SCHOOL STATISTICS, 1954-55

Reformatories for females.....	1	23
Prisons.....	1	204

tures for health and welfare institutions totaled \$8,716,862; for correctional and penal institutions, \$1,240,774.

Labor Force.—The labor force (as of Sept. 15, 1955) numbered 375,000, including 4,000 agricultural workers. Nonagricultural employment on August 15, 1955, was 297,800, and for the full year 1954 averaged 288,800. There were 25,000 unemployed workers on Sept. 1, 1955, and \$22,880,986.34 was paid in unemployment insurance compensation claims to insured workers during 1954.

Manufacturing.—There were 152,019 employees in manufacturing establishments during 1953 who received \$529,587,000 in wages. Investment in new plant and equipment amounted to \$33,643,000, and value added by manufacture was \$824,482,000. Earnings of production workers in manufacturing averaged \$60.44 for an average work week of 39.5 hours in 1954, and for the first six months of 1955 averaged \$63.13 for 40.7 hours.

MAJOR RHODE ISLAND MANUFACTURES, 1953

Product or industry	No. of employees ¹	Salaries and wages (thousands of dollars)	Value added by mfr. ² (thousands of dollars)
Textile mill products	59,137	\$199,292	\$266,021
Miscellaneous manufactures ³	27,852	91,134	161,793

Fabricated metal products	7,139	24,985	34,752
Food and kindred products	4,471	14,115	25,712 ⁴

¹ Average per year. ² Value of products less cost of materials, supplies, fuel, electric energy, and contract work. ³ Includes privately owned and/or operated establishments manufacturing ordnance equipment and accessories, but excludes government-owned and operated ordnance establishments. ⁴ 1952 figures. (Source: *Annual Survey of Manufactures, 1953.*)

Mining.—Mineral production in Rhode Island is confined chiefly to building materials. Total output in 1953, valued at \$1,461,796, included 898,393 short tons of sand and gravel (\$775,700), 161,632 tons of stone (\$617,096), and other minerals valued at \$69,000. The state normally ranks 47th in value of mineral output. Production in 1955 was estimated at \$1.4 million.

Fisheries.—The commercial fish and shellfish catch in 1954 was valued at \$4,124,854. Poundages and values of major species were: hard clams, 4,494,792 (\$1,701,546); fish for reduction, 58,900,571 (\$508,760); fluke, 2,373,785 (\$388,395); and scup, 5,714,550 (\$249,755). Some 3,626 persons were engaged in commercial fisheries during 1954.

Agriculture.—Cash farm income in the first half of 1955 totaled \$11,531,000, and for the full year 1954 comprised \$17,540,000 from livestock and livestock products, \$7,318,000 from crops, and \$55,000 from government payments.

In 1954, receipts from principal crops and livestock products included: dairy products, \$9,742,000; eggs, \$4,154,000; greenhouse and nursery products, \$3,435,000; and potatoes, \$1,466,000.

The state's 2,004 farms (154,674 acres; harvested cropland, 34,980) in 1954 had an average of 77.2 acres and \$21,516 in value of land and buildings per farm. Livestock on farms (Jan. 1, 1955) included 29,000 cattle and 615,000 chickens (not including commercial broilers). During the week of Sept. 26—Oct. 2, 1954, there were 3,989 family and hired workers engaged in farming. There were 1,665 farms with telephones and 1,932 with electricity.

RHODE ISLAND CROP STATISTICS

Crop (and unit of production)	Average 1944-53	1954	Est. 1955
Apples (1,000 bu.)	181	165	260
Corn (1,000 bu.)	310	231	258
Hay (1,000 tons)	48	51	53
Peaches (1,000 bu.)	16	17	19
Potatoes (1,000 bu.)	1,323	1,148	1,320

(Source: U.S. Dept. of Agriculture.)

Transportation and Communications.—State and federal funds disbursed for roads and highways in the 1954-55 fiscal year totaled \$10,278,027, and newly completed construction and reconstruction aggregated 32.71 miles for 1954.

Highways and roads on Jan. 1, 1955 totaled 4,120 miles (3,080 surfaced). Registered *motor vehicles* numbered 299,404 on Aug. 31, 1955, including 246,506 passenger cars. There were 6 *railroads* (1954) operating 96.89 line miles, and in 1955, 4 regularly scheduled *airlines* and 9 *airports and airfields* (6 commercial and municipal, 2 military, and 1 private).

Communications media included (1955) 11 AM and 3 FM *radio stations* and 2 VHF operating *television outlets*; (1954) 7 daily *newspapers* (circulation, 280,190) and 19 other newspapers (circulation, 72,843); and (Jan. 1, 1955) 78,223 business and 195,160 residential *telephones*.

Principal Events, 1955.—Rhode Island was one of the six states which suffered extensive damage on August 19 and 20 from Hurricane Diane. Most seriously affected was the city of Woonsocket, an industrial center of the state, which was left in a crippled condition. More than 6,000 factory workers were idled by the floods, which caused one death and left \$18 million in damages.

President Dwight D. Eisenhower visited the area on August 23 and conferred with Governor Roberts and the governors of five other states on plans for relief and rehabilitation, promising that "everything possible" would be done. On August 26, Secretary of Commerce Sinclair Weeks also visited the area with the top men from his department to study conditions and plan restorative measures.

A second disaster struck on October 17, when drenching rains caused the Blackstone River to overflow into Woonsocket, flooding some low-lying industrial plants and causing three deaths.

The Rhode Island Development Council, following an analysis of the best potential sites for industry in the state, plans to foster the development of industrial parks or districts for the location of new industrial plants.

Results of a nationwide survey showed that Rhode Island led all other states in traffic safety during 1954, with a rate of 2.6 traffic deaths per 100 million vehicle miles of travel.

Dr. Henry M. Wriston resigned as president of Brown University on August 16, and was succeeded by Dr. Barnaby C. Keeney, former dean of the college. One month earlier, Dr. Wriston had been honored by John D. Rockefeller, Jr., who gave \$4 million to the university in recognition of Dr. Wriston's achievements as president.

GRACE M. SHERWOOD,
State Librarian, Rhode Island State University.

RHODES. See DODECANESE ISLANDS.

RHODESIA AND NYASALAND, Federation of. Occupying an area of 487,640 square miles extending from the Limpopo River to the Belgian Congo, this federation of British Central African

territories consists of the self-governing territory of Southern Rhodesia and the protectorates of Northern Rhodesia and Nyasaland. The population (see accompanying table), totaling 6,876,600 in 1954 (Africans, 6,630,000; Europeans, 220,200; Asians and Colored, 26,400), increased in that year by 195,000, and was estimated in 1955 at 7,071,600, including 6,810,000 Africans, 233,600 Europeans, and 28,000 Asians and Colored. During the year ending June 30, 1954, European immigrants entering the federation totaled 16,770, representing a net gain in this category of 2,270 over the previous year's total (14,500). Under federal legislation which went into operation on Nov. 1, 1954, Africans of the South African Union were declared to be undesirable immigrants.

FEDERATION OF RHODESIA AND NYASALAND

Component	Square miles	Population ¹	Capital
Northern Rhodesia.....	288,130	2,128,300	Lusaka
Southern Rhodesia.....	150,333	2,398,700	Salisbury
Nyasaland.....	49,177 ²	2,544,600	Zomba
Total.....	487,640	7,071,600	

¹ All estimated at June 30, 1955. ² Including 12,298 square miles of lakes.

Government.—The British government adheres to the maintenance in Central Africa of a federal constitution, which came fully into effect on Oct. 23, 1953, by proclamation of the governor general, Lord Llewellyn, who assumed office at Salisbury, the Federal capital, Southern Rhodesia, Sept. 4, 1953. At the first general election, held on Dec. 15, 1953, the Federal Party won 24 of the 26 generally elected seats in the 35-member Federal Assembly, which also includes 6 African members (2 elected in each territory), and 3 European members representing African interests. There is also an appointed Executive Council and an African Affairs Board, the latter consisting of 3 European members and 3 African elected members. The cabinet, whose members are chosen from the Federal Assembly, was headed after the first general election by Sir Godfrey Huggins (created Viscount Malvern Feb. 17, 1955), who serves both as prime minister and as minister of external affairs and defense. Under the constitution the federal government assumes responsibility for economic and financial functions, defense, external affairs, transport and communications, and immigration. The territorial governments have authority over local affairs, including native education and agriculture, industrial relations, mining, and highways (excluding federal roads).

Finance.—The budget for the fiscal year 1955-56 estimated revenue at £39 million, and expenditures at £41.5 million, including £15.2 million for administrative and development services, £11.6 million for social services, and £3.7 million for defense. A 4-year development plan, introduced in 1954, provided for expenditures of £58 million, including £38 million for communications and transport. The Kariba Gorge project (see below *Power Projects*) is being separately financed.

Education.—Education other than primary and secondary education for Africans is the responsibility of the federal government, which in 1954 conducted most of the 258 schools for the 52,440 pupils of European, Asian, and mixed stock. The great majority of African schools in the three territories are operated by missions with financial assistance from the various governments. African education was provided as follows in 1954: Southern Rhodesia, 2,348 schools (259,696 pupils); Northern Rhodesia, 1,581 (186,976); and Nyasaland Protectorate, 4,719 (239,918). Classes are to begin in 1957 at a multi-racial university, which is being established at Salisbury.

Production and Trade.—The external trade of the federation aggregated about £278 million in 1954, with £153 million representing exports and £125 million, imports. Four principal mines exploit the copper belt of Northern Rhodesia (largest in the British Commonwealth, and second, after the United States, among world sources). They produced an export tonnage valued in 1954 at £86,455,737. In Southern Rhodesia the export value of gold bullion and concentrates (£6,548,419) led mineral production in 1954. Asbestos was second (81,172 tons exported; value, £6,475,182), and chrome ore

ranked third (318,478 tons exported; value, £2,616,831).

Tobacco is the federation's principal cash crop, of which the export production of Northern Rhodesia and the Nyasaland Protectorate in 1954 aggregated 132,484,641 pounds of unmanufactured tobacco valued at £24,916,283. Corn is the most important food crop, and seasonal production on European farms in all three territories aggregates between 200,000 and 300,000 tons.

Industrial output is important to Northern and Southern Rhodesia, where tobacco, cotton, metal, and other manufactures are carried on in more than 1,000 factories. In 1954 exports of processed and manufactured goods (and their value) included: cattle hides, 17,362,327 pounds (£1,082,385); jute bags, 6,662,435 bags (£927,278); meats (fresh frozen or chilled), 15,996,613 pounds (£921,510); wood, 860,032 cubic feet (£543,056); preserved meats, 3,770,783 pounds (£505,957); cotton yarns, 2,042,506 pounds (£451,088); and cotton piece goods, 3,879,839 square yards (£439,332).

Power Projects.—Two major hydroelectric power projects have been under consideration: (1) the harnessing of the Zambesi River at the Kariba Gorge, at an estimated cost of £85.8 million, and (2) the construction of a dam at the Meshi-Teshi gap, to produce a continuous output of 300,000 kilowatts, at a total cost of £55,050,000. In March 1955 the government announced its decision to give priority to the Kariba Gorge project. (See also *DAMS*.)

Transportation.—Roads in the federation aggregate about 51,500 miles (Southern Rhodesia, 28,500 miles; Northern Rhodesia, 18,000; Nyasaland Protectorate, 5,000) with main roads totaling about 11,000 miles. Central African Airways, a joint enterprise of the three territories, provides daily services between major towns and from these points to Nairobi and Johannesburg, as well as a weekly service to London. Major overseas airlines use the airport at Livingstone, the largest in Africa.

SOUTHERN RHODESIA

In 1955 the population, estimated at 2,398,700, comprised 166,000 Europeans, 2,220,000 Africans, and 12,700 of other races.

Government.—The administration is headed by a governor, Vice-Admiral Sir Peveril William Powlett, responsible to a 30-member elected Legislative Assembly. The leader of the United Rhodesia Party, R.S. Garfield Todd, is prime minister and chief member of a 6-man cabinet. Native councils (59 in 1953) also exercise considerable authority in certain areas. Revenue was estimated for 1955-56 at £13,290,000, with ordinary expenditures from revenue funds at £14 million, and from loan funds at £6 million.

Transportation.—The government-owned Rhodesia Railways operates 1,544 miles of railways in Southern Rhodesia. A new line linking the midlands with Lourenço Marques in Portuguese East Africa was under construction in 1955. There are about 6,000 miles of main roads, and 22,500 miles of other roads. Major airports are at Belvedere (serving Salisbury), Kumalo (Bulawayo), and Grand Reef (Untali). Central African Airways serves the territory and connects with the major trans-African airlines.

NORTHERN RHODESIA

The population in 1955 was estimated at 2,128,300, comprising 62,000 Europeans, 2,060,000 Africans, and 6,300 of other races. The territory is divided into 7 provinces. The seat of

government is at Lusaka. Other important centers include Ndola, Luanshya, Mufulira, Kitwe, and Chingola.

Government.—The governor, Sir Arthur Benson (assumed office May 25, 1954), is assisted by an 11-member Executive Council and a Legislative Council (including 10 elected nonofficials, 2 nominated white nonofficial members representing African interests, and 2 African members elected by the African Representative Council). Revenue for 1955-56 was estimated at £13,800,000; expenditures, £13,700,000.

Transportation.—Rhodesia Railways operates 507 miles of main line from the Victoria Falls to the Belgian Congo, and 229 miles of branch lines. In 1955, highways totaled about 18,000 miles (first class, 4,300 miles). Internal and external services are operated by Central African Airways from the Livingstone airport.

NYASALAND PROTECTORATE

The territory includes Lake Nyasa (11,430 square miles), the third largest lake in Africa. The protectorate's estimated population of 2,544,600 in 1955 comprised 5,600 Europeans, 2,530,000 Africans, and 9,000 of other races.

Government.—A governor, Sir Geoffrey Colby (assumed office March 13, 1948), is assisted by a 7-member Executive Council and a 20-member Legislative Council (including 10 nonofficials, of whom 3 are African and 1 is Asian). An all-African Protectorate Council, composed of 20 representatives of three African provincial councils, advises on legislation affecting the African population. Estimated revenue was £5,700,000 for 1955-56; expenditures, £5,900,000.

Shire Valley Project.—The catchment area of Lake Nyasa is 48,850 square miles. The Shire Valley extending from the lake to the Zambesi River is the site of a development program whose target is the production of 2,100 million kilowatt-hours of hydroelectric power a year. Also planned is the recovery of 320,000 acres of land to productive agriculture and the opening up of an extensive inland water transport system. The estimated cost of the project is £77,910,000.

Transportation.—The protectorate is served by the Nyasaland railway system, which connects Lake Nyasa with Beira, 524 miles distant on the east coast, and crosses the Zambezi on the world's longest railway bridge (12,064 feet). Highways aggregate about 5,000 miles (all-weather, 1,700 miles). Central African Airways provides internal services and connections with all parts of Africa.

ROBERTS, Owen J(osephus), American jurist: b. Philadelphia, Pa., May 2, 1875; d. Chester Springs, Pa., May 17, 1955. A conservative justice of the U.S. Supreme Court during the era of the New Deal, he often cast the decisive vote in the major cases of that period.

Roberts was educated at the University of Pennsylvania (B.A., 1895; LL.B., 1898), where he taught law from 1898 to 1918. Meanwhile he established a successful law practice in Philadelphia, numbering among his clients the Pennsylvania Railroad and other large corporations. He also served as a director of many companies. From 1901 to 1904 he was first assistant district attorney of Philadelphia County, and during World War I served as special deputy attorney general, representing the federal government in

the prosecution of cases under the Espionage Act in the Eastern District of Pennsylvania.

In 1924, President Calvin Coolidge appointed him one of two special United States attorneys general to prosecute persons involved in the Teapot Dome oil reserve scandals of the Harding administration. Though not completely successful, Roberts' meticulous investigation, which took six years, led at least to the conviction of former Secretary of the Interior Albert B. Fall. His prosecution of the case made him nationally prominent, and in 1930 he was appointed to the Supreme Court by President Herbert Hoover.

When Justice Roberts took his seat, the court was still dominated by conservatives, but by the time the New Deal got under way it was divided almost evenly between liberals and conservatives. Although Roberts was essentially conservative in his views, he did not permit his political opinions to enter into his judgments. He voted with the liberals of the court in the decisions that upheld the constitutionality of the National Labor Relations Act, the unemployment provisions of the

WIDE WORLD

Social Security Act, and the right of Congress to annul gold clauses in private contracts. On the other hand, he voted with the conservatives against the constitutionality of the National Industrial Recovery Act, the Agricultural Adjustment Act of 1933, and the Railroad Retirement Act of 1934. Later, when the Supreme Court had become predominantly liberal through the appointments of President Franklin D. Roosevelt, Roberts became more conservative and frequently dissented from opinions upholding the president's reform measures. In December 1941, however, aware of Roberts' integrity, Roosevelt named him chairman of the commission that investigated the Japanese attack on Pearl Harbor; its report was made in January 1942.

Justice Roberts, who advocated compulsory retirement of federal judges at the age of 70, retired from the Supreme Court in 1945 and returned to private law practice. From 1948 to 1951 he also served as dean of the University of Pennsylvania Law School. During his later years he devoted much of his time to the Atlantic Union Committee, an organization advocating federal union of the Western democracies, which he served as president from 1948 until his death.

ROMAN CATHOLIC CHURCH. In 1955 the Roman Catholic population of the world was estimated at 470,100,000. That of the United States, Alaska, and the Hawaiian Islands was 32,574,-

702, representing an increase of 1,098,441 over the previous year. In the last 10 years the Roman Catholic population of the United States has increased by 8,612,031. Roman Catholics in Canada numbered 6,069,496, and the total Roman Catholic population of the Americas is estimated at 191,424,000.

Guiding Roman Catholics throughout the world are 360,000 priests, a ratio close to one priest for 1,300 people. Of this number, 27,760 are missionaries working among a non-Catholic population of 2 billion, of whom 1.5 billion are non-Christian.

In the United States and its dependencies are 26 archdioceses and 106 dioceses. The hierarchy comprises 208 members—4 cardinals, 34 archbishops, and 170 bishops—the largest number in the history of the Catholic church in that country. A total of 13,362 parishes are reported, 673 being without resident clergy.

The United States Catholic Negro population is estimated at 477,000, served by 655 priests in 458 parishes, and helped by 1,800 nuns and 600 lay workers. Of the 345,000 persons of American Indian descent in the United States, 111,321 are Roman Catholics; 175 priests maintain 410 churches and chapels among the Indian tribes.

The 1,557 diocesan and parochial secondary schools in the United States reported 398,192 students, a gain of 23,093 over 1954; 842 private secondary schools reported 241,418 students, a gain of 13,518; and 8,843 parish elementary schools reported 3,253,208, a gain of 260,910. The number of children cared for in 328 protective institutions totaled 35,147. Catholic colleges and universities reported 219,705 students, a gain of 8,786 over the previous year. The 78 diocesan seminaries counted 9,539 students and 385 novitiates, and scholasticates of the various orders and congregations were preparing 16,493 candidates to the priesthood. Catholic schools of nursing accounted for 30% of all nurses graduated in the United States and its territories, with a total of 8,812 graduates.

At the end of 1955 the College of Cardinals comprised 60 members. Three of them in nations under Russian influence are restricted in their full liberty of action. The same tyranny has murdered, imprisoned, or expelled at least 185 bishops and other heads of sees. Communist China is held responsible for 99 names on the list of persecutions; among them are Cardinal Tien, archbishop of Peking, 18 archbishops, 56 bishops, and 24 monsignori. The Soviet Union, including Estonia, Latvia, and Lithuania, holds 29 victims. Other countries similarly guilty of persecutions are Albania, Bulgaria, Czechoslovakia, Hungary, North Korea, Poland, Rumania, and Yugoslavia.

The Third International Congress on Rural Life took place between April 17 and April 25 at Panama City. The theme of the congress was set in a message from Pope Pius XII, who called on both large landowners and governments to fulfill their duty towards those who live and work on the land they cultivate.

After a 3-day revolt had forced the resignation of Juan Perón, president of Argentina, in mid-September 1955, the Catholic Church regained all the privileges it had lost under the Perón dictatorship. (See also ARGENTINA.) Religious property again is exempt from taxation, subsidies to religious schools have been resumed, and nuns and priests have been reinstated to service in hospitals, schools, and prisons.

The Rev. Georges Bissonnette, an American

Assumptionist priest who was serving the religious needs of the Catholic American community in Moscow, was expelled from Russia on March 5 by the Soviet government. Charles E. Bohlen, the American ambassador to the USSR, immediately lodged a protest, based on the fact that Father Bissonnette's expulsion violated the Litvinov agreement of 1933 guaranteeing freedom of conscience and religious worship to United States citizens on Soviet soil. On November 3 it was announced that the Rev. Louis F. Dion, also an Assumptionist priest, had been granted a Soviet visa and would succeed Father Bissonnette in Moscow. (See also RELIGION—Catholicism.)

ROWING. See SPORTS, GAMES, AND SHOWS.

RUANDA-URUNDI. A United Nations trust territory in east-central Africa, administered by Belgium. Area, 20,916 square miles; pop. (est. Dec. 31, 1954), 4,269,905, including 5,559 Europeans. The natives are chiefly of the Bahutu and Batutsi tribes. Usumbura (27,294) is the capital.

The territory is united economically and administratively with the bordering Belgian Congo. The Belgian vice governor general is aided by an appointive council of 22 members. Elected local councils of natives have recently been instituted. In the report of the United Nations mission which toured the territory in August 1954, it was urged that the natives be given an increasing share of self-government. In the ordinary budget for 1954, revenue was estimated at 644.3 million francs; expenditure, 672 million; extraordinary expenditure, 505.6 million. In 1952 there were 1,697 primary schools (141,648 pupils), 4,693 chapel schools (325,552), and 36 secondary schools (1,114). About 45% of the population has been converted to Christianity.

The territory is densely populated and poor in resources. A 10-year development plan (1950-59) is under way and the government has inaugurated reforestation, soil conservation, drainage, and other agricultural projects. Chief food crops are corn, rice, and manioc. Output of coffee, the chief cash crop, was 13,600 metric tons in 1954. Other commercial products are cotton (7,227 metric tons in 1954), tobacco, kapok, and hides and skins. Minerals output in 1954 had a total value of 347.6 million francs, consisting chiefly of tin (2,253 metric tons) and wolframite (732). Imports in 1953 totaled 1,523 million francs; exports, 1,440.4 million. Ruanda-Urundi has no railroads. Main roads totaled 5,193 miles in 1952. Usumbura is connected by air service with the Belgian Congo.

RUBBER. New records in practically every branch of the rubber industry were achieved in 1955. World consumption totaled 2,880,000 long tons (1,860,000 natural, 1,020,000 synthetic) against 2,390,000 (1,680,000 natural, 710,000 synthetic) in 1954. World production amounted to 2,915,000 long tons (1,850,000 natural, 1,065,000 synthetic) against 2,411,000 (1,705,000 natural, 706,000 synthetic) in 1954.

Consumption in the United States reached 1,485,000 long tons (620,000 natural, 865,000 synthetic) as compared with 1,338,000 (553,000 natural, 775,000 synthetic) in 1953, the previous record year. The 1955 output of tires in the United States passed the 100 million mark for the first time, including an estimated 89 million passenger car tires and 14 million truck and bus tires.

The big news of 1955 in the rubber industry was the sale of the government-owned synthetic rubber plants to private industry for \$318,403,000. In all, 25 of 27 plants were sold (12 copolymer, 2 butyl rubber, 9 butadiene, 1 styrene, 1

chemical). Of the two remaining plants, one (a copolymer unit) will be sold shortly after the end of 1955 and the other (an alcohol-butadiene unit) has been leased for a three-year period. Most of the take-over operations occurred in late April 1955.

During the tenure of the government, which started in 1942, approximately 7,200,000 long tons of synthetic rubber were produced, consisting of 6,329,200 tons of general-purpose synthetic, 670,500 tons of butyl rubber, 198,200 tons of neoprene, and 2,100 tons of nitrile rubber.

Synthetic Rubber Developments.—Major strides were taken in the synthetic rubber field in 1955. Goodrich, Firestone, and Goodyear, in that order, announced the development of new "natural-like" synthetics which match the molecular structure of natural rubber. These *cis*-isoprene rubbers can be used in the manufacture of heavy-duty truck tires, the first synthetics for such usage. Lithium and aluminum triethyl are the catalysts utilized.

Other new synthetic rubbers included: G-E 700, a silicone rubber which remains flexible at 600°F.; Vyram, an acrylate-type elastomer with unusual resistance to chemical hydraulic fluids; Nitrex 2615, a latex offering good color, high tensile strength, and "snappy" film; and a completely new line of silicone rubbers by the Linde Air Products Company.

Developments abroad included decisions to build a 50,000-ton GR-S type plant in England, a 30,000-ton plant in Italy, a new plant in Germany, which will raise production to over 100,000 tons a year, and a 20,000-ton butyl rubber plant in France.

Products and Materials.—New equipment included a latex foam mixer with a production range of 700 to 15,000 pounds an hour; a disc-impeller for rubber cement; a laboratory roller coating machine with a speed of one to three yards per minute; and a 20-disc grinder for hard rubber, with a speed of more than 18,000 feet a minute. New compounding materials included: Naugatuck MBTS, an improved nondusting powder form with fine particle size; Advastab 48-79, a cadmium stabilizer; Cabflex TCP, a tricresyl phosphate made from petroleum cresylic acid; Poly-Sperse 300, a processing aid designed to speed the mixing cycle; and Arcco C-1035, a plastisol said to provide outstanding adhesion to metal.

New products included the first six-inch latex

foam mattresses, steel cord passenger tires, an all-rubber washing tub, air-porous Koroseal upholstery, off-the-road tubeless tires, an all-rubber underground lawn-soaking hose system, a high-wall dish drainer, fishing boots weighing only 21 ounces, a combination tissue holder and vanity tray, and a cleated conveyor belt for carrying small machined parts up steep inclines. (See also CHEMISTRY.)

Editor, "Rubber Age."

RUGBY. See SPORTS, GAMES, AND SHOWS.

RUHR. An industrial valley of northwestern Germany, included within the State of North Rhine-Westphalia of the German Federal Republic (see GERMANY). The Ruhr has an area of about 2,000 square miles and a population of over 4 million. Chief Ruhr cities and populations (est. Dec. 31, 1953) are: Essen, 660,934; Düsseldorf, 594,481; Dortmund, 580,892; and Duisburg, 454,899. The Ruhr is one of the world's great centers of heavy industry and provides the bulk of West Germany's output of coal, steel, and pig iron. Other Ruhr industries are chemicals, pharmaceuticals, textiles, machinery, tools, apparatus, instruments, and numerous other manufactures. On Nov. 23, 1955, the European Coal and Steel Community (ECSC) announced plans to decentralize the Ruhr coal cartel, Gemeinschafts Organization Ruhrkohle (GEORG), and place it under the supervision of the High Authority of ECSC.

RUMANIA. A Communist-type people's democracy in southeastern Europe, Rumania is bounded on the south by Bulgaria, on the west by Yugoslavia and Hungary, on the north and northeast by the Soviet Union, and on the southeast by the Black Sea. It occupies an area of 91,700 square miles and has a population of 17,150,000 (est. 1953).

In 1952 the country was divided into 17 administrative regions (Baia-Mare, Oradea, Cluj, Suceava, Bacău, Iași, Bârlad, Galați, Constanța, București, Ploesti, Stalin, Pitești, Craiova, Hunedoara, Timișoara, and Arad) and the Hungarian (Magyar) Autonomous Region. The capital is Bucharest, with a 1953 population of 1,250,000; other principal cities (with 1948 populations) are: Cluj, 117,915; Timișoara, 111,987; Ploesti, 95,632; Brăila (with suburbs), 95,514; Iași, 94,075; Galați, 80,411; and Constanța, 78,586. Rumanians constitute 85.7% of the total population; Hungarians, 9.4%; Germans, 2.2%; Jews, 0.9%; and others 1.8%.

Government.—The Rumanian Constitution of Sept. 24, 1952, defines the Rumanian People's Republic as a socialist state in which the working people of town and country are the source of all political power. The Grand National Assembly, a 423-member parliament with only nominal functions, is defined as the supreme legislative body. When not in session, it is represented by the Presidium, which is elected by the assembly and whose 19-member body was headed in 1955 by Dr. Petru Groza. A 38-member Council of Ministers is headed by Chivu Stoica as premier.

The government relies for political support on the Democratic Popular Front, a Communist-controlled mass organization. The principal force within the front is the Rumanian Workers' (Communist) Party, founded in 1948 by the fusion of the Communist and Social Democratic parties, and headed at the close of 1955 by Gheorghe Gheorghiu-Dej, first secretary. The Democratic Popular Front also includes President Groza's Ploughmen's Front, the Hungarian People's Union, the Trade Unions of the Rumanian People's Republic, the Democratic Federation of Women, and the Federation of Democratic Youth, all of which recognize Communist leadership.

The constitution guarantees universal suffrage and the secret vote; however, only the names of the Popular

Front candidates are allowed on the ballots. In a similar fashion the members of regional and local people's councils are elected. Having no autonomous power, they are mere instrumentalities of the central authorities.

Education.—In 1952, Rumania had 15,546 elementary schools with 2,100,000 pupils. In the same year 208,000 students attended secondary schools, and 107,000 were enrolled in various trade schools. In 1953, 62,000 students attended the country's 6 universities and 50 specialized institutions of higher learning. The entire network of educational institutions has been secularized and subordinated to full state control. Rumanian authorities claim that by 1951 illiteracy had been reduced from a prewar figure of 45% of the population to 10.6%.

Religion.—Over 75% (13,670,000 in 1950) of Rumania's population belongs to the Rumanian Orthodox Church. The Uniate Church (Greek Catholic), which in 1947 included 9% of the population, ceased to exist in 1948. The Roman Catholic Church, which has been subject to violent governmental persecution, embraces approximately 8% of the population. Although the Law on Religious Cults, passed on Aug. 4, 1948, theoretically guarantees freedom of religion, in actuality it imposes full state control over all church administrative and educational activities.

Finance and Cost of Living.—The Rumanian budget for 1954 called for estimated revenues of 40,838 million lei, and for estimated expenditures of 39,338 million lei (1 lei = U.S. \$0.1667 and 1.5 lei = 1 Soviet ruble). Of expenditures, 24 million lei were for financing the national economy and 4.3 million were for defense.

On Dec. 26, 1954, most rationing was abolished, and the government announced that the prices of formerly rationed goods would be stabilized at the level of "free market" prices. In addition, the government promised to compensate partially for the resulting 50% price increase by granting wage increases of 20% or less. In April 1955, however, a reduction of prices on food, clothing, and household articles went into effect, and government experts estimated that these reductions would save consumers 650 million lei yearly.

Defense.—The peace treaty of 1947 limited Rumania's armed forces to 138,000 men. Estimates at the end of 1954, however, showed that 250,000 men were in the regular armed forces and 205,000 were in the security police, frontier guard, and other units. On Aug. 30, 1955, the government decreed that the armed forces would be cut by 40,000 men on December 1.

Agriculture.—The "socialist agricultural sector" consisted in 1955 of 5,600 collective farms (following the model of the Soviet kolkhozes) and agricultural associations for joint cultivation, 2,700 simple cultivating associations, and about 3,200 cooperative sheepfolds. Socialist agriculture embraced 26% of the country's total arable land. In August 1954, Rumania had 220 machine and tractor stations, although the original plan called for the establishment of 428 such enterprises. These stations had at their disposal a total of 29,500 tractors (in 15-hp. units).

The agricultural production plan for 1953-54 allocated 17.5 million acres of land for cereal grains and 1.15 million acres for potatoes and vegetables. In 1954, industrial crops (mostly sugar beets, cotton, flax, and tobacco) were raised on 2.5 million acres of land, and grain production in 1955 totaled 11.5 million tons.

Industry.—Since the spring of 1948 the Rumanian government has followed a policy of rapid socialization of the country's industrial resources. By the beginning of 1954 almost all industrial and mining establishments had been socialized and subordinated to the 11 economic ministries of the cabinet. Most of the heavy industry is owned by joint Soviet-Rumanian companies.

In September 1955, Gheorghiu-Dej announced that during the First Five-Year Plan (1951-55), 57.7% of the investment fund went to industry, instead of 51.4% as originally stipulated by the plan. He also stated that during this period almost 50% of the total capital investment went to heavy industry, not 42% as originally intended. It has been estimated that 75% of the 1955 output of oil was extracted from the new oilfields in Moldavia, the Prahova valley, Pitesti, and Altenia. Of the investment fund,

26.4% was poured into the oil industry during the last five years.

In 1955, according to an official report, total industrial production reached a value of 1,730,168,450,000 lei. It exceeded by 350% the value of the total industrial production in 1938, and by 200% that of 1950. An official spokesman announced in October 1955, that the production of steel for that year had reached 700,000 tons, and that a new plant, presently under construction, will double the current output. He also stated that the oil output for 1955 was expected to reach a total of 10,500,000 tons, the highest output in the country's history. While the government did not give any direct statistical data on the production of electrical power, a government expert made an announcement that the 1955 output (4 billion kw.-hr.) was twice as large as that of 1950.

Foreign Trade.—Slightly over 84% of Rumania's foreign trade in 1955 was with the Soviet Union and its satellites. The government, however, has never published any detailed data on the imports from and exports to the Soviet Union. During 1955 the Rumanian government continued to expand its relations with the countries outside the Soviet orbit. According to a barter agreement with Egypt, Rumania was to exchange kerosene and crude oil for cotton, the total value to be £E1.8 million.

Rumania's exports in 1955 consisted mostly of wood products, petroleum, grains, cattle, salt, fruit and vegetables. A less important part of exports consisted of foundry equipment, petroleum equipment, equipment for cement factories, and smaller agricultural machinery.

Transportation.—On June 20, 1954, a double-decked bridge for motor and rail traffic, connecting Ruse, Bulgaria, and Giurgiu, Rumania, was put into operation. This bridge, built under the supervision of Soviet technicians, is the first to connect the two countries. In 1949, Rumania had 7,363 miles of railway lines and 43,163 miles of roads, of which only 1,500 miles had been modernized. In 1950 the country had 9,608 trucks, 1,942 buses, and 14,500 automobiles. During the first five months of 1955 freight car loadings totaled 65,000,000 tons, as compared with 27,606,800 tons in 1938. According to official sources, during the First Five-Year Plan, freight car loading had increased 175%.

Principal Events, 1955.—Purges of individuals and groups accused of spying for various Western powers have dominated the internal political scene. Among the victims were many Socialists, Social Democrats, Independents, and prewar labor leaders. There were no important elections in 1955, and there was only one important reshuffling in the government. On October 3, Gheorghe Gheorghiu-Dej relinquished his post as premier and became the first secretary of the Communist Party, the most powerful office in the Communist hierarchy; Gheorghe Apostol, the former first secretary, became chairman of the Central Council of Trade Unions, an obvious demotion; and Chivu Stoica was appointed premier. This change in leadership may be interpreted as an effort to tighten up the party ranks and consolidate political power.

On December 24, Rumania disclosed its Second Five-Year Plan (1956-60), the first of the coordinated Soviet bloc plans for this period to be revealed. In line with Soviet policy, heavy industry will be emphasized, receiving 50% of planned investments, as compared with 6% for light industry. Annual production of steel is to be

increased to 1.6 million tons, and that of coal to 11 million tons. The socialist sector of agriculture is expected to furnish 60 to 70% of farm output.

Rumania's foreign policies during 1955 continued to be guided by Soviet interests. On March 22, 1955, the Soviet government issued a communiqué to the effect that the USSR and her European satellites, including Rumania, had agreed to discuss a treaty of friendship, cooperation, and mutual assistance. At the Warsaw Conference, May 11-14, 1955, such a treaty was formally signed. On August 12, Gheorghiu-Dej informed the press that the Soviet occupation forces would remain in Rumania as a result of the Warsaw treaty and "until the foreign troops withdraw from western Europe." The treaty was ratified by the Rumanian Grand National Assembly on May 30, 1955.

Rumania was also selected to be one of the beneficiaries of the Soviet government's decision to extend scientific and technical assistance to various countries in the building of experimental stations for research in nuclear physics and the industrial employment of atomic energy. On June 4, 1955, N. Khrushchev, first secretary of the Soviet Communist Party, and A. Mikoian, Soviet vice premier, visited Bucharest on their way home from Belgrade, Yugoslavia. The two Soviet officials met in Bucharest with the highest party officials from Rumania, Hungary, and Czechoslovakia and informed them of the Soviet-Yugoslav *rapprochement* and the Soviet's new official attitude toward Tito's Yugoslav government.

Rumania's strained relations with the West were not alleviated during 1955. Relations with Switzerland were particularly aggravated by the attack of a small group of heavily armed Rumanian refugees on the Rumanian legation in Berne on February 15. The Rumanian notes of February 15 and 16 complained that the Swiss authorities had done nothing to punish the attackers. In October, the U.S. Department of State announced that it would henceforth issue passports for travel to Rumania. On the retirement of Harold Shantz in the summer of 1955, Robert Thayer was named the new American minister in Bucharest.

On December 14, Rumania, along with 15 other countries, was elected to membership in the United Nations.

WAYNE S. VUCINICH,

Associate Professor of History, Stanford University.

RURAL ELECTRIFICATION ADMINISTRATION.

Loans for rural electrification made by the REA during the fiscal year ended June 30, 1955, amounted to \$167,530,430, bringing the cumulative total of such loans to slightly over \$3 billion. One new electric distribution cooperative and two new generation and transmission cooperatives received loans during the year, bringing the number of active electrification borrowers to 999. These include 937 cooperatives, 40 public power districts, 17 other public bodies, and 5 electric

companies. Two cooperatives paid off all of their government loans during the year with earnings from farm service.

In 1935, when the REA was established, only one farm in ten was receiving electric service; now better than nine farms in ten have electricity. Of the farms connected to central station electric facilities, a little more than half are getting service from REA-financed systems.

Farmers and other rural consumers on REA-financed distribution lines increased their use of power more than 14% during the 1955 fiscal year. REA borrowers are distributing more than twice as much power as they did in 1950. The energy sales amount to about \$1,100,000 per day. Average annual use of power by farm consumers increased from 1,752 kw.-hr. in the 1950 calendar year to 2,712 kw.-hr. in 1954.

Less than 315,000 farms still were without central station electric service as of June 30, 1955. In addition, there were many unelectrified rural nonfarm dwellings, schools, churches, crossroads businesses, and other rural establishments. The REA had a backlog of \$97,127,000 in electric loan applications on June 30, 1955.

For the 1956 fiscal year, Congress authorized \$160,000,000 in new electrification loan funds, and reserve funds of \$100,000,000. REA loans bear interest at 2% and must be amortized within 35 years. The repayment record of the electrification borrowers continues to be good.

The following are cumulative statistics on the REA electrification program from its establishment in 1935 to June 30, 1955, unless otherwise noted:

Miles of line energized (Dec. 31, 1954).....	1,331,800
Number of consumers served (Dec. 31, 1954).....	4,165,219
Total congressional loan authorizations.....	\$3,102,928,288
Total loans.....	\$3,050,119,414
Total funds advanced.....	\$2,600,496,268
Principal and interest paid by borrowers.....	\$623,000,000
Principal repaid ahead of schedule.....	\$85,000,000
Payments overdue 30 days or more.....	\$400,000

In October 1949, Congress authorized the REA to make loans to improve and extend telephone service in rural areas. The first telephone loan was made in February 1950. For the 1956 fiscal year, Congress authorized \$75,000,000 in new telephone loan funds.

By June 30, 1955, the REA had approved \$234,180,542 in loans to 176 telephone companies and 175 telephone cooperative associations. These loans will provide facilities to bring modern dial telephone service to 515,600 farm families and other rural subscribers in 43 states and Alaska. Through the use of REA loan funds, 157 telephone systems already have placed in service 533 new dial exchanges.

SARR. An industrial district on the Franco-German border south of Luxembourg. Area, 991 square miles; pop. (Jan. 1, 1955), 987,650, predominantly German. Saarbrücken (119,-388) is the capital and chief city.

Government.—The Saar has autonomy in internal affairs but its foreign relations and defense are controlled by France, and it is linked to France in a monetary and customs union. The constitution of 1947 provides for an elected Landtag of 50 members and a ministry responsible to the Landtag. Premier Hubert Ney heads a coalition cabinet installed on Jan. 10, 1956.

Education and Religion.—In 1955 there were 758 elementary schools (93,696 pupils), 25 secondary schools (13,443), 39 vocational and technical schools (43,522), and 3 training colleges (743). The University of the Saar at Saarbrücken has 1,662 students. Roman Catholicism is the predominant faith.

Economy.—Coal mining and steel production are the Saar's two main industries. Output of coal in 1954 totaled 16,818,000 metric tons; steel, 2,805,000. Other industries include foodstuffs, chemicals, ceramics, glassware, and construction materials. The index of industrial production (1948 = 100) rose from 174 in 1953, to 186 in 1954, and 201 in the first half of 1955. About a third of Saar coal production is exported to France and about a fourth to Germany. France also takes the largest share of Saar steel exports.

Transportation and Communications.—The Saar has 1,056 miles of roads and 343 miles of railways (route length). Telephones numbered 49,-491 in 1955; radio receiver licenses, 213,853 (1953). There were 4 daily newspapers in 1952 with a total circulation of 250,000.

Principal Events, 1955.—The Franco-German agreement of Oct. 23, 1954, on a statute for the Saar came into force on May 5, 1955. The statute provided for an autonomous Saar under the Western European Union (WEU), economically linked with France. The 1954 agreement, however, required that the statute be approved by the Saar population in a special referendum.

The pre-referendum campaign in the Saar was marked by the virulent activity of hitherto banned pro-German parties which denounced the statute and assailed the existing Saar government as subservient to France. Against the vague concept of "Europeanization," these parties evoked the appeal of German nationalism. The referendum took place on October 23, supervised by a WEU-appointed commission aided by 1,005 neutral observers. The result was a rejection of the statute by the decisive margin of over 2 to 1 (67.7% to 32.3%), with 96.5% of the electorate casting ballots. Saar Premier Johannes Hoffmann, who had favored the statute, immediately resigned, and Heinrich Welsch was named on October 29 to head a caretaker cabinet pending parliamentary elections.

Elections for a new Landtag took place on December 18. The pro-German parties, which now officially demanded the return of the Saar to Germany, obtained 63.9% of the popular vote and 33 of the 50 seats in the Landtag. The three pro-German parties and the percentages of the popular vote received were: the Christian Democratic Union, 25.4%; the rightist Democratic Party, 24.2%; and the German Social Democrats, 14.3%. Hoffmann's Christian People's Party, which had obtained a 55% majority in the election of 1952 when the pro-German parties were banned, received only 21.8%. Hubert Ney, leader of the Christian Democratic Union, headed a new coalition government installed on Jan. 10, 1956. Heinrich Schneider, a former Nazi and the leader

of the Democratic Party, was chosen president of the Landtag.

At a conference in Bonn between West German Chancellor Konrad Adenauer and French Foreign Minister Antoine Pinay, April 29-30, it was agreed that the large Roehling steel works in the Saar would be purchased jointly by the French and German governments for about \$50 million (the shares to be resold to private interests), and that the company would be managed by a Franco-German consortium headed by a French chairman.

SAFETY. See INDUSTRIAL HEALTH AND SAFETY, and Index entry. *Safety.*

SAINT HELENA. This British crown colony, settled on widely separated volcanic islands in the South Atlantic, has an aggregate area of 126 square miles (pop., 5,345 in 1954). Saint Helena (47 square miles; pop., 4,878 in 1954) lies about 1,200 miles from the west coast of Africa. Dependent Tristan da Cunha (16 square miles; pop., 294 in 1954), is the chief island of a group lying 1,500 miles south-southwest of Saint Helena, which group includes the three small uninhabited islands of Gough, Nightingale, and Inaccessible. Ascension (34 square miles; pop., 173 in 1954), lies 750 miles northwest of Saint Helena. Jamestown (pop., 1,547) is the colony's capital and Saint Helena's chief port. A governor (J. D. Harford, appointed Jan. 11, 1954) is assisted by a 4-member Executive Council and a 6-member Advisory Council of nominated non-officials.

Saint Helena.—In 1954 revenue totaled £180,886; expenditure, £173,377; a grant of £200,000 has been made by the British Treasury for development projects. There were 12 schools (primary, 11; secondary, 1), with 1,260 pupils, in 1954. Cultivation of New Zealand flax is the major industry. In 1954, 3,250 acres yielded 505 tons of hemp, and 268 tons of tow. Rope, twine, and lace are made, and fishery products include mackerel, albacore, tuna, and bonito. Exports in 1954 were valued at £46,915 (flax fiber, £42,094); imports, £214,852. Roads total 65 miles. Restored by the French government, the apartments occupied by Napoleon in Longwood Old House were reopened to visitors early in 1955.

Ascension.—The inhabitants of Georgetown, the only settlement, are employees of the island's cable and wireless stations, and their families. A. R. Harrison is the resident magistrate.

Tristan da Cunha.—First settled by sailors and soldiers remaining after the garrison of Saint Helena was withdrawn in 1817, this extinct volcano (rising to a height of 7,640 feet) has a habitable area of 12 square miles, of which about 30 acres are cultivated. Tristan da Cunha became an important meteorological and signal station of the Royal Navy in 1942. Postal facilities were introduced in 1952. An administrator (P. R. Forsyth Thompson) is assisted by a 10-member Island Council (8 elected). A South African company, conducting crawfishing under an agreement with the government, has undertaken to maintain on the island a doctor, nurse, agriculturist, and schoolteacher, the latter appointed by the Society for the Propagation of the Gospel.

SAINT KITTS-NEVIS. See LEEWARD ISLANDS.

SAINT LAWRENCE SEAWAY. See CANALS; DAMS.

SAINT LOUIS. The largest city (in population) in the Mississippi River Valley, St. Louis, Mo. (pop. 868,000 in 1954) is the commercial heart of a metropolitan area with a population of 1,805,000. Continuing its dominance of city politics, the Democratic Party scored a victory of landslide proportions in 1955 local elections. On April 5, Democrats captured 12 of 14 contested aldermanic seats, and their candidate for president of the Board of Aldermen, Donald Gunn, carried 26 of the city's 28 wards. The Democratic majority became 24 to 4 in the Board of Aldermen. The city has a mayor-council type of government with Raymond R. Tucker (Democrat) serving as mayor in 1955.

Reflecting a somewhat more intense preoccupation with civic projects, voters approved two bond issues on May 26. The \$110,639,000 bond issue for general improvements, the largest in the city's history, includes provisions for hospitals, expressways, parks, slum clearance, and a planetarium. The accompanying \$16,395,000 bond issue authorizes public school improvements. The Third Street Interregional Highway, a 2-mile expressway built at a cost of \$13,037,292, was opened to traffic on October 15. A proposal to establish a metropolitan transit district, however, was defeated on January 25.

Reversing the trend of the previous year, economic indicators recorded an accelerated tempo of business activity in 1955. The index figure for department store sales climbed to 130 for the first nine months of 1955, compared with 119.5 for the first nine months of 1954 (1947-49 = 100). Unemployment declined to an average of 48,300 for the first six months of 1955, and on June 16 the city was removed from the list of "distressed labor areas" by the U.S. Department of Labor. With the rapid expansion of residential housing and shopping centers in suburban areas, construction activity achieved a very high level. Construction contracts, amounting to \$184,855,000 in the first five months of 1955, registered a 31% gain over the preceding year.

Leading industries include food products, transportation equipment, chemicals and allied products, and primary metals. Food and kindred products represent the leading industry on the basis of number employed, but thanks to the diversified nature of the local economy, no one class of industry accounts for more than 8% of the total employed in manufacturing in the St. Louis area.

Budget appropriations (1955-56 fiscal year): \$51,485,339. City tax rate (1955): \$3.09 per \$100 of assessed valuation. Cash tax receipts (April 11, 1955): \$49,467,339. Bonded debt (April 11, 1955): \$46,700,000. Public school enrollment (Sept. 12, 1955): 90,538 pupils, including 72,446 kindergarten and elementary and 18,092 senior and technical high. Tonnage shipped through port (1954): 5,926,958. Grain receipts (1954): 89,116,049 bushels. Total employment (average for first 6 months of 1955): 786,500 persons; manufacturing employment (July 1955): 270,700.

With the establishment of racially integrated classrooms in the elementary schools on Sept. 8, 1955, the Board of Education's 12-month plan for desegregation of the public schools was completed, except for the upper grades of technical high schools.

Two prominent figures in the annals of St. Louis journalism died during 1955: Joseph Pulitzer (q.v.), editor and publisher of the *Post-Dispatch*, on March 30; and E. Lansing Ray, editor and publisher of the *Globe-Democrat*, on August 30.

MERLE KLING,
Associate Professor of Political Science,
Washington University.

SAINT LUCIA. See WINDWARD ISLANDS.

SAINT PIERRE AND MIQUELON. Main islands of two groups of small French islands off the Grand Bank south of Newfoundland. Total area, 93 square miles; pop. (1951 census), 4,606. The town of Saint Pierre (pop. 1946, 3,636) is the capital. The governor is aided by a privy council and an elected General Council of 14 members. The 1954 budget totaled 369,534,500 francs. In 1954 there were 8 public schools (547 pupils) and 9 private schools (702). Cod fishing is the chief industry. Exports, chiefly fish products, totaled 169 million francs in 1954; imports, 506 million. The islands are linked by cable with the North American mainland and Europe, and by steamship service with North Sydney and Halifax, Nova Scotia.

SAINT VINCENT. See WINDWARD ISLANDS.

SALES, Retail and Wholesale. See RETAIL STORE SALES; WHOLESALING.

SALK, Jonas Edward, American medical research scientist: b. New York, N.Y., Oct. 28,

1914. His discovery of an antipoliomyelitis vaccine after three years of intensive research promised the termination of the search for a weapon against paralytic poliomyelitis.

Salk received his B.S. degree in 1934 from the College of the City of New York, and his M.D. degree in 1939 from the New York University College of Medicine. Following an internship at Mount Sinai Hospital, New York City, he was awarded in 1942 a National Research Council fellowship at the University of Michigan School of Public Health. In 1946 he was made an assistant professor in the school's department of epidemiology. During this period he assisted Dr. Thomas Francis, Jr., in the development of commercial vaccines against influenza. In 1947 he was chosen by the University of Pittsburgh to establish and direct its virus research laboratory, and two years later was raised to the rank of full professor.

While continuing his work on influenza, Salk began searching for an antipoliomyelitis vaccine in 1949, when the National Foundation for Infantile Paralysis commissioned him and others to investigate the discovery of three distinct strains of poliomyelitis virus by Drs. David Bodian and Howard Howe. The project corroborated their findings and revealed that an effective vaccine must immunize all three types. Employing a discovery, made by Dr. John F. Enders in 1949, that the poliomyelitis viruses could be grown in nonnervous as well as nervous tissue cultures (which are unacceptable in human injection), Dr. Salk found monkeys' kidneys to be a suitable medium. He used a formalin solution to kill the virus, thus preventing it from becoming infectious when applied to the human system, and a whipping technique, discovered by Dr. Jules Freund in 1942, to enhance the inactive virus' power to stimulate the production of antibodies.

In 1952, Dr. Salk tested the vaccine on 40 volunteers who had had polio, and in 1953 he inoculated 7,500 children, his family, and himself. When these tests proved successful, the National Foundation launched large-scale tests in 1954 on 1,800,000 children (440,000 inoculated) at a cost of over \$7,500,000. A year later, on April 12, 1955, Dr. Francis, as director of the Poliomyelitis Vaccine Evaluation Center at the University of Michigan, announced that the vaccine was 60% to 90% effective against paralytic poliomyelitis.

Dr. Salk has been a member of the commission on influenza of the U.S. Army Epidemiological Board since 1944, and he is a consultant on virus diseases to the World Health Organization. The recipient of many awards and prizes, he was given a presidential citation on April 22, 1955, and a congressional gold medal on Aug. 9, 1955. (See also POLIOMYELITIS.)

SALT. Production of common salt (sodium chloride) in the United States declined from 20,789,003 short tons in 1953 to 20,403,229 tons in 1954. The 1954 output comprised 3,731,087 tons of evaporated salt, 4,848,417 tons of rock salt, and 11,823,725 tons of salt in brine. Exports in 1954 increased to 380,609 tons (249,521 in 1953), and apparent consumption declined from 20,676,790 tons in 1953 to 20,183,388 tons in 1954. While the best known uses of salt are for food seasoning and preserving, relatively small quantities are so used. Chemical and industrial uses consume about 75% of the total output. (See MINERAL PRODUCTION for table showing output of major countries.)

SALVADOR. See EL SALVADOR.

SALVATION ARMY. The Salvation Army maintains its operations in 85 countries and colonies scattered over the world. During the calendar year 1953, there were 26,775 officers and cadets in its service, augmented by several hundred thousand volunteer lay members. On July 1, 1954, Gen. Wilfred Kitching succeeded Gen. Albert Orsborn as international leader. International headquarters are in London, England.

Throughout the world, according to most recent figures, The Salvation Army operated and maintained 109 hospitals, clinics, and dispensaries; 141 children's homes, 886 day schools, 194 residences for various age groups, 39 industrial homes for women, 88 maternity homes and hospitals, 6 training schools for girls, 152 goodwill centers and slum posts, 8 prison gate homes, 198 shelters and work shops for men, 64 employment bureaus, and a number of miscellaneous services geared to special needs in various localities.

The United States command of The Salvation Army is under Commissioner Donald McMillan, national commander, and four other commissioners, each in command of a number of states, as follows: for the Eastern states, Commissioner Norman Marshall, New York City; for the Central states, Commissioner Claude Bates, Chicago; for the Southern states, Commissioner William Dray, Atlanta; for the Western states, Lieut.-Commissioner Holland French, San Francisco. Its 1,118 local corps, 263 institutions, and various other centers of work are commanded by 5,138 commissioned officers.

Among The Salvation Army's social institutions in the United States are 110 men's social service centers, which in 1953 provided shelter and work for 45,470 homeless men; 34 maternity homes and hospitals, which cared for 13,769 women and infants; 3 general hospitals, which admitted 11,349 patients; 13 Evangeline residences for young business women; and 100 homes and lodges for men, women, and children. In addition, 34,891 mothers and children were sent to summer camps, 1,476 missing relatives and friends were located through efforts of the four missing persons bureaus, and 77,909 persons were assisted in finding jobs in other than Salvation Army institutions. In the field of prison work, 7,954 inmates and their families were given assistance or service, and 2,734 prisoners were paroled in care of The Salvation Army, whose officers visited 12,988 inmates in prisons during the year.

Emergencies of disastrous proportions, particularly during tornadoes in the South and Southwest in 1955, have found Salvation Army officers and workers ready to meet situations with the equipment which is being acquired for each unit. Closer working arrangements with civilian defense authorities and the American Red Cross have increased the effectiveness of this type of emergency service. In New York City a mobile feeding unit has been developed to meet the most stringent requirements of providing for emergencies, including atomic attack.

DONALD McMILLAN,
National Commander.

SAMOA. Lying about 2,700 miles east of Australia and 4,200 miles southwest of San Francisco, Samoa comprises a group of Polynesian islands in the South Pacific. It covers an area of 1,205.3 square miles and contains a population of 115,628 (based on 1954-55 estimates). Amer-

ican Samoa lies east of longitude 171°, and Western Samoa lies west of that line.

AMERICAN SAMOA

American Samoa, an unincorporated insular possession of the United States lying between 13° and 15° south latitude and between 167° and 171° west longitude, has an area of 75.3 square miles and an estimated population of 21,500 (1955). It consists of 7 islands divided into 3 groups: (1) Tutuila (on which is the excellent harbor and capital, Pago Pago) and Aunu'u; (2) Manu'a (includes Ofu, Olosega, and Ta'u); and (3) Swains Island and the uninhabited Rose Island. The United States obtained jurisdiction over Tutuila and Aunu'u in 1900 and over the Manu'a group in 1904. Swains Island became part of American Samoa by joint congressional resolution in 1925.

Government.—After 51 years of naval administration, American Samoa was placed under the jurisdiction of the Department of the Interior in 1951. Richard Barrett Lowe was appointed governor in 1953 by the secretary of the interior, with the approval of the president. Alan Mills MacQuarrie was appointed territorial secretary in February 1954. The executive branch also comprises departments of Legal Affairs and Public Safety, Agriculture, Communications, Education, Budget and Finance, Information and Adult Education, Personnel, Medical Services, Public Works, and Local Government, the last agency having been established in an effort to familiarize Samoan leaders with the more detailed procedures of government. The organization of government is defined in the Code of American Samoa, which contains all local laws. Citizens of American Samoa are nationals of the United States.

The advisory Legislature (Fono) is composed of a Senate of 15 members, elected in accordance with Samoan custom from among the chiefs, and a House of Representatives of 18 members, elected by secret ballot. A territorial constitution was being drafted in 1955, and will be presented to a constitutional convention.

The judicial branch includes a high court of three divisions—appellate, trial, and probate—presided over by Judge A. A. Morrow, as well as five district courts.

Finances.—During the fiscal year ending June 30, 1955, American Samoa operated under a direct federal appropriation of \$116,000 and a grant-in-aid of \$1,159,000, supplemented by local revenue of \$591,316.50. The Bank of American Samoa, owned and operated by the government, showed resources totaling \$1,669,158.53 at the end of the fiscal year.

Education.—School attendance is compulsory for all children aged 7 through 15 years. Illiteracy in the territory is approximately 1% of the total population of 10 years of age and over. An appropriation of \$273,639 was allotted to public education for the year, not including funds for the construction and maintenance of village schools.

Seventy students are selected yearly for the high school, 35 for the vocational school, and 10 for nurses' training. Above the high school level there are one-year courses in teacher training, in college preparatory work, and in commercial subjects. Four religious organizations maintain six private schools approved by the Department of Education.

SCHOOL STATISTICS, FISCAL YEAR 1955

Type of school	Number	Teachers	Pupils
Primary schools (1-6).....	47	170	3,875
Junior high schools.....	5	27	829
High schools.....	1	10	161
Vocational schools.....	1	2	46
Teacher education.....	1	1	13
Private and parochial elementary.....	6	31	1,133

Public Health and Social Welfare.—Appropriations for the fiscal year 1955 totaled \$368,257.32. Institutions include a 225-bed hospital, a 25-bed cottage hospital, 4 dispensaries, and a leprosarium. All services for tubercular and leprosy patients are free, but a nominal charge is made for other hospitalization. Vigorous immunization programs, preventive measures, and sanitation did much to advance public health in 1955.

Production and Trade.—Nearly all the population is engaged in agricultural activity on 1,500 farms averaging about 10 acres. Subsistence crops are taro, breadfruit, bananas, papayas, and pineapples. Swine, poultry, and some cattle are

the principal livestock. Copra (dried coconut) has been the largest source of income for many years; however, cocoa is now being raised as a money crop, and experiments are being made in coffee growing.

While much individual fishing is done, the establishment of a fresh fish market in 1955 made it possible for the Samoan people to supplement their protein diet at a nominal cost.

Copra and handicraft items are the principal exports. During the fiscal year 1955, 1,485 tons of copra, and handicrafts valued at \$47,794.14 were exported. A cannery, providing income to approximately 350 Samoans, exports processed tuna and fish meal.

Transportation and Communications.—American Samoa is served by a New Zealand vessel calling monthly and by occasional southbound Matson freighters, northbound ships calling only when freight shipments warrant. The government operates one small interisland vessel and three launches for intransit use, and a privately owned schooner operates regular intransit travel. Limited shipping facilities have proved detrimental to the export of local products to the United States. The Matson Navigation Company, however, was planning in 1955 to re-establish regular passenger and freight service to American Samoa late in 1956.

Tafuna Airport, was undergoing improvements in 1955 in order to receive nonscheduled commercial flights direct from Honolulu. During the year the Civil Aeronautics Board approved the petition of the Pan-American World Airways to make American Samoa a stopping point between Honolulu, New Zealand, and Australia.

There are 69.2 miles of road, 40 miles of which are considered main roads, with 4 miles surfaced. Of 185 registered motor vehicles, 70 are passenger cars. The government has 212 telephones for official and public use, and operates a local radio station and a small broadcasting station (WVUV), which presents programs in English and Samoan.

ALAN M. MACQUARRIE,
Acting Governor, American Samoa.

WESTERN SAMOA

Mandated to Great Britain in 1919, this former German territory has been continuously administered by New Zealand (since 1946 under a trusteeship agreement with the United Nations). Its area of 1,130 square miles comprises the islands of Savai'i (700 square miles) and Upolu (with Manono, Apolima, and other small islands, 430 square miles). At the 1951 census the population of 84,909 comprised 79,600 Samoans; 4,141 part-Samoans; 501 other Polynesians; 450 Europeans; 164 Chinese; and 52 Melanesians. The estimated total population in 1954 was 94,128. Apia (pop., 16,000), on Upolu, is the capital and chief port.

The executive government is under a high commissioner (G. R. Powles, assumed office March 1, 1949). He is president of the Council of State, comprising 2 Samoan *fautua* (high advisers), and of the Executive Council, comprising the 2 *fautua*, 3 officials, and 4 members (3 Samoan, and 1 European) of the Legislative Assembly, the latter consisting of the 2 *fautua*, 6 officials, 12 Samoans, and 5 elected Europeans. The 12 Samoans are elected by the Fono of Faipule, a body of representatives meeting semiannually at Mulinu'u, the traditional capital.

Representing all sections of the population, a constitutional convention, comprising 170 delegates, was held during November and December 1954. Resolutions were passed for the creation of a single-chamber legislature composed of 41 Samoan, 5 European, and 2 official members (the ministers of justice and finance). A premier and cabinet, responsible to the legislature, would control

the executive government, and the present two *fautua* would constitute a head of state. It was also decided to increase the present 41 Samoan constituencies to 45.

The Samoan and New Zealand pound have the same value and are at parity with sterling; government revenue in the calendar year 1954 totaled £NZ1,128,870; expenditure, £NZ1,145,810.

Five Christian missionary bodies cooperate with the government in operating the educational system. In 1954 there were 113 government schools (21,564 pupils) and 364 denominational mission schools (about 32,000 pupils). Samoa College at Apia has primary and secondary departments.

Food crops are principally taro, ta'amu, and bananas. Copra, cacao, and bananas are major exports. The New Zealand government operates the New Zealand Reparation Estates, comprising former German-owned areas, and devotes the profits to social and economic development. In 1954 such expenditure totaled £NZ54,000, allocated principally to education and public works.

In 1954 imports were valued at £NZ1,710,494 (from New Zealand, £NZ544,796; United Kingdom, £NZ398,279; and Australia, £NZ314,366). Exports totaled £NZ2,211,847 (to the United Kingdom, £NZ1,377,569; New Zealand, £NZ558,165; and Australia, £NZ165,276). Major items exported were bananas (276,135 cases), copra (13,664 tons), and cacao (2,399 tons).

There are approximately 339 miles of road. Steamships and services of Tasman Empire Airways link Western Samoa with Australia, New Zealand, Fiji, Tahiti, and the United States.

SAN FRANCISCO. The city and county of San Francisco, Calif., has an area of but 44.8 square miles, which makes it one of the most compact major cities of the United States. It occupies the northern tip of the San Francisco peninsula, bordered on the west by the Pacific, on the east by San Francisco Bay, and on the north by the Golden Gate. Possessing the most commodious harbor on the entire west coast of the continent, it has for over a century handled a great part of the maritime trade between the United States and the countries of the Orient. Shipments through the port totaled 4,694,629 revenue tons during the first ten months of 1955. In addition it has long served as the major financial, industrial, and distribution center for the rapidly expanding economy of northern and central California.

San Francisco's population, estimated at 805,000 on Oct 1, 1955 (1950 census: 775,357; national rank, 11th), has in recent years shown a steady increase, though at a slower rate than some of the adjacent communities, with many newcomers to the area making their homes elsewhere and commuting to the city. Thus in the first nine months of 1955, approximately 150,000 workers entered the city daily.

The city's bonded debt (June 30, 1955) was \$179,792,283, as against the legal limit of \$245,554,000. The city tax rate (1955-56 fiscal year) was \$7.02 per \$100 assessed valuation. During the same period, municipal revenue was estimated at \$197,312,174, of which \$89,092,566 was to be derived from taxes. Building permits for the first ten months of 1955 totaled \$53 million, some \$3¼ million more than for the same period in 1954. Average daily school attendance (1954-55 fiscal year) was 84,720.

San Francisco is governed by a mayor and a board of 11 supervisors. At the municipal election held on Nov. 8, 1955, a new mayor, George E. Christopher, was chosen to serve from Jan. 8, 1956, until 1960, and bond issues totaling \$61 million were approved by the voters. These included \$7 million for new park and recreation facilities, and \$54 million for the building of hydroelectric plants in the Hetch Hetchy Valley, thereby assuring an ample supply of electric power for the future domestic and industrial needs of the city.

Throughout 1955, building continued on the

extensive system of freeways, designed both to afford easier access to the city from outlying communities and to divert traffic from the crowded downtown streets. The section connecting the Bayshore Highway with the San Francisco-Oakland Bay Bridge was completed, and plans went forward for the construction of an elevated causeway paralleling the docks of the waterfront and tying in to the Golden Gate Bridge. (See also BRIDGES.)

Plans for other civic improvements moved closer to realization. These included the rehabilitation of blighted areas, provision for badly needed facilities for off-street parking, and the construction of an exhibit hall beneath the civic center plaza to serve as an annex to the Municipal Auditorium. A proposal to erect a building for the local courts, now housed in the city hall, was defeated by the voters in the November election.

OSCAR LEWIS,
Editor (with L. F. Byington) of *"A History of San Francisco"* (1932); Author of *"The Big Four"* (1938), *"High Sierra Country"* (1955), and other books.

SAN MARINO. The world's smallest republic, located in the Apennine Mountains of Italy, 140 miles north of Rome. Area, 23 square miles; pop. (1954), 14,545. The capital is San Marino (2,481). Language and currency are Italian, and a customs union exists with Italy. A 60-member Grand and General Council is elected every 4 years by male suffrage. Two members are appointed to act as regents for six-month periods. A coalition of Communists and leftwing Socialists has been in power since World War II. The republic has 35 elementary schools, a technical school, and a high school. Wine, woolen goods, hides, and building stone are exported. Tourism is important. In the elections of Aug. 14, 1955, the leftist coalition increased its majority in the council from 31 to 35 seats.

SAND AND GRAVEL. Sand and gravel production in 1953 reached 440,089,225 short tons, of which 160,426,217 tons were sand and 279,663,008 tons were gravel. Corresponding figures for 1952 were: total production, 435,511,233; sand, 156,092,506; and gravel, 279,418,727. About 90% of these products are used in building construction and road paving. Other important uses of sand are in glassmaking, in molding and filtering, and in railroad engines and ballast.

SANITATION. See Index entry.

SANTO DOMINGO. See HISPANIOLA.

SÃO TOME. See PORTUGUESE TERRITORIES.

SARAWAK. See BORNEO.

SARDINIA. An island in the Mediterranean west of the Italian Peninsula; area, 9,196 square miles. Together with small neighboring islands, Sardinia forms an autonomous region of Italy. Regional area, 9,301 square miles; resident population (1951), 1,273,850. Cagliari (137,032) is the capital and chief city. Agriculture, livestock raising, and fishing are the chief occupations. Lead and zinc are mined. Exports include wine, olive oil, and oranges.

SASKATCHEWAN. Located between Manitoba and Alberta, Saskatchewan is bounded on the north by the Northwest Territories, and on the south by North Dakota and Montana. The province has an area of 251,700 square miles, including 13,727 square miles of fresh water. The federal census of 1951 indicated it had a population of 831,728. A June 1955 estimate (Dominion

Flags of United Nations members line San Francisco City Center Plaza on June 20, 1955, during the tenth anniversary celebration of the signing of the U.N. Charter.

Bureau of Statistics) placed the province's population at 889,000. Saskatchewan's principal cities and their 1951 census populations are: Regina (the capital city), 71,319; Saskatoon, 53,268; Moose Jaw, 24,355; Prince Albert, 17,149; North Battleford, 7,489; Swift Current, 7,430; Weyburn, 7,138; and Yorkton, 7,054.

Government.—The province is administered by a lieutenant governor and a Legislative Assembly, the latter elected every five years. In the provincial election of June, 1944, the first Socialist government in Canada was elected. This government was returned in 1948 with a reduced majority, and again in June 1952 with a greatly increased majority. Following this election the representation in the legislature was: Co-operative Commonwealth Federation (Socialist), 42 members; Liberal Party, 11. In a 1953 by-election, a Progressive Conservative candidate was elected, reducing Liberal representation to 10. In the Canadian Parliament, the province is represented in the House of Commons by 17 members.

Finance.—Estimated revenues for the fiscal year 1955-56 (April 1 to March 31) were \$79,992,920; estimated expenditures, \$79,971,810. Net debt at the end of December 1954 stood at \$78,485,976.

Education.—In 1954, a total of 140,115 pupils were enrolled in elementary schools, and 33,275 in high schools. The University of Saskatchewan, at Saskatoon, had an enrolment of 2,674 in 1955. There are two teachers colleges, one at Saskatoon (354 students), and the other at Moose Jaw (232 students).

Agriculture.—Saskatchewan has approximately 112,000 farm units, occupying some 61 million acres. The chief agricultural products were wheat, oats, barley, rye, and flax. Cash income from the sale of farm products in 1954 was \$473,094,000. In 1954, Saskatchewan produced 151 million bushels of wheat, 86 million bushels of oats, 53 million bushels of barley, 4,800,000 bushels of flax, and 6,700,000 bushels of rye. Also in 1954, the province had 1,387,000 cattle, 539,000 hogs, 156,000 sheep, 229,000 horses, and 704,000 poultry.

Minerals.—Since 1925, mineral production has risen in annual value from \$1,075,000 to \$57,032,000 in 1954, excluding uranium. Metals yielded \$40,219,253; sodium sulfate, \$2,547,586; clay products, \$838,000; and salt, \$891,000. Coal production was valued at \$4,229,864. Production of natural gas in 1954 totaled 4,824,266,000 cubic feet, while oil production was 5,422,899 barrels. For the first eight months of 1955, oil output was 6,505,264 barrels, and natural gas 6,398,266,100 cubic feet. Interest in Saskatchewan's uranium was sparked in August 1952 by Canada's first large-scale uranium claim-staking rush, during which about 300 claims were filed within 24 hours. In 1954, a total of 7,290 claims

were filed, and approximately 10,985 were filed in the first 11 months of 1955.

Other Production.—Total value of forest products in 1954-55 was \$9,640,857. Commercial fish production for 1954-55 was valued at \$1,644,000, and fur production at \$3,715,011.

Gross value of manufacturing production for 1954 was estimated at \$282 million. In 1954 Saskatchewan had 1,200 manufacturing establishments, employing 11,800 persons. Retail sales in 1954 reached a total of \$755,195,000, and capital expenditure intentions were listed at \$474 million. Personal income in 1954 totaled \$761 million.

Communications.—In 1954 Saskatchewan had approximately 7,100 miles of railways and 8,280 miles of highways. There were 164,404 telephones, 1,600 post offices, and 10 radio broadcasting and 2 television stations.

Principal Events, 1955.—During 1955 Saskatchewan, which became a Canadian province in 1905, observed its Golden Jubilee by province-wide celebrations. Permanent memorials to the province's pioneers included opening of a million-dollar Museum of Natural History at Regina and the publication of histories of Saskatchewan.

In July 1955 the South Saskatchewan pipeline, final link in the line which carries medium-grade oil from the southwestern part of the province via Regina through Interprovincial and Minnesota pipelines to the Minneapolis-St. Paul market, was placed in operation. In August a 110-mile gas pipeline was completed from Coleville via Saskatoon, as a new loop to extend natural gas service to the city of Prince Albert in the north. Another pipeline completed later in the southwest, from the Success field, was slated to serve the city of Swift Current early in 1956. Feeder pipelines for oil were also under construction at the end of 1955 to take light oil from the province's southeastern oil fields (at Midale, Frobisher and Alida) through the Interprovincial line to market outlets.

A new 1,250-tons-per-day uranium plant, opened in October 1955 by a private company, Gunnar Mines Ltd., in the Beaverlodge area of northern Saskatchewan, will approximately double the province's uranium production potential. The Potash Company of America began a multi-million dollar potash development program in the Saskatoon area late in 1955, with at least nine other companies conducting initial explorative or developmental programs.

Late in 1955 plans were announced for several new kinds of manufacturing. These included Saskatchewan's first cement plant, an \$8 million project scheduled to be in production in the fall of 1956; and the construction of the province's first steel pipe plant, initially estimated to cost \$3 million, with production to start early in 1956.

During 1955 construction was begun on a series of microwave towers for the Saskatchewan section of a cross-Canada system which will increase telephone and television circuits.

of Publications.*

SATELLITE, Earth. See SPACE FLIGHT.

SAUDI ARABIA. This kingdom (area, approximately 900,000 square miles; pop., 1952 est., 7,000,000), lying between the Red Sea and the Persian Gulf, and covering the greater part of the Arabian Peninsula, comprises Nejd, al-Hasa, Asir, and Hejaz. Among the leading cities are

Mecca (100,000) and Medina (45,000), the holy places of Islam, both in Hejaz; Riyadh (60,000), in Nejd, and Mecca are capitals, although the main seat of government is at the former. Jidda (80,000) on the Red Sea is the principal port. Dhahran, in al-Hasa on the Persian Gulf, is the center of the oil industry.

Government.—All Saudi Arabia is under a single administration with one Legislative Assembly. The kingdom is a member of the Arab League (q.v.) and the United Nations. King Saud ibn Abdul-Aziz al-Faisal al-Saud succeeded to the throne in 1953. A Council of Ministers appointed in 1954 includes ministers of finance, agriculture, education, commerce, interior, health, and foreign affairs. In 1955 a Ministry of Information and National Guidance was created. The king's brother, Emir Faisal, is crown prince, prime minister, and foreign minister.

Education and Religion.—Primary, secondary, and higher education are free, though not compulsory. Night schools have been established for illiterate adults. At Mecca there are several religious colleges, and there is one at Medina for religious law. In 1955 King Saud turned over old palaces in Jidda, Medina, and Riyadh to be used as schools. In 1955 a royal decree was issued abolishing elementary and secondary education in foreign schools for all Saudi Arabian students and imposing restrictions on those wishing to enroll in foreign universities. Aramco maintains schools for technical training and in 1955 built two new primary schools and started eight others for the use of the children of its Arab employees. The great majority of Saudi Arabians are Wahhabis, a puritanical sect of Islam founded in the 18th century.

Defense.—The United States maintains military and air bases at Dhahran, and a United States military mission is aiding in the modernization of defense forces. Five regimental combat teams of 3,500 men each are being trained for desert warfare, and there is an officer-training base at Taif. A new military school has been founded at Buraidah, and a new military academy, the King Abd al-Aziz Royal Academy, was established at Riyadh. In April 1955, the first air force cadets were graduated from the Saudi Aviation Academy at Jiddah.

Finance.—All money of Saudi Arabia is coin, and the standard coins are the Saudi silver riyal (SR), equal to U.S.\$0.27, and a Saudi gold sovereign (SS), equal to SR40 and having a gold content of U.S.\$8.24. The budget for the fiscal year of 1374 (September 1954-August 1955) showed revenues of SR1,143 million and expenditures of SR1,355 million. The income tax on and royalties from oil provide about 85% of the national income. Other sources of revenue were customs, and airline, railway, and port incomes. There were large expenditures for defense, public works projects, and communications. Since 1946 the Export-Import Bank of Washington has loaned \$14,767,516 for development projects, \$6 million of which has already been repaid.

Petroleum Resources.—Rights for the development of oil resources for most of Saudi Arabia are held by Aramco, the Arabian American Oil Company, which is owned 30% each by the Standard Oil Company of California, the Texas Company, and the Standard Oil Company of New Jersey, and 10% by Socony-Vacuum Oil Company. Saudi Arabia receives a royalty of 50% of the profit before United States taxes, and the percentage is to be increased if any oil company pays a higher figure to any other Middle Eastern government. A similar arrangement exists with Pacific Western Oil Company, which holds the rights to Saudi Arabia's share in the Neutral Zone with Kuwait.

Oil revenues accruing to the state in 1955 were over \$250 million. Over 347 million barrels were produced in 1954 by Aramco, and Pacific Western Oil Company exported 5.7 million barrels of crude oil from the Neutral Zone. By the middle of 1955 production of crude oil amounted to 23 million metric tons. The great bulk of the oil is pumped through Aramco's TAPline (Trans-Arabian Pipeline), 1,068 miles to Lebanon, although some is piped to Bahrain, some is loaded on tankers, and 79.8 million barrels were refined at the Ras Tanura plant.

Agriculture.—Nejd is famous for well-bred camels and horses; coffee is produced in Asir; dates, barley, rice, sorghum, and fruits are grown in Hejaz; dates are grown in al-Hasa; and in al-

Kharj various crops are produced on 3,000 acres of irrigated land.

Foreign Trade.—There are no official statistics on foreign trade. Exports, which consist almost exclusively of oil, were estimated at £235 million in 1953. Exports to the United States in 1953 were valued at \$66,575 million, of which oil accounted for \$66,102 million. Exports to Great Britain in 1953 amounted to £2,107 million. Imports from the United States in 1953 were valued at \$76,317 million, of which metals and manufactures constituted \$49,109 million. Imports from Great Britain in 1953 were valued at £5,920.

Transportation and Communications.—The railroad from Dammam on the Persian Gulf to Riyadh (357 miles) is being extended, and bids were opened in December 1955 for the construction of a line from Riyadh to Medina and Jidda, with 4 branch lines, to connect with the Hejaz Railway. Meetings of the Hejaz Railway Executive Committee (Syria, Jordan, and Saudi Arabia) were held, and King Saud in October 1955 contributed SR2 million to finance a study of necessary repairs. Bids for repair work were submitted by 24 international companies. An asphalt highway is under construction between Dammam and Jidda, connecting Mecca, Taif, Riyadh, and Hofuf. In 1955 radiotelephone service was inaugurated with Egypt and Syria, and an automatic telephone exchange was installed in Jidda. The main airports are at Jidda, Dhahran, and Riyadh. There is air service to Cairo and Beirut.

Principal Events, 1955.—In 1954 an agreement was signed with the shipping magnate, A. S. Onassis, giving certain priorities in marketing oil to the Saudi Arabian Tanker Company, which he controlled. After Aramco protested that this agreement contravened its concession, the dispute was submitted to international arbitration at Geneva.

Several attempted coups made against King Saud and his brothers were suppressed. H. St. John B. Philby, the noted English author and Islamic scholar, who has been living in Riyadh and Mecca for a number of years and advising the Saudi Arabian government, was forced to leave the country in 1955. A German became the king's political adviser. Also in 1955 a joint committee was formed with Jordan to demarcate the common frontier.

The Baraimi Oasis dispute with Britain continued in 1955. The five-man arbitration council in Geneva investigating the dispute was composed of Sir Reader Bullard of Great Britain, Sheik Usuf Yasin of Saudi Arabia, and one member each from Belgium, Cuba, and Pakistan. In September 1955 the council broke up when Sir Reader Bullard resigned, charging that Saudi Arabia was bribing the council. Saudi Arabia claimed he resigned when he understood that the council's decision would be in favor of Saudi Arabia. In October 1955, British officers with troops from Muscat and Abu Dhabi occupied Baraimi in force and drove out the Saudi Arabian police, some of whom were wounded and killed.

On Oct. 27, 1955, Saudi Arabia entered into a pact with Egypt, in which the two countries agreed to stay out of the Baghdad Pact (Middle East Treaty Organization) and to contribute instead to joint Arab defense and economic cooperation. King Saud assured Egypt of full military and financial support in the event of an Israeli attack on the Gaza strip. On December 24 it was announced in Cairo that Maj. Gen. Abdel Hakim

Amer, Egyptian minister of war, would command the joint Egyptian-Saudi forces.

SYDNEY N. FISHER,
Professor of History, Ohio State University.

SAVINGS. Liquid savings of individuals in the United States totaled approximately \$176 billion at the beginning of 1955. During 1954 these savings, which include currency, checking and savings accounts, and United States government securities, increased by \$6 billion, one of the largest gains in the postwar period. Saving in these liquid forms appeared to have continued at a high rate in the first three quarters of 1955.

Growth in savings accounts (including shares in savings and loan associations) continued to account for most of the increase in total liquid assets, as is shown in Table 1. Savings accounts amounted to about \$91 billion at the end of 1954. Demand deposits increased during the year by about \$2 billion, while individual holdings of United States government securities and currency had a combined decrease of about \$4 billion. At year's end, personal holdings of these three assets totaled \$84 billion.

TABLE 1—ESTIMATED LIQUID ASSET HOLDINGS OF INDIVIDUALS IN THE UNITED STATES
(In billions of dollars)

Assets	1952 ¹	1953 ¹	1954 ¹
Currency.....	20.4	20.9	20.7
Demand deposits.....	33.0	32.7	34.7
Time deposits.....	58.6	62.7	66.5
Savings and loan shares.....	17.6	20.8	24.9
U.S. government securities.....	34.0	32.4	28.7
Totals ²	163.6	169.5	175.5

¹ End of the year. ² Includes holdings of farmers and professional persons, but not trust funds administered by corporate trustees. (Source: *Federal Reserve Bulletin*, July 1955, p. 750.)

The increase in total personal liquid assets in 1954 appeared to be primarily due to an increase in the average amount of holding rather than to expansion of the number of spending units that had such holdings. Large amounts of liquid assets (\$5,000 and over) were held by roughly 5.5 million consumer spending units at the end of 1954, compared with 5 million a year earlier, according to the Federal Reserve Board's Survey of Consumer Finances. The number of consumer units with no liquid assets increased, as has been the case in most postwar years. Approximately 25

TABLE 2—SIZE OF LIQUID ASSET HOLDINGS WITHIN VARIOUS INCOME GROUPS, EARLY 1955

Amounts of total liquid assets held ¹	Percentage distribution of spending units within income groups ²			
	All spending units	Under \$1,000	\$1,000-2,999	\$5,000 and over
None.....	29	61	46	26
\$1-\$499.....	29	21	24	37
\$500-\$1,999.....	21	8	17	20
\$2,000-\$4,999.....	11	5	8	10
\$5,000 and over.....	10	5	5	7

¹ Includes all types of U.S. government securities, checking accounts, and savings accounts in banks and savings and loan associations and postal savings; excludes currency holdings. ² Liquid assets data are based on interviews in January through March 1955. (Source: 1955 Survey of Consumer Finances, *Federal Reserve Bulletin*, June 1955.)

million of the 54 million spending units had no liquid assets at the end of 1954, compared with 22 million a year earlier. Liquid assets of \$2,000 or more were held by 21% of spending units, while smaller amounts were owned by 50%, as is shown in Table 2.

The higher the income, the more likely a spending unit was to have liquid assets. These

assets were nevertheless broadly distributed. Consumers in the lower half of the income distribution increased their share of total liquid assets (excluding currency) from 23% in early 1947 to 28% in early 1955. The rise in large holdings of liquid assets during 1954 appeared to take place among consumers with incomes between \$1,000 and \$5,000.

SCOTLAND. Including its 186 islands, Scotland has an area of 31,400 square miles (divided administratively into 33 civil counties on the main island of Great Britain north of the Tweed), and a population estimated in December 1954 at 5,123,300 (principal cities: Glasgow, 1,083,400; Edinburgh, 469,300; Aberdeen, 185,700; and Dundee, 176,800). Scotland is represented by 74 members in the House of Commons and by 16 Scottish peers in the House of Lords.

In 1953-54 there were 2,862 primary departments (590,577 pupils; 18,210 teachers); 817 secondary schools (average registration, 232,845), and 203,703 students at 1,112 centers for further education. Expenditure on education in 1954-55 was estimated at £49,076,968. University enrollment, aggregating 14,954 in 1954-55, comprised: St. Andrew's, 1,831; Glasgow, 5,789; Aberdeen, 1,836; Edinburgh, 5,498.

Agricultural production in 1954, on 10,392 farms occupying 4,388,879 acres, included wheat, oats, barley, and rye; there were 1,206,000 acres of permanent pasture. Fisheries produced 298,812 tons, valued at £11,236,022. An overall increase of 5% was recorded for industrial production in 1954, including exports of hosiery and knitwear valued at about £4 million. By 1955, United States interests had set up more than 20 varied industrial projects in Scotland. There were 305,000 overseas visitors to Scotland (a record figure) in 1954. (See also GREAT BRITAIN.)

SCOTT, Walter Dill, American educator; b. Cooksville, Ill., May 1, 1869; d. Evanston, Ill., Sept. 23, 1955. A pioneer in applying psychological knowledge and techniques to advertising and to personnel work, he also served as president of Northwestern University during a period of unprecedented expansion.

After receiving his B.A. degree from Northwestern in 1895, he prepared for missionary work at McCormick Theological Seminary. On being graduated in 1898, he instead went to study psychology at the University of Leipzig, where he earned a Ph.D. in 1900. In the following year he joined the psychology department at Northwestern, becoming a full professor in 1908 and president of the university in 1920. By 1939, when he became president emeritus, the university's endowments had been increased fivefold, its plant greatly enlarged, and many of its graduate schools gathered in a separate Chicago campus. From 1948 until his death he was chairman of the editorial board of *The American People's Encyclopedia*.

Early in his teaching career, Scott took the then novel course of applying psychological testing to business. In World War I he drew up the system of classification used by the U.S. Army to assign enlisted men to duty and the aptitude

tests used for officer candidates, for which he received the D.S.M. Of his many books on applied psychology, the best known is *Personnel Management* (with R. C. Clothier, 1923).

SCULPTURE. See PAINTING, SCULPTURE, AND PRINTS.

SECRET SERVICE, U.S. The Secret Service was established July 5, 1865, as a branch of the Treasury Department. Its powers and duties are defined in Title 18, U.S. Code, Section 3056.

Secret Service agents made advance security arrangements for President Eisenhower's participation in the historic "meeting at the summit" in Geneva, Switzerland, in July, and protected the president abroad. They also made security arrangements for the visit of Vice President Nixon to Central America and safeguarded him throughout the trip.

During the fiscal year ended June 30, 1955, Secret Service agents captured 16 plants for the manufacture of counterfeit money, and \$1,021,916 in counterfeit bills. Of that total, only \$102,462 was successfully passed on storekeepers and cashiers. The balance was captured before it could be put into circulation. Seizures of counterfeit coins totaled \$5,262.76, of which \$4,975.32 was passed. There were 124 new counterfeit note issues and variations thereof during the fiscal year, and 186 persons were arrested for violating the counterfeiting laws.

There were 33,260 forged government checks received for investigation. Agents completed investigations of 30,177 forged checks worth \$2,609,335.91, but on June 30 there was a growing backlog of 15,222 forged checks awaiting investigation. There were 2,825 check forgers arrested. Agents also received 5,607 forged U.S. Savings Bond cases for investigation, completed investigations of 4,961 forged bonds worth \$437,103.54, and arrested 86 persons for bond forgery.

Arrests for all offenses totaled 3,269, an increase of 5% over the previous year. There were 2,979 convictions, representing 98.1% of convictions in all cases prosecuted, some of which were pending from the previous year.

Cases of all types received for investigation totaled 43,990, an increase of 2,627 over 1954. Although 40,627 cases were closed during the year, there were 18,585 cases awaiting investigation and 956 pending prosecution as of June 30, 1955.

U. E. BAUGHMAN,
Chief, U.S. Secret Service.

SECURITIES. See STOCKS AND BONDS.

SECURITIES AND EXCHANGE COMMISSION. This bipartisan, quasijudicial agency of the United States government administers laws in the general field of securities and finance.

Securities Act of 1933.—This law seeks to protect investors by: (1) requiring (with certain exceptions) that securities offered for public sale be registered with the SEC; and (2) prohibiting fraud in the sale of securities.

By June 30, 1955, \$103 billion of securities had been registered, including \$10.9 billion during the 1955 fiscal year. Registration of securities is no guarantee against loss in their purchase, but disclosures should enable investors to make informed investment decisions. Although there is no warranty of the accuracy of the disclosures, investors who suffer losses in the purchase of registered securities have important recovery rights if the facts have been misrepresented.

Securities Exchange Act of 1934.—This law con-

tains similar registration and disclosure requirements applicable to outstanding securities listed for public trading on the national securities exchanges. Issuers must file periodic reports with the SEC and the exchanges containing data essential to informed investment analyses. Similarly, in the solicitation of proxies (votes), factual disclosures must be made so that stockholders' votes may be cast intelligently. In addition, management officials and large stockholders must report their holdings of, and transactions in, listed equity securities; and their short-term trading profits in such securities are recoverable by the issuer. This is designed to curb misuse of "inside" information. At the end of the fiscal year, 3,658 security issues of 2,219 issuing companies were so listed and registered; and exchange trading volume therein was approximately \$38 billion for the year. During the fiscal year, 1,934 proxy statements and 28,975 insiders' reports were filed.

The law also contains provisions designed to eliminate misrepresentation, manipulation, and other fraudulent and deceptive practices in the purchase and sale of securities. Exchanges and over-the-counter brokers and dealers must register with the commission. Associations of the latter organized under the law for self-policing purposes also may register. All must make their rules and trading practices conform to prescribed standards designed to establish and maintain free and open markets. At the fiscal year's end, 15 exchanges, 4,334 brokers and dealers, and one broker-dealer association were registered.

This law also contains important sanctions against violations. It gives the SEC investigatory and enforcement powers and provides for court injunctions against securities violations, as well as for criminal prosecution where fraud or other willful violations are indicated. In addition, it provides for revocation of the registration of brokers and dealers, and their suspension or expulsion from membership in exchanges or the broker-dealer association, for any such willful violations.

Public Utility Holding Company Act of 1935.—

This law provides for regulation of holding company systems of electric and gas utility companies to protect against certain abuses in their financing and operation, including improper financial and related practices and the extension of systems without regard to economies of operation. The law also requires a major overhauling of such systems to delimit their operations to integrated groups of utility properties, simplify corporate and capital structures, and redistribute voting power equitably among security holders.

The integration and simplification program is virtually complete. It has resulted in the release from the act's jurisdiction, by means of sales, distributions and other divestments, reorganizations, mergers and consolidations, liquidations, and other actions, of 1,958 of the 2,200 companies previously subject to the law. A prerequisite to approval of all such actions, involving several billion dollars of securities and properties, was a finding by the commission (and frequently by a federal district court) that the proposals were fair to security holders. Important byproducts have been the elimination of absentee control over many utility-operating companies and removal of obstacles to effective state regulation. Ultimately, some 18 integrated and simplified holding company systems with aggregate assets of about \$6.5 billion are expected to remain subject to continuing SEC regulation under the act.

This regulation has its primary impact on the purchase and sale of utility securities and properties, mergers and consolidations, intercompany transactions, and similar matters. Principal among these is the sale of securities to finance the business of system companies, including their plant expansion programs, with respect to which the commission must apply statutory standards designed to protect investors and consumers. Annual financings by registered holding company systems in recent years have approximated \$1 billion, including intrasystem sales.

The commission also administers the Trust Indenture Act of 1939, the Investment Company Act of 1940, and the Investment Advisers Act of 1940, and serves as adviser to federal courts in corporate reorganization proceedings under Chapter X of the Bankruptcy Act.

ORVAL L. DuBois,
Secretary.

SECURITY, National. See NATIONAL SECURITY.

SECURITY COUNCIL (U.N.). See UNITED NATIONS.

SECURITY COUNCIL, National. See Index entry, *National Security Council.*

SEGNI, Antonio, premier of Italy; b. Sassari, Sardinia, Italy, Feb. 2, 1891. A left-of-center Christian Democrat, he succeeded Mario Scelba as premier on July 6, 1955.

A graduate of the University of Rome (1913), he served as an artillery sergeant in World War I and began his long career as a teacher of law in 1920, when he was appointed to the faculty of the University of Perugia. Subsequently he taught at the University of Cagliari (1925-29); the University of Pavia (1929-31); the University of Sassari (1931-54), of which he became rector in 1944; and the University of Rome (1954-55).

Professor Segni was active in the Italian Popular Party, the predecessor of the Christian Democratic Party that was founded in 1919, and strongly opposed fascism. In 1924, Benito Mussolini dissolved the Popular Party, and Segni retired from politics until 1942, when he joined the Sardinian Clandestine Committee for Liberation, an anti-Fascist organization.

After the liberation of Italy, Segni played a major role in the nation's political reconstruction. In 1946 he was elected to the Constituent Assembly, which drafted the Constitution of the Italian Republic, and in 1948 he became a member of the Chamber of Deputies. From 1946 to 1951 he was minister of agriculture, and from then until 1954 minister of public instruction. As minister of agriculture, he played a prominent part in drafting the land reform legislation of 1950, which has done much to improve conditions in southern Italy and the islands and so to prevent the spread of communism.

After Mario Scelba resigned as premier on June 22, 1955, President Giovanni Gronchi (q.v.) asked Segni to form a new government. His coalition cabinet, much like that of his predecessor, was sworn in by the president on July 6, and was confirmed by the Chamber of Deputies on July 18 and by the Senate on July 22. Segni continued Scelba's firm support of the West and the North Atlantic Treaty Organization but, in talks with U.S. Secretary of State John Foster Dulles on October 22-23, urged a more equitable voice for Italy in Western policymaking, particularly in the Mediterranean area. He also pressed for greater United States support of the admission of Italy to the United Nations (with 15 other nations, Italy was admitted on December 14).

SEGREGATION, Racial. See EDUCATION; NEGROES, AMERICAN.

SEISMOLOGY. The year 1955 was very mild from the seismologist's viewpoint. While the number of earthquakes was about average, the number of quakes above magnitude 7 (on a scale of 0 = 10) was very small, and the damage done was much below average.

The most disastrous quake of the year occurred in the Philippine Islands on April 1. Northwestern Mindanao seems to have been hardest hit. Some 432 people lost their lives, damage to crops was estimated at \$5,000,000, and damage to buildings and bridges ran into many millions more. On one 35-mile stretch of highway alone, 9 bridges were destroyed.

Later, on April 19, 21, and 24, Greece was again badly shaken (severe earthquakes have shaken Greece annually for the last few years). Most hard hit was Volos, where many people were killed and property damage ran into the millions of dollars; it is estimated that 45,000 people out of Volos' population of 55,000 were rendered homeless. On September 12, Egypt experienced the worst earthquake in its history. While it was not large as quakes go, 16 people were killed and over 30 buildings in Cairo were destroyed.

San Francisco, Calif., received a scare on October 23 when, at 8:11 P.M., buildings in the Bay area shook perceptibly. However, little damage beyond broken windows and statues was caused. The quake was barely recorded in New York. Earlier in the year, on January 25, Long Beach, Calif., experienced what to residents seemed like a mild shock. It caused no loss of life and no damage to buildings, but some 43 oil wells were ruined by having their casings sheared, the damage amounting to \$3 million to \$4 million.

Quetta, Pakistan, near the Afghanistan border, scene of serious quakes in the recent past, was subjected to a mild quake on February 19, which killed 14 people and destroyed some 100 homes.

On February 28, a series of quakes shook the town of Pahoa, Hawaii (q.v.). However, the quakes and the damage were due to the eruption of the Puulena volcano, which had not erupted in over 180 years. No lives were lost, and the damage was volcanic rather than seismic.

The official news agency of Communist China reported severe earth tremors on April 14 which

shook Sikang Province and killed 39 persons and injured 113 others.

A recent development in seismology which deserves attention is a new instrument designed and named after Professor Willmore at the University of Cambridge in England. The instrument, a seismometer, is extremely small and compact, but gives the same order of magnification as larger and more expensive instruments. Moreover it can be used equally well as a vertical or as a horizontal instrument. (For a complete record of the earth motion at any observatory, three instruments have in the past been needed: one instrument to record the vertical component of the ground motion, and two devices to record the north-south and east-west components of the horizontal ground motion.)

The seismometer consists of a cylindrical Alnico magnet, suspended by springs so as to oscillate over a cylindrical coil attached to the base. The motion of the magnet across the coil generates a current which is led off to a recording galvanometer. If the instrument is placed upright the magnet oscillates vertically; if the instrument is laid on its side, the magnet oscillates horizontally. The magnet can be clamped for transportation.

The instrument has a period of one second and is therefore especially suitable for recording ground oscillations of short duration. Some of the typical oscillations recorded by this instrument in the Fordham University Observatory are shown in the accompanying reproduction of a portion of a day's record. The length of time along any one line of the record is just short of two minutes—the minute marks put on the record by the observatory clock can be seen as slight indentations of the line. Each line represents motion 15 minutes earlier than that of the line below; the reproduction is of a small portion of a 24-hour record taken from a recording drum that revolves once in 15 minutes. If the whole record were reproduced on a single page there would be 15 minute markings per line and 96 lines to the page.

At "A" on the record is a tracing made by a quarry blast about 140 miles to the west of New York. A second disturbance has been recorded at "B." These two disturbances represent two waves which started out from the quarry together, but which, traveling at different speeds, reached the observatory 24 seconds apart. The first wave is a compression or sound wave which pushes the earth particles ahead of it and gives a strong

Seismometer (at left) produced the record shown at right, during part of one day in 1955 at Fordham Seismic Observatory. For an explanation of the letter symbols, see the accompanying article, *Seismology*.

COURTESY OF THE REV. JOSEPH LYNCH, S.J.

vertical push to the ground wherever it strikes the surface. The second wave is a shear wave or shape wave caused by the shape of the earth's particles being disturbed by the blast. The compression wave travels a little less than 4 miles per second and reaches the observatory in 37 seconds. The shear wave, traveling more slowly at about $2\frac{1}{2}$ miles per second, reached the observatory in 61 seconds. The time interval between arrivals made it possible to compute the distance as 140 miles. The direction was determined by making use of three such instruments oriented north-south, east-west, and vertically.

Above this blast record, at point "C," is the record of a New York Central passenger train passing about a quarter of a mile away. Below, at "D," is the record of a freight train passing about a quarter of a mile away. The other disturbances shown in this record represent New York traffic of various types.

JOSEPH LYNCH, S.J.

Director, Fordham Seismic Observatory.

SELECTIVE SERVICE. The first session of the 84th Congress amended the Universal Military Training and Service Act of 1948 in several respects, including a four-year extension until July 1, 1959, of the Selective Service System's authority to induct regular registrants, and a two-year extension until July 1, 1957, of the so-called doctor draft. Other important amendments provided:

(1) Exemption from training and service, but not from registration, of certain aliens who, subsequent to July 24, 1948, served for not less than 18 months in the armed forces of nations with which the United States is associated in mutual defense activities.

(2) Exemption from training and service, "except after a declaration of war or national emergency made by the Congress subsequent to the date of enactment" of the amendment, of persons who after Sept. 16, 1940, served honorably on active duty for not less than one year in one of the armed forces; those who subsequent to Sept. 16, 1940, were discharged for the convenience of the government after having served on active duty for a period of not less than 6 months; and those who served for a period of not less than 24 months as commissioned officers in the Public Health Service, or in the Coast and Geodetic Survey.

(3) Exemption from induction for training and service of any person in the medical, dental, and allied specialist categories after he has attained the 35th anniversary of his birth, if he applies or has applied for a commission in the armed forces in any such category and is or has been rejected on the sole ground of physical disqualification.

(4) Lowering from 50 to 46 years of age the maximum age for induction of doctors, dentists, and allied specialists.

During 1955, Selective Service received calls from the armed forces for delivery of 153,000 men—133,000 for the army and 20,000 for the navy. The navy, for the first time since December 1945, asked for 10,000 men in November and 10,000 in December.

Congress, in enacting the Reserve Forces Act of 1955, made it clear that Selective Service would have definite responsibilities in the administration of the Reserve program. Accordingly, the system, immediately following the enactment of the bill, took steps to implement the part it would play in carrying out the program. Possible mobilization of the Standby Reserve will require that the Selective Service System establish individual records for each Standby Reservist. Such records must be complete enough at all times to permit a current classification to be available so that if a mobilization should come at any time, the system would be able to indicate to the Department of Defense which Standby Reservists are immediately available for mobilization. The system will also be involved in the en-

trance of the registrant into the Ready Reserve unit. It will be concerned with his performance in the Reserve, because it must be prepared to take action based on complete and accurate information should he be charged with failure to meet his obligation.

Likewise, in the use of the shorter period of service to permit greater use of registrants with critical skills for the furtherance of the national interest, Selective Service must play a part in the selection of such registrants. It must be prepared to observe the employment of the registrant after completion of his active duty period and his transfer to the Standby Reserve. This observation must be such as to guarantee that the registrant is making the contribution to the national interest required to ensure his continuance in the Standby Reserve.

The make-up of the Selective Service System remained materially the same throughout 1955. There were approximately 4,000 local boards, 92 appeal boards (one in each federal judicial district in each state), 28 appeal board panels, 56 "state" headquarters (one in each state, New York City, the District of Columbia, Alaska, Hawaii, Puerto Rico, the Virgin Islands, the Canal Zone, and Guam), and a national headquarters in Washington, D.C. Uncompensated personnel of the system, including local board members, appeal board members, government appeal agents, advisers to registrants, and medical and scientific advisers to local boards, totaled approximately 40,000, as against 8,000 paid personnel. In April 1955, the director established a National Selective Service Scientific Advisory Group to furnish him, when called upon, with advice regarding scientific problems which might confront him in the administration of the agency.

LEWIS B. HERSHEY,

Major General, USA; Director, Selective Service System.

SENEGAL. See FRENCH WEST AFRICA.

SEYCHELLES. This group of 92 islands in the Indian Ocean (area, $156\frac{1}{4}$ square miles; est. pop., 37,400 at mid-1954) constitutes a British crown colony. On Mahé, the largest island (56 square miles), is Victoria, the capital and chief port. Other principal islands are Praslin, Silhouette, La Digue, Curieuse, and Félicité; dependent islands include the Amirantes, Alphonse, Bijoutier, St. François, St. Pierre, and the Cosmoledo group.

A governor (Sir William Addis, assumed office Oct. 18, 1953) presides over the Executive Council and the 13-member Legislative Council (including 6 nonofficials—4 elected, 2 nominated). Revenue in 1954 was Rs.4,650,265 (the Seychelles rupee equals U.S.\$0.21); expenditure, Rs.4,705,324. In 1954 primary education was provided in 26 church schools and in 2 private schools; secondary education was given free at 2 modern coeducational government schools. Pupil enrollment totaled 5,256 in 1954.

The colony's chief exports in 1954 were copra (6,471 tons); cinnamon leaf oil (98,989 kilograms); guano (11,863 tons); salt fish (86 tons); patchouli leaves (67.1 tons); cinnamon bark (475.5 tons); patchouli oil (273 kilograms); and vanilla (1,370 kilograms). Imports were valued at Rs.8,086,860; exports at Rs.9,081,859. Trading is principally with the United Kingdom (exports, Rs.1,191,732; imports, Rs.2,951,852, in 1954).

There are 120 miles of earth roads (84 miles suitable for motor vehicles). Steamships on the Bombay-Mombasa-Durban run call at Victoria.

SHERWOOD, Robert Emmet, American author: b. New Rochelle, N.Y., April 4, 1896; d. New York, N.Y., Nov. 14, 1955. The winner of four Pulitzer prizes (three in the drama and one in biography), he was an ardent liberal whose most important plays reflect his outlook on society.

Educated at Harvard (1914-17), he left college to serve with the 42d Battalion, Black Watch, of the Canadian Expeditionary Force in France during World War I. He was gassed and wounded twice in combat. On his return to civilian life in 1919 he became dramatic editor of *Vanity Fair*, and subsequently associate editor (1920-24) and editor (1924-28) of the humor magazine, *Life*.

Sherwood's first Broadway play, *The Road to*

Robert E. Sherwood
(d. Nov. 14, 1955)

WIDE WORLD

Rome (1927), a pseudohistorical comedy dealing with Hannibal's expedition against Rome, was favorably received by the public, but it was not until the buoyant *Reunion in Vienna* (1931) that his comic talent was fully revealed. *The Petrified Forest* (1935), a melodrama dealing with frustrated lives in a decadent civilization, was followed by his first Pulitzer Prize play, *Idiot's Delight* (1936), a dramatic and subtle indictment of the forces that cause war. In 1938 (with Maxwell Anderson, S. N. Behrman, the late Sidney Howard, and Elmer Rice) he founded the Playwrights' Company in an attempt to preserve artistic integrity in the American theater by producing plays without commercial assistance.

With *Abe Lincoln in Illinois* (1938), Sherwood laid aside his penchant for sophisticated comedy to dramatize in the person of the young Lincoln the growth and "solidification of the American ideal." This play, which won him his second Pulitzer Prize, and *There Shall Be No Night* (1940; awarded the Pulitzer Prize in 1941), a powerful and timely appeal for action against contemporary threats to democratic principles, established him as a serious and significant dramatist.

Prior to the United States entry into World War II, Sherwood was one of the most vigorous spokesmen for aid to Britain. During the war years he headed the Overseas Branch of the Office of War Information (1941-44) and was an intimate adviser of President Franklin D. Roosevelt, some of whose speeches he helped write. From the experiences of these years emerged *Roosevelt and Hopkins: An Intimate History* (1948), which won him his fourth Pulitzer Prize.

Other plays by Sherwood include *The Love Nest* (1927); *The Queen's Husband* (1928); *Waterloo Bridge* (1930); *This Is New York* (1930); *Acropolis* (1933); *Tovarich* (1935; adapted from the French of Jacques

Deval); *The Rugged Path* (1945); and *Miss Liberty* (1949; a musical with lyrics and music by Irving Berlin). He was also the author of a number of screen plays, including *The Best Years of Our Lives* (1946), which received nine Academy awards. At the time of his death he had completed a new play, *Small War in Manhattan*, and the script for a film, *Main Street to Broadway*. A member of the National Institute of Arts and Letters, he received its gold medal for drama in 1941.

SHETLAND ISLANDS. Lying northeast of the Orkney Islands (q.v.), this archipelago constitutes a Scottish county (area, 551 square miles), known also as Zetland. Principal among the 28 inhabited islands are Mainland, on which is Lerwick (the county town), Yell, Unst, Fetlar, Bressay, Whalsey, and Foula. Tweed is woven, and the Shetland breed of small ponies is famous. The population (18,700 in December 1954; 18,900 in 1953) is declining; unemployment nevertheless has risen, and in 1955 the County Council recommended 10 measures to rebuild the economy, including reorganization of the wool industry and investigation of mineral resources. The annual income from visitors is estimated at £180,000.

SHIPBUILDING. In 1955 the shipbuilding and ship repairing industry experienced high hopes, some orders, and many delays. The long-range shipbuilding program, which was expected to begin in 1955, only partly materialized. New orders for commercial shipbuilding were not forthcoming either soon enough or in sufficient volume to check the continuing decline in shipyard employment.

By Jan. 1, 1955, 15 merchant vessels (of 1,000 tons or over), aggregating 212,660 gross tons, were on order, under construction, or awaiting delivery in domestic shipyards. These represented 10 tankers, 3 cargo vessels, 1 Great Lakes ore carrier, and 1 new cargo vessel undergoing conversion and completion as an auxiliary cargo attack vessel. By Oct. 1, 1955, of the 15 ships, 8 were delivered, consisting of 4 tankers, 3 Mariner-type cargo vessels, and 1 Great Lakes ore carrier. By the same date, 3 ships had been launched, consisting of 2 tankers and the last of the Mariner-type cargo vessels. These figures compared with 31 delivered and 27 launched during the same period in 1954.

On Oct. 1, 1955, there were 21 merchant vessels (including 13 tankers) of 1,000 gross tons or over, aggregating roughly 258,000 gross tons, either under construction or on order. Of the 21 vessels, 17 were authorized by Congress in 1954, as a part of a program to build 41 commercial ships. During 1955 Congress enacted additional legislation sponsored by the Maritime Administration, which raised the total of vessels authorized for construction to 59. As of Oct. 1, 1955, no contracts had been let for the additional 18 vessels.

Traffic on the inland waterways continued to increase during 1955 (see INLAND WATERWAYS), and the construction of smaller craft used along coastal and inland waterways, including barges, scows, tugboats, and trawlers increased markedly. A new development in 1955 was the renewal of interest in the operation of roll-on roll-off vessels, one of which was being constructed by the U.S. Navy in 1955.

Employment in private shipyards increased from 98,200 persons in January 1955 to 102,000 in July, compared with 123,600 persons employed in January 1954. The average hourly earnings in the shipbuilding, boatbuilding, and repairing industry during June 1955, according to the Bureau of Labor Statistics, was \$2.18, as

compared with \$2.13 in 1954. The average weekly hours worked were 39.3 in 1955, compared with 38.8 in 1954.

In contrast with the dark picture of commercial vessel construction, the navy's program of construction in 1955 was extensive. As of Oct. 1, 1955, the contracts let by the Navy Department totaled approximately \$115 million, one third the value of those let during 1954. The 1955 awards were for 6 LST's, a nuclear submarine, a cable ship conversion, and a number of small craft. The fiscal 1956 navy construction program, authorized by Congress in Public Law 157, includes the construction of 28 vessels, ranging in size from an attack aircraft carrier to an inshore minesweeper, as well as over 1,000 service craft.

WORLD SHIP CONSTRUCTION

(Vessels of 1,000 gross tons or more, under contract for construction as of July 1, 1955; excluding the USSR)

Nation	No. of ships	Gross tons	Nation	No. of ships	Gross tons
<i>World total</i>	1,437	12,596,534 ¹	Italy ²	58	630,000
Great Britain.....	418	3,857,362	Norway.....	62	544,773
Germany.....	270	1,783,265	Denmark.....	55	286,260
Japan.....	104	1,355,700	United States.....	14	214,060
Sweden.....	142	1,360,100	Belgium.....	25	194,600
Netherlands.....	127	1,083,691	Spain.....	22	170,320
France.....	91	853,826	Other ³	49	252,577

¹ Comprising 50 passenger vessels (487,180 gross tons), 384 tankers (6,180,173 tons), and 1,003 cargo vessels (5,929,181 gross tons). ² Excluding Trieste. ³ Comprising Australia, Canada, East Germany, the Republic of Ireland, Hong Kong, India, Poland, and Trieste, each having less than 1% of the world's tonnage.

Shipbuilding in Other Countries.—As of July 1, 1955, the gross tonnage of ships under construction throughout the world had increased by almost 6% over the figure for 1954, and the number of ships had also increased (1,437 in 1955, compared with 1,305 in 1954). Higher British labor costs have heightened the competition among Great Britain, Germany, and Japan.

Great Britain remained the leading shipbuilding nation, as of July 1, with 30.6% of current world construction. Germany assumed second place with 14.1% of world construction; Japan, third (10.8%); Sweden, fourth (10%); and the Netherlands, fifth (8.6%). The United States dropped to tenth place with 1.7%, as against eighth place with 3% of world construction in 1954.

The world shipbuilding gross tonnage of 12,596,534 in 1955 is an increase of 721,217 gross tons since July 1954. Germany, Japan, France, Italy, Trieste, Hong Kong, and Ireland have all increased the amount of tonnage under construction or on order. All other countries showed decreases in 1955. (See also **MERCHANT MARINE**.)

H. GERRISH SMITH,

Chairman of the Board, Shipbuilders Council of America.

SHIPPING. See Index entry.

SHOE INDUSTRY. United States Production.—

Footwear output in the United States in 1955 was estimated at 578 million pairs. This represented an increase of approximately 10% over the 523 million pairs produced in 1954, and exceeded by 45 million the previous yearly high of 533 million pairs produced in 1952. Of all shoes produced, 46% were women's shoes and only about 20% were men's shoes.

Retail sales of shoes in 1955 ran about 5% above 1954 levels. Shoe prices and the prices of

hides and other basic raw materials used in shoes were relatively stable during 1955.

The year 1955 may have proved to be one of the most important years in the history of the shoe industry. The United Shoe Machinery Corporation, on direction of the U.S. Federal District Court of Boston, placed into effect a plan to sell its machinery as well as to lease it. Up to this time, shoe machinery in the United States had been predominantly leased by manufacturers. The opportunity to buy machinery, as well as to lease it, may have a very significant future effect on the capital structure of the shoe industry.

WORLD PRODUCTION OF LEATHER FOOTWEAR (In estimated thousands of pairs)

Production area	1930	1940	1949	1954
North America.....	333,839	444,383	521,759	603,815

(Source: Shoe, Leather, and Leather Products Division, U.S. Department of Commerce.)

World Production.—Based on data released in 1954, the United States continued to be the best-shod nation in the world. It is the only country which has an annual consumption of leather footwear in excess of 3 pairs per capita. In 1954, the United States produced almost 40% of the total world output of footwear. Per capita production of shoes by continent in 1954 was: North America, 2.77; South America, 0.65; Europe, 1.01; Asia and Oceania, 0.60; and Africa, 0.41. The world average was 0.60.

SHULMAN, Harry, American educator and labor arbitrator: b. Krugloye, Russia, May 14, 1903; d. Hamden, Conn., March 20, 1955. One of the leading authorities on labor law in the United States, he gained national prominence as an arbitrator in major labor-management disputes.

Shulman went to the United States with his parents in 1912, grew up in Providence, R.I., and became a naturalized citizen in 1921. Enrolling at Brown University in 1920, he completed the requirements for the B.A. degree in three years and proceeded to the Harvard Law School where he took his LL.B. in 1926 and an S.J.D. in 1927. After a year of law practice in New York City, he was appointed law secretary to Associate Justice Louis D. Brandeis of the U.S. Supreme Court (1929-30). In 1930 he joined the faculty of the Yale School of Law as an instructor, and by 1937 he had become a full professor. In 1939 he was named Lines professor of law, and in 1940, Sterling professor of law, a position he held until his death. He had become dean of the law school on July 1, 1954.

In addition to his teaching duties, Professor Shulman was active in a variety of fields related to law. One of the most sought-after arbitrators of labor-management disputes, he served as an umpire in negotiations between the Ford Motor Company and the United Automobile Workers

(UAW) from 1943 until his death. He was also arbitrator in disputes involving the UAW and the Bendix Aviation and Curtiss-Wright corporations. For the federal government he served as special counsel for the U.S. Railroad Retirement Board (1934-36) and as a member of the U.S. Attorney General's Committee on Administrative Procedure (1940-41). During World War II he functioned as an associate member of the National War Labor Board, acting as director of disputes in 1942-43.

Professor Shulman was the author and editor of a number of books on jurisprudence, including *Cases and Other Authorities on Federal Jurisdiction and Procedure* (co-editor with Felix Frankfurter, 1937); *Cases and Materials on the Law of Torts* (co-editor with Fleming James, Jr., 1942; 2d ed., 1952); *A Study of Law Administration in Connecticut* (co-author with Charles E. Clark, 1937); and *Opinions of the Umpire* (author, 1945).

SIAM. See THAILAND.

SICILY. The largest island of the Mediterranean, lying off the southwest tip of the Italian Peninsula. Area, 9,831 square miles. Together with small adjacent islands, Sicily forms a region of Italy with local autonomy. Regional area, 9,926 square miles; resident population (1951), 4,462,220. Chief cities: Palermo, the capital, 483,777, Catania, 297,531, and Messina, 218,906. Chief exports are citrus fruits, wine, grapes, olives, wheat, and sulfur. In the elections for the 90-member regional parliament on June 5, 1955, the Christian Democrats obtained 38.6% of the popular vote (31.2% in 1951) and increased their seating from 31 to 37. The combined Communist and left-wing Socialist vote was 30.5%, about the same as in 1951.

SIERRA LEONE. See BRITISH WEST AFRICA.

SIKKIM. See Index entry.

SILK. United States.—During the first ten months of 1955, according to the American Silk Council, United States consumption of raw silk was 44,008 standard bales of 132.275 pounds, approximately 13% higher than for the same period in 1954. Imports (46,321 bales) were about 14% higher than for the same ten-month period in 1954 (40,680 bales). Consumption for the full year 1954 was 48,546 bales, and imports totaled 48,609 bales.

World Production.—World raw silk output, which showed no important changes in 1954, is indicated in the accompanying table.

RAW SILK PRODUCTION, BY MAJOR COUNTRIES, 1954

(Source: U.S. Bureau of Mines.)

United States.—Mine production declined from 37,570,838 ounces in 1953 to 36,582,288 ounces in 1954, but the production of 30,835,581 ounces during the first 10 months of 1955 indicated a small recovery.

Canada.—Production increased from 28,424,795 ounces in 1953 to 31,117,949 ounces in 1954. The output of the first 7 months of 1955 reached 15,758,540 ounces.

Mexico.—The world's leading producer of silver reported an output of 47,873,677 ounces in 1953, and a decline to 39,896,467 ounces in 1954. Production during the first 8 months of 1955 was 33,480,000 ounces, as compared with 26,240,000 ounces during the same period of 1954.

(See MINERAL PRODUCTION for table showing output of major silver-producing countries.)

SINGAPORE. Situated at the southern end of the Malay Peninsula, the British crown colony of Singapore comprises Singapore Island (area, 224½ square miles, with adjacent islets) and the Christmas Island (q.v.) dependency. The British Parliament has ratified the transfer to the Australian government of authority over the Cocos (or Keeling) Islands, previously administered by Singapore. The estimated population of Singapore proper, as of July 1, 1955, was 1,210,695, of which 76.5% was Chinese, 12.2% Malaysian, and 1.2% European. Christmas Island had an estimated population in 1955 of 2,054, of which some 74% was Chinese.

Singapore is a separate governmental unit under a governor (Sir Robert Black, installed June 30, 1955). A new constitution giving a large measure of internal self-government came into force in 1955. It provides for a Legislative Assembly of 32 members (25 elected from 25 constituencies, 3 ex officio members, and 4 nominated members). A Council of Ministers, collectively responsible to the assembly, consists of 6 nonofficial members (including 5 elected members of the assembly), and 3 ex officio members. The first elections on the basis of adult suffrage (the electorate numbering 300,000) were held on April 2, 1955. The Labor Front won 10 seats, resulting in the formation of a coalition government, with David Marshall as chief minister.

The Malayan dollar equals 32.66 U.S. cents. Revenue in 1954 was M\$207,297,524; expenditure, M\$248,919,571. The net cost of education in 1954 was M\$28,400,000. In the colony's 563 schools there were almost 180,000 students, of whom 84,000 are taught in English schools, the remainder, in vernacular language schools (Chinese, Malay, and Tamil); 6,307 teachers are employed. The University of Malaya, in Singapore, had 1,220 students in the academic year 1955-56.

In 1954 the value of external trade was M\$4,506,458,915 (exports, M\$2,176,317,874; imports, M\$2,330,141,041). Trade with the United States comprised imports of M\$132,639,225, and exports of M\$259,885,443. Singapore is a free port; in 1954 it handled 74% of Malaya's imports, and 70% of Malaya's exports, including rubber (555,298 tons, valued at M\$785,100,000) and tin exports (valued at M\$195,900,000). There are 302 miles of metaled and bitumenized roads, and 8 principal air services; air passengers in 1954 numbered 123,399.

SINKIANG. Largest and westernmost province of China. Area, about 700,000 square miles; pop. (1953), 4,873,608, chiefly Uigurs, a Turkic-speaking Moslem people. Urumchi is the capital. In 1955 the Peking government decided to establish a Sinkiang-Uigur Autonomous Region. Farming and livestock raising are the chief occupations. Considerable industrialization has taken place in recent years with Soviet aid, particularly in mining and electric power output. Minerals are believed to include gold, tungsten, zinc, molybdenum, coal, oil, copper, and possibly uranium. Foreign trade is mostly with the USSR and consists of the exchange of animal products and minerals for Soviet industrial goods. Construction on the 1,700-mile Lanchow-Alma Ata railway, which will link China and Soviet Kazakhstan via Sinkiang, had pushed west of Changyeh by late 1955.

SKATING. See SPORTS, GAMES, AND SHOWS.

SKIING. See SPORTS, GAMES, AND SHOWS.

SKIN DISEASES. See DERMATOLOGY.

SLATE. Production of slate in the United States increased from 698,589 tons in 1953 to 749,436 tons in 1954, including 42,700 tons of roofing slate, 17,896 tons of mill stock, 69,866 tons of flagstones, and 565,083 tons of granules and flour. Production of both roofing slate and flagging declined substantially in 1954, the overall gain being confined chiefly to output of granules and flour.

SMALL BUSINESS ADMINISTRATION. Created by an act of Congress of July 30, 1953, the SBA was the first peacetime independent government agency set up solely to advise and assist small business enterprises. In July 1955, Congress amended the Small Business Act to provide new and expanded authorities and responsibilities for the agency.

SBA's major responsibilities are: to assist small firms to obtain a fair share of the government's contracts for supplies and services; to help them obtain adequate capital and credit on reasonable terms; and to assist them in overcoming management and production problems. Another important SBA function is to make loans to help victims of storms, floods, and other natural disasters rehabilitate their businesses and homes, or to aid business concerns which have suffered substantial economic injury because of major drought conditions. The SBA has made 3,200 disaster loans approximating \$37,000,000.

Through a cooperative program with the Department of Defense, SBA has had more than \$800,000,000 in military contracts reserved for exclusive award to small firms on a competitive basis. The agency also has arranged programs with other major government purchasing agencies to increase the small firm's share of their purchases. In a little more than two years of operation, SBA had made approximately 290,000 notifications of government contract opportunities to small firms.

The agency also certifies as to the financial and technical competency of small firms to fulfill government contracts on which they are low bidders; maintains an inventory of small plant productive facilities; advises small firms of subcontracting opportunities with prime contractors; and helps small firms to obtain data needed to bid on government contracts.

SBA makes business loans to small firms which cannot otherwise obtain financing on reasonable terms. The agency's general loan policies are developed by a Loan Policy Board consisting of the SBA administrator as chairman, the secretary of the treasury, and the secretary of commerce. SBA's direct business loans are limited to \$250,000 to any one borrower. The same limitation applies to the agency's share of a loan in which a private lender participates. Approximately 2,200 business loans, totaling about \$112,000,000, have been made to small firms.

SBA also provides a wide variety of management and technical assistance, including helpful publications and evening courses in administrative management for owners and managers.

WENDELL B. BARNES,
Administrator.

SMITHSONIAN INSTITUTION. This institution was created by act of Congress in 1846, under the will of James Smithson, English chemist. Its purposes are carried out by research, exploration, publication, and museum and art gallery exhibits. In addition to the original and later endowments, the Smithsonian Institution administers ten "bureaus" supported wholly or in part by federal appropriation.

The most important event of 1955 was the authorization by Congress of a \$36 million Museum of History and Technology, to be erected in Washington for the national collections that record and illustrate the political, cultural, industrial, and military development of the United States. Subsequently Congress appropriated \$2,288,000 for the immediate planning of this museum.

During 1955, the institution continued its scientific investigations, chiefly in the fields of anthropology, astrophysics, biology, and geology. The year's recorded visitors to the various buildings of the Smithsonian Institution reached a total of 8,186,533.

The National Museum collections were increased by approximately 7,600,000 specimens, bringing the total catalogue entries to 42,864,645. Outstanding among the year's accretions were a large number of Foraminifera and an important collection of ants. Two new halls were formally opened to the public—a hall exhibiting the gowns of the first ladies of the White House in period settings, and the American Indian Hall.

The National Gallery of Art received 842 accessions and held 6 special exhibitions. The National Collection of Fine Arts sponsored 14 special exhibitions, and the Smithsonian Traveling Exhibition Service circulated 63 exhibitions: 52

in the United States and 11 abroad. The Freer Gallery of Art acquired choice specimens of oriental art and handicraft.

Anthropologists on the staff of the Bureau of American Ethnology continued their researches, particularly in Panamanian and Mexican archaeology and Arctic anthropology. The River Basin Surveys, a unit of the bureau, continued its archaeological work at sites threatened by dam and reservoir construction, principally in the Missouri Valley. (See also *ARCHAEOLOGY*.)

Solar radiation studies of the Astrophysical Observatory were continued at the observatory's two field stations—Montezuma in northern Chile and Table Mountain in southern California. In the division of radiation and organisms, studies were made on the photocontrol of the processes of plant growth and on the mechanism of action of the plant hormone, auxin, in the control of growth. Effective July 1, 1955, Dr. Fred L. Whipple of Harvard University was appointed to succeed L. B. Aldrich as director of the Astrophysical Observatory, the headquarters of which were moved to Cambridge, Mass.

The National Air Museum completed moving its stored materials from Park Ridge, Ill., to Suitland, Md. Included in the year's 117 added specimens for the museum's aeronautical collections was the midget racing plane, *Buster*, built in 1931 and flown in more than 50 races.

The collection of animals in the National Zoological Park numbered 3,410. Noteworthy among the year's accessions were a domestic donkey; a pair of baby gorillas; several young chimpanzees; two Goeldi's marmosets; emperor, Adélie, and Humboldt penguins; two rare Mona Island iguanas; and a horn-nosed iguana. In all, 280 creatures were born or hatched at the zoo during the year.

The International Exchange Service, serving as the United States agency for the interchange of scientific and governmental publications with other countries, handled 1,146,972 packages of such material.

At the Canal Zone Biological Area, Barro Colorado Island, Panama, 43 visiting scientists used the station's facilities for research.

Outstanding among the institution's publications during the year were the following: *The Material Culture of Pueblo Bonito*, by Neil M. Judd; *The Black Flies of Guatemala and Their Role as Vectors of Onchocerciasis*, by Herbert T. Dalmat; *Checklist of North American Recent Mammals*, by Gerrit S. Miller, Jr., and Remington Kellogg; *Frogs of Southeastern Brazil*, by Doris M. Cochran; *The Horse in Blackfoot Indian Culture*, by John C. Ewers; *A Ceramic Study of Virginia Archaeology*, by Clifford Evans; Volume 7, *Annals of the Astrophysical Observatory*; *Masters of the Air*, by Glenn O. Blough; and Volume 1, *Ars Orientalis*. The Smithsonian Library and its branches now contain approximately 951,400 volumes.

PAUL H. OEHSER,
Chief, Editorial and Publications Division.

SOAP AND SYNTHETIC DETERGENTS. The Association of American Soap and Glycerine Producers estimates production of soaps and comparable synthetic detergents in recent years as follows:

Year	Soaps*	Synthetic detergents	Total
	(Amounts in million pounds)		
1951.....	2,488	1,434	3,922
1952.....	2,247	1,749	3,996
1953.....	1,984	2,134	4,118
1954.....	1,751	2,358	4,109

* Includes washing powders and exports, but excludes scouring cleansers and liquids.

The estimated production of synthetic detergents has continued to gain, as compared with soaps, and at the end of 1954 amounted to 57%

of the total market. The increase in synthetic detergent consumption in recent years is mainly due to its use for household laundering, housecleaning, dishwashing, and miscellaneous cleaning purposes. Synthetic detergents have not yet been sold in large volume for toilet soap uses.

The intense competition which characterizes the soap industry has stimulated scientific research, higher manufacturing standards, improved labor conditions, and better products. The increased availability of new home appliances, such as the automatic washing machine and dishwasher, especially since 1925, has created a tremendous change in consumer preference from the bar type laundry soaps to the more soluble, quicker sudsing, packaged chips and granulated soaps, and more recently in turn, to the increased use of synthetic detergents.

From 1951 through 1954, the annual per capita consumption of soaps and synthetic detergents in the United States has averaged approximately 25½ pounds. Compared with other nations, the United States ranks among the highest in the world.

Glycerine is largely a co-product of soap manufacture, although in recent years there has been a sizable production of synthetic glycerine from petroleum, due to the increased demand for glycerine and declining soap production. Total production in 1954 was 207 million pounds, of which, it is estimated, approximately 60 million pounds was synthetic glycerine. Glycerine has wide application in alkyd resins for paints, as a humectant for tobaccos, in industrial explosives, pharmaceutical products, and in many other fields vital to the national economy.

ROY W. PEET,
Manager, Association of American Soap
and Glycerine Producers, Inc.

SOCIAL SECURITY. The Social Security Administration has the responsibility for three major programs under the Social Security Act—federal old-age and survivors insurance, the federal aspects of the public assistance program, and the maternal and child health and child welfare programs; it also administers operations under the Federal Credit Union Act.* (Another Social Security Act program—federal-state unemployment insurance—is the responsibility of the Department of Labor.) The administration is a unit of the Department of Health, Education, and Welfare (q.v.).

Old-Age and Survivors Insurance.—The 1954 amendments to the Social Security Act made coverage under old-age and survivors insurance almost universal, about 9 in 10 of the nation's jobs are covered. The largest groups not covered are self-employed lawyers, physicians, and dentists, members of the armed forces (except for specified periods of service), and most federal civilian employees.

Under the amended law, workers who meet certain requirements may have up to 5 years of lowest earnings ignored in the determination of their benefit. Persons who have a prolonged total disability and who meet specified conditions may have their wage record frozen for the period of disability. Old-age beneficiaries who apply for the "freeze" before July 1957 will receive any increase retroactively to July 1955—the first month

* These programs are administered by the Bureau of Old-Age and Survivors Insurance, the Bureau of Public Assistance, the Children's Bureau, and the Bureau of Federal Credit Unions.

for which increased benefits could be paid. Beneficiaries may earn up to \$1,200 a year without loss of benefits; those aged 72 or over receive benefits regardless of the amount they earn.

The contributions paid by the worker and his employer and by the self-employed to finance the program are based on taxable earnings up to a maximum of \$4,200. For employer and employee the contribution rate was 2% each in 1955; it is scheduled to rise to 2½% in 1960, 3% in 1965, and 3½% in 1970, and it will be 4% from 1975 on. For the self-employed the rate is 1.5 times that for employees; it was 3% in 1955.

About 69.8 million persons were fully insured under the program on Jan. 1, 1955. This group included 29.6 million permanently insured persons, of whom 5.2 million were aged 65 or over; about 3.8 million of these older persons were receiving benefits.

In June 1955, almost 7.6 million persons were receiving benefits totaling \$384 million. The average benefit to a retired worker was \$61.03, and to an aged widow or widower, \$46.61. The 1954 amendments set the minimum old-age benefit at \$30 and the maximum at \$108.50; the maximum family benefit is \$200. Lump sums ranging from \$90 to \$255 are paid when an insured worker dies.

Public Assistance.—The federal government makes grants to help individual states finance their assistance programs for dependent children, the aged, the blind, and (since October 1950) the permanently and totally disabled.

In June 1955, federal funds were being used for old-age assistance and aid to the blind in all states and for aid to dependent children in all states but Nevada. (In July 1955, Nevada's plan for aid to dependent children became effective.) Programs of aid to the permanently and totally disabled were in operation in 43 states. In June, 2,239,500 persons, including 1,691,700 children in 620,300 families, were receiving aid to dependent children. Old-age assistance payments were going to 2,548,600 persons; about 103,900 persons were receiving aid to the blind; and 236,800 persons were receiving aid to the permanently and totally disabled. Average payments were \$52.30 per aged recipient, \$57.41 per blind recipient, \$86.78 for families receiving aid to dependent children, and \$54.93 for aid to the disabled. These figures include payments made by the states directly to doctors or others supplying medical care to recipients, and cases receiving only such payments.

State and local governments administer a fifth assistance program (general assistance) without federal aid. In June 1955 an estimated 310,000 cases (about 720,000 persons) were receiving general assistance; the average payment per case was \$53.78.

The total spent for assistance and administration during the calendar year 1954 was about \$2,861 million—\$2,562 million for the federal-state programs and \$299 million for general assistance.

Maternal and Child Health and Child Welfare.—The Social Security Act authorizes federal grants to the states to extend and improve their health and welfare services for mothers and children. The grants are administered by the Children's Bureau.

Federal payments to the states for maternal and child health services totaled \$11,919,292 in the fiscal year 1954-55. Typical services were prenatal clinics, child-health conferences, immunizations, public health nursing services, and

health services for children of school age by physicians and dentists.

Federal grants of \$10,613,701 were made to the states for services for crippled children. Locating these children, diagnosing their condition, providing or locating skilled care for them, and working with private and public agencies and professional groups concerned with their care and training are among the services provided.

The federal government paid \$6,725,553 for child welfare services to help the states protect and care for homeless, dependent, and neglected children, and children in danger of becoming delinquent. These services include strengthening and preserving family life; planning for foster-home care or care in institutions for children who cannot be cared for in their own homes; protecting neglected or abused children; helping children with physical, mental, and emotional handicaps; placing children for adoption; safeguarding unmarried mothers and children born out of wedlock; finding day-care for children; cooperating with courts and schools in handling children's cases and with state institutions caring for children; and working with communities in building better community conditions for children. (See also CHILD WELFARE.)

Federal Credit Unions.—The Social Security Administration is responsible for the chartering and supervision of credit unions organized under the Federal Credit Union Act. These are cooperative organizations designed to promote thrift among their members and to create a source of loans for provident and productive purposes. Membership is limited to groups of persons having a common bond of association, occupation, or residence. On June 30, 1955, 7,563 of these credit unions were in operation; their total membership was 3.7 million.

(See also BUREAU OF EMPLOYMENT SECURITY.)

CHARLES I. SCHOTTLAND,
*Commissioner, Social Security
Administration.*

SOCIAL WELFARE. In its broadest sense, social welfare is the combined efforts of society to see that opportunities for employment, adequate income, congenial family relationships, enjoyment of civil rights, education, recreation, health and mental health, decent housing, constructive community relationships, opportunities for community service, and similar advantages of society are available to all. Within the meaning of social welfare, such opportunities should be open to all persons without respect to race, creed, nationality, economic status, or other extraneous circumstance, so that insofar as possible individuals may achieve for themselves the level of well-being essential both to them and the larger community.

More particularly, however, social welfare's concern is that the elements of a population which at any given time are most "disadvantaged" (whether by inadequate earnings, unemployment, old age, unprotected childhood, physical or mental disability, poor social relationships, or similar causes) are assured of access to the economic, social, and health services essential to their well-being. Such services may be public assistance (relief); unemployment, disability, old-age or survivors insurance; protective services for children; child welfare and family service; school social work (which aids children whose social problems interfere with their educational pursuits); foster home and institutional care of children, aging persons, chronically ill persons or oth-

ers without suitable homes of their own; social work service in hospitals and clinics; probation and parole; group work with children, adolescents, or adults (to help them enjoy constructive interpersonal relationships); and community planning for health, recreation, and social services—to name only some of the most typical of social welfare services.

Social Workers.—Although administration of these services requires the skills of various professional groups, the one profession most characteristic of the social welfare field is social work. Typically, social workers (of whom there were probably 100,000 in the United States in 1955) are employed in social welfare agencies rather than engaging in private practice. Such agencies may be either voluntary (nongovernmental) organizations, supported by individuals, community solicitation, foundations, and the like, or governmental agencies supported by tax funds.

The most critical problem confronting the social welfare field in 1955–56 continued to be the acute shortage of professional social workers. All appearances in 1955 indicated that this shortage would continue to be a critical one for many years. Consequently, the social welfare field offered exceedingly rich opportunities as a career.

Because of the urgent need for greatly increased numbers of professional social workers (the educational requirements for whom are two years of graduate education in an accredited school of social work), employing agencies, professional social work organizations, and colleges and universities in 1955 increased their efforts to recruit young people into the field, and planned in 1956 to expand these efforts still further (see also SOCIOLOGY). An important step in this direction was the agreement of all concerned that the organization to coordinate recruitment programs should be the Council on Social Work Education (345 East 46th Street, New York City).

A second result of the increased emphasis on recruitment was the wide range of scholarships, traineeships, and fellowships offered by various social welfare agencies to help qualified candidates secure the requisite professional education. In 1955, for the first time, social work traineeships were made available by the federal Office of Vocational Rehabilitation, thus expanding similar aids previously available from the National Institute for Mental Health, the U.S. Children's

Bureau, and other governmental and voluntary agencies.

Fortunately for the success of increased emphasis on recruitment, salaries in the social welfare field by 1954 had increased materially over what they had been in 1950, and showed every sign of continuing to increase. In public welfare agencies in 37 states, Puerto Rico, and Hawaii, social work salaries in 1954 were about 30% higher on the average than they had been four years before.¹

A historic event which occurred in 1955 was the merging of seven previously existing organizations of professional social workers into the National Association of Social Workers. The first president of the new association, with a membership of approximately 20,000, is Dr. Nathan E. Cohen, associate dean of the New York School of Social Work.

Government Activities.—The most important single governmental agency in the social welfare field, the federal Department of Health, Education, and Welfare (q.v.), had a change of leadership in 1955 when its first secretary, Mrs. Oveta Culp Hobby, submitted her resignation, and was succeeded by Marion B. Folsom (q.v.). Before the year's end, Secretary Folsom had outlined social welfare advances which again evidenced the fact that strengthening and improving the nation's social welfare services was no longer a partisan issue, although political parties might differ on the degree and direction of change. This fact was further underlined in 1955 by the nonpartisan nature of celebrations of the 20th anniversary of the federal Social Security Act.

Social welfare expenditures in the United States in 1954 (exclusive of industry-labor union health and welfare programs) probably neared \$21 billion, of which almost \$19 billion came from tax funds and more than \$1.5 billion was derived from voluntary funds. The nation's social security program in 1953–54 (the latest period for which comparable data are available) accounted for over \$8 billion of the total public expenditures for social welfare; public aid (relief), which represented so large a proportion of the total in 1934–35, by 1954 had been greatly reduced to about \$2.8 billion. This reduction, which was in accordance with the original intent

¹ Council on Social Work Education, *Social Work Education*, Vol. III, No. 3, June 1955.

(Left) A paraplegic victim is undergoing treatment at the U.S. Department of Health, Education, and Welfare's Woodrow Wilson Rehabilitation Center, Fishersville, Va. (Right) An aged Korean is examined at a United Nations Korean Reconstruction Agency clinic operated by the Maryknoll Sisters in Pusan.

of the Social Security Act, was both absolute and in proportion to total expenditures.

Further governmental expenditures for social welfare in 1953-54 were: \$2.9 billion for health and medical services; \$4.1 billion for veterans services, and \$729 million for other welfare services.

Governmental welfare expenditures in 1953-54 represented about \$119 for every man, woman, and child in the United States, as compared with a per capita cost of \$44.54 in 1934-35. When adjustments are made for the change in price levels, however, the increase between 1934-35 and 1953-54 was only about 34%, although those for veterans services increased 271%, and those for social insurance, 767%. Of the total expended, \$10.9 billion was from federal funds and \$7.8 billion from state and local governmental funds. During this period the national economy expanded so tremendously that governmental expenditures for social welfare, although increasing markedly, actually represented a smaller percentage (7.7) of the total national product in 1953-54 than had been the case in 1934-35 (11.3). (See also SOCIAL SECURITY; VETERANS ADMINISTRATION.)

Vital Statistics.—The population of the United States increased from 127.5 million in 1934 to 166 million on Oct. 1, 1955. Its labor force rose from 52.5 million to 70.7 million in August 1955. Between 1934 and July 1955, persons under 18 years of age increased from 42.4 million to 55.6 million, and those 65 years of age and over, from 7.7 million to 14.1 million.

Unemployment.—Happily, the number of unemployed persons fell from a monthly average of 11.3 million in 1934 to 3.2 million in 1954. In October 1955, the number of workers unemployed was 2.1 million. When viewed in proportion to the nation's fantastically high-level employment, the rate of unemployment seems insignificant. By any human standard, however, 2.1 million workers is a vast number of human beings, many of whom have additional human beings dependent upon them. Seen in the aggregate, too, unemployment takes a heavy toll from an economy.²

Moreover, such unemployment as does persist is unevenly distributed, so that pockets of unemployment are found in particular localities, thus causing acute distress, for example, in various Pennsylvania coal-mining and Northeastern manufacturing areas in 1955. In fact, because of the economic problems in chronically depressed areas, President Eisenhower in October 1955 was reported as favoring a domestic Point Four program to "extend the good times" to every section of the nation. (See also BUREAU OF EMPLOYMENT SECURITY.)

Population Growth.—While the population of the United States as a whole rose by some 9.9 per cent between 1950 and 1955, the gains in different parts of the country were quite uneven. Seven states suffered actual reductions in population over this period. At the other extreme, population increases in Delaware, Florida, Arizona, Nevada, and California were at least double the national rate. (See also CENSUS DATA, U.S.)

² In December 1954, for example, Walter P. Reuther estimated that unemployment in the previous year had cost the United States \$30 billion and that abolition of unemployment "would have provided sufficient additional income to permit federal Social Security payments of \$200 a month; the construction of 500,000 more homes, and hospitals with 250,000 beds; a doubling of public outlays for education, and 'a lot of money left over to help fight communism by fighting poverty and hunger in the world.'" (New York Times, Dec. 7, 1954.)

Implications for social welfare of population increases are clear. Additional schools, expanded health services, more housing, new recreational areas, extended social services, and heightened community planning and organization are all needed lest serious problems, such as juvenile delinquency, short school sessions, and impaired family living, result.

National Income.—By the June quarter of 1955 the nation's economy was operating at the unprecedented rate of a \$321 billion national income annually (see also INCOME). All elements in the population were not, however, sharing proportionately in this increase. Farm income, for example, seemed likely to fall below the previous year's level of net income by about 10 per cent, and the number of low-income families still receiving less than \$2,000 a year was of national concern.

Voluntary Philanthropic Programs.—Over and above government-supplied social welfare services the American people generously contribute an unknown amount, probably in excess of \$5 billion in 1955, for philanthropic purposes. In 1952, according to a reasonable estimate, "living donors gave 89 per cent of the total, corporations gave 8 per cent, and 3 per cent came from bequests."³ Of the total given for philanthropic purposes, including education and religion, perhaps \$1.5 billion went for the more specific types of social welfare services.

Preliminary reports of Community Chest and United Fund campaigns for funds for 1956 indicated that contributions to these campaigns were running 9.1 per cent larger than in the previous year. The first 110 cities reporting had collected slightly more than the goals they had set. For 1956 some 1,900 communities were hoping to raise approximately \$300 million through these campaigns. The multiplicity of appeals continued to draw criticism in 1955 as they had previously. (See also COMMUNITY TRUSTS; PHILANTHROPY.)

Industry-Labor Welfare Plans.—Supplementing the governmental and voluntary welfare services, there is, of course, an expanding series of industry-labor union health, pension, and welfare services whose dollar values are not fully known but which certainly run into hundreds of millions of dollars annually. In New York it was reported in 1955 that 75 per cent of the industrial workers in the state were covered by employer-financed welfare plans. Life and hospital insurance were the most common benefits, but pensions, medical insurance, and accidental death insurance were each available to at least a third of the workers.

Attacks directed in 1954 against labor unions and their administration of health and welfare funds subsequently seemed to have tapered off with announcement by both the CIO and AFL of stricter rules for the regulation of such funds.

(See also STANDARDS OF LIVING; UNITED STATES—*The United States in 1955*; and for further references, see the Index entry, *Social Welfare*.)

of California at Los Angeles.

SOCIALISM. Socialist and Labor parties during 1955 dominated the governments of Denmark, Norway, and Sweden in Europe; Israel in the Middle East; Burma in Asia; Jamaica in the British West Indies; Saskatchewan in Canada;

³ Division of Research and Statistics, Social Security Administration, U.S. Department of Health, Education, and Welfare, Research and Statistics Note No. 51-1955, Oct. 17, 1955.

and Costa Rica in Latin America. Socialists likewise headed the coalition governments of Belgium, the Netherlands, and Singapore, and were represented in the cabinets of Austria, Finland, Switzerland, and Italy. Their parties constituted the chief opposition groups in Great Britain, West Germany, Australia, New Zealand, and Japan. In France, the party led in the number of representatives in the National Assembly. And in India, Premier Nehru's National Congress Party declared itself in favor of a "socialistic pattern of society."

Europe. Scandinavia.—An all-Social Democratic cabinet and an all-Labor cabinet administered the governments of Denmark and Norway, respectively, during 1955, and a cabinet dominated by Socialists directed the government of Sweden. Einar Gerhardsen, Socialist, replaced Oscar Torp on Jan. 22, 1955, as Labor prime minister of Norway, following the latter's resignation, and H. C. Hansen, Social Democrat, took office as prime minister of Denmark on February 1, following the death of Hans Hedtoft (q.v.).

Finland.—The Social Democrats of Finland, with the largest parliamentary representation (54 seats out of 200), continued during 1955 to participate with the Agrarians in the coalition government.

Great Britain.—The two largest Socialist parties in Europe in 1955 were the British Labour and the German Social Democratic parties. The chief event in the life of the British Labour Party during 1955 was the parliamentary elections held on May 26. The balloting led to the election of 277 Labour representatives in Parliament, as compared with 345 seats won by the Conservatives and their associates. Labour's popular vote dropped by 1½ million from 1951 to a 1955 count of 12,405,130, representing a reduction in the percentage of the total vote from 48.8 to 46.4. Labour had won 295 seats in 1951. Many observers attributed the victory of the Conservatives to the comparative prosperity of Britain, the Conservatives' claim to liberalism, and dissensions within the Labour Party and the trade union movement.

At the Annual Conference of the Labour Party in October, Aneurin Bevan, leader of the left wing of the party, was defeated for party treasurer by Hugh Gaitskell in a card vote of 5,475,000 to 1,225,000. On December 7, Clement R. Attlee resigned as leader of the Labour Party at the age of 72, and was succeeded to that post on December 14 by Hugh Gaitskell, former chancellor of the exchequer.

During 1955 the Labour Party lost, by death, Arthur Deakin, former general secretary of the Trades Union Congress; Hector McNeil, former minister of state; William Whiteley, chief Labour whip in Commons; and Edward Pease, a founder and historian of the Fabian Society.

Germany.—The Social Democratic Party, with 600,000 members and a parliamentary representation of 151, remained the chief opposition party to the Adenauer government during 1955.

On January 11, Dr. Otto Suhr, Socialist, was elected mayor of Berlin and formed a coalition cabinet composed of Socialists and Christian Democrats. In the elections in Lower Saxony on April 24, Social Democrats polled 35.2% of the votes against 30% in 1953, and in coalition with the Refugee Party won 76 seats in the Landtag, against 43 for the Christian Democrats. The latter, however, led a coalition to take control of the government from the Socialists. In Bremen, on October 9, Socialists polled 47.8% of the popular

vote and won 52 of the 100 seats in the Parliament, against 48 for the opposition parties. In the Rhineland-Palatinate, a stronghold of Dr. Adenauer's Christian Democratic Party, Socialist representation in the Landtag was reduced in the election of May 15 from 38 to 36 out of 100. In these election campaigns, Social Democrats opposed the immediate rearmament of Germany out of fear that it would strengthen Nazi-minded forces in Western Germany and increase obstacles to German reunification.

Austria.—The Socialist Party in Austria continued in a coalition government with the People's Party and cooperated in the passage of a General Social Insurance law which covered the entire field of sickness, accidents, and old age.

France.—The French Socialist Party, with the largest parliamentary representation of any party—104 seats—remained outside the cabinet throughout 1955. In late February, Christian Pineau, Socialist, was asked to form a coalition government, but the National Assembly, after hearing his program of economic reform and his views on the need for a more liberal policy in North Africa, refused to give its approval. Late in 1955 the party gave much attention to the election of Jan. 2, 1956, which resulted in the election of 97 Socialists.

Belgium and the Netherlands.—In both these countries the Socialists and the Catholic Church continued their dispute over subsidies to Catholic schools. In the Netherlands, Dr. Willem Drees, Socialist, was premier in a coalition Labor-Catholic government. At the party conference on February 22, Catholic and non-Catholic members of the Labor Party joined in a demonstration "of solidarity" against the 1954 decree of the Roman Catholic bishops which forbade Catholics to join the Labor Party, attend its meetings, or read its literature. In Belgium, Socialist Premier Achille Van Acker led the Liberal-Socialist coalition.

Italy.—Giuseppe Saragat, leader of the right-wing Democratic Socialist Party, remained deputy premier in Italy during the year. In July the Socialists obtained four seats out of 21 in the coalition cabinet of Antonio Segni. The right-wing group, however, was weak in comparison with the left-wing Socialists led by Nenni. In the Sicilian elections in June, the Saragat Socialists obtained but 3.1% of the votes and two parliamentary seats, as compared with 9.7% and 10 seats for the Nenni followers. Socialists, however, won many workers away from the Communist-controlled unions.

Middle East. Israel.—The Socialist-dominated cabinet in Israel administered the government throughout 1955. In the July 26 parliamentary elections the socialist Mapai or Labor Party received 32% of the votes (37% in 1951) and remained the country's largest party. Following the election, former Premier David Ben-Gurion was confirmed on November 2 as the head of a new coalition cabinet.

Lebanon and Syria.—In adjoining Lebanon, Socialists were the majority force during 1955 in many municipal councils in rural districts. In Syria, Socialists won majority control of the country's trade unions during 1955.

Australasia.—In Australia and New Zealand the Labour parties remained the chief opposition parties under the respective leadership of Dr. Herbert V. Evatt and Walter Nash. In the Australian Labour Party there was wide division of opinion regarding the so-called "Movement," a Catholic anti-Communist organization which had

sought to rid the trade unions of Communist elements. Many Labourites accused this organization of seeking to further Catholic domination of the labor movement, while others held that Dr. Evatt was "soft" toward Communists. The election of December 10 resulted in the reduction of Labour seats in the House of Representatives from 57 to 47, the Liberal-Country coalition increasing its representatives from 64 to 75.

Asia. India.—The Socialist Party in India, under the leadership of Ashoka Mehta, decided on a policy of "discriminating cooperation" with the National Congress Party, led by Prime Minister Nehru. In its January 21-23 convention, the Congress Party had favored social and economic planning "with a view to the establishment of a socialist pattern of society, where the principal means of production are under social ownership and control, production is progressively speeded up and there is an equitable distribution of the national wealth."

Burma.—U Nu, leader of the Burmese Anti-Fascist People's Freedom League, controlled by Socialists, remained the prime minister of Burma during 1955 and continued the enactment of advanced social legislation.

Japan.—In Japan, the two wings of the Socialist Party cooperated closely in the February 27 elections, and on October 14 merged into one party. Both wings opposed the proposal to change the constitution with a view to rearming Japan. In the elections, Socialists elected 156 out of 467 representatives in the Diet. On Nov. 14, the controlling Liberals and Democrats merged as a means of solidifying the conservative forces of the country in their fight against socialism.

Singapore.—On April 2 the Labour Front, a Socialist party, won 28% of the total vote cast in the Singapore elections and 10 of the 25 elected seats in the assembly. David Marshall, leader of the Labour Front, was chosen chief minister.

North and Latin America. Canada.—The Co-operative Commonwealth Federation controlled the government of the Province of Saskatchewan, under the premiership of T. C. Douglas. The CCF also held 24 seats in the Canadian House of Commons, where the party was led by M. J. Coldwell.

United States.—The Socialist Party in the United States functioned primarily as an educational society, entering candidates for office in only a few states and cities. The Union for Democratic Socialism, of which Norman Thomas was chairman in 1955, the Social Democratic Federation, the Socialist Verband, and other Socialist groups were also active in Socialist education. Mayor Frank P. Zeidler, Socialist, continued as mayor of Milwaukee, and Jasper McLevy of the Socialist Party of Connecticut, unaffiliated with the Socialist Party, U.S.A., was re-elected mayor of Bridgeport for his 12th term.

Jamaica.—In this country of the British West Indies the socialistic People's National Party won 18 seats in the January 12 election for the House of Representatives. This compared with 14 for the Labour Party led by William A. Bustamante. Norman Washington Manley, leader of the PNP, became the new chief minister.

Costa Rica.—In Costa Rica, President José Figueres, leader of the National Liberation Party, a democratic Socialist party, continued his regime as president of the country.

Argentina.—Socialists were active in Argentina in the overthrow of the Perón government and in the substitution of President Pedro Aram-

buro for President Eduardo Lonardi. They held a number of offices in the post-Perón governments and assisted in ridding the labor movement of Perónist control.

Brazil.—In Brazil the Socialist Party was represented in the government of the State of São Paulo. It unsuccessfully supported Gen. Juarez Távora for the national presidency in the election of October 3. The party continuously urged a program of land reform.

Internationals.—The Socialist International and the Asian Socialist Conference were active during 1955 as informational and consultative bureaus for the Socialists in the West and in Asian countries, respectively. Delegates and consultants from 30 countries in four continents attended the Fourth Congress of the Socialist International in London on July 12.

Socialist Leader.

SOCIETIES AND ORGANIZATIONS. The following pages contain a selected list of some of the principal associations, societies, foundations, and trusts of the United States and Canada. In each case, the information has been supplied by the organization concerned. Additional related material may be found in the articles on the principal government agencies, religious bodies, etc.

Academy of Motion Picture Arts and Sciences.—Established to advance the arts and sciences of motion pictures and to foster cooperation among the creative leadership of the motion picture industry for cultural, educational, and technological progress. Membership, 1,600. Publications: *Academy Players Directory*; *Screen Achievement Bulletins*. The 27th annual presentation of the academy awards took place on March 30, 1955. (See the article PRIZES AND AWARDS.) President, George Seaton; exec. director, Margaret Herrick. Headquarters: 9038 Melrose Ave., Los Angeles 46, Calif.

Academy of Natural Sciences of Philadelphia.—Founded in 1812, the Academy is the country's oldest natural history museum and research organization. Notable for its great collections of specimens, many expeditions, and famous library, it is supported by gift, membership dues, and a city appropriation. Many foundations make grants for special research, and numerous industries sponsor water contamination studies through the Department of Linnology. In 1955, a new Hall of Pennsylvania was opened. Membership: 2,500. Publications: *Frontiers*, a natural history magazine; *The Proceedings*, a scientific annual. President, M. Albert Linton; director, H. Radcliffe Roberts. Address: 19th and the Parkway, Philadelphia 3, Pa.

Academy of Political Science.—Devoted to impartial investigation in the fields of economics, politics, and public law. Membership: 8,444 persons; 1,820 organizations. Publications: *Political Science Quarterly*; *Proceedings* (semi-annual). Meetings are held in April and November of each year in New York City. President, Lewis W. Douglas; director, Mary M. Anger. Headquarters: 413 Fayerweather Hall, Columbia University, New York 27, N.Y.

Adult Education Association of the United States of America.—Founded in 1951 to further the idea of education as a process continuing throughout life (successor to the American Association for Adult Education and the Department of Adult Education of the National Education Association). Membership: 14,000. Publications: *Adult Education* (quarterly); *Adult Leadership* (monthly). President, Kenneth Benne; administrator, Malcolm S. Knowles. Headquarters: 743 N. Wabash Ave., Chicago 11, Ill.

Alcoholics Anonymous (The General Service Board of A.A., Inc.).—Self-supporting, nonsectarian lay-society of ex-problem drinkers, banded together for the purpose of helping the sick alcoholic recover if he wishes. Membership: approx. 150,000 in 5,927 affiliated international groups. Publication: *The A.A. Grapevine* (monthly). Headquarters: P.O. Box 459, Grand Central Annex, New York 17, N.Y.

Allied Youth, Inc.—A nonsectarian, nonpolitical organization working in the high schools of the U.S. and Canada since 1936 with a program of alcohol education and alcohol-free recreation aimed at building well ad-

SOCIETIES AND ORGANIZATIONS

justed personalities, citizenship, character, and leadership. Membership: 25,000; member organizations, 264. Publication: *The Allied Youth* (monthly except July and August). The annual conference is held at Buck Hill Falls, Pa., the third week in November. Chairman of the board, J. C. Penney. Headquarters: 1709 M St. NW, Washington 6, D.C.

American Academy of Arts and Letters.—Founded in 1904 by the National Institute of Arts and Letters for the furtherance of literature and the fine arts in the United States. Membership limited to 50. Publications: *Catalogue of The Great Decade in American Writing Exhibition*, Dec. 3-30, 1954; *Catalogues of art and manuscript exhibitions* May 25-June 26, 1955; *Proceedings*, 2d Series, No. 5; *Yearbook* 1955. On May 25, 1955 a special meeting of the Academy was held, followed by a public ceremonial given jointly with the National Institute of Arts and Letters. New members were inducted, medals and honors awarded, and 16 arts and letters grants of \$1,000 each were given. An exhibition of the works of newly-elected art members, grantees in art, and the recipient of The Gold Medal for Painting, Edward Hopper, as well as a manuscript exhibition of works by newly-elected literature and music members, grantees in literature, recipient of Fellowship of the Academy, Ralph Ellison; recipient of The Gold Medal for Essays and Criticism, Edmund Wilson; the Howells Medal for the Novel, Eudora Welty; and recipient of the Award of Merit, Jorge Guillén, were opened on the same day. The annual meeting is held in December, at which time in 1955 the following new members were elected: Marianne Moore, Maxwell Anderson, Lewis Mumford, Walter Piston, Andrew Wyeth, and Edward Hopper. President, Archibald MacLeish; secretary, Douglas Moore. Headquarters: 633 West 155th St., New York 32, N.Y.

American Academy of Arts and Sciences.—Founded in 1780 for the encouragement and diffusion of every art and science. Membership: 1,050. Endowment: \$1,000,000. Publications: *Proceedings*; *Memoirs*; *Bulletin*. President, John E. Burchard; secretary, William C. Greene. Annual meeting is held the 2d Wednesday in May, in Boston. Headquarters: 77 Massachusetts Ave., Cambridge 39, Mass.

American Academy of Political and Social Science.—Organized in 1889, to provide a forum for the discussion of national and world questions. Membership (Jan. 1, 1955): 15,384. Publications (1955): *Ethical Standards and Professional Conduct*; *Contemporary Africa: Trends and Issues*; *Air Power and National Security*; *Internal Security and Civil Rights*; *Higher Education Under Stress*; *Community Services and the Public Schools*. The 59th annual meeting was held in Philadelphia in April 1955. President, James C. Charlesworth (on leave of absence); acting president, Thorsten Sellin; secretary, Raymond T. Bowman; exec. asst., E. Gordon Alderfer. Headquarters: 3937 Chestnut St., Philadelphia 4, Pa.

American Association for the Advancement of Science.—Founded in 1848 to promote the advancement of science in all fields of the natural sciences and of the social and economic sciences. Membership: 48,800. There are 260 affiliated and associated societies with a combined membership of approximately 1,000,000. Endowment: \$365,000. Periodicals: *Science*; *The Scientific Monthly*. Books (1955): *Antimetabolites and Cancer*; *Advances in Experimental Caries Research*; *The Luminescence of Biological Systems*; and other volumes. President, Paul B. Sears; admin. secretary, Daed Wolfe. Headquarters: 1515 Massachusetts Ave. NW, Washington 5, D.C.

American Association of Law Libraries.—Organized to promote librarianship; develop and increase the usefulness of law libraries; cultivate the science of law librarianship; and foster a spirit of cooperation among the members of the profession. Membership: 620. Publications: *Law Libraries in the United States and Canada*; *Law Library Journal*; *Index to Legal Periodicals*. The 1955 convention was held at Chicago, Ill. President, Carroll C. Moreland; secretary, Frances Farmer. Headquarters: Law Library, Clark Memorial Hall, University of Virginia, Charlottesville, Va.

American Association of University Professors.—The professional organization for college and university teachers and investigators in the United States and its territories, Canada, and American-controlled institutions of higher education abroad, the association endeavors to bring about more effective cooperation among the members of the profession, promote discussion of educational problems in institutions of higher learning, create means for authoritative expression of the public opinion of the teachers, make collective action possible, and maintain and advance the ideals and standards of the profession. Membership: 43,525. Publication: *Bulletin* (quarterly). President, William E. Britton; general secretary, Ralph F. Fuchs. Headquarters: 1785 Massachusetts Ave. NW, Washington 6, D.C.

American Association of University Women.—Founded in 1882, the association acts as spokesman for educated women, seeking to make their influence felt and to enlarge their opportunities for service. It supports research fellowships for women and gives international grants to bring women of other countries to the U.S. for study. Membership: 137,000 in 1,320 branches. Fellowship Endowment:

\$1,316,000. Publication: *Journal* (quarterly). President, Dr. Anna L. Rose Hawkes; gen. director, Dr. Helen D. Bragdon. Headquarters: 1634 I St. NW, Washington 6, D.C.

American Automobile Association.—Established to provide services to car-owning members on the basis of national and international reciprocity and to work for improvement of motoring conditions generally. Membership: over 4,843,000 in 783 member organizations. Publications include *Sportsmanlike Driving* (3d ed.). The annual meeting was held in Washington, D.C., Sept. 20-22, 1955. President, A. J. Sordoni; secretary, W. A. Stinchcomb. Headquarters: 1712 G St. NW, Washington 6, D.C.

American Bankers Association.—The national organization of banking, representing more than 99 per cent of banking resources. As part of its educational program, the Association conducts the American Institute of Banking, and The Graduate School of Banking at Rutgers University. Membership (1955): 17,140 banks and branches. Publication: *Banking* (monthly). The 81st annual convention was held at Chicago, Ill., Sept. 25-28, 1955. President, Fred F. Florence; secretary, Henry M. Sommers. Headquarters: 12 East 36th St., New York 16, N.Y.

American Bar Association.—Established to uphold and defend the U.S. Constitution and maintain representative government; advance jurisprudence; promote the administration of justice, and the uniformity of legislation and judicial decisions throughout the nation; uphold the honor of the legal profession; and apply its knowledge and experience in the field of law for the public good. Membership: 58,000. Publications: *American Bar Association Journal* (monthly); *Annual Report*; *American Citizenship Bulletin* (quarterly); numerous specialized manuals. The annual meeting was held in Philadelphia, Pa., Aug. 22-26, 1955. President, E. Smythe Gambrell; secretary, Joseph D. Stecher. Headquarters: 1155 East 60th St., Chicago 37, Ill.

American Bible Society.—Founded in 1816 to translate, publish, and distribute the Scriptures, without note or comment. Membership: approx. 375,000. Publication: *Bible Society Record*. President, Daniel Burke; secretary, Eric M. North. Headquarters: 450 Park Ave., New York 22, N.Y.

American Book Publishers Council.—Founded to further the interests of its members in their relationships with other segments of the industry, the government, and the public; to serve as a clearing house of information on publishing techniques and practices; and to collect and publish statistics with respect to book publishing; to increase the distribution of books. Membership: 125 publishing firms. President, Donald S. Klopfer; managing director, Dan Lacy. Headquarters: 2 West 46th St., New York 36, N.Y.

American Cancer Society.—Organized in 1913 to collect, collate, and make available statistical information relative to the incidence, mortality, and curability of cancer; encourage medical and scientific research and training of personnel in the detection, diagnosis, treatment, and prevention of cancer; and foster the establishment of cancer treatment facilities. Membership: 188 persons; 60 chartered divisions. Publications: *Cancer*; *Cancer News*; *CA: A Bulletin of Cancer Progress*; *Annual Report*. The annual meeting was held Oct. 30-Nov. 4, 1955, New York, N.Y. President, G. V. Brindley; secretary, Granville Whittlesey, Jr. Headquarters: 521 West 57th St., New York 19, N.Y.

American Catholic Sociological Society.—See article, SOCIOLOGY.

American Chemical Society.—Founded in 1876 to encourage the advancement of chemistry in all its branches. Membership: 74,500 in 149 local sections. Publications: *Journal of the American Chemical Society*; *Industrial and Engineering Chemistry*; *Analytical Chemistry*; *Journal of Physical Chemistry*; *Journal of Agricultural and Food Chemistry*; *Journal of Organic Chemistry*; *Chemical and Engineering News*; *Chemical Abstracts Service*. In 1955 meetings were held in Cincinnati, Ohio, in April and in Minneapolis, Minn., in September. President, Joel H. Hildebrand; exec. secretary, Alden H. Emery. Headquarters: 1155 16th St. NW, Washington 6, D.C.

American Civil Liberties Union.—Founded in 1920 to maintain and extend throughout U.S. jurisdiction the principles of the Bill of Rights, as essential to the functioning of democracy for majorities and minorities alike. Membership: 36,000, including that of 22 affiliates. Publications: *Civil Liberties*; various pamphlets. Chairman, Ernest Angell; director, Patrick Murphy Malin. Headquarters: 170 Fifth Ave., New York 10, N.Y.

American College of Dentists.—Founded for the advancement of the standards and efficiency of dentistry; promotion of the ideals of the profession; stimulation of graduate study and efforts by dentists; the conferring of fellowships in recognition of meritorious achievement; and improvement of public understanding of oral health service. Membership: 2,058 in 29 sections. Publication: *Journal of the American College of Dentists* (quarterly). President, Kenneth C. Pruden; secretary, Otto W. Brandhorst. Office of Secretary: 4221 Lindell Blvd., St. Louis 8, Mo.

American College of Physicians.—Founded in 1915 to

maintain and advance the highest possible standards in medical education, medical practice, and clinical research. Membership: 8,800. Endowment: approx. \$474,000. Publication: *Annals of Internal Medicine*. President, George F. Strong, M.D.; secretary, E. R. Loveland. Headquarters: 4200 Pine St., Philadelphia 4, Pa.

American College of Surgeons.—Founded in 1913 to elevate the standards of surgery and to improve hospital care of the patient. Membership (1956): 21,000. Publications: *Surgery, Gynecology & Obstetrics* (monthly); *Bulletin* (bimonthly). Regional surgical meetings are sponsored each year in addition to an annual Clinical Congress which is the largest surgical meeting in the world. President, Dr. Warren H. Cole; director, Dr. Paul R. Hawley. Headquarters: 40 East Erie St., Chicago 11, Ill.

American Correctional Association.—Organized in 1870 for the improvement of laws in relation to correctional procedures and offenders; improvement of correctional institutions; public education in the correctional field. Membership (1955): 2,000 persons in 9 member organizations. Publications: *American Journal of Correction* (bimonthly); *Manual of Correctional Standards*; *Proceedings of annual Congress of Correction*. The 85th annual Congress of Correction was held Sept. 27-30, 1955, at Des Moines, Iowa. The name of the organization was officially changed from American Prison Association to American Correctional Association. President, Kenyon J. Scudder; general secretary, E. R. Cass. Headquarters: 135 East 15th St., New York 3, N.Y.

American Council of Learned Societies.—A federation of national organizations devoted to the encouragement of humanistic studies. Activities include the promotion of research and the dissemination and utilization of its results; the training of individuals for vital teaching; and the representation of the interests of American scholars in humanistic fields. Membership: 25 professional societies. Publications (1955): *Bulletin* 48; *ACLS Newsletter*. The annual meeting was held in Washington, D.C., Jan. 20-21, 1955. Chairman, Howard Mumford Jones; exec. director, Mortimer Graves. Headquarters: 1219 16th St., NW, Washington 6, D.C.

American Council on Education.—Founded in 1918 to advance American education through action on the part of education organizations and institutions. Membership: 143 organizations; 960 educational institutions, school systems, and departments of education. Publication: *The Educational Record*. President, Arthur S. Adams; secretary, Walter E. Hager. Headquarters: 1785 Massachusetts Ave. NW, Washington 6, D.C.

American Dental Association.—Established in 1859 "to encourage the improvement of the health of the public and to promote the art and science of dentistry." Membership (Sept. 1, 1955) 84,023 in 54 state and 448 local societies. Publications: *The Journal of the A.D.A.* (monthly); *Journal of Oral Surgery* (quarterly); *American Dental Directory* (annual); *Accepted Dental Remedies* (annual); *Index to Dental Literature* (quarterly cumulative); *American Dental Association Specifications for Dental Materials* (annual); *Dental Abstracts* (monthly). In 1955, conducted aptitude testing program for 5,597 prospective dental students; sponsored National Children's Dental Health Week, Feb. 7-13; reiterated its recommendation that fluoridation of water supplies to reduce dental decay be adopted in all communities with a central water supply (by late 1955 more than 1,100 communities with a total population of over 21 million had the measure in operation); constructed a \$1,300,000 addition to its Central Office building in Chicago, and expanded significantly its research and health education programs. The 96th annual session was held Oct. 17-20, 1955, in San Francisco, Calif. President, Bernard C. Kingsbury; secretary, Harold Hillenbrand. Headquarters: 222 E. Superior St., Chicago 11, Ill.

American Economic Association.—Organized in 1885 for the encouragement of economic research, the issuance of publications on economic subjects, and the encouragement of freedom of economic discussion. Membership: 7,717, and 2,995 subscribers. Publication: *American Economic Review*. The 1955 annual meeting was held in New York, N.Y. President, John D. Black; secretary, James Washington Bell. Headquarters: Northwestern University, Evanston, Ill.

American Farm Bureau Federation.—Organized in 1920 to better the standards of farm living and to handle legislative and educational problems affecting the welfare of farm people. Membership: 1,609,461 farm families. Publication: *The Nation's Agriculture*. President, Charles B. Shuman; secretary, Roger Fleming. Headquarters: Room 2300, Merchandise Mart, Chicago 54, Ill.

American Federation of Labor.—See separate article under its own heading.

American Federation of Teachers.—Founded to provide better educational facilities for children, raise the professional standards of teaching, and provide better working conditions for teachers. Membership: 51,000 in 440 organizations. President, Carl J. Megel. Headquarters: 28 E. Jackson Blvd., Chicago 4, Ill.

American Forestry Association.—Founded in 1875 for the advancement of intelligent management and use of the country's forests and related resources of soil, water, wildlife, and outdoor recreation. Membership: 26,000.

Endowment: \$275,000. Publications: *American Forests* (monthly); *Knowing Your Trees* (Rev. 1955); *A Program for American Forestry* (1954); *Proceedings Fourth American Forest Congress* (1953); *Teaching Conservation* (1948); *Managing Small Woodlands* (1947); and others. President, Don P. Johnston; exec. director-forester, Lowell Besley; secretary, Fred E. Hornaday; editor, James B. Craig. Headquarters: 919 17th St. NW, Washington 6, D.C.

American Foundation for Allergic Diseases.—See article, ALLERGIES.

American Foundation for the Blind.—Established in 1921 to promote the interests of blind people throughout the United States. Publications: *Directory of Activities for the Blind in the United States and Canada*; *The New Outlook for the Blind*; *Touch and Go*; other books and pamphlets. President, William Ziegler, Jr.; secretary, Eustace Seligman. Headquarters: 15 West 16th St., New York 11, N.Y.

American Geographical Society.—A research institution devoted to the advancement of geography in its scientific, educational, and cultural aspects; its practical applications; and its bearing on fundamental problems of human existence and human relationships in different parts of the earth. Membership: 4,200. Publications: *Geographical Review* (quarterly); *Focus* (10 issues yearly); *Current Geographical Publications* (10 months a year). President, Richard U. Light; director, Charles B. Hitchcock. Headquarters: Broadway at 156th St., New York 32, N.Y.

American Geological Institute.—Established in 1948 for the advancement of geology and its application to human welfare by providing a means for the cooperation of organizations active in the fields of pure and applied geology. Operates under the National Research Council. Membership: 13 organizations. Publications: *Geological Newsletter*; *Directory of Geology Departments in the U.S. and Canada*; *Directory of Geologists and Geophysicists in member societies of the Institute*; *Geological Abstracts*. The board of directors meets twice annually: in the spring in conjunction with the annual meeting of the American Association of Petroleum Geologists, and in the fall with the annual meeting of the Geological Society of America. Exec. director, Robert C. Stephenson. Headquarters: 2101 Constitution Ave. NW, Washington 25, D.C.

American Historical Association.—Founded in 1884 for the promotion of historical studies, the collection and preservation of historical manuscripts, and for kindred purposes in the interests of American history and of history in America. Membership: approx. 6,000. Endowment: \$414,799.99. Publications: *American Historical Review*; *Annual Report*. President, Dexter Perkins; exec. secretary, Boyd C. Shafer. Headquarters: Study Room 274, Library of Congress Annex, Washington 25, D.C.

American Horticultural Society, Inc.—Founded for the promotion of horticulture in all its branches, embracing all activities of the gardener and the orchardist, the growth and culture of fruits, vegetables, and flowers, and study of their origins, uses, and history. Membership: approx. 3,000; member organizations, 52. Publication: *National Horticultural Magazine* (quarterly). The annual meeting is held in the spring in Washington, D.C. President, Dr. John L. Creech; exec. secretary, James R. Harlow. Headquarters: 1600 Bladensburg Rd. NE, Washington 2, D.C.

American Hospital Association.—Founded in 1898 to promote the public welfare through the development of better hospital care for all the people. Membership: 3,946 persons; 6,607 institutions. Publication: *Hospitals*. The 1955 annual convention was held Sept. 19-22 at Atlantic City, N.J. President, Ray E. Brown; director, Edwin L. Crosby, M.D. Headquarters: 18 E. Division St., Chicago 10, Ill.

American Institute of Accountants.—The purposes of this national professional organization of certified public accountants are to promote and maintain high professional standards; to assist in the maintenance of high standards for the CPA certificate; and to advance the science of accountancy. Membership (1955): 26,345. Publications: *The Journal of Accountancy*; *The CPA*; *Accounting Research Bulletins*; *Accounting Terminology Bulletins*; *Statements on Auditing Procedure*; *CPA Handbook*; *Accountant's Index*. President, John H. Zebley, Jr.; exec. director, John L. Carey. Headquarters: 270 Madison Ave., New York 16, N.Y.

American Institute of Architects.—Founded 1857. Objectives: to organize and unite in fellowship the architects of the United States; to combine their efforts so as to promote the esthetic, scientific, and practical efficiency of the profession; to advance the science and art of planning and building by advancing the standards of architectural training and practice; to coordinate the building industry and the profession of architecture to insure the advancement of living standards through improved environment; and to make the profession of ever-increasing service to society. Membership: 10,500 in 118 chapters; 11 state organizations. Publications: *Journal* (monthly); *Bulletin* (bi-monthly); *Memo* (bi-weekly). President, George Bain Cummings; secretary, Edward L. Wilson; exec. director, Edmund R. Purves. Headquarters: The Octagon, 1735 New York Ave. NW, Washington 6, D.C.

American Institute of Banking.—Devoted to the education of bank personnel in the theory and practice of banking and in those principles of law, economics, and accounting that pertain to the banking business; and to the establishment and maintenance of a recognized standard of banking education. Membership: 122,000. President, Bernard J. Hunt; secretary, Robert C. Rutherford. Headquarters: 12 East 36th St., New York 16, N.Y.

American Institute of Chemical Engineers.—Its purpose is the advancement of chemical engineering in theory and practice and the maintenance of a high professional standard among its members. Membership: 16,601. Publications: *Chemical Engineering Progress* (monthly); *A.I.Ch.E. Journal* (quarterly); various monographs and symposium series. Four meetings are held each year. The annual meeting was held at Detroit, Mich., Nov. 27–30, 1955. President, Barnett F. Dodge; secretary, F. J. Van Antwerpen. Headquarters: 25 West 45th St., New York 36, N.Y.

American Institute of Chemists.—Founded to advance the profession of the chemist in the United States. Membership: 2,850 in 12 organizations. President, Dr. Ray P. Dinsmore; secretary, Lloyd Van Doren. Headquarters: 60 East 42d St., New York 17, N.Y.

American Institute of Electrical Engineers.—Established to advance the theory and practice of electrical engineering and its allied arts and sciences, and to maintain high professional standards among its members. Membership: 53,000. Endowment: \$1,250,000. Publications: *Electrical Engineering* (monthly); *Annual Transactions*; various papers and special pamphlets. President, M. D. Hoovan; secretary, N. S. Hibbsman. Headquarters: 33 West 39th St., New York 18, N.Y.

American Institute of Graphic Arts.—Founded in 1914. A national, educational, non-profit organization to raise standards of design and manufacture of printing and the allied arts in the United States. Membership: 1,350. Publications: *Fifty Books of the Year* (annual); *Printing for Commerce* (annual); 17th Annual Textbooks; Children's Books (biennial exhibition catalogues). A two-year printing workshop course is given in cooperation with the New York School of Printing. Four clinics: Magazine, Printing for Commerce, Trade Book and Textbook, meet monthly to consider design and production problems. The Institute sponsors a series of exhibits in its small gallery during the season. The Guild of Bookworkers (hand bindings) is an affiliate. The annual meeting was held May 19, 1955. President, Leo Lionni; secretary, Horace Nahm; director of public relations and executive administrator, Joyce Morrow. Headquarters: 13 East 67th St., New York 21, N.Y.

American Institute of Mining and Metallurgical Engineers.—Established to promote the arts and sciences connected with the economic production of the useful minerals and metals, and the welfare of those employed in these industries. Membership: 23,500. Publications: *Journal of Metals*; *Journal of Petroleum Technology*; *Mining Engineering*. The annual meeting was held in Chicago, Ill., Feb. 14–17, 1955. President, Henry DeWitt Smith; secretary, Ernest Kirkendall. Headquarters: 29 West 39th St., New York 18, N.Y.

American Iron and Steel Institute.—Founded to promote the interest of the iron and steel industry. Membership: 2,400 individuals; 95 companies. Publications: *Steelways*; *Steel Facts*; *Annual Statistical Report*; *Yearbook*; *Directory of Iron and Steel Works of the U.S. and Canada*; various technical and engineering booklets. In 1954 research projects were sponsored in colleges, universities, and research institutions, bearing on technology of iron and steel making, preparation of raw materials, etc. The general meeting is held in May in New York City. President, B. F. Fairless; exec. vice pres., Max D. Howell; secretary, George S. Rose. Headquarters: 350 Fifth Ave., New York 1, N.Y.

American Law Institute.—Founded in 1923 to do constructive work for the law. Its present projects include the drafting of a federal income tax statute, a model penal code, a federal estate and gift tax statute, revision of the Restatements and a program of continuing legal education. Membership: 1,530. President, Harrison Tweed; director, Herbert F. Goodrich. Headquarters: 133 South 36th St., Philadelphia 4, Pa.

American Legion, The.—A patriotic, non-political organization founded in 1919 by veterans of World War I. Subsequent amendments to the charter (1942 and 1950) have made veterans of World War II and the Korean War eligible for membership. Membership: 2,785,277 in 58 departments and 17,200 posts. Publication: *The American Legion Magazine* (monthly). During 1955, more than \$7,330,000 was expended in child welfare work; the 29th year of the junior baseball program was celebrated; 18,997 school award medals were received by primary and secondary school pupils, and high school students participated in the Legion's national oratorical contest, Boys States and Boys Nation. The Legion also continued its "Back to God" movement and its "New Glory For Old Glory" program to encourage greater display of the Flag of the United States. The 37th national convention was held in Miami, Fla., Oct. 10–13, 1955. National Commander, J. Addington Wagner. Headquarters: 700 N. Pennsylvania St., Indianapolis 6, Ind.

American Library Association.—See separate article under its own heading.

American Mathematical Society.—Founded in 1888 to encourage and maintain an active interest in mathematical science. Membership: 4,958 individuals and 134 institutional members. Publications include the *Bulletin*; *Proceedings*; *Transactions*; *Mathematical Reviews*; *Colloquium Publications*; *Mathematical Surveys*; *Memoirs*; *Proceedings of Symposia in Applied Mathematics*. Eleven meetings are held each year. President, R. L. Wilder; secretary, E. G. Begle. Headquarters: 80 Waterman St., Providence 6, R.I.

American Medical Association.—Founded in 1847 to promote the science and art of medicine and the betterment of public health. Membership: 155,537 in 53 state and territorial associations. Publications include the *Journal*; *Today's Health*; nine monthly journals devoted to special fields of medicine; and thousands of books, pamphlets, and reprints. The 1955 annual meeting was held at Atlantic City, N.J., June 6–10. President, Elmer Hess, M.D.; secretary and gen. mgr., George F. Lull, M.D. Headquarters: 535 N. Dearborn St., Chicago 10, Ill.

American Meteorological Society.—Founded in 1919 for the development and dissemination of knowledge of meteorology and the advancement of its professional ideals. Membership: 5,500. Endowment: \$28,000. Publications: *Bulletin*; *Journal of Meteorology*; *Meteorological Abstracts and Bibliography*; *Compendium of Meteorology*; *Weatherwise*; meteorological monographs. President, A. F. Merewether; exec. secretary, Kenneth C. Spengler. Headquarters: 3 Joy St., Boston 8, Mass.

American Missionary Association.—Founded in 1846 as a consolidation of several missionary, nonsectarian societies primarily concerned with the abolition of slavery; it later pioneered for education of the freedmen. Endowment: \$13,000,000. It maintains community centers, colleges, mission work in Puerto Rico, and a Department of Race Relations. It is now a division of The Board of Home Missions of the Congregational and Christian Churches. General secretary, Philip M. Widenhouse. Headquarters: 287 Fourth Ave., New York 10, N.Y.

American Museum of Natural History.—An organization founded in 1869 to encourage and develop the study of natural science, to advance the general knowledge of kindred subjects, and to that end furnish popular instruction. Membership: approx. 51,000. Publication: *Natural History* (10 issues yearly). Noteworthy during 1954–55 were the following openings: the Hall of Oil Geology, which tells the story of petroleum, from its origin in the earth millions of years ago to its emergence through man-made wells in today's world; and the Natural Science Center for Young People which includes living plants and animals, designed to introduce young people to the natural history of the metropolitan area. Combined attendance for the Museum and the American Museum–Hayden Planetarium was 2,174,415 for 1954–55. President, Alexander M. White; director, Albert E. Parr. Address: Central Park West at 79th Street, New York 24, N.Y.

American Newspaper Publishers Association.—Established to gather and disseminate to membership information on problems of the newspaper publishing business. Membership: 803 daily newspapers. The 1955 convention was held April 26–28 in New York. President, Richard W. Slocum; gen. mgr. Cranston Williams. Headquarters: 370 Lexington Ave., New York 17, N.Y.

American Nuclear Society, Inc.—Organized in 1955 to promote the advancement of science and engineering relating to the atomic nucleus; to aid in the integration of the several disciplines constituting nuclear science and technology; and to encourage research in these and allied fields. Membership: 917. Publication: *Nuclear Science and Engineering*. The first annual meeting was held June 27–29, 1955, at Pennsylvania State University, University Park, Pa. President, W. H. Zinn; exec. secretary, W. W. Grigorieff. Address: Oak Ridge Institute of Nuclear Studies, P.O. Box 963, Oak Ridge, Tenn.

American Nurses' Association.—Founded in 1896 to promote the professional and educational advancement of nurses; to elevate the standard of nursing education; to establish and maintain a code of ethics among nurses; and promote their social and economic welfare. Membership: 175,840 in 54 constituent associations. Publication: *The American Journal of Nursing*. President, Agnes Ohlson, R.N.; secretary, Frances L. A. Powell, R.N. Headquarters: 2 Park Ave., New York 16, N.Y.

American Optometric Association, Inc.—Organized in 1897 to advance the profession of optometry and to protect and improve the visual welfare of the American people. Membership: 11,000. Publication: *The Journal of the American Optometric Association*. During 1955 seminars were held in various U.S. cities on children's vision, occupational vision, ethics, and economics; a film strip entitled "Adventures in Seeing" was produced for grade schools; national Save Your Vision Week was sponsored during March. The annual convention was held at Milwaukee, Wis., July 6–9, 1955. President, Norman R. Hays, O.D.; secretary, E. H. Kickenapp, O.D. Headquarters: 4030 Chouteau Ave., St. Louis 10, Mo.

American Osteopathic Association.—Founded to promote the public health by maintaining high standards of osteopathic education and stimulating and disseminating

original research. Membership: 9,372. President, Hobert C. Moore; exec. secretary, R. C. McCaughan. Headquarters: 212 E. Ohio St., Chicago 11, Ill.

American Petroleum Institute.—Founded in 1919 to further cooperation with the government; foster trade in American petroleum products; and promote the interests of the industry and the improvement of its members through scientific studies. Publications: *Statistical Bulletin* (weekly); *Advance News* (weekly); *Tax Economics Bulletin* (bimonthly); *Quarterly*; *Annual Statistical Bulletin*. President, Frank M. Porter; secretary, Lacey Walker. Headquarters: 50 West 50th St., New York 20, N.Y.

American Philatelic Society.—Founded in 1886 to disseminate knowledge of philately and to assist its members in acquiring and disposing of stamps through its various departments. Membership: 11,700; chapters, 235. Endowment: \$100,000. Publication: *The American Philatelist*. President, L. D. Shoemaker; exec. secretary, H. Clay Musser. Central Office: P.O. Box 800, State College, Pa.

American Philosophical Association.—Founded in 1901 to promote the study and the teaching of philosophy. Membership: 1,403. Endowment: \$10,000. The association maintains close affiliation with UNESCO and the ACLS. Chairman, Glenn R. Morrow; secretary-treasurer, William H. Hay. Headquarters: Bascom Hall, University of Wisconsin, Madison 6, Wis.

American Physical Society.—Founded in 1899 for the advancement and diffusion of the knowledge of physics. Membership: 11,900. Publications: *Physical Review*; *Reviews of Modern Physics*; *Bulletin*. President, E. P. Wigner; secretary, K. K. Darrow. Headquarters: Columbia University, New York 27, N.Y.

American Political Science Association.—Founded in 1903 to encourage the study of government and contemporary public affairs. Membership: 6,300. Endowment: \$33,000. Publication: *The American Political Science Review*. President, Harold D. Lasswell; exec. director, Evron M. Kirkpatrick. Headquarters: 1726 Massachusetts Ave. NW, Washington 6, D.C.

American Psychiatric Association.—Promoting further study of all phases of mental disorder; greater interest in and better maintenance of high standards in hospitals and all other agencies concerned with mental health; further psychiatric education and research. Membership: 8,534. Publications: *American Journal of Psychiatry*; *Newsletter* (monthlies). During 1955, conferences and studies for evaluation of psychiatric therapies and hospital inspection were continued. The annual meeting was held May 9-13, 1955 in Atlantic City, N.J. President, R. Finley Gayle, Jr.; secretary, William Malamud. Addresses: 1270 Avenue of the Americas, Rm. 310, New York 20, N.Y.; 1785 Massachusetts Ave. NW, Washington 6, D.C.

American Psychological Association.—Founded in 1892 to advance psychology as a science, as a profession, and as a means of promoting human welfare. Membership: 14,700. President, Theodore M. Newcomb; exec. secretary, Filmore H. Sanford. Headquarters: 1333 16th St. NW, Washington 6, D.C.

American-Scandinavian Foundation.—Founded in 1910 to promote knowledge and understanding and improve cultural relationships between the United States and Denmark, Iceland, Norway, and Sweden. Membership: 3,100 in 10 chapters in the U.S. Four associated organizations in the Scandinavian countries. Endowment: \$736,750. Publications: *American-Scandinavian Review* (quarterly); *SCAN* (monthly news bulletin). President, Lithgow Osborne; director, Raymond Dennett. Headquarters: 127 East 73rd St., New York 21, N.Y.

American Society for Metals.—Established in 1913 to collect information concerning technical and engineering developments and keep industrial, research, and government organizations informed of the progress and needs of the metallurgical field. The society grants 500 awards to high school students for outstanding work in the field of science; awards 50 scholarships of \$400 each to university students of metallurgy; awards annually a \$3,000 fellowship for post-graduate study in metallurgy; awards \$2,000 in cash to outstanding metallurgy teachers at university level. The annual convention is held concurrently with the National Metal Congress & Exposition (Oct. 17-21, 1955). Membership: 25,000; 93 organizations. Publications: *Metal Progress* (monthly); *Metals Review*; *Transactions* (annual); numerous books covering the metals field. President, A. O. Schaefer; secretary, W. H. Eisenman. Headquarters: 7301 Euclid Ave., Cleveland 3, Ohio.

American Society for Psychical Research.—Incorporated in 1904 for the systematic investigation of phenomena that are prima facie inexplicable on any generally recognized hypothesis, especially those phenomena suggesting the survival of human personality after death and the occurrence of extrasensory perception. Membership: 850. Endowment: \$250,000. Publication: *The Journal of the American Society for Psychical Research* (quarterly). President, George H. Hyslop, M.D.; chairman of research committee, Prof. Gardner Murphy; research associate, Laura Abbott Dale. Headquarters: 880 Fifth Ave., New York 21, N.Y.

American Society of Civil Engineers.—Established to promote the advancement of the science and profession of

engineering. Membership: 39,000; 135 local sections and sub-units; 132 student chapters. Publications: *Civil Engineering*; *Proceedings* (monthlies); *Transactions* (annual); special manuals of engineering practice. The annual convention was held the fourth week in October, 1955, in New York City. President, Enoch R. Needles; secretary, William H. Wily. Headquarters: 33 West 39th St., New York 18, N.Y.

American Society of Composers, Authors, and Publishers.—Founded in 1914 to collect, on behalf of its members, royalties for the public performance (for profit), of their copyright musical works, this being done principally by the issuance of blanket licenses to commercial users of music and by making available to licensees the whole repertoire of ASCAP. Membership: 4,308. President, Stanley Adams; secretary, John Tasker Howard. Headquarters: 575 Madison Ave., New York 22, N.Y.

American Society of Heating and Air-Conditioning Engineers, Inc.—Organized in 1895 to advance the arts and sciences of heating, ventilating, cooling, and air conditioning, and allied arts and sciences, for the benefit of the general public. Membership: 10,200 in 62 local chapters. Publications: *ASHAE Journal Section* (monthly); *Transactions* (annual); *Heating, Ventilating, and Air Conditioning Guide* (annual). During 1955 the Society changed its name from American Society of Heating and Ventilating Engineers to American Society of Heating and Air-Conditioning Engineers; nominated Dr. Robert W. Keeton, of Chicago, Ill., for the F. Paul Anderson Medal; and made 13 grants for cooperative research to U.S. colleges and universities. The 62nd annual meeting was held in Cincinnati, Ohio, Jan. 23-25, 1956. President, John E. Haines; exec. secretary, A. V. Hutchinson. Headquarters: 62 Worth St., New York 13, N.Y.

American Society of Mechanical Engineers.—Established in 1880 to promote the art and science of mechanical engineering and the allied arts and sciences. Membership (1955): 40,289. Publications: *Mechanical Engineering* (monthly); *Transactions* (8 issues yearly); *Journal of Applied Mechanics* (quarterly); *Mechanical Catalog* (annual); *Applied Mechanics Reviews*. The annual meeting is held in winter, usually in New York, N.Y. President, David W. R. Morgan; secretary, Clarence E. Davies. Headquarters: 29 West 39th St., New York 18, N.Y.

American Society of Naturalists.—An association fostering the development of breadth and unity in biology through the discussion, advancement, and diffusion of knowledge concerning the broader biological problems, thus serving to correlate the various biological sciences into a common philosophy of biology. Membership: 660. Publication: *The American Naturalist*. President, Kenneth V. Thimann; secretary, Warren P. Spencer. Headquarters: Dept. of Biology, Wooster College, Wooster, Ohio.

American Society of Zoologists.—Founded as an association of workers in the field of zoology for the presentation and discussion of facts and problems and for the advancement of zoological science. Membership: 1,424. President, Tracy M. Sonneborn; secretary, Rudolf T. Kempton. Address: Vassar College, Poughkeepsie, N.Y.

American Sociological Society.—A nationwide organization seeking to stimulate and improve sociological research, instruction, and discussion; and to encourage cooperation among those engaged in sociological studies. Membership: 4,600, 9 regional and affiliated societies. Publications: *American Sociological Review*; *Sociometry*; *Employment Bulletin*; special bulletins. The 1956 annual meeting is scheduled for September 7-9 in Detroit, Mich. President, Herbert Blumer; secretary, Wellman J. Warner; exec. officer, Matilda White Riley. Headquarters: New York University, Washington Square, New York 3, N.Y. (See article, SOCIOLOGY.)

American Veterans of World War II (AMVETS).—Chartered by Congress; its purpose, to promote world peace and the American way of life, and to help the veteran help himself. Membership: 200,000 in 1,600 posts. Publications: *National AMVET*; *AMVET Letter*. The annual convention was held in Philadelphia, Pa., Sept. 6-11, 1955. National Commander, Rudolph G. Pesata. Headquarters: 1710 Rhode Island Ave. NW, Washington 6, D.C.

American Vocational Association.—Established to advance the services of American education through the development of economic competence of youths and adults, and to promote the professional interests of persons engaged in vocational and industrial arts education. Membership: 35,000. Publications: *American Vocational Journal* (10 issues annually); various bulletins. President, Cecil Stanley; exec. secretary, M. D. Mobley. Headquarters: Denrike Bldg., 1010 Vermont Ave., NW, Washington 5, D.C.

American Youth Hostels, Inc.—To help all, but especially young Americans, to acquire a greater appreciation of the out-of-doors, and of the culture and history of peoples at home and abroad, by providing simple accommodations for their use while traveling primarily by foot or bicycle, thus promoting their health, welfare and education and furthering mutual understanding among peoples of differing backgrounds and points of view. Membership: 10,000. Publication: *AYH Handbook-Hos-*

telers Manual; National Sponsored Trips Travel Bulletin. Activities in 1955: Developed, supervised and chartered 100 youth hostel facilities throughout the U.S.; sponsored the AYH National Leaders Training Course; directed and furnished leadership for travel programs for 490 young people in the U.S., and to Mexico, Canada, and Europe; coordinated the work of 22 local councils of AYH. President, Miller Moore; secretary, Mrs. Carl Neumann; exec. director, Justin J. Cline. Headquarters: 14 West 8th St., New York 11, N.Y.

Archaeological Institute of America.—Founded in 1879 to foster archaeological research and to disseminate the knowledge resulting from that research. Membership: approx. 2,600. Endowment: \$155,000. Publications: *American Journal of Archaeology*, for experts, and *Archaeology*, for laymen (quarterlies); *Bulletin* (annual); *Newsletters*. President, Henry T. Rowell. Headquarters: 608 University of Cincinnati Library, Cincinnati 21, Ohio.

Art Institute of Chicago.—Established to maintain schools of art and design; to form and exhibit art collections; and to cultivate the arts of design. Membership: 17,105. Endowment: \$18,507,000. Publications: *Art Institute of Chicago Quarterly*; various catalogs. Six fellowships for foreign study are given annually to graduating students of the School of the Art Institute. The School of Drama in the Goodman Theatre and the Goodman Theatre's productions are under Institute jurisdiction. Exhibitions, 1955: *Great French Paintings*; in memory of Chauncey McCormick; *Masterpieces of Japanese Prints*; *Joseph Winterbotham Collection of European Paintings*; *Society for Contemporary American Art*: 15th annual exhibition; *Artists of Chicago and Vicinity*: 58th annual exhibition; *Art Institute School Students Show*; *French Drawings*. Acting president, Everett D. Graff; director, Daniel Catton Rich. Address: Adams and Michigan, Chicago 3, Ill.

Arthritis and Rheumatism Foundation.—Established in 1948, its purposes are: to formulate and carry out a national program of research and education in the rheumatic diseases to discover their causes and develop methods of prevention; to promote on the local level more effective methods of diagnosis, more facilities for treatment and training physicians in rheumatic disease; to provide systematic rehabilitation for the disabled. Membership: 43 local chapters. Publications: *Manual for Nurses*; *Arthritis and Related Disorders*; *Home Care in Rheumatoid Arthritis*; *Bulletin on Rheumatic Diseases*; *Manual for Arthritis Clinics*; *Primer on Rheumatic Diseases*. For laymen: *Arthritis*; *It's Women Three to One*; *The Farmer Suffers Most*; *10,104,000 Questions About Arthritis and Rheumatism*. President, Gen. George C. Kenney; exec. director, Thomas E. Freeman; medical dir., Dr. Russell L. Cecil. Headquarters: 23 West 45th St., New York 36, N.Y.

Association of American Colleges.—Organized in 1915 for the promotion of higher education in the colleges of liberal arts and sciences and for the prosecution of such plans as may make the member institutions more efficient. Membership: 714 colleges and universities. Publication: *Bulletin* (quarterly). President, Very Rev. Joseph R. N. Maxwell; exec. director, T. A. Distler. Headquarters: 726 Jackson Pl. NW, Washington 6, D.C.

Association of American Railroads.—Founded in 1934 as the organization of the principal railroads of the United States, Canada, and Mexico, for dealing with matters of common concern in the whole field of railroading. Membership: 131 railroad systems. President, W. T. Faricy; secretary-treasurer, G. M. Campbell. Headquarters: Transportation Building, Washington 6, D.C.

Association of Better Business Bureaus, Inc.—Organization which coordinates the Better Business Bureau movement, whose purpose is: to promote honesty and dependability in advertising and merchandising, and fair conditions in trade; to help the public buy wisely and gain the maximum of satisfaction in its dealings with business; through the handling of customer inquiries and complaints about companies, products, services and organizations; trade practice conferences and standards for advertising and selling; and information-education activities with business firms, groups and the public. Membership: 104 bureaus in the U.S. and Canada, supported by more than 70,000 business firms. President, Victor H. Nyborg. Headquarters: 405 Lexington Ave., New York 17, N.Y.

Association of Research Libraries.—Founded for the purpose of developing and increasing the resources and usefulness of research collections in American libraries. Membership: 45 organizations. Exec. secretary, Robert A. Miller. Headquarters: Indiana University Library, Bloomington, Ind.

Association of the Junior Leagues of America, Inc.—Founded in 1921 to unite all Junior Leagues of America and their members and to foster interest in the social, economic, educational, cultural, and civic conditions of their own communities and to make efficient their volunteer service. Membership: 66,000 in 183 member Leagues. President, Mrs. Robert L. Foote; administrator, Mrs. Margaret G. Twyman. Headquarters: The Waldorf-Astoria, New York 22, N.Y.

Benevolent and Protective Order of Elks.—Founded in 1868 to inculcate the principles of charity, justice,

brotherly love and fidelity; promote the welfare and happiness of its members; and quicken the spirit of patriotism. Membership: 1,500,000 in 1,744 subordinate lodges. Publication: *The Elks Magazine*. The 1955 convention was held in Philadelphia, Pa., July 4-8. Grand exalted ruler, John L. Walker, grand secretary, Lee A. Donaldson. Headquarters: 2750 Lake View Ave., Chicago 14, Ill.

B'nai B'rith.—Founded in New York in 1843 to unite and serve the Jewish people and humanity through cultural, social, civic, philanthropic, and patriotic activities. Membership: 360,000 in 35 countries. Agencies, departments and B'nai B'rith activities include Anti-Defamation League, Hillel Foundations, Youth Organization, Vocational Service Bureau, Americanism and Civic Affairs Department, Service Committee for Armed Forces and Veterans, Adult Jewish Education Committee, Women's Supreme Council, Israel Committee, and U.N. Liaison Office; 1,000 men's lodges, 600 women's chapters in U.S. and Canada; 135 lodges and chapters in 33 other countries. Publications: *The National Jewish Monthly*; *The Shofar* (youth monthly); *The Career News* (bi-monthly); *B'nai B'rith Women's World* (monthly). The next international convention is scheduled for 1956. President, Philip M. Klutznick; secretary, Maurice Bisgyer. Headquarters: 1003 K St. NW, Washington 1, D.C.

Boston Museum of Fine Arts.—Major exhibitions of 1955: Matisse Bronzes and Drawings; Sport in Art. Outstanding accessions in 1955: a Gustave Courbet painting, *The Forest Pool*; Italian Renaissance bronze relief attributed to Francesco di Giorgio; Chinese landscape by Wang Meng of the Yuan Dynasty; Etruscan bronze lion's head; life-size stone figure of St. Malo, French, early 13th century; tapestry of *Wild Men and Moors*, c. 1400, Upper Rhinish; sculptured *Death Triumphant*, c. 1560, from Lorraine; Strasbourg School *Bust of a Prophet*, c. 1490; Jacopo de' Barbari's *Large Bird's-eye View of Venice*, woodcut dated 1500; Flemish tapestry of *Allegorical Scenes from the New Testament*, Brussels, c. 1500. Publications: *Bulletin* (quarterly); *Handbook of the Museum*. Attendance (1954): 463,719. President, Ralph Lowell; director, Perry Townsend Rathbone. Address: 465-479 Huntington Ave., Boston 15, Mass.

Botanical Society of America, Inc.—Concerned with the scientific and educational advancement of botany, the society serves as a clearing house for American botanists in all matters of general botanical interest. Membership: 1,950. Publication: *The American Journal of Botany*. The 1955 annual meeting was held at E. Lansing, Mich., Sept. 6-10. President, Oswald Tippo; secretary, Harold C. Bold. Address: Box 1501, Vanderbilt University, Nashville 5, Tenn.

Boy Scouts of America.—Founded in 1910 to promote the ability of boys to do things for themselves and others; to train them in scoutcraft; and to teach them patriotism, courage, self-reliance, and kindred virtues. Membership (1955): 3,821,000 in 540 scout councils. Publications: Over 300 manuals and pamphlets including *Handbook for Boys*; *3 Cub Scout Books*; *Explorer Manual*; magazines, *Boys' Life* (for boys), *Scouting* (for leaders). President, John M. Schiff; chief scout exec., Arthur A. Schuck. Headquarters: New Brunswick, N.J.

Boys' Clubs of America.—Founded to promote the health, social, educational, vocational, and character development of boys throughout the United States. Publications include *Program Service*, *The Boys' Club Bulletin*, *The Boys' Club Newsletter*. Membership: 400,000 in 413 clubs. Chairman of the board, Herbert Hoover; president, Albert L. Cole; secretary, William Ziegler, Jr.; exec. director, David W. Armstrong. Headquarters: 381 Fourth Ave., New York 16, N.Y.

Brookings Institution.—Organized in 1927 to promote research and training in economics and government. Publications (1955): *Economics and Public Policy—Brookings Lectures*, 1954, A. Smithies and Others; *The United Nations and the Maintenance of International Peace and Security*, L. M. Goodrich and A. P. Simons; *Proposal for Changes in the U.N.*, F. Wilcox and C. Marcy; *Research Frontiers in Politics and Government—Brookings Lectures*, 1955, S. K. Bailey and Others. President, Robert D. Calkins; secretary, E. H. Wilson. Headquarters: 722 Jackson Pl. NW, Washington 6, D.C.

Buhl Foundation.—Established for the advancement of human welfare by support of experimental, demonstration, and research projects in natural and social sciences, education, and community planning in the Pittsburgh (Pa.) district. Endowment (1953): \$13,500,000. Director, Charles F. Lewis; secretary, J. G. Verwer, Jr. Headquarters: 2215 Farmers Bank Bldg., Pittsburgh 22, Pa.

California Academy of Sciences.—Established in 1853, the academy maintains Morrison Planetarium, the Science Museum, and Steinhart Aquarium. Its research facilities include collections in botany, entomology, herpetology, ichthyology, mammalogy, ornithology, paleontology, and a library of 100,000 volumes in the natural sciences. A staff of 40 engages in original research. Membership: 1,789. Publications: *Pacific Discovery* (bi-monthly); *Proceedings*; *News Letter*; occasional papers. Chairman, board of trustees, Charles Page; president of the academy, Ira L. Wiggins; director, Robert C. Miller. Address: Golden Gate Park, San Francisco 18, Calif.

Camp Fire Girls.—Founded in 1910 to provide a

leisure-time program of health and character-building activities for girls between the ages of 7 and 18, with emphasis on homemaking skills. Membership: 430,124. Publications: *The Camp Fire Girl* (monthly, September through June); *Horizon Club Program Book*; *Outdoor Book*; *Handbook for Guardians of Camp Fire Girls*; *The Blue Bird Book*; *Book of the Camp Fire Girls*. President, Mrs. Harold H. Hartman; national director, Miss Martha F. Allen. Headquarters: 16 East 48th St., New York 17, N.Y.

Canadian Association for Adult Education.—Organized to stimulate an interest in leisure time education; and to provide a national clearing house for publications, research, and experimentation on behalf of universities, departments of education, and all organizations interested in adult education. Membership: 1,019 persons; 115 organizations. Publications: *Food For Thought*, CAAE journal (8 issues yearly); *Adult Education in Canada*; *Culture in Canada*; *University Extension in Canada*; *Pioneers in Adult Education in Canada*; *Education in Canadian Institutions*; *Where—and Why?* (a study of the distribution of program materials); *Let's Tell People*; *Questions and Answers About Adult Education*; *Adult Education and The School*; *Program Guide*; and 11 booklets on Canadian adult education, the *Learning For Living* series. Two discussion-action projects—*Citizens' Forum* and *National Farm Radio Forum*—were carried on in conjunction with the Canadian Broadcasting Corp. Sponsors of the Canadian film and radio awards. President, W. R. Carroll; director, J. R. Kidd. Headquarters: 113 St. George St., Toronto 5, Ont.

Canadian Corps Association.—Incorporated to make Canada a working partner in the Commonwealth of Nations, and to further democracy at home. Membership: 15,000. Publication: *Torch* magazine. President, A. E. Lanning; treasurer, E. V. Heesaker; secretary, Miss S. Wood. Headquarters: 41 Isabella St., Toronto 5, Ont.

Canadian Institute of International Affairs.—Established to promote an understanding of world affairs through publications, discussion meetings with authorities, conferences, and use of the national library. Membership: 2,200 persons. Publications (1955): *International Journal* (quarterly); *Behind the Headlines* (series of pamphlets); *Tariff Procedures and Trade Barriers*. President, Edgar McInnis. Headquarters: 230 Bloor St. W., Toronto 5, Ont.

Canadian Library Association (Association Canadienne des Bibliothèques).—Formed in 1946 to stimulate and aid Canadian library service, promote high standards of librarianship, advance the welfare of librarians and library patrons, and cooperate with other organizations in furthering education, literature, science, and culture. Membership: 1,084 persons and 429 organizations. Publications (1955): *Canadian Index to Periodicals and Documentary Films* (annual bound cumulation and monthly service); *C.L.A. Bulletin* (bimonthly); *Canadian Library Directory*; *The Library Trustee*; *Conference Proceedings*. President, Willard E. Ireland; exec. secretary, Elizabeth Homer Morton. Headquarters: 46 Elgin St., Ottawa, Ont.

Canadian Medical Association.—Founded for the promotion of medicine and allied sciences, and the maintenance of the honor and the interests of the medical profession. Membership: approx. 10,500. Publication: *The Canadian Medical Association Journal*. President, Dr. T. C. Routley; general secretary, Dr. A. D. Kelly. Headquarters: 150 St. George St., Toronto 5, Ont.

CARE (Cooperative for American Remittances to Everywhere, Inc.).—A cooperative, non-profit overseas relief and rehabilitation agency, established in 1945 to channel aid of American individual citizens and civic groups to needy and underdeveloped areas of the free world, in form of standard food, clothing and tool packages, "self-help" implements and equipment, books, medical supplies, etc. Collaborates closely with 25 member agencies and other groups in overseas aid programs. By end of September of 1955, CARE had delivered over 15 million packages, valued at more than \$175,000,000 in some 30 countries in Europe, Asia, Africa and Latin America. President, Murray D. Lincoln; exec. director, Richard W. Reuter. Headquarters: 660 First Ave., New York 16, N.Y.

Carnegie Corporation of New York.—Established in 1911 for the advancement and diffusion of knowledge and understanding among the people of the United States and the British dominions and colonies. Assets: \$174,000,000. Publications: *Annual and quarterly Reports*. President, John W. Gardner; secretary, Florence Anderson. Headquarters: 589 Fifth Ave., New York 17, N.Y.

Carnegie Endowment for International Peace.—Established in 1910 by Andrew Carnegie to promote international peace. Objectives: to increase knowledge and understanding of the basic factors in international relations, to encourage mutual understanding among the peoples of the world, and to further the development of organizations and measures likely to lead to orderly international cooperation based on peace and justice. Current programs include: conferences, lectures, exhibits, and other activities at the new Carnegie Endowment International Center; a study of national policies and attitudes toward the United Nations carried out in over 20 countries; encouragement of the role of universities in world

affairs; and publications dealing primarily with problems of international organization. Current assets: \$16,336,414.84. Periodical: *International Conciliation* (5 issues yearly). Chairman of the board, Harvey H. Bundy; president, Joseph E. Johnson; secretary, Leslie Paffrath. Headquarters: United Nations Plaza at 46th St., New York 17, N.Y. European Center: 172 Route de Ferney, Grand Saconnex, Geneva, Switzerland.

Carnegie Foundation for the Advancement of Teaching.—Founded to conduct educational studies in the field of higher education and to make payment of retiring allowances and widows' pensions to officers and teachers in specified North American higher educational institutions. Membership: 25 trustees. Assets: \$11,837,232. The annual meeting is held in November in New York City. President, John W. Gardner; secretary, James A. Perkins. Headquarters: 589 Fifth Ave., New York 17, N.Y.

Carnegie Hero Fund Commission.—Established in 1904 by Andrew Carnegie for the purpose of rewarding acts of heroism in civil life through medals and pecuniary grants. Endowment: \$5,000,000. Members of the Commission, never exceeding 21 in number, hold their annual meeting the 4th Wednesday in January. In the 12 months ending Jan. 31, 1955, 63 awards were made. President, Thomas S. Arbuthnot; manager and ass't secretary, M. H. Floto. Address: Oliver Bldg., Pittsburgh 22, Pa.

Carnegie Institute, Pittsburgh, Pa.—Founded and endowed by Andrew Carnegie in 1896, it houses under one roof the Carnegie Library, the Department of Fine Arts, the Carnegie Museum, and the Carnegie Music Hall. Endowment: \$8,000,000. Publications: *Carnegie Magazine*; various bulletins. President, James M. Bovard; vice president, Roy A. Hunt; treasurer, Thomas L. Orr; secretary, William P. Witherow. Address: 4400 Forbes St., Pittsburgh 13, Pa.

Carnegie Institution of Washington.—Founded to encourage investigation, research, discovery, and the application of knowledge to the improvement of mankind. Endowment: \$32,000,000. Integrated programs of fundamental scientific research in astronomy, terrestrial sciences, biological sciences, and archaeology are carried on in the institution's 7 departments. President, Caryl P. Haskins; executive officer, Paul A. Scherer. Address: 1530 P St. NW, Washington 5, D.C.

Catholic Community Service, National. See under *National*.

Catholic Library Association.—Founded to initiate and encourage activities that will promote Catholic library work. Membership: 2,184. President, Rev. A. Homer Mattlin, S.J.; exec. secretary, Rev. Vincent T. Mallon. Publications: *Catholic Library World*; *Catholic Periodical Index*. Headquarters: Maryknoll Seminary, Glen Ellyn, Ill.

Catholic Rural Life Conference, National. See under *National*.

Catholic Welfare Conference, National. See under *National*.

Chamber of Commerce of the United States.—A national business federation working to preserve and promote representative democracy; to promote good citizenship, good government, and good business; and to preserve the right of the individual to earn a profit, and to acquire and to hold property. Membership: 3,100 organizations representing 1,700,000 businessmen; 21,000 business firms and individuals. Publications: *Nation's Business* (monthly); *Legislative Outlook* (biweekly); *Washington Report* (weekly); *Legislative Daily*; *American Economic Security* (6 issues a yr.); *Newsletters*. The 1955 annual meeting was held in Washington, D.C., April 27-30. President, Boyd Campbell, exec. vice president, Arch N. Booth. Headquarters: 1615 H St. NW., Washington 6, D.C.

Chicago Natural History Museum (formerly FIELD MUSEUM OF NATURAL HISTORY).—All departments of the museum—anthropology, botany, geology, and zoology—benefited in 1955 from collecting and research in both the Americas, and in Asia and Africa. The largest field operation was the Southwest Archaeological Expedition which excavated sites of ancient Mogollon culture in New Mexico and Arizona. This was the 21st year in which Dr. Paul S. Martin and his associates worked at the reconstruction of some 4,000 years of the history of a previously unknown American Indian people. Dr. Julian A. Steyermark, curator of the phanerogamic herbarium, and Dr. John J. Wurdack, of the N.Y. Botanical Garden, made a joint expedition to the "lost world" area of Venezuela. Dr. Sharat K. Roy conducted a geological expedition to El Salvador, Costa Rica, and Nicaragua to collect volcanic specimens and study volcanoes. Loren P. Woods collected marine fishes in the Acapulco region of Mexico and in the Gulf of Tehuantepec. A botanical expedition, headed by Dr. Margery C. Carlson, collected plants in Mexico, El Salvador, and Honduras. Other field work included: collecting on the Pacific Coast of material for the hall of American woods; collecting insects in Georgia and Florida; bird collecting in Nepal; zoological collecting in the Philippines, Peru, and Portuguese West Africa; and collecting reptiles and amphibians in New Mexico and Arizona. Dr. Karl P. Schmidt, herpetologist, and chief curator of zoology since 1941, retired in July after 33 years on the staff and was succeeded by Dr.

Austin L. Rand. A new hall with improved physical geology exhibits was opened in October. In addition to monographic displays, it spotlights with spectacular dioramas such earth features as glaciation, volcanism, solvent action of ground waters, and stream erosion. Three new dioramas were added illustrating facets of the lives of prehistoric Southwest Indians. In all departments, exhibits and specimen collections were expanded. An important museum publication was the translation by Dr. I. J. Gelb of the texts of a large collection of ancient Babylonian cuneiform tablets in the oldest Akkadian dialect, dating back more than 4,000 years. There was an increasingly effective extension work in the schools by the Harris Extension which circulates traveling miniature exhibits, and the Raymond Foundation which sends lecturers and films to the schools, as well as providing programs for children in the museum. Attendance (1954): 1,142,200. Director, Clifford C. Gregg. Address: Roosevelt Rd. and Lake Shore Dr., Chicago 5, Ill.

Christian Endeavor, International Society of. See under *International*.

Civitan International.—A service organization devoted to the promotion of good citizenship. Each individual club selects activities best suited to the needs of its respective community. Membership: 20,000 persons in 504 clubs in the United States and Canada. Publications: *The Civitan* (monthly); various booklets and pamphlets. Activities in 1955: Presentation of citizenship awards; rehabilitation project for physically handicapped; safety program and work with youth through Junior Civitan Clubs, scouting, Y.M.C.A., and boys and girls clubs. President, R. Clarence Williams; secretary, Rudolph T. Hubbard. Headquarters: 1523-28 Comer Bldg., Birmingham, 3, Ala.

Cloisters, The.—See below, *Metropolitan Museum of Art*.

Committee for Economic Development.—Founded in 1942, CED is a non-profit, non-political organization of 150 businessmen and educators, formed to study and report on national economic problems. Its Research and Policy Committee issues Statements on National Policy containing recommendations which, in the Committee's judgment, will contribute to maintaining high and productive employment and a rising standard of living. Chairman of the board, Meyer Kestbaum; exec. director, W. F. Rennie. Headquarters: 444 Madison Ave., New York 22, N.Y.

Commonwealth Fund, The.—Established in 1918 by Mrs. Stephen V. Harkness "to do something for the welfare of mankind." Having been increased by bequests from Edward S. Harkness and Mrs. Edward S. Harkness, the fund amounted to approximately \$85,500,000 at the end of the fiscal year 1954-55. Appropriations for that year were \$3,469,972.94. The major concern of the Fund at present is helping medical schools to reorient medical education to the student, and medical care to the patient, by better integration and increased attention to the relation between the patient and his environment. Grants for medical education, including fellowships and planning in the health field, amounted to \$2,370,721.25; for experimental health services, \$137,750.00; and for medical research, \$887,926.04. During the academic year 1955-56, fifty-seven Commonwealth Fund Fellows are in residence in the United States. Forty-three hold fellowships for scholars, journalists, and civil servants from Great Britain and other parts of the British Commonwealth, and fourteen hold fellowships for scholars from western countries on the European continent. The Fund publishes an annual report in November. President, Malcolm P. Aldrich. Headquarters: 1 East 75th St., New York 21, N.Y.

Community Chests and Councils of America, Inc.—The national association of local Community Chests, United Funds and Welfare Councils, organized in 1918 to advance the cause of united social planning and federated financing in local communities; to be a clearing house of ideas and information for its local members; and to provide advisory service in the fields of health and welfare planning, campaigns, public relations, statistics, personnel, labor-employer participation, and volunteer leadership. Membership (1955): 1,737 chests, united funds, councils and state affiliates. Publications: *Community* magazine, various bulletins, studies and manuals. A National Budget Committee reviews budgets of national agencies requesting such services and makes recommendations to local Chests. In 1955 Chests and United Funds raised \$302,025,059 for the support of voluntary health and welfare services. National conferences are held biennially. President, Albert J. Nesbitt; secretary, Foster W. Doty. Headquarters: 345 East 46th St., New York 17, N.Y.

Congress of Industrial Organizations.—See separate article under its own heading.

Consumers' Research.—Incorporated in 1929, as a nonprofit organization to make tests, collect, compile, and edit reports and findings on a wide range of consumers' goods for its consumer-subscribers. Products are rated by brand names as "A. Recommended," "B. Intermediate," or "C. Not Recommended," on the basis of test findings. Publications include the *Consumers' Research Bulletin* (monthly) and the *Annual Cumulative Bulletin*. Presi-

dent and technical director, F. J. Schlink; secretary, Clark C. Willever. Office and laboratory: Consumers Rd., Washington, N.J.

Daughters of Isabella.—An organization to unite all Catholic women for mutual assistance in times of need and to promote their religious, social, and intellectual growth. Membership: 113,000. President, Mrs. Helen T. Howard; secretary, Mary F. Riley. Headquarters: 375 Whitney Ave., New Haven, Conn.

Daughters of the American Revolution (National Society).—Founded in 1890 for historical, patriotic, and educational purposes. Functioning through 24 national committees, the society: owns and operates two schools in the Southern mountains; gives financial assistance to 11 approved schools; aids American Indians through financial support to St. Mary's and Bacon colleges; conducts D.A.R. Good Citizens contest for senior high school girls; administers student loan funds; forms and operates Junior American Citizens Clubs; maintains a genealogical library and a museum of Americana. Membership: 180,572 in 2,784 chapters. Publications: *Daughters of the American Revolution Magazine*; *Press Relations Digest*; *D.A.R. Manual for Citizenship*. Annual conventions are held in Washington, D.C., in April. President general, Miss Gertrude S. Carraway. Headquarters: 1776 D St. NW, Washington 6, D.C.

Duke Endowment.—Established in 1924 by James B. Duke "to make provision in some measure for the needs of mankind along physical, mental and spiritual lines." Beneficiaries include Duke University and other educational institutions, hospitals, orphanages, rural churches, and superannuated Methodist preachers. Through Dec. 31, 1954, a total of \$114,822,345.75 was distributed. Chairman, George G. Allen; secretary, Philip B. Heart. Offices: Power Building, Charlotte 1, N.C.; 30 Rockefeller Plaza, New York 20, N.Y.

Economic Mobilization National Council, Inc.—Originally established as the National Economic Mobilization Council and incorporated under the new title. The council is established for the purpose of promoting the preservation of national security through the dissemination and mutual exchange of economic mobilization information between business executives, educators, civic leaders, and the appropriate federal agencies, to the end that responsibilities during national emergencies are clearly established. Liaison is maintained with the Dept. of Defense through the Industrial College of the U.S. Armed Forces. President, Maj. Gen. Robert E. Condon; treasurer, Frank A. Vanderlip, Jr.; exec. secretary, Lloyd W. Stearns. Headquarters: 52 Wall St., New York 5, N.Y.

Educational Film Library Association.—Founded to promote the production, distribution, and utilization of films for education, both on the school and college level and for adult and general use. EFLA evaluates films; acts as an information center; publishes booklets on the use of films, selected film lists, and issues a monthly *Bulletin* with news of the audiovisual field. Membership: 70 personal, 550 service and constituent members. President, Garret R. Weathers; exec. secretary, Emily S. Jones. Headquarters: 345 East 46th St., New York 17, N.Y.

Elks, Benevolent and Protective Order of. See under *Benevolent*.

English-Speaking Union of the United States.—Organized to draw together in the bond of comradeship the English-speaking peoples of the world. Membership: 23,000 in 64 branches. Publication: *E.-S.U. News*. President, William V. Griffin. Headquarters: 19 East 54th St., New York 22, N.Y.

Falk Foundation, The Maurice and Laura.—Established in 1929, it devotes its activities principally to financing research studies of economic problems affecting the operation and development of the domestic economy of the United States and to financing programs and projects to further the efforts of American colleges and universities to prepare their students for a vocational participation in party politics as a responsibility of American citizenship. A few out-of-program grants are made to Pittsburgh medical and social welfare activities. Endowment (market value, Dec. 31, 1954): \$14,200,792.75. Grants voted in 1955 included allotments to various colleges and universities in support of programs to promote college training for citizen participation in politics, and an allotment to the Brookings Institution in support of a research study of the impact of union policies upon industrial management. Appropriations outside the Foundation's major fields of interest included allotments to the Pittsburgh Child Guidance Center; to the Carnegie Institute, Pittsburgh; and to the Community Chest of Allegheny County. Publications (1955) included the *First Annual Report—1954 of the Falk Project for Economic Research in Israel*. Executive director, J. Steele Gow; secretary, E. B. Strassburger. Headquarters: Farmers Bank Building, Pittsburgh 22, Pa.

Family Service Association of America.—A voluntary federation made up chiefly of Community Chest-supported family casework agencies seeking the further development of healthful and stable family life and providing direct assistance to people with personal or family problems. Through the association, agencies exchange information regarding professional practice, agency administration, community organizations, etc. Membership: 263

member and pre-member affiliate agencies, Publications: *Social Casework and Family Service Highlights* (monthly); numerous pamphlets dealing with family social work. General director, Clark W. Blackburn. Headquarters: 192 Lexington Ave., New York 16, N.Y.

Ford Foundation.—Established in 1936 "to receive and administer funds for scientific, educational and charitable purposes, all for the public welfare." Endowment (1954): \$493,213,842. Publications: *Annual Report*; various program announcements. During 1955 the Foundation made grants to support programs in education, public affairs, international understanding, economic development and administration, and the behavioral sciences. President, H. Rowan Gaither, Jr.; secretary, Joseph M. McDaniel, Jr. Headquarters: 477 Madison Ave., New York 22, N.Y.

Foreign Policy Association.—Founded in 1918, to carry on educational activities to aid in the understanding and constructive development of American foreign policy. Membership: approx. 60,000 in over 60 cooperating community organizations. Publications include *Foreign Policy Bulletin*; *Headline Series*. President, John W. Nason; vice pres., A. W. Allport. National office: 345 East 46th St., New York 17, N.Y.

Four-H Clubs.—A part of the system of cooperative extension work in agriculture and home economics, established on a national basis in 1914, and carried on jointly by the U.S. Department of Agriculture, state colleges of agriculture, and local county governments. 4-H Club work, emphasizing head, heart, hands, and health, is a specialized educational enterprise for rural young people, 10 to 21 years of age, who may become members of local 4-H Clubs, organized under the supervision of county extension agents and local volunteer leaders. Enrollment: 2,104,787. The National 4-H Club Camp is held annually in June in Washington, D.C.; the National 4-H Club Congress, in December in Chicago, Ill. Administrator, C. M. Ferguson, Federal Extension Service, U.S. Department of Agriculture, Washington 25, D.C.

Franklin Institute.—Dedicated to the promotion of the mechanic arts and the dissemination of scientific knowledge, the nonprofit, private institute is designed to be a permanent memorial to Benjamin Franklin. Membership: 6,900. Publication: *Journal*; *Institute News*. The institute is presently concerned with the Benjamin Franklin Memorial, a science museum; Fels Planetarium; and four research laboratories engaged in work for private industry and the government. President, S. Wyman Rolph; exec. vice president, Henry B. Allen. Headquarters: 20th St. and Benjamin Franklin Pkwy., Philadelphia 3, Pa.

Freemasonry, Northern Jurisdiction, Supreme Council, 33°, Ancient and Accepted Scottish Rite of.—Organized in 1813 for fraternal, benevolent, religious, scientific, and educational purposes. Membership: 448,305 persons in 113 lodges in 15 states. Publications: *News-Letter* (monthly); special reports; occasional books. Council activities include subsidizing research in dementia praecox, and financing journalism scholarships at Boston University. Sovereign grand commander, George E. Bushnell; grand secretary, F. Elmer Raschig. Headquarters: 1117 Statler Bldg., Boston 16, Mass.

Freemasonry, Southern Jurisdiction, Supreme Council, 33°, Ancient and Accepted Scottish Rite of.—Organized in 1801 for fraternal and benevolent purposes. Membership: 420,000. Publications: *The New Age and Scottish Rite News Bulletin* (monthly); various books and pamphlets. The Supreme Council meets biennially in October; the last meeting was in 1955. The Council's activities include maintenance of a free public library. Grand commander, Thomas J. Harkins; grand secretary-general, Dr. Claud F. Young. Headquarters: House of the Temple, 1733 16th St. NW, Washington 9, D.C.

Future Farmers of America.—An organization for boys founded in 1928 for the development of rural and agricultural leadership, cooperation, and citizenship. Membership: 383,219 in 50 state and territorial associations. Publications: *Proceedings* of national conventions; *The National Future Farmer* (quarterly). Conventions are held annually at Kansas City, Mo., at the time of the American Royal Livestock Show—1955 meeting, October 10-13. President, William D. Gunter, Jr.; exec. secretary, Dr. A. W. Tenney. Headquarters: Office of Education, Dept. of Health, Education & Welfare, Washington 25, D.C.

Garden Club of America.—Established to stimulate the knowledge and love of gardening among amateurs; to aid in the conservation of natural resources and in the protection of native plants and birds; and to encourage civic planting. Membership: approx. 10,000. Publication: *Bulletin* (bimonthly). The 1956 annual meeting will take place at Colorado Springs, Colo., April 16-19. President, Mrs. Fernando Reid, Jr.; corresponding secretary, Mrs. Charles D. Webster. Headquarters: 15 East 58th St., New York 22, N.Y.

General Federation of Women's Clubs.—Organized to unite women's clubs and like organizations throughout the world for the promotion of education, philanthropy, public welfare, moral values, civics and fine arts. Membership: approx. 11,000,000 in 15,000 state, national, and international clubs and affiliated groups. Publica-

tion: *General Federation Clubwoman*. Activities in 1954-55 included: a campaign for better comics; ridding newsstands of salacious and obscene magazines; eliminating violence, crime and drinking in motion pictures, television and radio; continued efforts to prevent juvenile delinquency; a Community Achievement Contest with prizes totalling \$60,000. The annual convention was held in Philadelphia, Pa., May 24-30, 1955. President, Mrs. Theodore S. Chapman; exec. director, Mrs. Stephen J. Nicholas. Headquarters: 1734 N St. NW, Washington 6, D.C.

Geological Society of America.—Founded in 1888 for the advancement in North America of the science of geology. Membership: 3,948. Endowment: \$4,500,000. Publications: *Bulletin* (monthly); *Proceedings* (annual); *Bibliography of Geology Exclusive of North America* (annual); memoirs, special papers. President, Walter H. Bucher; secretary, H. R. Aldrich. Headquarters: 419 West 117th St., New York 27, N.Y.

Georgia Warm Springs Foundation.—Founded in 1927, it is a nonprofit medical institution for the study and treatment of the after-effects of infantile paralysis. Publications: *Annual Report*; *The Story of the Georgia Warm Springs Foundation*. President, Basil O'Connor; exec. vice president, Henry K. Urien; secretary, William F. Snyder. Headquarters: 120 Broadway, New York 5, N.Y.

Gideons International.—Established to win men and women for the Lord Jesus Christ, through the association of Christian businessmen for service; personal testimony and personal work by individual Gideons; placing the Bible or portions thereof in hotels, hospitals, schools, institutions, and also through the distribution of same for personal use. Membership: 16,000 persons; 785 local associations in U.S. Publication: *The Gideon* (monthly). The Gideons have distributed over 30,000,000 Bibles and Testaments in the United States, Canada, and 71 foreign countries. The 1956 convention is scheduled for July 18-23, at Atlanta, Ga. President, R. R. Lindsey; secretary, W. W. Gothard. Headquarters: 212 E. Superior St., Chicago 11, Ill.

Girl Scouts of the U.S.A.—Chartered by Congress, 1950. Founded in 1912 by Juliette Gordon Low to help girls develop as happy, resourceful individuals willing to share their abilities as citizens in their homes, their communities and the world. One of 35 national organizations comprising the World Association of Girl Guides and Girl Scouts. Program is scaled to three age groups: Brownie Scouts, 7-9; Intermediate Girl Scouts, 10-13; Senior Scouts, 14-17. Membership (1955): 2,580,000. Publications include: *Brownie Scout Handbook*; *Girl Scout Handbook*; *Senior Girl Scouting*; magazines, *The Girl Scout Leader* and *The American Girl*. In 1955, the Girl Scouts began restoration of the birthplace and childhood home of Juliette Gordon Low in Savannah, Ga., as a national Girl Scout center. During the summer of 1955 more than 1,100 teen-age Senior Girl Scouts participated in special regional primitive encampments in preparation for the Girl Scout Senior Roundup to be held in Pontiac, Mich., June 29-July 11, 1956. Under the 1955 Girl Scout international exchange program, 30 U.S. Girl Scouts visited Girl Guides in other countries, and 40 Girl Guides from abroad came to the United States. These exchanges were with Australia, Canada, Chile, Finland, France, Germany, Great Britain, Greece, New Zealand, Peru, and Sweden. An additional 39 U.S. Girl Scouts attended Girl Guide international camps or conferences in Canada, Italy, Norway, Sweden, and Switzerland. Honorary president, Mrs. Dwight D. Eisenhower; national president, Mrs. Roy F. Layton; secretary, Mrs. Charles H. Ridder; national exec. director, Miss Dorothy C. Stratton. Headquarters: 155 East 44th St., New York 17, N.Y.

Good Templars, International Order of. See under *International*.

Grange, National. See under *National*.

Guggenheim Memorial Foundation, John Simon.—Established to promote the advancement and diffusion of knowledge and the appreciation of beauty, by offering Fellowships to further the development of scholars and artists by assisting them to engage in research in any field of knowledge and artistic creation in any of the fine arts, including music. Fellowships are available to citizens of the United States, Canada, all the Latin American republics, the Philippines, and the British Caribbean. Membership: 9. Endowment: \$43,519,000. The foundation awarded 258 fellowships in 1955. President, Mrs. Simon Guggenheim; secretary general, Henry Allen Moe. Headquarters: 551 Fifth Ave., New York 17, N.Y.

Hispanic Society of America.—Founded in 1904 to establish a free public library and museum for the presentation of Hispanic culture from prehistoric times to the present. The collection includes paintings, sculpture, and examples of the various decorative arts, as well as a notable library of more than 100,000 volumes. Chairman of the school committee, Eliot Clark; president of the academy, Lawrence G. White; secretary, Ernest Fiene. Address: 1083 Fifth Ave., New York 28, N.Y.

National Academy of Sciences—National Research Council.—The National Academy of Sciences is a private non-profit corporation chartered by Congress in 1863 for the promotion of science and to investigate, examine, experiment, and report upon any subject of science or the useful arts upon government request. Membership: 550 leading U.S. scientists and 53 foreign associates. The National Research Council was organized by the Academy for the war emergency in 1916 and permanently established in 1918 to stimulate and advise on government and private research through committees, conferences, publications, management of research funds and fellowships, etc. Membership: 243, representing more than 100 scientific societies and certain federal agencies. Nearly 5,000 academic and industrial scientists and engineers serve on Academy-Research Council committees and boards. In 1955 the Academy-Research Council undertook to study the effects of atomic radiation on man, and upon request provided advice to the White House on loyalty in relation to unclassified government research grants and contracts. Academy-Research Council publications: *Proceedings*; *News Report*; various technical reviews and reports. Buildings and general maintenance are financed by a \$5,000,000 endowment given by the Carnegie Corporation of New York in 1919; other costs are supported by government and private funds. President of the Academy, Detlev W. Bronk; exec. officer of the Academy-Research Council, S. D. Cornell. Headquarters: 2101 Constitution Ave. NW, Washington 25, D.C.

National Aeronautic Association.—Organized for the advancement of the art and science of aviation and related subjects and the diffusion of knowledge thereof. Membership: 8,500 regular; 47,000 affiliated. Publication: *National Aeronautics and Flight Plan* (monthly). Activities include promotion of air racing and record attempts, sanction of the National Aircraft show and other events; promotion of model aviation activities. NAA is the U.S. representative of the Federation Aeronautique Internationale, official governing body of sporting aviation throughout the world. The annual national convention was held Oct. 26-28, 1955 in Cleveland, Ohio. President, Thomas G. Lanphier, Jr. Headquarters: 1025 Connecticut Ave. NW, Washington 6, D.C.

National Association for Mental Health, Inc.—A voluntary agency working in cooperation with state and local mental health associations to promote adequate care and treatment of the mentally ill and mentally deficient; the prevention of mental and emotional illnesses; public education, training, and research; and the organization of state and local associations. Affiliated organizations: 350. Publications: *Mental Hygiene* and *Understanding the Child* (quarterlies); *Annual Report*; directory of psychiatric clinics and other resources in the U.S.; materials on mental health and related subjects. Exec. director, Richard P. Swigart; national and international consultant, George S. Stevenson, M.D. Headquarters: 1790 Broadway, New York 19, N.Y.

National Association for the Advancement of Colored People.—Founded in 1909 to safeguard the full political, civil, and legal rights of colored citizens and secure for them equality of opportunity. Membership: 350,000 in 1,235 branches, youth councils, and college chapters. Publication: *Crisis*. President, Arthur B. Spingarn; exec. secretary, Roy Wilkins. Headquarters: 20 West 40th St., New York 18, N.Y.

National Association of Manufacturers.—Established in 1895 to preserve the free competitive enterprise system in the U.S. by stressing the protection of the individual liberty and rights of both employer and employee. Membership: more than 20,000 companies. Publications: *Memo to Members* (biweekly); *Washington Bulletin* and *Review of Legal Developments* (weeklies); pamphlets and economic studies. Its annual Congress of American Industry is held in December. President, Henry G. Riter, 3d; senior vice pres., Kenneth R. Miller; secretary, Thomas M. Brennan. Headquarters: 2 East 48th St., New York 17, N.Y.

National Association of Radio and Television Broadcasters.—Founded in 1922 to foster the development of the art of broadcasting and to encourage practices in the best interest of the public and the radio-television industry. Member stations: 1,862; associates, 128. President and chairman of the board, Harold E. Fellows; secretary-treasurer, C. E. Arney, Jr. Headquarters: 1771 N. St. NW, Washington 6, D.C.

National Association of Social Workers.—A professional membership association founded in 1955 through merger of the American Association of Group Workers, American Association of Medical Social Workers, American Association of Psychiatric Social Workers, American Association of Social Workers, Association for the Study of Community Organization, National Association of School Social Workers, and Social Work Research Group, to advance the quality of social work practice. Membership: 20,000 in 144 chapters. Publication: *Social Work* (quarterly). President, Nathan E. Cohen; exec. secretary, Joseph P. Anderson. Headquarters: One Park Ave., New York 16, N.Y.

National Association of State Libraries.—Organized to develop and increase the usefulness and efficiency of state libraries and other agencies performing state library functions. Membership: 3 association, 166 individual; 57 institutional. Publications: *Proceedings* (annual); *Newsletter* (quarterly). President, Walter T. Brahm; secretary-treasurer, Helene H. Rogers, Illinois State Library, Springfield, Ill.

National Audubon Society.—Founded in 1905 to arouse public understanding of the value and need of conservation of soil, water, plants, and wildlife. Membership: 27,000 adults; 300,000 juniors; approx. 50,000 in branches and affiliates. Endowment: \$2,300,000. Publications: *Audubon Magazine*; *Audubon Field Notes*; *Audubon Junior News*. The Audubon Society of Canada (Toronto) publishes *Canadian Nature*. Headquarters: 1130 Fifth Ave., New York 28, N.Y.

National Catholic Community Service.—Founded in 1940 as the agency designated by the Catholic bishops of the United States to mobilize and coordinate the Catholic resources of the country to assist in serving spiritual, educational, recreational, and welfare needs of the men and women in the armed forces and defense industries, their families, and patients in veterans hospitals. During 1955, it conducted programs in 64 USO and USO-type units located near major military establishments in the United States and overseas, conducted volunteer programs in 171 VA Hospitals and was a participating agency in the United Community Defense Services. Publications: *NCCS News*; *NCCS-VA Hospital News*; *Focus on Faith*; *Greetings*; *Fall In*; *Letters to Servicemen*; etc. The NCCS received funds for its services to the armed forces and defense workers principally from the USO and UCDS, which were financed by the United Defense Fund largely through local Community Chests. Exec. director, Thomas D. Hinton. Headquarters: 1312 Massachusetts Ave. NW, Washington 5, D.C.

National Catholic Rural Life Conference.—Founded to strengthen and develop Catholicity in the rural districts, and to promote the general welfare of the rural population. Diocesan directors, 109. Publication: *Feet in the Furrow*. President, Most Rev. Peter W. Bartholome; exec. director, Rt. Rev. Msgr. L. G. Ligutti; exec. secretary, Rev. Michael P. Dineen. Headquarters: 3801 Grand Ave., Des Moines 12, Iowa.

National Catholic Welfare Conference.—Founded in 1919 to coordinate and organize Catholic activities in the fields of education, social welfare, immigrant aid, youth guidance, etc. Membership: all Catholic archbishops and bishops of the U.S. Publications: *NCWC News Service* for Catholic weeklies; various bulletins and pamphlets. Eighty-two local organizations in major cities of the U.S. distribute educational information obtained from nutrition research carried on in colleges and universities and financed in part by the dairy industry. President, Milton Hunt; secretary, G. L. Ogle. Headquarters: 111 N. Canal St., Chicago 6, Ill.

National Education Association of the U.S.—Dedicated to the upbuilding of democratic civilization and supported by cooperation of teachers of the U.S. to advance the interests of the teaching profession, promote child welfare, and foster education of all people. Membership: 612,716 persons; 30 departments; 66 state and 5,542 local affiliates. Publications: *NEA Journal*; 27 professional magazines; nearly 200 other publications annually. President, John Lester Buford; exec. secretary, William G. Carr. Headquarters: 1201 Sixteenth St. NW, Washington 6, D.C.

National Exchange Club.—Organized in 1911 to educate, improve, and develop the capabilities of the members of the clubs chartered by the Exchange Club, and of the citizens of the communities in which such clubs operate. Membership: 80,000 in 1,500 clubs. President, Harold E. Mott; secretary, Herold M. Harter. Headquarters: 335 Superior St., Toledo 4, Ohio.

National Federation of Business and Professional Women's Clubs, Inc.—Organized with the purpose of improving conditions in all professions and businesses; extending opportunities for women and improving their professional status; preparing members for leadership in their communities, states, and the nation; and advancing women in their respective fields of work. Membership: approx. 165,000; 3,300 clubs. Publication: *Independent Woman* (monthly). President, Marguerite Rawalt. Headquarters: 1790 Broadway, New York 19, N.Y.

National Federation of Music Clubs.—Founded in 1898, to encourage high standards and equalization of opportunity in musical education; make music an integral part of the life of the nation; encourage and advance American creative musical art; promote American artists; and uphold high musical standards. Membership: over 500,000 in approx. 6,500 clubs. Major Publications: *Music Clubs Magazine*; *Junior Keynotes*. In 1955, the organization awarded prizes in composition in its Young Composers Contest and Steinway Centennial Contest; selected three Young Artist winners, a baritone, a pianist and a string quartet, for awards aggregating \$1,000 each or its equivalent; awarded a total of 14 summer scholarships, with State Federations giving many more, and several year-around scholarships, plus a \$500 award for superior musicianship. Also commissioned an orchestral work, "Dance Overture," by Paul Creston, which was world-premiered at its Biennial Convention in Florida in April. Made gifts of instruments and musical equipment to schools, hospitals and other institutions overseas. Staged a Parade of American Music in which more than 5,000 programs of all-American works were presented. President, Mrs. Ronald A. Dougan; exec. director, Helen Havener. Headquarters: 445 West 23d St., New York 11, N.Y.

National Foundation for Infantile Paralysis.—Established to lead, direct, and unify the fight against poliomyelitis. Membership: 3,100 Chapters. Publications: *Annual Report*; *National Foundation News*. Through funds contributed to the annual March of Dimes, the chapters pay for treatment and care of polio victims. National headquarters underwrites programs of research, education, and polio prevention as well as assisting chapters hard pressed for funds. On April 12, 1955, Dr. Thomas Francis Jr. of the University of Michigan reported on the Foundation's field trials of a polio vaccine developed by Dr. Jonas E. Salk of the University of Pittsburgh. The vaccine was found "safe, effective and potent." During the spring vaccine purchased by the Foundation was made available free to all youngsters in the 1st and 2d grades of school

and youngsters who participated in the field trials without getting vaccine. Vaccine was also made available for booster shots to the 440,000 children who got vaccine during the 1954 field trial. Grants and appropriations are made for scholarships and fellowships. President, Basil O'Connor; vice pres. and secretary, William F. Snyder; exec. director, Raymond H. Barrows. Headquarters: 120 Broadway, New York 5, N.Y.

National Gallery of Art.—Noteworthy exhibits in 1955: *Renaissance Prints* by Lucan van Leyden, Marcantonio Raimondi, and Jean Duvet, from the Rosenwald Collection; *Austrian Drawings and Prints*, from the Prado and Lazaro Galdiano museums, Madrid; *American Primitive Paintings*, from the Edgar William and Bernice Chrysler Garbisch Collection; *Miniatures and Prints* from the Rosenwald Collection; *German Drawings—Masterpieces from Five Centuries*. Gifts to the Gallery included the art library of the late Julius Meier-Graefe; portrait by George Romney; portrait by Sir Henry Raeburn; three portraits by Gilbert Stuart, including one of George Washington; *On the Terrace and Fête Champêtre* by Pater; *Portrait de Femme* by Carriera; *Portrait of Thomas Sully* by Rembrandt Peale; 64 contemporary prints given by the people of Germany; 27 prints from Mrs. W. Murray Crane. The Education Department continued its lectures and tours in the Gallery and its distribution of color slides, films, and exhibitions of color reproductions. The Index of American Design, a collection of watercolor renderings of American crafts and folk arts, is available at the Gallery for study, publication, and reproduction purposes. The fourth annual series of A. W. Mellon Lectures in the fine arts was delivered by Dr. Étienne Gilson on *Art and Reality*. The regular series of concerts was held in the East Garden Court throughout the year, and in the spring the Gallery held its 12th American Music Festival. Average daily attendance for the year ended June 30, 1955, was 2,245. Since March 17, 1941, when the Gallery was opened to the public, through June 30, 1955, there have been 23,633,628 visitors. Director, David E. Finley. Address: Constitution Ave. at 6th St., Washington 25, D.C.

National Geographic Society.—See separate article under its own heading.

National Grange.—A rural fraternity founded to improve and strengthen the farm home; advance the welfare of agriculture; support good government at local, state, and national levels; advance the cause of education; work for equity among all groups; and advance the cause of good citizenship. Membership: 860,000 in 7,125 granges. Publication: *The National Grange Monthly*. Master, Herschel D. Newsom; secretary, Harry A. Caton. Headquarters: 744 Jackson Pl., Washington 6, D.C.

National Health Council.—Founded in 1921, it is a membership organization consisting of 50 national organizations concerned with health; voluntary and governmental health agencies, professional societies, and organizations and business groups with strong health interests. They seek, through the Council, to promote better health throughout the nation, improve their own services, encourage the formation and effective operation of state and local health councils, and promote better official community health services. The Council serves as a conference ground for exchange of health information, maintains the National Health Library, and operates common services for member agencies. President, Hugh R. Leavell, M.D.; secretary, James E. Perkins, M.D.; exec. director, Philip E. Ryan. Headquarters: 1790 Broadway, New York 19, N.Y.

National Industrial Conference Board, Inc.—An independent, nonprofit organization, established in 1916, conducting scientific research in the fields of economics, business management, and human relations in order to assist the sound development and effective operation of voluntary productive enterprise in the U.S. and Canada. Membership: more than 3,400 subscribing associates. Publications: *Desk Sheet* (weekly); *Previews*; *Road Maps of Industry* (economic charts); *Economic Almanac* (annual); research reports, chart books, basic industrial data. The 40th annual meeting will be held May 17-18, 1956, New York, N.Y. President, John S. Sinclair; secretary, Herbert S. Briggs. Headquarters: 460 Park Ave., New York 22, N.Y.

National Institute of Arts and Letters.—Founded in 1898 for the furtherance of literature and the fine arts in the United States. Membership: 250 persons. Publications: *Yearbook*, 1955; Catalogues of art and manuscript exhibitions held May 25-June 26, 1955 and "The Great Decade in American Writing," Dec. 3-30, 1954; *Proceedings*, 2d Series, No. 5. On May 25, 1955 a public ceremonial was given jointly with the American Academy of Arts and Letters. New members were inducted, awards made, and 16 arts and letters grants of \$1,000 each were given. On exhibition were the works of newly-elected art members, grantees in art, and the recipient of The Gold Medal for Painting, Edward Hooper; and manuscripts and books by newly-elected literature and music members, grantees in literature, and recipients of the Fellowship of the Academy, Ralph Ellison; The Gold Medal for Essays and Criticism, Edmund Wilson; the Howells Medal for the Novel, Eudora Welty; and the Award of Merit, Jorge Guillén. The annual meeting was held on Jan. 16, 1955. President, Marc Connelly; secretary, Louis Kronenberger. Headquarters: 633 West 155th St., New York 32, N.Y.

National Institute of Social Sciences.—Founded to promote the study of the social sciences and research therein, and to reward distinguished services rendered to humanity, either by election to membership, or by bestowal of its honor medals or other insignia. Membership: limited to 600, excluding honorary memberships. President, Walter Hoving; secretary, Rosina Hahn. Headquarters: 271 Madison Ave., New York 16, N.Y.

National Jewish Welfare Board.—The national association of more than 350 Jewish Community Centers and YM-YWHAs with a combined membership of 550,000 and the American member of the World Federation of YMHAs and Jewish Community Centers. As the government-authorized agency for serving the religious, welfare and morale needs of Jewish personnel in the U.S. armed forces, JWB maintains 350 full- and part-time chaplains at home and abroad, a field staff of trained workers, and 265 local Armed Services Committees. Aggregate annual budgets of Centers affiliated with JWB total some \$15,000,000. Combined cost of Center buildings has reached \$75,000,000. In 1955 the Board continued to sponsor the Jewish Book Council, Jewish Music Council, the National Jewish Youth Conference and Jewish Center Lecture Bureau, and was actively involved in the development of Center facilities in Europe, Israel, and Latin America. President, Charles Aaron; exec. vice pres., Samuel D. Gershovitz; secretary, Alan J. Altheimer. Headquarters: 145 East 32d St., New York 16, N.Y.

National Kindergarten Association.—Purpose: to increase the number of kindergartens throughout the United States (preferably in the public schools), always under the direction of graduates of kindergarten training courses in accredited institutions. Since the Association was founded in 1909, almost 1,800,000 children have been enrolled in kindergartens through its efforts. Promotion materials (leaflets, a film, petition headings, etc.) and step-by-step advice on opening kindergartens are furnished without charge on request. President, Dr. Howard R. Best; exec. secretary, Mrs. Creighton Peet. Headquarters: 8 West 40th St., New York 18, N.Y.

National Music Council.—Organized in 1940 to provide a forum for exchange of information and the discussion of national musical problems; to coordinate efforts of its member organizations; and to encourage the development and appreciation of music. Membership: over 800,000 in 45 musical organizations. Publication: *Bulletin* (3 issues yearly). President, Howard Hanson; exec. secretary, Edwin Hughes. Address: 117 East 79th St., New York 21, N.Y.

National Recreation Association.—A national, nonprofit service agency established in 1906 to promote widespread recreation activities for young and old. It maintains an International Recreation Service to help individuals and groups outside the U.S. Membership: 1,289 affiliate, 2,984 active associate, and 12,500 contributing members. Endowment: \$457,296.24. Chairman, Otto T. Mallory; exec. director, Joseph Prendergast. Headquarters: 8 West 8th St., New York 11, N.Y.

National Research Council.—See above, *National Academy of Sciences*.

National Research Council of Canada.—Its principal occupation is with industrial and scientific research affecting the expansion of Canadian industries or the utilization of Canadian natural resources. Annual budget: approx. \$16,000,000. Publications: *Canadian Journal of Biochemistry and Physiology*, of Botany, of Chemistry, of Microbiology, of Physics, of Technology, of Zoology; *Annual Report*; *NRC Review*; *NRC Research News* (monthly); *List of Publications*, 1918-1952 (3d ed. and supplements). In 1955-56 grants included 30 medical and some 80 National Research Laboratories postdoctorate fellowships; 267 scholarships for graduate work in the natural sciences; and about \$2.5 million to assist graduate work in science departments of Canadian universities. President, E. W. R. Steacie; secretary, S. P. Eagleson. Headquarters: National Research Bldg., Sussex St., Ottawa, Ont.

National Safety Council.—A nonprofit, non-political organization founded in 1913 to reduce the number and severity of all kinds of accidents. It serves as a clearing house for information on causes and prevention of accidents. Membership: over 11,000 organizations. Publications: *National Safety News*; *Public Safety*; *The Industrial Supervisor*; *Safety Education*; *Safe Worker*; *Safe Driver*; *Safe Railroad*; *Safe Builder*; *Home Safety Review*; *Farm Safety Review*. President, Ned H. Dearborn; secretary, R. L. Forney. 425 N. Michigan Ave., Chicago 11, Ill.

National Sculpture Society.—Founded in 1893 to spread the knowledge of good sculpture, encourage its production for museums and the household, promote the decoration of public buildings, squares, and parks with sculpture of high quality, and improve its use as applied to industry. The society holds an annual competition and exhibition of bas-reliefs, sponsors various other exhibitions, and carries on an educational program through endowments and gifts. Awards: Lindsey Morris Memorial prize; Mrs. Louis Bennett prize; Herbert Adams Memorial Medal. Membership: approx. 500. Publications: *National Sculpture Review* (quarterly); *Year Book* (for members); *Red Book of Classified Sculptural Services and Supplies*. President, Leo Friedlander; secretary, Adolph Block.

SOCIETIES AND ORGANIZATIONS

Headquarters: 1083 Fifth Ave., New York 28, N.Y.

National Society for Crippled Children and Adults, Inc.—Organized in 1921 to help the crippled through programs of care and treatment; rehabilitation; research into causes, prevention, and improved treatment; and education of the public. Membership: 52 state and territorial societies; 1,600 local societies. Publications: *Crippled Child Magazine* (bimonthly); *Bulletin of the National Society and Bulletin on Current Literature* (monthly); various pamphlets and reprints. During 1955, in addition to maintaining its regular facilities, the Society awarded 40 scholarship and fellowship grants for graduate and undergraduate therapy training. The 1955 convention was held in Chicago, Ill., Nov. 28–30. President, Edgar Kobak; secretary, Lawrence J. Linck. Headquarters: 11 S. LaSalle St., Chicago 3, Ill.

National Society of Professional Engineers.—Organized in 1934 to advance the public welfare and to promote the professional, social, and economic interest of the professional engineer. Membership: 36,000 persons; 39 state societies; 350 local chapters. Publications: *American Engineer* (monthly); *Executive Research Survey Reports*. President, A. C. Neff; secretary, Paul H. Robbins. Headquarters: 1121–15th St. NW, Washington 5, D.C.

National Travelers Aid Association.—Founded in 1917 to promote means of cooperation and improve standards of Travelers Aid service; to study causes of migration and to encourage public understanding of moving people. It provides consultant and advisory service to local Travelers Aid Societies; distributes information regarding migration; and conducts regional conferences, institutes, and training courses. Operating members, 104 Travelers Aid Societies; cooperating members, 1,043 organizations and individuals in the United States and foreign countries on call where no regular Travelers Aid Society exists. The association is a member agency of USO and of United Community Defense Services. Publication: *Shifting Scenes*. President, Robert W. Budd; secretary, Mrs. H. W. Ruggles, Jr.; gen. director, Laurin Hyde. Headquarters: 425 Fourth Ave., New York 16, N.Y.

National Tuberculosis Association.—Organized to study tuberculosis in all its forms; to disseminate knowledge concerning the causes, treatment, and prevention of tuberculosis and of related health problems; to stimulate, unify, and standardize the work of its affiliated associations; to cooperate with other organizations interested in tuberculosis and related health problems, and to promote international relations in connection with the study and control of the disease. Membership: 5,565; approx. 3,000 affiliated organizations. Publications: *American Review of Tuberculosis*; *Bulletin*; *Tuberculosis Abstracts* (all monthly); numerous books and pamphlets. For the fiscal year 1955–56, the association made 40 grants for medical research. Twenty-six medical research and medical education fellowships were awarded. In addition, scholarships were awarded for postgraduate work in public health, health administration, and rehabilitation. Postgraduate courses in tuberculosis were conducted for physicians. The 1955 annual meeting was held in Milwaukee, Wis., May 22–27, 1955. President, Edward T. Fagan; secretary, Mrs. Morrell De Reign. Headquarters: 1790 Broadway, New York 19, New York.

National Urban League.—Founded in 1910 “for social work among Negroes” and dedicated to improving, through interracial leadership, the living and working conditions of Negroes and the extent of cooperation and understanding between the races throughout the United States. Membership: 62 local Urban Leagues in 30 states with total membership of 50,000 persons, of whom approximately 3,500 serve on interracial boards and committees. President, Robert W. Dowling; secretary, Mollie Moon; exec. director, Lester B. Granger. Headquarters: 1133 Broadway, New York 10, N.Y.

National Woman's Christian Temperance Union.—Organized in 1874 to build public sentiment for total abstinence through teaching the effects of beverage alcohol on the mental, moral, social, spiritual, and physical well-being of the individual and the nation, promoted by an alcohol education program through the two branches, “The Youth Temperance Council” and “The Loyal Temperance Legion”; the 22 departments; and 4 bureaus: legislation, publicity, facts and news service, and narcotics. Membership: approx. 400,000 in U.S.; World's WCTU organized in 65 countries. Publications: *The Union Signal* (seminthly); *The Young Crusader* (monthly for children). President, Mrs. Glenn G. Hays; corresp. secretary, Mrs. H. E. Mielke. Headquarters: 1730 Chicago Ave., Evanston, Ill.

Near East Foundation.—Supported by about 40,000 contributors, and organized to cooperate with governments, municipalities, societies, and individuals in the care and instruction of children, and in the promotion, maintenance, and support of community activities in the Near East and in countries adjacent thereto, and to provide relief and assist in the repatriation and rehabilitation of suffering and dependent peoples of these areas. The foundation's program reaches more than 100,000 people in Greece, Syria, Iran, Afghanistan, and Jordan. Chairman, Cleveland E. Dodge; president, John S. Badeau; exec. director, E. C. Miller. Headquarters: 54 East 64th St., New York 21, N.Y.

New York Academy of Medicine.—Its purpose is the advancement of the science and art of medicine, and the promotion of public health and medical education. A public medical library is maintained. Membership: 2,000. Endowment: \$6,000,000. Publications (1955): *Academy Bulletin*; *The Academy Bookman*; *Society & Medicine*; *Laity Lectures XVII*; *Better Health Through Better Living*; *Perinatal Mortality in New York City*. President, Dr. Edward J. Donovan; secretary, Dr. Frederick H. Wilke. Headquarters: 2 East 103d St., New York 29, N.Y.

New-York Historical Society.—Founded in 1804, it is the second oldest historical society in the United States. It comprises a 400,000 volume reference library and a museum of American history, particularly that of the city and state of New York. Membership: 700. Publications (1955): *The New-York Historical Society Quarterly*; *Esra Ames of Albany: Portrait Painter, Craftsman, Royal Arch Mason, Banker, 1768–1836. And a Catalogue of His Works*, by T. Bolton and I. F. Cortelyou. Special exhibitions in 1955 were: The New York “El”; The Livingston Gift; The Bequest of Waldron Phoenix Belknap, Jr.; American Glass; Fort Ticonderoga Bicentennial; The Arnold Shirliffe Menu Collection; and Paintings by Esra Ames. Accessions included oil portraits of Mr. and Mrs. Cassius Hunt by Joseph Badger, Mr. and Mrs. Eleazer Burnham by Esra Ames, 1826. Daniel D. Tomkins by John W. Jarvis; copy of the Elephant Folio Edition of Audubon's *Birds of America*, 1826–1836, the original watercolors for which have long been a treasure of the Society; a plaster bust of Mrs. John Rogers, Sr. by John Rogers, her son; a collection of 10,000 manuscripts of New York Provincial officials and of members of the Stuyvesant family; and a collection of over 10,000 hotel and restaurant menus covering the last 150 years. Three film series and a concerts series were given, group tours and school programs were presented, a lecture series was given and a course on methods and resources of American historical societies was given in cooperation with Columbia University. Director, Dr. R. W. G. Vail. Address: 170 Central Park West, New York 24, N.Y.

Parents and Teachers, National Congress of.—See under National.

Photographic Society of America.—Founded in 1934 for the promotion of the art and science of photography. Membership: over 10,000 members and over 1,100 camera clubs; 350 or more clubs affiliated through 12 camera club councils; about 250 additional miscellaneous members included in a list of firms, libraries, laboratories, and government bodies. Publications: *PSA Journal*; various news bulletins. Exec. secretary, Randolph Wright, Jr. Headquarters: 2005 Walnut St., Philadelphia 3, Pa.

Planned Parenthood Federation of America.—Founded in 1921 as the American Birth Control League to strengthen maternal and infant health through providing and spreading knowledge about conception control under medical auspices. In 1941 its name was changed to better express an expanded program of family planning, treatment for infertility, education for marriage and parenthood, and research in the field of human reproduction. Membership: 112 organizations. Publications: *Planned Parenthood News*; various pamphlets. The Robert L. Dickinson Research Memorial aims to improve present contraceptive techniques, develop new simple, inexpensive, and safe methods that can be used in underprivileged and overpopulated world areas, and to investigate infertility and sterility problems. Federation affiliates conducted 157 of the country's 546 birth control clinics and 91 of the 217 infertility clinics. National director, William Vogt. Headquarters: 501 Madison Ave., New York 22, N.Y.

Red Cross, American National.—See separate article under its own heading.

Rockefeller Foundation.—Founded in 1913 to promote the well-being of mankind through the advancement and the effective application of knowledge to human interests in specific fields of medical education and public health, biological and medical research, agriculture, the social sciences, and the humanities. Uncommitted assets (market value on Dec. 31, 1954): \$447,686,573. Publications: *President's Review*; *Annual Report*; *Rockefeller Foundation Grants* (quarterly). In 1955 appropriations in medical education and public health were concerned chiefly with professional education, medical care, and the development of the health sciences. In biological and medical research emphasis was on experimental biology and the investigation and control of specific diseases and deficiencies. In agriculture the major interests were in research and demonstration programs in Latin America, and in research on the basic sciences which underlie agriculture. The social sciences were concerned with projects contributing to the understanding of international relations, human behavior and interpersonal and intergroup relations, and the functioning and management of the economy; and to the development of moral and social philosophy and of social science personnel. Projects aided in the humanities were in the general fields of intercultural understanding, humane values, literature, and the arts. President, Dean Rusk; secretary, Flora M. Rhind; treasurer, Edward Robinson. Headquarters: 49 West 49th St., New York 20, N.Y.

Rotary International.—Worldwide organization of all

Rotary Clubs; a world fellowship of business and professional executives to further thoughtfulness of and helpfulness to others in business and community life and to promote international understanding. Membership: 8,900 Clubs in 92 countries and geographical regions; 420,000 Rotarians. Foreign offices are located in London, England, and in Zurich, Switzerland. Publications: *The Rotarian*; *Revista Rotaria* (in Spanish). Since 1947, Rotary Foundation Fellowships have been awarded to 708 outstanding graduate students from 57 countries for one year of study in a country other than their own. Total grants awarded during the nine-year period amount to more than \$1,750,000. The 46th annual convention was held in Chicago, Ill., in May, 1955. President, A. Z. Baker; secretary, George R. Means. Headquarters: 1600 Ridge Ave., Evanston, Ill.

Rural Sociological Society.—See article, SOCIOLOGY.
Russell Sage Foundation.—Established by Mrs. Russell Sage in 1907 for improvement of social and living conditions in the U.S.; now devoted primarily to a research and consultation program designed to increase the utilization of social science principles in various fields of social practice. A 12-member board of trustees handles administration. Principal (Sept. 30, 1955): \$21,100,000 (market value). Publications (1955): *Morbidity in the Municipal Hospitals of the City of New York*, M. Fraenkel and C. L. Erhardt; *Studying Your Community*, R. L. Warren; *The Estimation of Population Changes for New York City*, H. G. Brunsman; *Health, Culture, and Community*, B. D. Paul, Ed.; *From Custodial to Therapeutic Patient Care in Mental Hospitals*, M. Greenblatt, R. H. York and E. L. Brown; *Annual Report 1954-55*. Chairman of the Board, Eli Whitney Debevoise; president, Donald Young; treasurer, Dave H. Morris, Jr.; secretary, Ralph G. Hurlin. Headquarters: 505 Park Ave., New York 22, N.Y.

Scottish Rite Masonry.—See above, Freemasonry.
Seeing Eye, Inc., The.—Founded in 1929 to train dogs as guides for blind persons; to teach instructors how to train the dogs; and to teach blind persons how to use the dog guides. Membership: 21,000. President, Henry A. Colgate; exec. vice president, George Wertz, Jr. Headquarters: Morristown, N.J.

Sloan Foundation, Alfred P.—Established in 1934, the Foundation originally made grants-in-aid for projects in economic education to fully accredited educational institutions. More recently, it has developed significant programs for giving financial assistance to cancer research, scientific research and research in ophthalmology. Fund reserves: \$53,720,104. During its entire existence, up to the end of 1954, the Foundation had made grants totaling \$27,368,330. Exec. director, Arnold J. Zurcher; vice president, Raymond P. Sloan; secretary-treasurer, James F. Kenney. Headquarters: 30 Rockefeller Plaza, New York 20, N.Y.

Sloan-Kettering Institute for Cancer Research.—Founded in 1945 as a division of Memorial Center for Cancer and Allied Diseases, for the purpose of engaging in cancer research. A gift of \$2,400,000 for construction, and originally a \$200,000 annual operating gift for ten years (now \$400,000 pledged for a five year period) was made by the Alfred P. Sloan Foundation. Research is also supported by contributions from the public and by the Institutes of Health of the U.S. Public Health Service; the American Cancer Society and its affiliate, the New York City Cancer Committee; the Atomic Energy Commission; the Damon Runyon Memorial Fund; and the Department of the Army. Control and management is vested in a board of 21 trustees. Director, C. F. Rhoads, M.D.; chairman of the board, Alfred P. Sloan, Jr.; president, Frank A. Howard; secretary, Edward C. Delafield. Headquarters: 410 East 68th St., New York 21, N.Y.

Smithsonian Institution.—See separate article under its own heading.

Social Science Research Council.—Its purpose is to advance knowledge concerning human relations through the development of research in the social sciences. Membership: 30 members of the board of directors, of whom 21 are designated by 7 national social science organizations and 9 are elected as directors-at-large. In 1954-55, the council awarded 18 faculty research fellowships; 38 grants-in-aid for research; 29 research training fellowships; 19 first-year graduate study fellowships; and 56 undergraduate research stipends. President, Pendleton Herring; vice president, Paul Webbink. Headquarters: 230 Park Ave., New York 17, N.Y.

Society for the Study of Social Problems.—See article, SOCIOLOGY.

Society of American Bacteriologists.—Organized to promote the advancement of bacteriology. Membership: 5,000. Publications: *Journal of Bacteriology*; *Bacteriological Reviews*; *Applied Microbiology*; *Bacteriological Proceedings*; *Alice in Viruland*. The annual meeting was held in New York, N.Y., May 8-12, 1955. President, H. Orin Halvorson; secretary-treasurer, John H. Bailey. Headquarters: Mr. Francis C. Harwood, Bus. Mgr., Mt. Royal & Guilford Aves., Baltimore 2, Md. (See article, BACTERIOLOGY.)

Sodality of Our Lady.—Formed to give Catholics an opportunity to follow Christ more closely within their own state of life by following a permanent rule and way

of life through the motivating force of love of the Blessed Virgin Mother. Membership: 18,014 organizations. Publications: *Action Now*, *Queen's Work*, *Direction*, and *Junior Sodalist* (monthlies); *Children's Moderator* (bi-monthly). In 1955 the diocesan sodality directors held their annual meeting in St. Louis in January, and Summer School of Catholic Action courses were held in 7 cities. National promoter, Rev. R. L. Rooney, S.J. Headquarters: 3115 S. Grand Blvd., St. Louis 18, Mo.

Special Libraries Association.—Formed in 1909 by librarians of business, professional, governmental, and industrial organizations to promote the collection, organization, and dissemination of information in specialized fields and to improve the usefulness of special libraries and information services. Its program includes an annual convention, consultant services, and a placement service for members and employers. Membership: approx. 5,000. Publications: periodicals, *Special Libraries*, *Technical Book Review Index*, pamphlets, *Indexing—with Emphasis on Its Techniques*, *Libraries for Research and Industry—Planning and Equipment*, *Bibliography of Engineering and Abstracting Services*. The International Relations Committee issues a news bulletin to library interests throughout the world. The SLA professional award for 1955 was presented to Dr. Jolan M. Fertig, librarian of Westinghouse Electric Corp., East Pittsburgh, Pa. President, Chester M. Lewis; exec. secretary, Marian E. Lucius. Headquarters: 31 East 10th St., New York 3, N.Y.

Synagogue Council of America.—The spokesman agency for religious American Jewry made up of the Rabbinical Council of America, the Rabbinical Assembly of America, the Central Conference of American Rabbis, the Union of Orthodox Jewish Congregations in America, and the Union of American Hebrew Congregations. The council represents its constituencies before U.S., U.N., and UNESCO agencies, and cooperates with the Protestant and Catholic denominations. President, Dr. Abraham J. Feldman; exec. director, Marc H. Tanenbaum. Headquarters: 110 West 42 St., New York 36, N.Y.

Town Hall, Inc., The.—A nonprofit educational institution founded as The League for Political Education. Activities include the morning lecture series, concerts, short courses for adults, and the radio program, *America's Town Meeting of the Air*. Exec. director, Thurston J. Davies. Headquarters: 123 West 43rd St., New York 36, N.Y.

Travelers Aid Association, National.—See under National.

Twentieth Century Fund.—An endowed foundation for research and public education on economic and social issues and problems. Assets (Dec. 31, 1954): \$12,134,162. Reports issued in 1955: *America's Needs and Resources—A New Survey*; *Approaches to Economic Development*; *Economic Needs of Older People*; *American Imports*; *World Commerce and Governments*. Studies in progress pertaining to the United States economy include: the effects of technological changes; antitrust policies and enforcement; the influence of military considerations on national policy; recent agricultural policies and programs; and distribution costs and methods. In the field of international relations, the Fund is conducting a broad survey of economic, social and political conditions in tropical Africa. Exec. director, J. Frederic Dewhurst. Headquarters: 330 West 42d St., New York 36, N.Y.

United Service Organizations, Inc.—The purpose of the USO is to serve the religious, spiritual, social, welfare and educational needs of service men and women. Its member agencies are the Young Men's Christian Associations, the National Catholic Community Service, the National Jewish Welfare Board, the Young Women's Christian Association, The Salvation Army, the National Travelers Aid Association, and Camp Shows, Inc. USO is financed by the voluntary contributions of the American public. In 1955 there were 208 USO service units operating from the Mediterranean to Tokyo and from the Panama Canal to Alaska. In a typical month service men and women make more than 4,000,000 visits to these units. USO Camp Shows also bring professional entertainment to armed forces personnel at military bases and in hospitals overseas and at isolated outposts in this country. Chairman, Harvey S. Firestone, Jr.; president, Emil Schram; secretary, Mrs. William Spencer Bowen; exec. director, Edwin E. Bond. Headquarters: 500 Fifth Ave., New York 36, N.Y.

United States Junior Chamber of Commerce.—A nonprofit corporation organized for educational and charitable purposes and designed to inculcate in the individual members a spirit of genuine Americanism and civic interest, and as a supplemental educational institution to provide them with opportunity for personal development and achievement and an avenue for intelligent participation for young men in the affairs of their community, state and nation, and to develop true friendship and understanding among young men of all nations. Membership: 200,000 in 3,000 organizations. Publications: *Future*; *Action* (monthlies). The 1955 national convention was held in Atlanta, Ga., June 21-23. President, Hugh F. McKenna; exec. vice pres., Roland T. Tibbetts. Headquarters: 21st and Main St., Tulsa, Okla.

United World Federalists, Inc.—An organization call-

ing for the support and strengthening of the United Nations and such amendments to its Charter as will strengthen it into a world federation having powers limited to the prevention of aggression and the control of armaments. Membership: 23,534. Publications: *The Federalist* (periodical); *UWF, What, Who, Why*. A general assembly was held in New York, N.Y., May 20-22, 1955. Hon. president, Norman Cousins; president, C. M. Stanley; exec. director, Helen A. Shuford. Headquarters: 49 West 32d St., New York 1, N.Y.

Veterans of Foreign Wars of the United States.—Founded in 1899; chartered by the U.S. Congress in 1936. A fraternal, patriotic, historical, and educational organization active in promoting Americanism and civic improvement and in supporting legislation benefiting disabled veterans and national security. Membership: 1,200,000 active. Publication: *VFW Magazine*. The 1955 national encampment was held in Boston, Mass. Commander-in-chief, Timothy J. Murphy; adjutant general, Julian Dickenson. Headquarters: V.F.W. Bldg., Broadway at 34th St., Kansas City 11, Mo.

Whitney Foundation, The Helen Hay.—Established to promote basic research in rheumatic fever and rheumatic heart disease. The Foundation provides grants to individuals for research, study, and fellowships; maintenance of a clearinghouse of information concerning rheumatic fever facilities, program activities, and research in the United States and Territories, as a service to workers in the field. Assets for fiscal year ended Dec. 31, 1954, \$6,339,673.52. Grants paid out of current or accumulated income during same fiscal year, \$215,178.85. President, Mrs. Charles S. Payson; secretary-treasurer, Mr. Frederick K. Trask, Jr.; exec. secretary, Miss Dora E. Young. Address: 525 E. 68th St., New York 21, N.Y.

Woman's Christian Temperance Union, National.—See under *National*.

Women's Clubs, General Federation of.—See under *General*.

Woodrow Wilson Foundation.—Created in 1922, with an endowment of \$820,000, to further the Wilsonian concept of international organization and world cooperation. In 1950, the foundation inaugurated a long-term study of the structure and practices of the federal government in interrelated domestic and international affairs. Two publications have resulted: *U.S. Foreign Policy: Its Organization and Control* and *The Political Economy of American Foreign Policy*. President, August Heckscher, exec. director, Julie d'Estournelles. Headquarters: Woodrow Wilson House, 45 East 65th St., New York 21, N.Y.

World Council of Churches.—Official instrument of 164 denominations representing all major branches of the Reformation, the Old Catholics, the Eastern Orthodox, and other ancient Eastern churches, in 47 countries, carrying on responsibilities which call for united action. Membership represents over 160,000,000 persons. Work of the Council is carried on through three main divisions: Study; Ecumenical Action; and Interchurch Aid and Service to Refugees. Contact with the United Nations is maintained through the Commission of the Churches on International Affairs. Assemblies are held every six years (Evanston, Ill., 1954). In the interim, the Council is governed by a Central Committee of 90 members which meets yearly. Dr. Franklin Clark Fry (USA) is chairman. Publications: *Ecumenical Press Service* (weekly); *Ecumenical Review* (quarterly); *Ecumenical Courier* (bimonthly). Presiding officers of the Council are six presidents: Bishop Otto Dibelius (Germany); Principal John Baillie (Scotland); Rt. Rev. Henry Knox Sherrill (USA); Bishop S. U. Barbieri (South America); Metropolitan Juhanon (India); Archbishop Michael (Greek Orthodox). General secretary, Dr. W. A. Visser't Hooft. Headquarters: 17, Route de Malagnon, Geneva, Switzerland. Exec. head, New York Office, Dr. Samuel McCrea Cavert. Address: 156 Fifth Ave., New York 10, N.Y.

Young Men's Christian Associations, National Council of the.—See under *National*.

Young Women's Christian Association of the USA.—An organization endeavoring to improve the mental and physical well-being of women and girls and to encourage their spiritual growth in keeping with Christian traditions. Any girl over 12 may join, regardless of race, creed, or national origin. Membership: more than 3,000,000 in 438 community associations, 641 student groups, and in 1,550 rural and municipal units. The executive body is the National Board, which recommends program standards and directs regional staff in the 4 community and 9 student regions. As a member of the World's YWCA, the National Board is allied with YWCA work in 64 other lands. Publications: *The YWCA Magazine*; *National YWCA Bulletin*; *The Bookshelf*. Key events in 1955 included the Centennial Celebration, and the 20th national triennial convention, April 21-27, New York, N.Y. President, Miss Lilace Reid Barnes; general secretary, Mrs. Savilla Mills Simons. Headquarters: 600 Lexington Ave., New York 22, N.Y.

Zionist Organization of America.—Founded in 1897, its present purpose is the building of Israel and the promotion of interests of the Jewish renaissance. Membership: 250,000 persons in 900 units. Publications: *American Zionist*; *The Organization Letter*; *Dos Yiddishe Folk*. The

ZOA House is maintained in Israel to cement American-Israeli relations. In 1955, the organization founded and opened Kfar Silver Agricultural School in Israel, established an Israel Tourist Department, and embarked on a Shekel Campaign. The national convention was held in Washington, D.C., in June 1955. President, Mortimer May; secretary, Sidney Marks. Headquarters: 145 East 32d St., New York 16, N.Y.

Zonta International.—Organized in 1919 to improve legal, political, economic, and professional status of women; encourage high ethical standards in business and the professions; and work toward peace and understanding through a world fellowship of executive women in business and the professions. Membership: approx. 11,500 in 320 clubs in 13 countries. Publication: *The Zontian*. During 1955 the clubs supported vocational guidance projects, student scholarships and loans, and camp scholarships; and gave aid to the aged and to children's hospitals and recreation centers. Annual \$1,200 scholarships to graduate women students in the field of aeronautics, established in memory of Amelia Earhart, former Zontian, were awarded in 1955 to Miss Daria Domenighetti, Milano, Italy, and to Mrs. Selma Caroline Swift Teichmann, Los Angeles, Calif. International president, Dr. Dorothea Radusch; exec. secretary, Miss Ellen Firewood. Headquarters: 59 E. Van Buren St. Chicago 5, Ill.

SOCIOLOGY. During 1955, sociology made important strides in perfecting its research techniques and in conducting important studies in such fields as small groups, industrial relations, race and ethnic relations, and world affairs.

Research.—The advance in perfecting research methods is illustrated in the article, "An Outline of Some New Methodology for Social Research," by Louis Guttman (*Public Opinion Quarterly*, Winter 1954-55), in which several specialized techniques are presented.

In a re-examination of the participant observer method of social research, A. J. Vidich (*American Journal of Sociology*, January 1955) summarized the following weaknesses: (1) the images that the observed persons have of the observer may have a decisive influence on the nature of the data that are collected; (2) the responses of the observed person will change as the role of the observer changes; (3) the observer has difficulty in according the correct meanings to the actions of the observed; and (4) validating the results of participant observations is still a problem.

In the presidential address given at the 1955 meeting of the Pacific Sociological Society in April at Santa Barbara, Calif., Charles B. Spaulding pointed out the weakness now evident in carrying out large numbers of fragments of social research on aspects of human relations. He claimed that comparing social research fragments is not enough and urged that microscopic pieces of research should be supplemented by studies of the large frameworks of social life, such as the evolution of human society, the social systems, and human relations as a whole (*Research Studies*, State College of Washington, Pullman, June 1955).

Small Groups.—An outstanding monograph on small group research was published as the December 1954 issue of the *American Sociological Review*. It contained 15 articles by 23 writers on three-person groups, conformity to group norms, reactions to small group pressures, interpersonal orientations in small groups, planning a laboratory for the direct observations of human behavior, and other aspects.

Industrial Relations.—In this field, Melville Dalton (*Social Forces*, March 1955) calls attention to the "changing accommodations" that are taking place among personnel, arising out of the interplay of three motivations: "top managerial expectations, career incentives, and personal antipathies." The role of mediation in industrial conflict is analyzed by Clark Kerr in terms of tactical mediation and strategical mediation. He

points out that in the long run the latter is more important, for it can help to bring about an integration of worker and management interests, to establish new and fairer rules of the industrial game, and to increase industrial stability (*American Journal of Sociology*, November 1954).

Race and Ethnic Relations.—Sociologists are studying the nature and problems of desegregation and integration of racial and cultural groups, particularly of whites and Negroes in the public schools. A Southern sociologist has reported that in all Southern states except five, higher education is to some extent integrated, and that over 1,000 Negro students are attending more than 100 former all-white public and private colleges.

In the January 1955 issue of *Social Problems* a report is given, showing that the removal by college fraternities of discriminatory membership provisions, or the established absence of them "does not necessarily mean" that fraternities "do not indulge in discriminatory practices." The large role of these organizations in "the rating, dating, and mating of college students" is judged to be a major hindrance to integration.

World Urbanism.—A new sociological concept, world urbanism, is given currency in nine articles in the March 1955 issue of the *American Journal of Sociology*. The editor of this issue, Philip M. Hauser, states that the urban way of life appears to be on the way to dominate the rural areas and ultimately the world. The trend is also evident in hitherto remote areas of the world, such as Iceland. An article on "Social Change in Iceland" in the November–December 1955, issue of *Sociology and Social Research* shows that in 1900 only 20 per cent of the people in Iceland lived in villages, towns, and cities, whereas in 1952 the percentage had reached 80.

Sociological Societies.—The American Sociological Society held its annual meeting Aug. 31–Sept. 2, 1955, in Washington, D.C. In his presidential address on "Sociology and the Practicing Professions," Donald Young pointed out that sociologists need to take advantage of the opportunities "available to them through collaboration with the practicing professions," such as social work, law, public health, and medicine. More case studies "of sociology in application" are needed. It is "reasonable to expect" the establishment of "special graduate curricula to train sociologists for research in the applied fields for which sociology has the most relevance." In line with this emphasis the American Sociological Society (with the Russell Sage Foundation) was publishing in 1955 three bulletins on sociology and medicine, sociology and mental health, and sociology and correction.

Meetings were held on 30 different subjects, which included such newer themes as: social research with reference to defense, changing status of husband and father, sociology of the professions, and the interdisciplinary social science course.

Beginning with the first issue of 1956, the American Sociological Society is taking over the publication of *Sociometry* (founded in 1937 by J. L. Moreno), with the significant subtitle, *A Journal of Research in Social Psychology*.

The Rural Sociological Society held its 1955 annual meeting at the University of Maryland, August 29–30. Its president, William H. Sewell, gave the annual address on "Some Observations on Theory Testing." Among the subjects of section meetings were: rural-urban migration, technological change in rural society, application of

research findings, and research on peasant societies.

The Society for the Study of Social Problems held its fifth annual meeting in Washington, D.C., Aug. 30–Sept. 2, 1955, and was addressed by its president, Herbert Blumer, on the theme, "Attitudes and the Social Art."

The International Sociological Association (headquarters, London, England) announced that a Third World Congress of Sociology is scheduled to be held in Amsterdam, Aug. 22–29, 1956, on the theme, Problems of Social Change in the Twentieth Century.

Dissertations and Theses.—A total of 75 departments of sociology in the United States and Canada conferred 173 doctoral degrees and 286 master's degrees in 1954, according to the *American Journal of Sociology*.

SOIL CONSERVATION. An outstanding feature of the United States soil and water conservation program during 1955 was the intensification of effort at all levels—national, state and local—to improve and expand facilities. During 1955, 20 state legislatures passed 37 new or amendatory laws relating to this program. To a large extent, the new legislation reflected an effort to provide authority needed by groups and organizations within the states in initiating and carrying out conservation work on a watershed basis and in cooperation with the U.S. Department of Agriculture.

The new legislation by the states followed passage of the Watershed Protection and Flood Prevention Act (Public Law 566) by the U.S. Congress in August 1954. By Oct. 1, 1955, 394 watershed protection and flood control groups had been organized in 41 states. Programs had been authorized on 103 projects, and planning parties composed of specialists in watershed problems had been assigned by the Soil Conservation Service to assist people with technical phases of their programs. Accomplishments during 1955, the first year of the watershed protection and flood control program, included completion of 1,044 stabilization and sediment control structures, 129 floodwater retarding structures, 38 silt and debris basins, revegetation on 28,000 acres, 165 miles of grassed waterways, and 211 miles of channel stabilization.

During the year, 56 new soil conservation districts were organized by farmers and ranchers, making a total of 2,674 such districts in the United States. Eighteen states and Puerto Rico and the Virgin Islands were completely covered by the districts. Fifteen districts in Hawaii and nine in Alaska had been organized. All the districts covered approximately 1,485 million acres and included 4,884,490 farms and ranches.

Nearly 1,553,000 farmers and ranchers within the districts had adopted soil and water conservation as a system for using their land. Two thirds of this number had complete conservation plans for their farms or ranches covering about 287 million acres. Most of them had reached or were approaching the advanced stage of applying overall conservation plans, and about 165,000 had applied all measures needed on their land.

During 1955, the following soil and water conservation practices were applied on farm and range land:

Contour farming.....	3,146,889 acres
Strip cropping.....	947,611 "
Cover cropping.....	4,506,673 "
Seeding grazing land.....	3,134,634 "
Tree planting.....	313,209 "
Wildlife planting and habitat improvement.....	525,051 "
Stubble mulching.....	4,199,916 "
Crop residue utilization.....	7,949,445 "
Windbreak planting.....	1,244 miles
Hedgerow planting.....	705,466 rods
Ponds constructed.....	86,574 "
Water diversion channels.....	6,902 miles
Terraces constructed.....	45,806 "
Drainage of wet lands.....	1,553,562 acres
Improved use of irrigation water.....	1,713,618 "
Land leveling for irrigation.....	493,907 "

The Soil Conservation Service provided 7,364 man-years of on-site technical assistance to farmers and ranchers during 1955. In addition, about 250 people who were employees of the states or soil conservation districts were working in the districts. At the same time, more than 13,000 supervisors, commissioners, or directors of districts gave their time and effort, without remuneration, to the district programs, and many other groups and organizations assisted in various ways. Among the latter was the year-long soil conservation program carried out in 1954-55 by the Boy Scouts of America. Practices applied by the scouts included planting of 20,363 acres to grass, 1,093,142 feet of hedgerows, and 6,192,753 trees; control of 65,485 eroding gullies; and improvement of 51,291 acres of farm woodlots.

On July 19, 1955, dedication of a historical monument and roadside parkway, commemorating the nation's first soil conservation project, was held in the 90,000-acre Coon Creek Watershed, in Wisconsin. The area was selected in 1933 by the Soil Conservation Service (at that time called the Soil Erosion Service) as an area suitable for large-scale demonstration of soil and water conservation. The watershed is now considered a model for conservation of farmland and is visited yearly by many students of conservation techniques.

Funds available during the fiscal year 1955 for soil and water conservation, as administered by the Soil Conservation Service, totaled \$87,075,769. Of this amount, \$77,956,020 was appropriated by Congress, while the remainder represented trust funds advanced to the service for assisting in the Agricultural Conservation Payments Program of the Department of Agriculture. (See also AGRICULTURAL RESEARCH SERVICE.)

PHOEBE O'NEALL HARRISON,

Division of Information, Soil Conservation Service.

SOLOMON ISLANDS. See WESTERN PACIFIC ISLANDS, BRITISH.

SOMALILAND (TERRITORY OF SOMALILAND UNDER THE UNITED NATIONS). A territory on the eastern coast of Africa, administered by Italy under a 10-year mandate ending in 1960. Area, 198,275 square miles; pop. (est., mid-1954), 1,269,000, including about 5,000 Europeans, mostly Italians. Mogadiscio (pop. 1953, 63,272) is the capital and chief port. The natives are mostly nomadic or seminomadic tribesmen of Arab-African origin and of Moslem religion. Numerous dialects are spoken and there is no written Somali language.

Government.—The Italian administrator is advised by a 3-member U.N. Advisory Council. There is a Territorial Council of 51 members (44 natives). A United Nations mission toured the territory in 1954. In its report to the U.N. Trusteeship Council, the mission recommended that Italy take greater steps to train native personnel for public administration, to prepare the way for self-government by 1960.

Education.—In 1954-55 there were 9,400 children and 11,950 adults attending 122 elementary schools. About 110 Somalis were studying abroad, mostly in Italy and Egypt. There is no provision for education of the nomads.

Finance.—Revenue in 1954 equaled \$12.3 million, of which Italy contributed nearly \$8 million. A 7-year development program was begun in 1954, projecting an expenditure of \$10 million in public and \$2.5 million in private funds toward improvements in agriculture, stock raising, and communications. The somalo equals U.S. \$0.137.

Economy.—Much of the land is arid and resources are meager. Livestock raising and farming are the chief occupations. Subsistence crops include sorghum, millet, maize, beans, and rice; cash crops: bananas (301,784 quintals exported in 1953), cotton, sisal, and sugarcane. Italian-owned plantations along the Webi Scebeli and Juba rivers produce bananas and sugarcane. A few small enterprises produce hides and skins, textiles, canned goods, and soap. Fishing is important along the coast. Exports totaled 34,687,600 somali in 1953; imports, 78,552,000. Trade is mostly with Italy.

Transportation and Communications.—Roads of all kinds total about 7,000 miles. There are no railways. Motor vehicles numbered 1,903 in 1954; telephones, 1,055 (1955). International airlines serve Mogadiscio. In 1952, Somaliland had one daily newspaper with a circulation of 2,000.

SOMALILAND, French. See FRENCH SOMALILAND.

SOMALILAND PROTECTORATE. British Somaliland, occupying about 68,000 square miles of northeastern Africa, extends some 400 miles along the south shore of the Gulf of Aden and adjoins French Somaliland, Ethiopia, and the Italian-administered United Nations trusteeship Territory of Somaliland. Except for about 2,700 non-natives (including a small number of Arab and Indian traders), the population (estimated in 1954 at 640,000) consists entirely of nomadic Somali tribes, who are Sunnite Moslems of the Shaff'i sect. Hargeisa (pop., 40,000) is the seat of government; other towns, whose names are also those of administrative districts, are Berbera, the chief port (pop., about 20,000). Borama, Burao, Erigavo, and Las Anod.

A governor (T. O. Pike, assumed office in February 1954) is assisted by an Advisory Council, consisting of both elected and selected Somali representatives; plans were in preparation in 1955 for the inauguration of a representative Legislative Council. The currency is the East African shilling. Revenue in 1953-54 totaled £582,122; expenditure, £1,053,720. There are 22 government primary schools (2,876 pupils in 1953); 2 government secondary schools; and 45 state-aided Koranic elementary schools (1,481 pupils).

Much of the coastal area is desert; but on the interior plateau coarse grass furnishes the food for camel, sheep, and goat herds. Imports valued at £2,360,000 in 1954 included 6,410,000 square yards of cotton piece goods; exports totaling £1,210,000 included goat and kid skins (6,360 hundredweight) and sheep and lamb skins (11,500 hundredweight). Exports to the United Kingdom totaled £33,738 in 1954; imports from the United Kingdom, £570,359. Highways aggregate 1,804 miles. External air services from Hargeisa are maintained by Aden Airways.

SOMERVELL, Brehon Burke, United States army officer: b. Little Rock, Ark., May 9, 1892; d. Ocala, Fla., Feb. 13, 1955. Commander of the Army Service Forces during World War II, he

was charged with supplying the armies of the United States with all the materials and facilities needed to wage total war against the Axis powers.

Commissioned a 2d lieutenant in the Corps of Engineers after his graduation from the U.S. Military Academy in 1914, Somervell served briefly as assistant military attaché in Paris at the outbreak of World War I, and as an assistant in the office of the chief of engineers in Washington. In 1915 he was sent to map the Mexican frontier, and this duty led to his participation in the Villa campaign under Gen. John Pershing in 1916.

With the entrance of the United States into World War I, Somervell went to France with the 5th Reserve Engineers. He worked on a variety of engineering projects until 1918, when he was assigned to the 89th Division, with which he participated in the Meuse-Argonne offensive. After the war, until 1920, he served as a supply officer in the 3d Army and later as assistant chief of staff of the supply division of the Army of Occupation at Coblenz.

Somervell worked in 1925 with Walker D. Hines, director general of American railways (1919-20) in preparing a survey of navigation conditions on the Rhine and Danube rivers for the League of Nations. From 1925 on, he held a variety of important engineering posts throughout the United States, and in 1933, at the request of Kemal Attatürk, went with Hines to Turkey to make a comprehensive economic survey of that country. With the death of Hines in January 1934, the major work, including a voluminous report, was completed by Somervell within a year.

Somervell's next major assignment came in August 1936 when he was appointed administrator of the Works Progress Administration (WPA) of New York City. From that year until he gave up his post in November 1940, he employed his organizing talents and inexhaustible energy to transform the administration from a loose organization, marked by scandal and incompetence, to a closely knit enterprise which completed many important projects.

In December 1940, Somervell was recalled to military service. Given charge of the construction division of the Quartermaster Corps, he directed the U.S. Army's vast development program. In November 1941 he was named assistant chief of staff in charge of supply, and in March 1942 he was appointed commander of the Services of Supply (later named Army Service Forces), the newly organized branch under whose jurisdiction were placed all supply units of the U.S. Army, including the Quartermaster Corps, the Ordnance Department, the Corps of Engineers, the Signal Corps, and the Chemical Warfare Service. In little over a year he advanced from lieutenant colonel to lieutenant general, and in March 1945 he became the first engineering officer to achieve the U.S. Army rank of four-star general.

"The impossible we do at once," he once said, "the miraculous takes a little longer." The extent of his task was indicated in a report he made to the War Department in 1945 in which it was computed that his organization had equipped 8,300,000 men and, by June 30, 1945, had disbursed a total of \$172 billion.

Retiring from the army in April 1946, General Somervell thereafter served as president and director of Koppers Company, Inc., at Pittsburgh, Pa., an industrial machinery and byproducts firm. He was buried in Arlington National Cemetery.

SOUTH AFRICA, Union of. A sovereign unitary state with a multiracial population, South Africa is a member of the Commonwealth of Nations.

Area and Population.—The area of the Union is 472,494 square miles, and the population was estimated on June 30, 1955, at 13,629,000. The whites, themselves divided 60-40% between Afrikaans-speaking and English-speaking persons, numbered 2,856,000; the native Africans, or Bantu, 9,121,000; the Coloreds, of mixed descent, 1,242,000; and the Asians, almost exclusively Indians, 410,000.

The largest cities, with their 1951 census populations (including suburbs), are Johannesburg (880,014); Cape Town, seat of Parliament (571,638); Durban (475,026); Pretoria, Union administrative center (283,148); and Port Elizabeth (188,617).

South Africa controls two small islands, Prince Edward and Marion, lying some 1,200 miles southeast of Cape Town, and administers South West Africa (q.v.).

Education.—There is free, compulsory education for white children between the ages of 7 and 16. In 1952 the 2,662 primary and secondary schools for white children had a combined enrollment of 518,953.

Native education was placed under the Department of Native Affairs in 1953, at which time there were 883,896 native Africans attending government and government-aided schools, or about 41% of those of school age. By 1955, under the provisions of the Bantu Education Act of 1953, most Protestant mission schools had either been forced to close because of lack of funds or had been transferred to government control, but the Roman Catholic mission schools continued to operate.

There are nine universities—four English-speaking (Cape Town, Witwatersrand, Natal, Rhodes), four Afrikaans-speaking (Pretoria, Stellenbosch, Orange Free State, Potchefstroom), and the University of South Africa, a federal university mainly for external students. Fort Hare College, solely for Africans, was closed on May 4, 1955, following difficulties between the administration and the student body, but later was reopened.

Government.—The Constitution of the Union is embodied in the South Africa Act of 1909. Parliament consists of the Senate and the House of Assembly, and its measures are approved by

the governor general (Ernest G. Jansen since 1951) on behalf of Queen Elizabeth II.

Though a relatively small minority, the white population has a monopoly of political and economic power and social prestige. Only whites can sit in Parliament. Of 159 members of the House of Assembly, seat of political power, 156 are chosen at general elections, the last of which were held on April 15, 1953. At that time, the Nationalist Party, which represents the nationalistic Afrikaans-speaking element and is now led by Prime Minister Johannes G. Strijdom, won 94 seats; the United Party, the official opposition which holds together most of the English-speaking population and about 20% of the Afrikaans-speaking, won 57 seats; and the English-speaking Labour Party, which had an electoral agreement with the United Party and is now largely composed of intellectual socialists, won 5 seats. At the same time, the United and Labour parties polled well over 100,000 more votes than the Nationalists.

Since the 1953 elections three new parties have split off from the United Party; the National Conservatives, numbering 7 members in the assembly, resulting from revolt against the leadership of Johannes G. N. Strauss of the United Party; the Union Federal Party, still without representation in the assembly, which seeks to reinforce the British heritage in South Africa; and the Liberal Party, which endorses the far-reaching program of universal franchise for all South Africans, including non-Europeans, to be achieved by progressive stages.

On Dec. 1, 1954, the Liberal Party won 2 of the 3 seats assigned in the assembly to African voters in Cape Province who can meet certain educational and property qualifications. In addition to this representation, Africans throughout the Union select 4 European senators through a complicated indirect procedure, and 2 of these 4, chosen on Dec. 8, 1954, also were Liberals. The Senate, formerly consisting of 48 members, was enlarged in 1955 to 89 members, of whom the Nationalists control 77 (see below, *Principal Events*, 1955).

Finance.—In the year ending June 30, 1954, South Africa's net national product increased by 6.5%, to £1,521.5 million (£1=U.S. \$2.80), although wholesale and retail prices rose only 1.4%. This followed a striking and continuous increase in the net national product, at a rate of 11.5% a year between 1946-47 and 1952-53, during which period wholesale and retail prices rose by 7.2% a year.

After successive annual deficits totaling £75 million for the years 1951-53, the balance of payments of the Union, including South West Africa, showed a favorable turn in the first quarter of 1954, yielded a net surplus of £44 million for that year, and showed a total improvement of £74 million as compared with 1953. The surplus on the capital account in 1954 was also £74 million, the highest net capital inflow since 1948.

The 1955-56 national budget provided for ordinary expenditures of £244 million and capital expenditures of £90.3 million.

Mining.—Mineral production showed a strong upward tendency during 1954, and continued to increase steadily as new gold mines and uranium extraction plants were opened. Partly because of a sharp rise in the average yield of ore milled by Orange Free State mines, gold output increased from 12.4 million ounces, worth £153.6 million, in the year ending June 30, 1954, to 14 million ounces, worth £175.1 million, in that ending June 30, 1955. In the same period, receipts from the sale of uranium, which in South Africa is a byproduct of gold mining, rose from £7 million to £21 million. By 1955 the South African Atomic Energy Commission had empowered 26 gold mines to produce uranium, and 18 of these had reached the production stage. Though a shortage and uncertainty of native labor remained a problem, the average number of Africans employed by the gold mines in the first half of 1955 rose to 324,496, as compared with 305,233 in the first half of 1954.

The output of diamonds, platinum, and copper showed a moderate increase in the year end-

ing June 30, 1955, but that of coal, manganese ore, chrome ore, and asbestos was still being hampered by the inability of the railways to provide adequate transport to coastal ports for export. In the year 1954, 29.3 million metric tons of coal were produced, and diamond sales totaled £62,153,125.

Industrial Production.—There has been a steady increase in the output of secondary industries, but in some sectors, notably production of steel (1,431,000 metric tons in 1954) and deliveries of new cars, the supply has not been able to satisfy the demand.

In pursuance of the Nationalist government's aim of aiding the native reserves (which occupy 11% of the total area) to become a national home for the Africans, the National Resources Development Council plans to build 100 factories in these areas to provide employment for 30,000 Africans and 6,000 Europeans. Total costs are estimated at £200 million, and about 40 years will be required to complete the project.

Agriculture.—In 1954-55 there were record crops of sugar (828,555 tons) and deciduous fruits (69,290 tons exported) and a near-record crop of corn (36.4 million 200-pound bags). The wool clip totaled 290.4 million pounds, as compared with 268.3 million pounds in 1953-54, but because of a decline in price it yielded only £58.8 million (£64.2 million in 1953-54). For the year 1954 wheat production totaled 6,347,000 200-pound bags; and citrus fruit, 6,350,000 boxes for export.

External Trade.—In 1954, South Africa's exports totaled £317.7 million (about 50% to Great Britain), and imports £443.3 million; corresponding figures for the first six months of 1955 were £178.7 million and £246 million, respectively. With the favorable turn in the balance of payments import controls were substantially relaxed in the second half of 1954, and a further relaxation of controls on imports of motor vehicles and goods on the prohibited list was announced in February 1955. In the first half of 1955 imports increased by £17.3 million while the net inflow of capital declined by about £29 million, as compared with the first half of 1954. Thus the Reserve Bank's gold and foreign exchange holdings declined to £120.6 million by the end of June 1955, but this figure was still £1.8 million above that of June 30, 1954.

Principal Events, 1955.—The most significant development of 1955 was the change in the balance of the South African Constitution which resulted from the passage of the hotly contested Senate bill. While this bill, together with measures affecting the Appellate Division of the Supreme Court, was clearly designed to enable the Nationalists to make political *apartheid* (separation) complete, it also reflected a disturbing lack of concern for constitutional ways of action.

Since 1950 the Nationalists have attempted to place on a separate roll the last non-Europeans in the Union who vote on the ordinary roll with Europeans—the male Cape Coloreds who can meet certain educational and property qualifications. On March 20, 1952, the Appellate Division of the Supreme Court declared that the ordinary legislation passed for this purpose was unconstitutional because it did not follow the procedure laid down in the constitution for dealing with the voting rights of non-Europeans in Cape Province, which requires a two-thirds majority of the House of Assembly and Senate in joint session. An attempt to make Parliament itself the supreme judge of the validity of legisla-

tion through the High Court of Parliament Act similarly failed when the Appellate Division declared on Nov. 13, 1952, that this measure too was unconstitutional. After the Nationalists were returned to office with a much increased majority in 1953, Prime Minister Daniel F. Malan tried, unsuccessfully, twice by joint-session procedure to secure the necessary two-thirds majority to put the Coloreds on a separate roll.

Under Prime Minister Strijdom, who took office on Nov. 30, 1954, more far-reaching measures have been taken. On March 25, 1955, it was announced that 5 new judges would be appointed to the Appellate Division. Then, on May 5, Parliament passed the Appellate Division Quorum Act, raising the number of judges to 11 whenever the court questions the validity of an act of Parliament. Strijdom explained that the purpose of the act was to add new judges to the 5 who had made the decisions in 1952.

Still more drastic was the Senate Act, which became law on June 20, 1955. Under this act, Cape Province and the Transvaal receive more seats in the Senate than Natal and Orange Free State, thus overriding the principle of equal representation of provinces in the second chamber. Moreover, instead of allotting seats to the parties in proportion to their provincial strengths as formerly, the act provides that the party controlling a province receives all its Senate seats. Since the Nationalists control the provincial councils in Cape Province, the Transvaal, and Orange Free State, and the number of government-nominated members was substantially increased, the new Senate, selected on Nov. 25, 1955, has 89 seats instead of the former 48, and the Nationalists control 77 of these instead of 30. A joint session will yield the Nationalists 171 votes to 77, or a clear two-thirds majority, and so make it relatively easy for them to remove the Coloreds from the common roll.

While the Senate bill was under consideration, there were widespread signs of protest. A monster petition against the measure secured 100,000 signatures. A striking evidence of dissent was the formal protest of 13 senior faculty members of Pretoria University. A newly organized group, the Women's Defense of the Constitution League, not only held meetings throughout the country, but also wore black sashes in mourning for the constitution and lined the way whenever a cabinet minister made an appearance. There was little evidence, however, that these signs of opposition would change Nationalist policies.

The United Party vigorously fought the Senate Bill and maintained its position that the Coloreds should be left on the common roll. Under pressure from its small liberal wing, the party declared that on its return to office it would "set right the grave injustice" done the Coloreds through the Senate Act "in the best way open to us at that time." This did not satisfy one of its liberal members, Dr. Bernard Friedman, who felt that the party should pledge itself to replace the Coloreds on the common roll. When party leaders refused to give such a pledge, he resigned his seat, and on September 14 fought it in a bye-election as an independent. His defeat in a straight fight with a United Party candidate, is evidence that there is not deep concern about the position of the Coloreds, and also that many voters are reluctant further to weaken the United Party, which offers the only viable opposition to the Nationalists.

Though the Liberal Party still has only a relatively small membership, it is providing a unique

example for South Africa of multiracial membership in a political party. More than a quarter of its membership in Cape Province in 1955 was African, and in Natal almost 50% of its members were either African or Indian.

Almost the only evidence of the opposition of non-Europeans to the highly restrictive situation in which they find themselves was the Congress of the People held in July 1955. This brought together representatives of the African National Congress, the South African Indian Congress, the South African Colored People's Organization, and a left-wing European organization known as the Congress of Democrats. Together they attempted to publicize a Freedom Charter of rights for non-Europeans. Though this had no obvious effect, it suggested the danger of forcing non-European organizations, for lack of other channels, into the orbit of the Communists.

Few new measures of *apartheid* were introduced in 1955, and Nationalist efforts were concentrated on tightening the administration of acts already on the statute books. In February, for example, two groups of Africans living in Johannesburg suburbs were moved under the provisions of the Natives Resettlement Act. At the Nationalist Party congress held in Natal in August, Prime Minister Strijdom spoke of the necessity for Europeans within South Africa and elsewhere on the continent to stand together on the policy of *apartheid* if they were to maintain their position. He pledged himself to remove the Coloreds from the common roll and ultimately to transform South Africa into a republic.

The Nationalists achieved one cherished objective in 1955 when the United Kingdom, as announced on July 4, formally agreed to give up control and administration of the naval base of Simonstown by March 31, 1957, for a sum of £750,000. In return, the British were assured continued use of the base, and that there would be no discrimination against non-Europeans whom they wished to employ there.

The United Nations continued to concern itself in 1955 with South Africa's treatment of its Indian minority, its refusal to submit reports as the mandatory power for South West Africa, and its racial situation. South Africa, on its side, maintained its customary refusal to admit the right of United Nations organs to concern themselves with these issues. On April 5, it announced its withdrawal from UNESCO.

In its extended third report on the racial situation in South Africa, presented to the tenth session of the General Assembly on October 12, the U.N. Commission on the Racial Situation in South Africa suggested that the greatest problem of South Africa's white minority, particularly the Afrikaans-speaking element, lay in their sense of isolation. It pointed out that they could best gain the security they sought by developing a sense of solidarity with other nations "based on a common striving towards justice and social progress according to common and generally accepted principles." On November 9, after the Special Political Committee voted to continue the commission, the South African delegation withdrew from the General Assembly session. The General Assembly subsequently decided, however, not to continue the commission.

SOUTH AMERICA. A continent in the Western Hemisphere. Estimated area, 6,894,000 square miles; est. pop. (1954), 121,100,000. (See In-

SOUTH CAROLINA

dex entry, *South America*, and articles on the individual South American countries.)

SOUTH CAROLINA. South Atlantic state, United States; one of the original 13 states. The "Palmetto State" ranks 39th in area and 26th in population (1955) among the 48 states.

Area and Population.—Area: 31,055 square miles (land, 30,305; inland water, 750), divided into 46 counties. Population: (1950) 2,117,027; (est., July 1, 1955) 2,226,000. Urban places with 1950 populations above 10,000 are as follows:

Anderson.....	19,770	Greenwood.....	13,806
Brandon-Judson*.....	11,008	Orangeburg.....	15,322
Charleston.....	70,174	Rock Hill.....	24,502
Columbia, capital.....	86,914	Spartanburg.....	36,795
Florence.....	22,513	Sumter.....	20,185
Greenville.....	22,161	* Unincorporated	

Executive.—Chief state officers in 1955:

Governor: George Bell Timmerman, Jr. (Democrat)

Lieutenant Governor: Ernest F. Hollings

Secretary of State: O. Frank Thornton

Treasurer: Jeff B. Bates

Attorney General: T. C. Callison

Supt. of Education: Jesse T. Anderson

Constitution and Judiciary.—The present constitution went into effect in 1895. The Supreme Court comprises five justices; chief justice in 1955 was D. Gordon Baker.

Legislature.—The General Assembly (Senate, 46 members; House of Representatives, 124) meets annually commencing the second Tuesday in January.

The 1955 session of the General Assembly authorized General Fund expenditures of almost \$130 million. Chief cause of the \$10 million rise in expenditures over the previous year was an increase of \$5 per pupil in the state allocation to local school districts for current operations. Other legislation on education raised the state bonded indebtedness for school construction by \$37.5 million, and for bus equipment by \$1.5 million; repealed compulsory attendance and automatic teacher employment laws; and vested greater authority in local school districts. Corporate income taxes were raised to 5%, and the state was authorized to garnishee the salaries of employed persons delinquent in payment of income taxes. The offices of council director and code administrator were combined, with all bill drafting, publishing of acts, and code publication and revision functions placed in that office. A point system on traffic violations was enacted; payment of property taxes on automobiles was made a precondition for licensing or registration; closer regulation of narcotics sales was provided; and an amendment eliminating the antidueling provision from the oath of office was approved in final form.

Finances.—State treasury receipts (1954-55 fiscal year), \$301,276,346.91; expenditures, \$303,960,556.73; treasury balance, \$123,533,051.80; long-term indebtedness, \$146,298,792.91.

Taxation.—State tax revenue (1954-55 fiscal year): \$153,033,220, including \$119,087,149 from a 3% general sales tax and selective sales and gross receipts taxes; \$9,678,384 from licensing; \$12,326,765 from individual income taxes; and \$11,940,924 from corporate income taxes. The state also has a poll tax of \$1 per person.

Banking.—As of June 30, 1955, the state's 27 national banks had \$526,570,000 in assets, \$423,094,000 in demand deposits, and \$63,938,000 in time deposits; the state's 112 other banks, 23 branches, 1 military facility, and 14 cash depositories had \$323,549,938.71 in assets, \$221,647,431.79 in demand deposits, and \$52,116,231.80 in time deposits.

Education.—The state's compulsory attendance law was repealed at the 1955 session of the General Assembly. Operating expenditures for the 1954-55 school year included \$30,500,191.21 from local school districts, \$83,034,775.06 from the state, and \$5,134,718.70 from the federal government. Cost per pupil was \$169. Expenditures for construction and improvements totaled \$42,957,330. Teachers' salaries averaged \$2,924 (elementary school teachers, \$2,800; high school teachers, \$3,165).

Enrollment during the 1954-55 school year comprised 398,138 pupils in 1,562 public elementary schools (grades 1 to 8), with 12,050 teachers; 154,811 pupils in 402 public secondary schools (grades 6-12 in some districts and 8-12 in others), with 6,199 teachers; 9,678 students in 51 private and parochial elementary and second-

ary schools; and 25,344 students in 31 colleges and universities.

Social Welfare.—Public assistance expenditures from federal and state funds (excluding institutional costs) in the 1954-55 fiscal year totaled \$24,941,376, including \$16,398,029 for old-age assistance, \$772,173 for dependent children, and \$4,467,619 for the needy blind; a monthly average of 77,632 persons received public assistance. Operating expenditures for health and welfare institutions amounted to \$6,935,100; for correctional and penal institutions, \$1,383,061.

SOUTH CAROLINA WELFARE INSTITUTIONS

(As of June 30, 1955)

Type of institution	No.	Pop.
Hospitals for mentally deficient and epileptic.....	3	7,750
Sanatoriums for the tubercular.....	1	506
Schools for the deaf and blind.....	1	330
Vocational schools for boys and girls.....	2	705
Hospitals for crippled children.....	1	40
Homes for veterans and veterans' widows.....	1	42
Reformatories for boys.....	2	500
Reformatories for girls.....	2	160
Prisons.....	1	1,547
Prison farms.....	2	337

Labor Force.—Nonagricultural employment numbered 512,600 in August 1954, and averaged 536,500 during 1953. There were 17,402 unemployed workers in August 1954, and the state paid \$13,582,467.63 in unemployment compensation for the 12 months ending June 30, 1954.

Manufacturing.—Establishments numbering 1,958 in 1954 employed 186,435 persons who received \$473,666,241 in salaries and wages. Value added by manufacture in 1953 totaled \$1,056,243,000, and investment in new plant and equipment (1954) amounted to \$76,029,000. Earnings of production workers in manufacturing averaged \$49.64 for an average work week of 39.4 hours in 1954, and \$52.10 for 40.7 hours in the first half of 1955.

MAJOR SOUTH CAROLINA MANUFACTURES, 1954

Product or industry	Ave. no. of employees	Salaries and wages	Value of product
Textiles.....	127,250	\$336,845,102	\$1,493,400,618

Foundry & machine shops.....	2,249	7,431,262	31,526,440

Mining.—South Carolina stood 43d among the states in 1953 in value of mineral output, with 0.12% of the United States total. The state normally ranks second as a producer of kyanite and vermiculite.

SOUTH CAROLINA MINERAL PRODUCTION, 1954

Mineral	Quantity	Value
Clay (short tons).....	1,136,019	\$ 4,702,027
Crushed stone (short tons).....	2,548,290	2,559,391
Sand and gravel (short tons).....	2,813,750	2,550,260
Other minerals.....	...	6,552,126
Total.....	...	17,363,804

(Source: U.S. Bureau of Mines.)

Agriculture.—Cash farm income for the first half of 1955 totaled \$78,358,000, and for the full year 1954 comprised \$91,261,000 from livestock and livestock products, \$227,894,000 from crops, and \$2,781,000 from government payments. Receipts from principal crops and livestock in 1954

included: cotton lint, \$88,695,000; tobacco, \$72,-544,000; hogs, \$24,624,000; and dairy products, \$21,490,000.

The state's 124,203 farms (11,069,348 acres; harvested cropland, 3,392,207) averaged 89.1 acres and \$6,767 in value of land and buildings per farm in 1954. There were 21,606 farms with telephones and 109,100 with electricity. Livestock on farms on Jan. 1, 1955, included 492,000 cattle, 525,000 hogs, and 5,263,000 chickens (excluding commercial broilers). During the week of Oct. 24-30, 1954, 231,772 family and hired workers were engaged in farming.

SOUTH CAROLINA CROP STATISTICS

Crop (and unit of production)	Average 1944-53	1954	Est. 1955
Corn (1,000 bu.).....	25,972	11,718	29,680
Cotton lint (1,000 bales).....	692	501	570
Cottonseed (1,000 tons).....	286	215	242
Cowpeas (1,000 bu.).....	410	252	451
Hay (1,000 tons).....	412	257	416
Oats (1,000 bu.).....	17,184	23,846	21,450
Pecans (1,000 lb.).....	507	450	60

(Source: U.S. Dept. of Agriculture.)

Transportation and Communications.—State and federal funds disbursed for roads and highways in the 1953-54 fiscal year totaled \$24,486,270, and newly completed construction and reconstruction aggregated 1,606 miles.

Highways and roads in January 1954 totaled 49,-901 miles (19,141 surfaced). Registered motor vehicles numbered 690,137 in August 1954, including 544,392 passenger cars and buses. There were (1954) 16 railroads operating 3,353.13 line miles, and (1955) 5 regularly scheduled airlines and 54 airports and airfields (45 commercial and municipal, 4 military, 2 private, and 3 others).

Communications media included (1954) 53 AM radio stations and 9 operating television outlets (5 VHF and 4 UHF); 18 daily newspapers (circulation, 696,-849) and 76 other newspapers; and (Jan. 1, 1955) 106,856 business and 250,280 residential telephones.

Principal Events, 1955.—On March 27, a freeze occurred in the state which completely destroyed the peach crop and seriously damaged the pecan and apple crops. The peach crop is usually valued at \$10 million per year. Other crops were good. It was estimated that the value of cotton and cottonseed would amount to \$105 million in 1955 and that tobacco would bring in \$110 million. Most significant, however, was the fact that the state seemed to be moving toward a more diversified agriculture.

South Carolina was also striving for a better-balanced and more diversified industrial program. In the past, industry has been mostly confined to cotton textiles, but at the present time new woolen mills are entering the state. For instance, in 1955, Nichols and Company of Boston established the Wellman Combing Company plant at Johnsonville for the purpose of manufacturing wool tops; and the Amedee Prouvost Company of France, the largest wool top manufacturer in the world, established the Santee River Wool Combing Company plant at Jamestown. Each plant is a \$3 million installation employing 350 people and capable of producing 20 million pounds of tops per year. Both factories are so constructed that their size and production can be quadrupled at any time. A plant was established at Sumter, which can dye the entire output of the two wool top plants. Thus wool tops have been made available for woolen and other syn-

thetic manufacturing plants wishing to come into the Southern area.

As of October 15, industrial expansion in 1955 amounted to \$175 million and was expected to exceed \$200 million for the full calendar year. This amount represented the largest annual outlay for expansion in the history of the state.

Principal Events by: GEORGE R. SHERRILL,
Professor of Political Science, University
of South Carolina.

SOUTH DAKOTA. North Central state, United States; admitted to the Union, Nov. 2, 1889. The "Coyote State" ranks 15th in area and 40th in population (1955) among the 48 states.

Area and Population.—Area: 77,047 square miles (land, 76,536; inland water, 511), divided into 68 counties. Population: (1950) 652,740; (est., July 1, 1955) 672,000. Urban places with 1950 populations above 7,500 are: Aberdeen, 21,051; Brookings, 7,764; Huron, 12,788; Mitchell, 12,123; Rapid City, 25,310; Sioux Falls, 52,696; Watertown, 12,699; and Yankton, 7,709. Pierre (5,715) is the capital.

Executive.—Chief state officers in 1955:

Governor: Joe J. Foss (Republican)

Lieutenant Governor: L. R. Houck

Secretary of State: Geraldine Ostroot

Treasurer: Ed. T. Elkins

Attorney General: Phil Saunders

Supt. of Public Instruction: Harold S. Freeman

Constitution and Judiciary.—The present constitution went into effect in 1889. The Supreme Court comprises five justices; chief justice in 1955 was Herbert B. Rudolph.

Legislature.—The legislature (Senate, 35 members; House of Representatives, 75) meets in odd-numbered years commencing the first Tuesday after the first Monday in January.

The 1955 meeting of the legislature adopted a \$49.5 million budget for the 1955-57 biennium, including \$11.4 million for the maintenance and operation of state institutions of higher education; an increase of \$1 million in school appropriations, with the major share of the rise going to secondary schools; and an increase in the appropriations for highways. It added a ¼-cent tax per package of cigarettes, and enacted a temporary increase of the sales tax from 2% to 3%; established a Department of Revenue to consolidate the divisions of taxation and licensing, a Department of Military Affairs, in charge of civil defense, and a Water Resources Commission to administer the new water laws; designated the Board of Charities and Corrections as the Department of Probation and Parole; and made the Highway Commission the State Highway Department. The appropriation of the Natural Resources Commission was doubled to increase the promotion of industrial development; the decennial census was eliminated; provision was made for new buildings at state colleges; reflectorized license plates were approved; and salary increases were awarded to the governor, attorney general, and to Supreme Court and Circuit Court judges. (See also below, *Principal Events, 1955.*)

Finances.—State treasury receipts (1954-55 fiscal year), \$79,472,099.38; expenditures, \$87,929,108.64; treasury balance, \$36,010,940.71. The state's long-term indebtedness was paid off as of June 30, 1955.

Taxation.—State tax revenue (1954-55 fiscal year), \$36,995,807.44, including \$34,839,367.66 from a 2% general sales tax (increased to 3% on April 1, 1955) and selective sales and gross receipts taxes, and \$2,156,-439.78 from licensing. The state has no individual income, corporate income, or property tax, but does have a \$1 school poll tax per person.

Banking.—As of June 30, 1955, the state's 35 national banks had \$316,435,000 in assets, \$216,862,000 in demand deposits, and \$77,928,000 in time deposits; the state's 136 other banks had \$295,025,719.87 in assets, \$164,373,583.10 in demand deposits, and \$62,-354,592.37 in time deposits.

Education.—School attendance is compulsory for all between the ages of 7 and 16, inclusive. Operating expenditures for public elementary and secondary education in the 1954-55 school

SOUTH DAKOTA SCHOOL STATISTICS, 1954-55

SOUTH DAKOTA

year totaled \$33,506,238.87 (\$284.83 per pupil). Expenditures for construction and improvements amounted to \$5,628,439.76. In the 1953-54 school year teachers' salaries averaged \$2,122 for rural teachers, \$2,761 for city elementary school teachers, and \$3,573 for high school teachers.

Social Welfare.—Public assistance expenditures from federal and state funds (excluding operational costs) in the 1954-55 fiscal year totaled \$9,083,145, including \$5,862,416 for old-age assistance, \$2,767,940 for dependent children, \$104,395 for the needy blind, and \$348,394 for the disabled; a monthly average of 21,160 persons received public assistance. Operating expenditures for welfare institutions devoted to education, \$5,513,943.93; for all other welfare institutions, \$3,927,401.47.

SOUTH DAKOTA WELFARE INSTITUTIONS

Type of institution	No.	Pop.
Hospitals for the mentally ill (June 30, 1955).....	1	1,605
Homes for the feeble-minded (June 30, 1955).....	1	899
Sanatoriums for the tubercular (June 30, 1955).....	1	82
Schools for the blind (Sept. 13, 1955).....	1	51
Schools for the deaf (Sept. 12, 1955).....	1	93
Soldiers and sailors homes (Aug. 31, 1955).....	1	221*
Training schools for boys and girls (Sept. 9, 1955).....	1	125
Reformatories for males (December 1954).....	1	21
Prisons (December 1954).....	1	427

* Includes 145 men and 76 women.

Labor Force.—Nonagricultural employment on June 15, 1955, numbered 125,300, and for the full year 1954 averaged 121,850. The state paid \$1,384,337.67 in unemployment compensation during the year ending June 30, 1955.

Manufacturing.—Establishments in 1953 paid \$37,038,000 in salaries and wages to 10,441 persons. Value added by manufacture was \$80,703,000, and investment in new plant and equipment amounted to \$3,270,000. Earnings of production workers in manufacturing averaged \$67.39 for an average work week of 43.8 hours in 1954, and \$68.43 for 43.7 hours in the first half of 1955. Major manufacturing industries include food processing and printing and publishing.

Mining.—In 1953, South Dakota ranked first among the states in the production of beryl, columbium-tantalum, and gold; second in feldspar, kyanite, and lithium minerals; third in lignite; and fourth in mica. The state stood 36th in the value of its mineral products, with 0.24% of the United States total.

SOUTH DAKOTA MINERAL PRODUCTION, 1955*

(In short tons, except as noted)

Mineral	Quantity	Value
Beryl concentrates.....	330	\$ 137,000
Clay.....	230,000	1,332,000
Feldspar (long tons).....	43,000	273,000
Gold (fine ounces).....	527,400	18,459,000
Sand and gravel.....	20,000,000	8,200,000
Silver (fine ounces).....	154,700	140,011
Stone.....	1,800,000	5,400,000
Other minerals.....	...	4,676,989
Total.....	...	38,618,000

* Preliminary. (Source: U.S. Bureau of Mines.)

Agriculture.—Cash farm income for the first half of 1955 totaled \$216,740,000, and for the full year 1954 comprised \$362,872,000 from livestock and livestock products, \$201,631,000 from crops, and \$5,728,000 from government payments. Receipts from principal crops and livestock in 1954 included: cattle, \$184,766,000; hogs, \$99,586,000; corn, \$71,153,000; wheat, \$65,488,000; dairy products, \$27,315,000; eggs, \$26,603,000; and oats, \$23,881,000.

The state's 62,520 farms (44,928,353 acres; harvested cropland, 17,759,947) averaged 718.6 acres and \$28,708 in value of land and buildings per farm in 1954. There were 37,394 farms with telephones and 56,734 with electricity. Livestock on farms on Jan. 1, 1955, included 3,301,000 cattle, 1,254,000 sheep, 1,524,000 hogs, and 9,371,000 chickens (excluding commercial broilers). During the week of Sept. 26-Oct. 2, 1954, 120,670 family and hired workers were engaged in farming.

SOUTH DAKOTA CROP STATISTICS

Crop (and unit of production)	Average 1944-53	1954	Est. 1955
Barley (1,000 bu.).....	22,439	8,854	9,306
Corn (1,000 bu.).....	108,013	115,913	86,457
Flaxseed (1,000 bu.).....	4,833	5,802	5,512
Hay (1,000 tons).....	3,617	4,908	4,079
Oats (1,000 bu.).....	98,658	113,772	100,672
Potatoes (1,000 bu.).....	2,139	1,680	1,150
Rye (1,000 bu.).....	4,202	2,460	4,012
Soybeans (1,000 bu.).....	682	3,114	2,761
Wheat (1,000 bu.).....	43,157	27,008	28,158

(Source: U.S. Dept. of Agriculture.)

Transportation and Communications.—State and federal funds disbursed for highways in the 1953-54 fiscal year totaled \$26,441,019.75, and newly completed construction and reconstruction in 1954 aggregated 1,033 miles.

Highways and roads on Dec. 31, 1954, totaled 91,706 miles (38,571 surfaced). Registered *motor vehicles* numbered 341,196 on Sept. 1, 1955, including 224,973 passenger cars. There were 9 *railroads* (1954) operating 3,950.53 line miles, and (1955) 2 regularly scheduled *airlines* and 209 *airports and airfields* (68 commercial and municipal, 1 military, and 140 private).

Communications media (1955) included 1 FM and 14 AM *radio stations* and 2 VHF operating *television outlets*; 12 daily *newspapers* (circulation, 156,951) and 158 other newspapers (circulation, 164,448); and (Jan. 1, 1955) 41,876 business and 129,310 residential *telephones*.

Principal Events, 1955.—Significant legislation of the 34th Legislature, whose session ended March 4, included: (1) recodification of state school laws; (2) provisions for directors of assessment on the county, rather than township, level; (3) appropriation of \$5,000,000 for state aid to education; (4) revision of the state's water laws; (5) adoption of a \$7,500,000 Korean bonus to be paid by raising the sales tax from 2% to 3%; and (6) repeal of the state's communal corporation laws to prevent further expansion of communities of the Hutterite sect.

In elections of April 19, Brookings favored a municipal liquor store by a narrow margin, and Yankton approved the city manager-council form of government. South Sioux Falls on October 18 and Sioux Falls on November 15 voted for a merger of the two cities, to be completed Jan. 1, 1956.

Educational news included a campaign for funds to replace College Hall, principal building of Dakota Wesleyan University, which was destroyed by fire on February 12; and the sale, after October 6, of 90 buildings of Pickstown by the Department of Health, Education, and Welfare to state institutions.

Automobile accidents and inclement weather furnished much of the tragedy of the year. From February 18 to 21, snow storms reached blizzard conditions, and on April 5, 50 inches of snow fell in the northern Black Hills, closing schools and roads in Lead, Deadwood, Spearfish, Belle Fourche, and Sturgis. An abnormally hot and dry summer reached a 110-degree temperature on July 31, and provided a 10th successive day of over 100 degrees on August 4. November, how-

ever, was the coldest since 1913. By December 20, automobile fatalities had numbered 190, surpassing the record high of 189 in 1954.

Miscellaneous events included administration of the first free Salk vaccine shots on June 14; a four-day visit of Soviet farm delegates, beginning July 2; the closing of Gavins Point Dam on the Missouri River on July 31 (see also DAMS); and the dedication of Joe Foss Air Field at Sioux Falls on August 7.

Principal Events by: CEDRIC C. CUMMINS,
Professor of History, University of South
Dakota.

SOUTH SEA ISLANDS. See FRENCH OCEANIA; PACIFIC ISLANDS; WESTERN PACIFIC ISLANDS, BRITISH.

SOUTH WEST AFRICA. Lying southward of Portuguese West Africa and extending westward from the Bechuanaland Protectorate to the Atlantic Ocean, this African territory (area, 317,725 square miles) is administered by, and closely integrated with, the Union of South Africa. Walvis Bay (an enclave of the Cape Province of the Union; area, 374 square miles; pop., 3,570 in 1951) is administered with South West Africa; the Caprivi Zipfel strip, extending northeastward 300 miles as far as Barotseland, is controlled by the Union Ministry of Native Affairs.

At the 1951 census the European population numbered 49,641. The native and Colored population (principally Bantu races, Hottentots, and aboriginal Bushmen) was estimated at 156,453 inside, and 224,233 outside, police areas, together with 27 Malays and Asians; total, 430,354. Windhoek (pop., 29,717) is the capital; other chief centers are Keetmanshoop (5,050); Luderitz (3,250), and Swakopmund (3,100).

The administrator (D. T. du P. Viljoen, assumed office in 1953), appointed by the Union government, is assisted by an Executive Committee, and (since 1925) by an 18-member Legislative Assembly. After elections held on Nov. 16, 1955, National Party candidates held 16 seats; others, 2. South West Africa is represented in the Union House of Assembly by 6 elected members, and in the Senate by 2 elected and 2 nominated members.

The Union government disputes the contention that transfer took place to the United Nations of the former League of Nations' functions with respect to the South West African mandate. Since 1946 the Union has resisted efforts of the U.N. General Assembly to "progressively assimilate" South West Africa to the status of a trust territory. On the other hand, the Union has denied that its government has proceeded toward incorporation of South West Africa in the Union.

Estimated ordinary revenue for 1953-54 totaled £5,800,000; expenditure, £5,700,000. Primary education is free. Education for European children was provided in 1954 in 53 government schools, with 9,900 pupils, and 15 private schools, with 1,241 pupils. Non-European education, conducted principally by missions, included 7 government native schools; 2 government colored schools; and 119 government-aided mission schools, with 10,816 pupils.

Major economic resources are mining and pastoral industries. The latter includes the production of karakul pelts, 2,700,000 of which were exported in 1954, principally to the United States, Canada, Germany, France, and Italy. Cattle and dairy products, valued at £4 million annually, are exported to the Union of South Africa. In 1954, some 9,400,000 pounds of butter, from a total production of 11,100,000 pounds, were exported.

Total mineral production, valued in 1954 at £20,300,000, included diamonds (550,987 carats, valued at £12 million, exported), copper, lead (149,304 short tons, valued at £6,700,000),

tin, vanadium, zinc, manganese, lithium, and salt.

A record total of £59,400,000 of foreign trade in 1954 comprised exports, £36,800,000; imports, £22,600,000. A 1,470-mile railway system links the territory with the Union.

SOUTHEAST ASIA TREATY ORGANIZATION (SEATO). The designation, Southeast Asia Treaty Organization (SEATO), though commonly used, is unofficial. The Southeast Asia Collective Defense Treaty (and protocol) and the Pacific Charter, signed at Manila, the Philippines, on Sept. 8, 1954, by representatives of the United States, Great Britain, France, Australia, New Zealand, the Philippines, Pakistan, and Thailand, declared the intention of the signatory powers to coordinate efforts for collective defense and the preservation of peace and security against aggression and subversion in the general area of Southeast Asia and the Southwest Pacific. The treaty came into effect on Feb. 19, 1955, when the instruments of ratification were deposited in Manila by the signatory powers.

The first session of the Council of the Southeast Asia Collective Defense Treaty took place at Bangkok, Thailand, Feb. 23-25, 1955, under the chairmanship of Prince Wan Waithayakon, foreign minister of Thailand. The meeting was attended by the foreign ministers of the member nations, with the exception of France, which was represented by Henri Bonnet, former ambassador to the United States. At its initial session the Council reiterated the general aims of the Manila treaty while stressing its defensive character, noted the threat of Communist subversion and infiltration, expressed support for the governments of Cambodia, Laos, and South Viet-Nam, and discussed a program of economic cooperation among the signatory powers.

With regard to the machinery for the implementation of the Manila treaty, the Council decided that its own membership would consist of the member nations' foreign ministers or their representatives, and would meet at least once a year and more often when deemed necessary. Decisions of the Council were to require unanimous agreement. To aid the work of the Council between sessions, and to further the aims of the treaty regarding economic, social, and cultural cooperation, a permanent body of Council representatives was established with headquarters in Bangkok. This body was to be served by a permanent secretariat. The Council also provided for the formation of a permanent group of military advisers to the Council, consisting of one representative from each nation, who were to meet periodically anywhere within the treaty area. A group of experts on subversion and an economic working group were also set up as nonpermanent bodies which would meet whenever required anywhere within the treaty area.

SOUTHERN RHODESIA. See RHODESIA AND NYASALAND, FEDERATION OF.

SOVIET LITERATURE. Although no basic changes took place in Soviet literary life during 1955, its general climate became somewhat milder. There were several indications of this "new look" in literature. It was announced that the collected works of Dostoevsky were to be published by the State Publishing House, despite the Communist rejection of the writer's religious and antirevolutionary views. Hemingway, whose works had been banished for more than 15 years, made a comeback with *The Old Man and the Sea*, and translations of other Western authors were promised by the new magazine *Foreign*

Literature, which enjoys a very large circulation. There was a more lively discussion of literary problems in Moscow periodicals during 1955, and the dullness of current "industrial fiction" was strongly condemned. In his survey published by the *Literary Gazette* in its September issues, Alexander Fadeyev, a prominent novelist and a Communist dignitary, recommended a more critical attitude toward the official school of "socialist realism."

Current Soviet literary production, however, has not yet caught up with modern trends, and only a few writers have moved from the purely social to the psychological novel. Such is the case of Vassily Nekrassov, whose *The Native Town* depicts thoughts and emotions of a veteran who returns home from war and finds the readjustment to civilian life rather painful. *Serezha*, by the excellent writer Vera Panova, portrays the world of adults as seen through the eyes of an eight-year-old child. In general, many Soviet writers have lately been devoting attention to childhood and adolescence. These included Nikolai Dubov in *The Orphan*, Vladimir Smirnov in *The Discovery of the World*, and Nikolai Atarov in *The Tale of the First Love*, who portrayed high-school boys and girls in a delicate, almost Turgenev-like manner.

A strong controversy was provoked in 1955 by Xenia Lvova's *Elena*, a novel of extramarital love. Critics were shocked by its frankness in descriptions of physical passion, while the public, tired by the monotonous procession of virtuous party secretaries and "heroes of labor," made it a best-seller.

The Restless Youth, by Konstantin Paustovsky, one of the best Soviet writers, depicts the author's adventures in 1915-17. This autobiographical narrative was probably the most interesting book of the year.

Other Fiction.—In his *Searchers*, Dmitri Granin tries to revive the battered image of an inventive scientist handicapped by general inertia and conservatism. Anatoly Rybakov tells the story of a woman-captain in his *Ekaterina Voronina*, a vast panoramic novel of the Volga region. Serghei Sergeyev-Tsensky, whose 80th birthday was celebrated in 1955, published *A Morning Explosion*, an episode from a large chronicle of World War I. *Tale on Shaliapin*, by Semen Rosenfeld, who extols the great singer, is indicative of the lenient attitude recently adopted by Moscow toward emigré artists.

Typical expressions of the "party line in literature" were offered by Vladimir Popov's *The Boiling Steel*, a description of a metallurgical plant in the Urals during the war, and by Vassily Azhaev's *The Creative Individual*, a semisatirical exposé of ambitious egotism. Both works were dubbed literary misfits even by the most rigid supporters of socialist realism.

Drama.—While critics continued to deplore the scarcity of new plays on contemporary issues, the public filled the theaters where classical repertory was offered, and favored light comedies or dramas of personal relationships. Box office successes of the season were all plays devoted to love and family conflicts, such as *Svetlana*, by Vassily Lavrentiev; *The Wheel of Happiness*, by the Tur brothers; and *The Love of Ania Berezko*, by Victor Pistolenko. Leonid Leonov's *The Golden Carriage* was often mentioned as the most important theatrical event of the year.

Poetry.—The topical and long-winded epic narrative in verse continued to enjoy the favor of Communist critics. Vissarion Sayanov's 300-page

The Kolobovs, a poetic chronicle of a Russian family against the historical background of recent decades, was 1955's most typical specimen of the genre. Critics and readers paid a great deal of attention to *Meditations*, a collection of lyrical and epic pieces by Nikolai Asseyev, one of the most talented disciples of Mayakovsky. The resumption of Soviet diplomatic relations with Marshal Tito made possible the publication of *Poems on Yugoslavia*, by Nikolai Tikhonov, dean of Soviet poets. Among numerous translations of poetic works by non-Russian authors were excellent versions of English poets by Semen Marshak, and new renditions of Walt Whitman's *Leaves of Grass*.

Essays.—The Academy of Science published three new volumes of its monumental history of Russian literature from its origins to the present. The first four volumes of a new critical edition of Alexander Herzen's collected works were very favorably received by both scholars and the general public. Among numerous monographs, the *Life of Nikolai Leskov*, written by his son, was hailed as a real contribution to the history of 19th century Russian literature.

SOVIET UNION. See UNION OF SOVIET SOCIALIST REPUBLICS.

SOYBEANS. See Index entry.

SPACE FLIGHT. While the first half of the present century was devoted to the conquest of the air, the second half will see the conquest of nearby space. But there is a fundamental difference between the two, not only as regards the technological means to be employed, but also, one might say, ideologically. The conquest of the air came about mostly through the private enterprise of individual inventors and took place as a small advance here, a new idea there, and a successful experiment somewhere else. It was only after a number of men had made several successful, if short, flights that a theory of flight could be established which enabled a designer to draw up and build an airplane with predictable performance.

In the case of space flight, the theory came first. It was worked out independently by Professors Robert H. Goddard in the United States and Hermann Oberth in Germany near the end of World War I, and was published as soon as feasible after the conclusion of the war.¹ Both studies predicted the construction of large-size rockets with novel design ideas, and gave the necessary mathematical formulas for determining their performance in advance. With these formulas one could calculate, for example, that a rocket capable of accelerating itself to a velocity of one mile per second while its fuel supply lasted would be able to climb to a hundred miles altitude, and that a rocket capable of attaining 1½ miles per second should ascend to about 250 miles. (Both such rockets have been tested.) They also made it clear how much fuel would be needed to reach a certain speed, which, of course, varied for different fuels. If the exhaust blast of a certain fuel turned out to be 7,000 feet per second, two thirds of a rocket's take-off weight had to be in fuel to produce a rocket

¹ Goddard, Robert H., *A Method of Reaching Extreme Altitudes*, Smithsonian Miscellaneous Collections, Vol. 71, No. 2 (Smithsonian Institution, Washington, D.C., 1920); Oberth, Hermann, *Die Rakete zu den Planetenräumen* (*The Rocket into Interplanetary Space*, Munich 1923).

velocity of 7,000 feet per second (this formula being valid only for empty space outside a gravitational field).

The whole foundation for space flight was actually laid in these works, which were published in 1920 and 1923, respectively. The experimental work that followed was merely a means of finding the best possible ways of translating the equations into metal, fuels, and workable reality. But it soon turned out that this was, even in its beginnings, a much bigger project than were the early airplanes. Private initiative could not go very far because of the large sums of money involved. Although modern rockets, too, began with private experimentation, the first really large rocket built was a (German) government project, and cost the equivalent of one hundred million dollars.

After the first large rocket—which theoretically could be employed as a weapon, as a mail carrier, or as a means of exploring the upper atmosphere—more complicated rockets, consisting of several “stages” or “steps,” could be designed for higher performances. Each “step” would require a complete rocket which could work independently, but the “steps” would be used to boost each other, with the empty rockets dropping off as soon as their fuel supply was exhausted so that their dead weight would not have to be carried along unnecessarily.

To fire a rocket in such a manner that, once outside the atmosphere, it takes up an orbit around the earth, requires a velocity of slightly less than five miles per second. It is impossible to pack enough fuel into a single rocket to attain this velocity, but with a three-stage rocket it could be done. If the first stage dropped off when the whole had reached 1.5 miles per second, the second stage could add another 1.5 miles per second by using up its fuel, and the third stage would then have to produce slightly more than 1.5 miles per second to enable the rocket to climb out of the atmosphere at a shallow angle with enough speed to stay in its orbit. This, of course, is the principle of the “satellite shots” which are to be fired during the International Geophysical Year, 1957–58.² Some of these satellite shots will be fired in such a way that the “satellite” (the instrument-carrying nose of the third stage) continues to encounter a little air resistance in its orbit as it revolves around the earth once approximately every 90 minutes at a speed of 18,000 mph. Because of the air resistance it will slowly lose both speed and altitude, and ultimately will fall into denser layers of the atmosphere and burn up like a meteorite. Another satellite shot will be high enough so that it will not encounter any air resistance and will stay in its orbit permanently.

The return of the satellites into the atmosphere will teach a very important lesson: how an object which was in a satellite orbit and returns to the atmosphere can do so without burning up. This information is needed before a manned and winged rocket can be made to leave the atmosphere. After a number of unmanned artificial sat-

ellites have been launched successfully, a piloted third stage with wings for subsequent landing will be fired into a satellite orbit temporarily. After that has been done, other such piloted third stages will leave portions of a future manned space station in an orbit. The space station will have been built on the ground and disassembled for shipment into an orbit, probably more than 800 miles above sea level. When enough material has been carried up, a few men will begin reassembling the station in space.

"TIME" DIAGRAM BY V. PUGLISI

Artist's drawing of the MOUSE, proposed earth satellite developed by Dr. Fred Singer of the University of Maryland. It is designed to circle the earth in 90 minutes at 18,000 mph. Such satellites, either cylindrical or spherical in shape, are to be launched by the U.S. during the International Geophysical Year, 1957–58.

Research work done on the ground with complicated equipment has shown that the human body can stand even greater strains than would be caused by travel to and from such an orbit. Virtually the only question not yet answered is how man will react to prolonged exposure to an apparent absence of gravity. It is now believed that this “zero-g condition,” to use the technical term, will produce a sensation of falling. What is not known at the moment is whether this sensation of falling will give way after a while to one of floating. But this question will be answered by the crew of the first rocket ship which goes into an orbit temporarily.

Before the 20th century draws to a close, all this will be well known, and other pioneers will be busy investigating—and solving—the next set of problems. (See also *ELECTRONICS*; *PHYSICS*.)

Research Engineer and Author of “*Rockets and Space Travel*,” “*The Conquest of Space*,” etc.

SPAIN. Located on the Iberian Peninsula of southwestern Europe, Spain is bounded on the north by the Bay of Biscay and by France, from which it is separated by the Pyrenees Mountains; on the west by Portugal and the Atlantic Ocean; and on the east and south by the Mediterranean Sea. Including the Balearic and Canary Islands (q.v.), it has an area of 194,232 square miles. The population was estimated at 28,976,000 in July 1955. Leading cities, with their estimated 1955 populations, are Madrid, the capital (1,643,000), Saragossa (268,000), Valencia (516,000),

² It has been announced that 12 such satellite shots will be prepared. Plans for launching the first one, under sponsorship of the National Science Foundation and the National Academy of Sciences, were first announced on July 29, 1955, and further details were released on Jan. 13, 1956. This first satellite will be fired from Patrick Air Force Base, Cocoa, Fla., probably before Sept. 30, 1957. It will be a metallic sphere about 30 inches in diameter, weighing about 21½ pounds, and is expected to supply nonmilitary data for scientists of all nations participating in the International Geophysical Year.

Barcelona (1,188,000), Seville (384,000), Málaga (279,000), Bilbao (230,000), and Murcia (225,000). (See also SPANISH COLONIES).

Government.—The present Spanish regime dates from 1939. The chief of state is Gen. Francisco Franco Bahamonde, who is also head of the official Falange Party. His ministers have administrative and advisory functions. The Cortes (473 members), or Parliament, which meets annually, is admittedly a rubber-stamp body. Elections, in which only heads of households may vote, are limited to municipal offices, for which the candidates are first screened by the government. The country is divided into 50 provinces, including the Balearic and Canary Islands.

On March 31, 1947, Franco promulgated the Law of Succession, which was approved by the Cortes in the following July. This law gave him life tenure as chief of state, and provided for a Regency Council to select a king as his successor. Franco has given some indication that he is willing to accept Juan Carlos, son of Don Juan of Bourbon, the pretender, as king. The young prince is presently being educated in Spain by Franco. No official act of succession has been passed.

Finances.—Annual government receipts for the biennial period 1953-55 were estimated at 26 billion pesetas. Annual government expenditures were budgeted at 28.6 billion pesetas. The budgeted deficit will be made up by United States aid under the mutual defense assistance agreement signed on Sept. 26, 1953.

Education and Religion.—Approximately 20% of the population is illiterate, although Spain has (1951-52) 59,428 public elementary schools with 4,208,651 pupils and 59,917 teachers; 119 government-supported national secondary schools, and 806 private secondary schools, with a total of 221,809 students; and 12 universities with a combined enrollment of 51,633. There are also 53 teacher-training institutions with 21,210 students.

A concordat, signed with the Vatican on Aug. 27, 1953, and ratified by the Cortes on Oct. 26, 1953, recognizes Roman Catholicism as "the only religion of the Spanish people," and provides for the nomination of bishops by the Spanish government and the chief of the Spanish state. The government appropriates funds for the Roman Catholic Church, and clergy are not entirely subject to the ordinary criminal and civil courts. The approximately 26,000 Protestants, 3,000 Jews, and a relatively small number of Moslems cannot be said to enjoy full religious freedom, since both public pressure and official policy prohibit not only proselytizing, but also public or advertised religious services.

National Defense.—The Spanish Army of more than 360,000 is presently being equipped in a more modern manner by the military side of the United States aid program. Except in the case of emergencies, the army is not used for internal police control. The air force and navy are also being modernized under the American aid program.

The United States airbases at Saragossa, Torrejón, San Pablo, and Morón de la Frontera (near Seville), provided for by the 1953 agreement and scheduled for completion in 1957, will accommodate both fighter planes and bombers. At the port of Rota, southern terminal of the 485-mile fuel pipeline which will extend to the airbases, the U.S. Navy is building a small base for the use of its fleet. It is estimated that United States military aid to Spain will exceed \$300 million up to 1957. (See also NAVAL AFFAIRS.)

Economy.—Spain is essentially an agricultural country, with over half the active population engaged in farming; approximately one third of the gross national product is directly attributable to this occupation. The country is more or less self-sufficient (depending on the weather) with respect to food production. Due both to the improved foreign trade position of the economy and to the relatively good harvest year, per capita food consumption in 1955 probably rose slightly above the 2,500 calories per day which has marked the recent past, but is still among the lowest in Europe. Annual per capita income probably does not exceed \$190, although, again due to American aid (\$203 million since 1953), the tendency is upward. In 1952-53 the index of production stood at 117 (1950-51 = 100); in 1953-54, at 113. The general wholesale price level in 1954 stood at 176, a decline from the 1953 high of 195 (1948 = 100). The consumer goods price level stood at 157 in 1954, as compared with 160 in 1953.

Spain built an average of slightly over 2,000 dwelling units per month in 1954, as contrasted with 1,560 in 1953. Nevertheless, the rate of con-

struction was 75% below the estimated national need. Late in 1955 the government announced a 5-year building program, to begin on Jan. 1, 1956, aimed at providing 500,000 low-rent homes.

Agriculture.—The agricultural economy of 1955 continued satisfactory insofar as the home requirements of Spain are concerned. Agricultural yields in 1954 included, in metric quintals (220.46 pounds per quintal), wheat, 48,500,000; hops, 22,000,000; oats, 5,500,000; corn, 5,500,000; and rice, 3,500,000.

In 1954 the U.S. Foreign Operations Administration released \$8.5 million for tractors, soil conditioners, harvesters, and other machinery to aid Spain's agricultural and reforestation programs. As a result of the good crops and the availability of funds for equipment and fertilizers, there is no immediate threat of the reinstitution of food rationing in Spain. Wheat imports, for example, were virtually zero in 1955, while in 1954 they amounted to nearly 400,000 metric tons.

An index to Spain's attempt at economic self-sufficiency is the marked increase in land under cotton, part of which was secured from former vineyards. In 1954-55 about 267,000 acres were devoted to cotton, as compared with 217,000 in 1953-54; acreage in 1955-56 was tentatively estimated at 435,000. The 1954-55 cotton crop totaled 95,000 bales (500 pounds gross), compared with 76,000 bales in 1953-54 and an estimated 150,000 bales for 1955-56. Wine production in 1953 was estimated at nearly 23.5 million hectoliters; in 1954 it fell to 17.8 million hectoliters.

The 1954 citrus crop was poor due to ravages of frost, hail, and the Mediterranean fly. The total crop, originally estimated at 1.7 million metric tons, amounted only to approximately 1 million metric tons. Olive production was similarly affected. Offsetting these was the better than average cereal crop.

Fisheries.—The Spanish household is perennially dependent on the fisheries industry, which is primarily located along the northern coast. In 1953 the total take from all waters was 635,000 metric tons (valued at 3.25 million pesetas or about \$81 million), the major portion of which was cod, herring, sardine, hake, and haddock. The number of boats of all sorts in the fishing fleet in 1953 was 39,700; the tonnage totaled 221,000.

Manufacturing.—The index of industrial production for 1953-54 stood at 113 (1950-51 = 100). The index for 1952-53 was 117, and for 1951-52, it was 124. These statistics indicate that the expected sharp increase in Spanish production did not materialize. (The increases which have occurred in the Spanish economy have been largely due to imports.)

The principal manufacturing industry of Spain is textiles, located almost entirely in Catalonia. Cotton manufacturing, which employs about 2 million spindles in about 25,000 mills, is the most important part of the textile industry. The 1954 average monthly output of cotton yarn was about 4,500 metric tons. Woolen yarn averaged about 1,200 metric tons; rayon yarn was about equal to woolen yarn production. Cement production in 1954 averaged 277,000 metric tons per month.

Also of importance are the manufacture of cigarettes (a government monopoly), tiles, earthenware, glassware, bricks, furniture, leather, and chemicals, as well as flour milling and sugar refining. Heavy industry includes the production of

locomotives, rolling stock, steam and combustion engines, and textile and farm machinery. An attempt is presently being made to increase the production of automobiles, trucks, and aircraft. In 1954 electric power output reached a record total of 3,853,573 kw.; it was estimated that new plant construction would add another 2.5 million kw. by 1958.

Mining.—Monthly output of the leading minerals in 1954 (in metric tons) was as follows: pig iron and ferroalloys, 75,400; lead, 4,720; aluminum, 390; tin, 50; zinc, 1,900; and copper, 480. The Spanish oil monopoly, which has a technical link with the American firm, Caltex, and certain private interests, is presently undertaking a geological survey of Spain in an attempt to discover crude oil in the country. The Calvo Sotelo National Corporation, a government-owned enterprise, is presently reducing oil and fertilizer from shale in a plant located in Ciudad Real Province. It is hoped this operation will yield nearly 27,000 tons of kerosine, an amount which will meet the domestic requirement. Production, however, is still in the experimental stage.

Foreign Trade.—Spain's imports in 1954 were valued at approximately 1,880.9 million gold pesetas (1 gold peseta = U.S.\$0.327; paper peseta rates range from 10.95 to 38.95 pesetas to the dollar, depending on the commodity). The comparative figure for 1953 was 1,825 million gold pesetas. Exports in 1954 were 1,421.6 million gold pesetas, slightly below the 1953 figure of 1,476.2 million. Agricultural products accounted for 60% of Spanish exports; raw materials and manufactured goods comprised the principal imports. The United States was Spain's main supplier of goods (\$113 million), followed by the sterling area (\$83 million), Germany (\$69 million), and the franc area (\$68 million); the principal importers of Spanish products were the sterling area (\$92 million), Germany (\$51 million), and the United States (\$48 million).

Transportation and Communication.—In 1955 Spain's highway system totaled 74,990 miles; there were 115,700 passenger cars, 90,615 trucks, 9,023 buses, and 75,874 motorcycles. The railway network exceeds 11,000 miles and is growing rapidly. The current United States aid program will clearly benefit both the highway and railroad systems. Iberia, the most important Spanish airline, maintains regular service to Europe, South America, and the United States.

Principal Events, 1955.—Despite the United States aid program, which was nearing full swing, Spain remained a poor country in 1955. The expectations aroused probably exceeded the realization, as experienced by most Spaniards. Production increased but not to the extent anticipated, and inflation remained a threat to the Spanish economy.

Since the importance of Spain in the cold war varies directly with its geopolitical and geomilitary position, the Soviet Union's apparent desire to better its relations with the West at the Geneva Conference (q.v.) of the heads of government in July had the temporary effect of reducing the role of Spain in the great Western alliance. With the failure of the conference of foreign ministers in October–November, however, Spain regained its strategic value to the West, a turn highlighted by the visit, on November 1, of U.S. Secretary of State John Foster Dulles to General Franco in Madrid, during which "the spirit of collaboration" between the United States and Spain was reaffirmed.

In North Africa, Spain has undoubtedly prof-

ited both economically and politically from France's inability to solve its colonial problem. The political and military instability of French North Africa, coupled with the French government's lack of policy, has given a real propaganda edge to the Franco regime. Despite its obvious reluctance to interfere with French Moroccan rebel operations in the Spanish Moroccan border area, however, Spain has not developed a program or policy to take full advantage of the power vacuum in North Africa. Decisive Spanish action there undoubtedly would test the solidarity of the Western alliance. But Spain, apparently, is unwilling to take such action, since the dismemberment of the French Empire might very well mark the beginning of the end of the Spanish African Empire.

A further indication of Spain's growing status in international affairs was the approval by the United Nations, on January 25, of the Spanish request to establish a permanent observer with that organization. On December 14, Spain was admitted to the United Nations, along with 15 other countries. This represented a tremendous political victory for the Franco regime.

Early in January 1956 the United States press reported that a morale survey had been made at the University of Madrid, testing the attitudes and reactions of the students to the economic and political regime. The overwhelming majority of the students had little faith or confidence in the integrity and efficiency of the regime, according to the newspaper account. Not only is the fact of such lack of confidence of interest and importance, but perhaps of equal significance is the permission, apparently allowed the United States press representatives, to circulate such information.

SPANISH COLONIES. Spain's colonial territories, listed in the accompanying table, are located along Africa's north and northwest coasts.

SPANISH COLONIES

Territory	Area (sq. mi.)	Population (est. 1954)
Moroccan Protectorate:		
Northern Zone.....	7,589	1,017,000
Southern Zone ¹	9,040	13,000
Settlements in North Africa ²	82	141,302 ³
Spanish West Africa:		
Ifni.....	741	44,000 ⁴
Spanish Sahara (Rio de Oro and Saguia el Hamra).....	115,234	38,000 ⁴
Spanish Guinea ⁵	10,830	205,000

¹ Administered as part of Spanish West Africa. ² Including the garrison cities of Ceuta (pop. 1955, 60,000) and Melilla (83,000), together with Alhucemas, the Chafarina Islands, and Peñon de Velez de la Gomera. The settlements in North Africa are enclaves within Spanish Morocco and are administered as part of Spain. ³ 1950. ⁴ Including nomads absent during the dry season. ⁵ Including the territory of Rio Muni and the islands of Fernando Poo, Corisco, Annobon, and the Elobeyes.

For an account of Spanish Morocco, see MOROCCO.)

Spanish West Africa.—The politico-military government resides at Cabo Yubi and derives from the Spanish high commissioner of Morocco at Tetuán, Spanish Morocco. In 1951 there were 4 primary schools with 354 pupils.

Ifni is a Spanish enclave on the southwest coast of French Morocco. Sidi Ifni (7,651) is the

capital. Corn, alfalfa, grapes, wheat, oats, fruit, and dates are grown. Fishing is important along the coast.

Spanish Sahara lies south of Morocco and is mainly desert in the interior. Aíun (3,142) is the capital. There is some coastal fishing. Cacao is exported.

Spanish Guinea.—Spanish Guinea is ruled by a governor assisted by territorial administrators. In 1951 there were 85 primary schools (15,906 pupils), and (in 1950) a secondary school (62) and 2 technical schools (150). Cacao exports totaled 16,600 metric tons in 1953. Other products are coffee, vegetables, and wood. Largest of the Spanish islands in the Gulf of Guinea are Fernando Poo (773 sq. mi.). Its chief city is Santa Isabel (9,280), capital of Spanish Guinea. Fishing and cattle raising are the chief occupations.

SPANISH LITERATURE. Fiction.—Spain's most exciting literary productions of 1955 belonged to the field of fiction. The coveted Nadal Prize went to Francisco José Alcántara for his very readable *La muerte le sienta bien a Villalobos*. The Planeta Prize was awarded to Ana María Matute for her *Pequeño teatro*, an imaginative re-creation of a provincial town. The Ateneo Prize went to another promising young woman, María Beneyto, for her powerful saga, *La invasión*.

The literary scandal of 1955 was caused by Camilo José Cela, whose latest novel, *La catira*, was set in a Venezuelan background. Although many Spanish critics hailed it as Cela's ripest creation, 21 Venezuelan writers blasted it in the Caracas newspaper, *El Nacional*, as a grotesque misrepresentation of Venezuelan life, customs, psychology, and language. The fact remains, however, that *La catira* is a most engaging work.

Ignacio Aldecoa's latest works, the novel *El fulgor y la sangre* and the short stories, *Vísperas del silencio*, enhance this promising young man's reputation. They bring to mind Medardo Fraile's truculent *Cuentos con algun humor* and Juan Goytisolo's *Juegos de manos*, which criticises the youth of today, and Goytisolo's *Duelo en el paraíso*, a panoramic picture of the Spanish Civil War which dexterously combines truth with fiction. In *Diario de un cazador*, Mario Delibes depicts with his customary truculence and verve a school janitor who loves hunting to the point of distraction. Using streamlined techniques, José María Espinas presents in *El gandul* a neorealist picture of the denizens of a modest apartment house. Bereft of all humor is Jorge Ferrer Vidal's *El trapecio de Dios*, which deals with the desperately grim existence in a Barcelona suburb, and Elena Quiroga's psychological narrative, *Algo pasa en la calle*.

From Spanish writers in exile came the four superb tales of Paulino Massip, which are included in *La trampa*; two short story volumes of realistic fantasy, *Cuentos ciertos* and *Ciertos cuentos*, by the ubiquitous Max Aub; and a fiercely desperate novel by Sebastián Juan Arbó, *La hora negra*, in the form of memoirs by a student who died insane. For her fruitful activities in the field of fiction, the Menorca Prize (the most generous of all) was awarded to Carmen Laforet.

Poetry.—Another woman, Concha Zardoya, won the Boscán Prize for poetry, a literary form which found adequate representation in 1955 in the work of two other talented young women: *Midas*, a magnificent love poem by Marina Romero, and *Vivientes de los siglos*, which shows Carmen Conde's love of nature and her cosmic preoccupations.

Twenty-five-year-old José Angel Valente won the Adonáis Prize with *A modo de esperanza*, which proves him a consummate craftsman and a most inspired poet. Carlos Murciano's *Viento de la carne* is lustier and more pagan, and at times contains Whitmanesque echoes. In *Hombre y Dios* the veteran Dámaso Alonso appears in dead earnest in his quest for order and clarity. The anthology *Veinte poetas españoles*, edited by Rafael Millán, exhibits the range and diversity of contemporary Spanish lyricism.

Nonfiction.—The Fastenrath Prize of the Spanish Academy was awarded to Luis G. de Valdeavellano for his *Historia de España*, a vivid survey of Spanish life to the Middle Ages. Another equally significant work was the two-volume *Historia universal, cultural y política*, by Antonio Palomeque Torres.

In literary criticism the most informative volume was *Ocho escritores actuales*, in which Antonio de Hoyos analyzes the creative output of four women (Carmen Laforet, Elena Quiroga, Ana María Matute, and Dolores Medio) and of four men (Cela, Gironella, Delibes, and Francisco Alemán Sainz).

There were perceptive studies of the life and work of Miró: *Vida y obra de Gabriel Miró*, by Vicente Ramos; of Unamuno as a poet: Manuel García Blanco's *Don Miguel de Unamuno y sus poesías*; and of the 19th century Galician poetess, Rosalía de Castro: *Siete ensayos sobre Rosalía*, by R. Carballo Valero and other critics. Two separate volumes were published on the great poet, Antonio Machado, by Ramón de Zubiría and S. Serrano Poncela, as well as a survey of contemporary poetry, José Luis Cano's *De Machado a Bousoño*.

Among the various collections of philosophical essays the most outstanding were María Zambrano's inspired *El hombre y lo divino*, which surveys the religious spirit in man; José Ferrater Mora's *Cuestiones disputadas*; and Julián María's *Ensayos de teoría*.

Spain's literary losses in 1955 were extremely heavy, among them José Ortega y Gasset (q.v.), greatest living Spanish philosopher, who died on October 18, and the popular novelist, Concha Espina de Serna, who died on May 19.

SPECIAL LIBRARIES ASSOCIATION. See SOCIETIES AND ORGANIZATIONS.

SPICES. In 1954 the approximate spice consumption in the United States was 148,770,000 pounds, an increase of 2 million pounds over the preceding year. Imports totaled 131,553,000 pounds, an increase of nearly 11 million pounds. In spite of larger exports (2,050,000 pounds, 1953; 3,595,000 pounds, 1954) American production declined 8 million pounds from the 1953 level of 28 million pounds.

Pepper and mustard registered major import gains. In 1954, 37,938,469 pounds of pepper were imported, as compared with 30,488,129 pounds in 1953. This was the largest increase since 1946, when the spice plantations of Indonesia, formerly a source of 80% of the supply, began to recover from the effects of Japanese destruction during World War II. Pepper consumption in the United States, however, remains below the 56 million-pound average of 1935-39. Mustard's 6 million pound import gain did not compensate for the 8 million pound drop in

SPORTS, GAMES, AND SHOWS. Upsets, surprises, thrills, records, and tragedy all contributed to the sports scene in 1955. The Brooklyn Dodgers amazed the world by finally winning a world series; an "unknown" professional won the National Open golf championship; a rare match race marked horse racing; boxing had a champion who disproved the adage that they never come back; the 200-mile-an-hour water "barrier" was pierced; and deaths were high in auto racing.

The Dodgers achieved their historic World Series feat by defeating the New York Yankees, 4 games to 3. Brooklyn became the first team to capture the championship after losing the first two games of the classic. Fittingly, the seventh and deciding game was the highlight. In a tense situation, Johnny Podres turned back the Yankees, 2-0, with a stout-hearted exhibition of left-handed pitching. The victory was Podres' second of the series.

In the National League pennant race, Brooklyn had wasted no time in establishing its superiority. The Dodgers won 22 of their first 24 games and set a circuit mark by clinching the flag on September 8.

The American League race was considerably tighter, with four teams in the running for a good portion of the season. The flag was decided in the final week as the Yankees crushed the Boston Red Sox and as the Cleveland Indians lost their chance to win the pennant for the second year in a row by faltering against the Detroit Tigers.

The keen race and the shift of the Athletics from Philadelphia to Kansas City helped bring

about an increase in American League attendance. More than a million fans turned out to see games in the Missouri metropolis and the total attendance in the junior loop was 8,942,971. The National League drew 7,674,412, with Milwaukee again setting the pace in both circuits by attracting 2,005,836.

Oklahoma extended its undefeated and untied string to 29 games and at the end of the season was rated the No. 1 college football team in The Associated Press and The United Press rankings. Michigan State, Maryland, the University of California at Los Angeles, and Ohio State also ranked high. Army pulled a surprise by defeating Navy in their annual encounter. Howard (Hopalong) Cassady, Ohio State back, was generally acclaimed as the top player in college ranks.

Professional football had another big year. The Cleveland Browns, coached by Paul Brown, won the Eastern crown, with the Los Angeles Rams, under a first-year coach, Sid Gillman, taking the Western laurels in the National League. The league attendance mark was broken for the fifth year in a row, 2,722,685 fans attending the 72 regular-season contests.

Spurred by television plums, activity continued at a rapid rate in boxing, with championship fights in each division. Rocky Marciano, the heavyweight titleholder, continued his reign by stopping two challengers, Don Cockell and Archie Moore, but it remained for Sugar Ray Robinson to provide the surprise of the year in fistic circles. Robinson, who had retired as world middleweight champion in 1952, decided on a comeback, which led to a title bout with the then current ruler, Carl (Bobo) Olson, in December. Robinson knocked out Olson in two rounds at Chicago and thereby became the first man to win the 160-pound title three times.

Horse racing had its third \$2 billion betting year in a row, although there was a 2.08% decline in New York over the previous year. The year's headlines went mainly to a 3-year-old colt, Nashua. The Belair Stud racer won 10 of 12 tests and lifted his total earnings to \$945,415, second only to Citation's total of \$1,085,760. One of Nashua's defeats was by Swaps in the Kentucky Derby; the other in a race against older horses in New York. Nashua made amends for his defeat in the Derby by beating Swaps in a match race at Chicago in August.

Later, William Woodward, Jr., the owner of Belair Stud, was killed in a shooting accident, and the stable was sold through sealed bids. A five-man syndicate headed by Leslie Combs, 2d,

acquired Nashua for \$1,251,200. The figure represents a record for a sale in the sport.

Harness racing also enjoyed a banner year. Wagering reached \$476,728,009, and attendance was 19,242,678, both records. Scott Frost, a trotter, was named the harness horse of the year.

An unheralded professional from Davenport, Jack Fleck of Iowa, proved an insurmountable obstacle in Ben Hogan's attempt to become the first golfer to win the United States Open championship five times. Staging a spectacular rally to tie Hogan after the regular 72 holes, Fleck went on to defeat the Texan, 69 to 72, in an 18-hole play-off for the title. The United States swept the two major men's competitions with England, the Walker Cup for amateurs and the Ryder Cup for professionals. Julius Boros was the leading money-winner, with earnings of \$63,121, the major portion of which was supplied by his \$50,000 victory in the Tam O'Shanter world tournament.

Tennis in the United States suffered a major setback during 1955. Eight months after winning the Davis Cup, the United States team lost it back to Australia, 5 to 0. Tony Trabert of Cincinnati, who won the French, Wimbledon, and United States titles, was below his playing peak for the team matches because of an injury. Trabert later turned professional, but tennis promoter Jack Kramer failed to lure the Australian stars, Lewis Hoad and Kenneth Rosewall, into professional ranks.

Mile racing again spotlighted track and field action. Three runners bettered 4 minutes for the distance in a meet at London. They were Laszlo Tabori of Hungary, the winner, in 3:59; Chris Chataway of England, second, 3:59.8; and Brian Hewson of England, third, 3:59.8. Wes Santee, who lowered the American record to 4:00.5, had a good year in indoor competition. He set a world indoor mark of 4:03.8, which was subsequently lowered to 4:03.6 by Gunnar Nielsen of Denmark, who sparkled in competition in the United States during the winter.

The year 1955 saw Navy's crew finally meet defeat. The University of Pennsylvania ended the middies' streak at 31 victories. Cornell won the Intercollegiate Rowing Association regatta. Penn was first in the Grand Challenge Cup event of the Royal Henley regatta in England.

Tragedy struck auto racing. Bill Vukovich, who had won the Indianapolis 500-mile contest two years running, was killed in an attempt to notch his third triumph. Bob Sweikert won the race. The world was shocked by the deaths of more than 80 persons in an accident during the Le Mans (France) 24-hour endurance race.

Donald M. Campbell cut a niche in speedboat racing. On July 23 he became the first to officially reach the 200-mile-an-hour water "barrier" with a two-way clocking of 202.32 mph. at Lake Ullswater, England. He made one other successful attempt during the year, at Lake Mead, Nev., on November 16. He sent his jet-powered *Bluebird* at 239.5 mph. on the first of the two required runs over a measured kilometer, and at 193 mph. on the return trip for an average of 216.2.

The Detroit Red Wings continued their sway in the National Hockey League. They finished first in the circuit race and then subdued the Montreal Canadiens in the Stanley Cup final, 4 games to 3.

Two thousand athletes representing 22 nations took part in the second Pan-American Games, held in Mexico City, Mexico, on March

12-26. The United States, unofficial winner with 1,434½ points, dominated the major track and field and aquatic competitions.

Following are summaries of some of the developments in major sports activities of 1955, together with listings of champions and of many outstanding performances. Team or residential affiliations are provided for each winner, where possible, but are indicated only once for a multiple winner—the first time his name is listed. Special international activities are covered below under the heading, *Pan-American Games*.

AUTO RACING

Auto racing was marred by several major tragedies during 1955. At Le Mans, France, the world's worst automobile racing accident occurred on June 11 during the running of the Le Mans Endurance Race. A German Mercedes, driven by Pierre Levegh of France, smashed into a 5-foot earthwork barrier with such force that its engine ripped loose and hurtled into jammed masses of spectators (300,000 were watching the race), killing 87 and injuring some 108 others.

In the 500-mile Indianapolis race on May 30, 36-year-old Bill Vukovich, winner of the 1953 and 1954 events, was killed while leading the field with his Hopkins Special. His racer crashed into a 4-car tangle of wreckage on the backstretch. The well-known Italian driver, 36-year-old Alberto Ascari, world racing champion in 1952 and 1953, was killed at Monza, Italy, on May 26, while testing a borrowed Ferrari.

One of the results of the tragedies was that the American Automobile Association, the chief ruling power of the sport in the United States, withdrew its support of all types of auto racing.

AMERICAN RACES

Indianapolis Speedway (500 miles)—Bob Sweikert, Indianapolis, driving a John Zink Special (ave. speed, 128.209 mph.; time, 3:53:59.53; winner's share of prize money, \$76,138.63)
President's Cup (Hagerstown, Md.)—Sherwood Johnston, Greenwich, Conn., driving a Jaguar (dist., 100 miles; ave. speed, 87.9 mph.)
Argentine Grand Prix (Buenos Aires)—Juan M. Fangio, Argentina, driving a Mercedes (dist., 375 kilometers, 576.55 meters, or 233 miles; ave. speed, 120.-876 kmph., or 75 mph.; time, 3:38:06.0)

EUROPEAN RACES

Le Mans Endurance (24-hour) Race—Mike Hawthorne, London, and Ivor Bueb, driving a Jaguar (dist., 2,564.28 miles; ave. speed, 106.84 mph.)
 Mille-Miglia (Brescia, Italy)—Stirling Moss, Great Britain, driving a Mercedes (dist., 992 miles; ave. speed, 98.53 mph.; time, 10:07:48.0)
 Grand Prix of Europe (Monte Carlo, Monaco)—Maurice Trintignant, France, driving a Ferrari (dist., 314.5 kilometers, or 196.5 miles; ave. speed, 105.914 kmph., or 65.66 mph.; time, 2:58:09.8)
 British Grand Prix (Aintree)—Stirling Moss, driving a Mercedes (dist., 270 miles; ave. speed, 86.47 mph.; time, 3:07:21.2)
 Italian Grand Prix (Monza)—Juan Fangio, driving a Mercedes (dist., 500 kilometers, or 310.5 miles; ave. speed, 206.791 kmph., or 128.493 mph.; time, 2:25:04.4)

BADMINTON

Thomas Cup (world team championship)—Malaya (defeated Denmark, 8-1) American Badminton Association Open Championships (Long Beach, Calif., tourney ending April 9)—Singles: Joseph Alston, South Pasadena, Calif.; women's singles: Margaret Varner, Mt. Holyoke College; doubles: Joseph Alston and Wynn Rogers, Arcadia, Calif.; women's doubles: Judy and Susan Devlin, Baltimore; mixed doubles: Wynn Rogers and Dorothy Hann, Los Angeles
 All-England (unofficial world) Championships (London, tourney ending March 26)—Singles: Wong Peng Soon, Malaya; women's singles: Margaret Varner, U.S.; doubles: Finn Kobbero and Jorgen H. Hansen, Denmark; women's doubles: Iris Cooley and June White, England; mixed doubles: Finn Kobbero and Kirsten Thordahl, Denmark
 World Professional Championships (Montreal, Que., tourney ending April 19)—Poul Holm, Montreal

BASEBALL

The year 1955 was the year the Brooklyn Dodgers won the World Series. After seven fruitless attempts the National League team from the Borough of Churches finally won the world championship in its eighth attempt. Frosting was added to the cake by the fact that the crown was gained at the expense of the New York Yankees, 4 games to 3. The Yankees had beaten the Dodgers five times in previous World Series.

It was not an easily gained triumph. The Yankees won the first two games behind the stellar pitching of their star left-handers, Whitey Ford and Tommy Byrne, at Yankee Stadium. The classic then moved to Ebbets Field and there the Dodgers rallied to take three consecutive games. Johnny Podres, a 23-year-old southpaw who had been sidelined most of the season by an ailing back, started the Brooklyn surge.

Back at the stadium, the Yankees made it 3-all as Ford registered his second success in the sixth game. In the seventh and final contest, Podres returned to blank the New Yorkers, 2-0, and thereby make Brooklyn's long-cherished dream come true. Podres was easily the outstanding player in the series.

The Brooklyn victory was a signal achievement for Manager Walter Alston. The pilot, after his first year at the helm of the Brooks in 1954, had been severely criticized for his failure to lead the team to the pennant that year.

The Dodgers' drive to the championship and a berth in the World Series was a comparatively easy one. The team led the league race from start to finish. The Brooks won their first 10 games and 22 of their first 24. They took the flag on September 8, the earliest clinching date in National League history. Prominent in the Dodgers' success were Duke Snider, Roy Campanella, and Don Newcombe. Snider and Campanella were effective sluggers, and Newcombe excelled on the mound. Campanella and Yogi Berra of the Yankees, both catchers, each won the most valuable player awards for the third time in their respective leagues.

The Yankees, on the other hand, had a difficult time in capturing their record 21st American League pennant. Stubborn opposition was provided by the Cleveland Indians, the Chicago White Sox, and the Boston Red Sox, with Cleveland apparently having the pennant sewed up early in September. But the Indians dropped three games in a row and the Yankees went on a seven-game winning streak that clinched their sixth flag in seven years under the direction of Casey Stengel.

Six players were named to the Hall of Fame at Cooperstown, N.Y. They were Joe DiMaggio, Ted Lyons, Dazzy Vance, and Gabby Hartnett, recent stars; and Frank (Home Run) Baker and Ray Schalk, both of whom were named by a special committee on baseball veterans.

Following the close of the season there were some managerial changes. Leo Durocher resigned and Bill Rigney succeeded him as pilot of the Giants. Harry (The Hat) Walker, who replaced Eddie Stanky as manager of the St. Louis Cardinals in midseason, was released at the end of the schedule, and Fred Hutchinson was ap-

pointed his successor. The Pittsburgh Pirates dropped Fred Haney and gave the job to Bobby Bragan.

An overall increase of 681,500 over the 1954 attendance figure of 15,935,883 was noted in the majors. This was largely because of the Athletics' shift from Philadelphia to Kansas City, where 1,393,054 fans turned out. Separately, the American League (8,942,971) showed a rise in attendance, while the National League (7,674,412) showed a decline.

 Babe Ruth League—Terre Haute, Ind.
 Pony League—Washington, Pa. (defeated Youngstown, Ohio, 4-0)
 National Amateur Junior—Detroit (defeated Chicago, 7-2)
 American Baseball Congress—Houston (defeated Seattle, 7-2)

BASKETBALL

A surprise team gained the spotlight in collegiate basketball in 1954-55. Overlooked in the preseason predictions, the University of San Francisco capped an outstanding campaign by capturing the National Collegiate Athletic Association title in its first attempt. The Dons defeated La Salle, the defending champion, 77 to 63, in the final. The Pacific Coast squad was picked as the ranking team in the end-of-the-season polls of The Associated Press and The United Press.

Duquesne gave San Francisco a close race for national honors. The team from Pittsburgh won the National Invitation Tournament in New York for the first time in eight attempts, beating Dayton, 70 to 58, in the final.

Princeton took the Ivy League crown after finishing the regular season in a three-way tie with Columbia and Pennsylvania. The Tigers routed Columbia, 86 to 69, for the laurels following a first-round bye.

Georgia Tech accounted for the biggest collegiate upset. On Jan. 8, 1955, the Engineers broke Kentucky's winning streak at 32 games and the Wildcats' home-court winning skein at 129 games. The score was 59 to 58.

The Syracuse Nationals gained the National Basketball Association championship for the first time by downing the Fort Wayne Pistons, 4 games to 3, in the final series of the professional postseason play-offs.

For the third consecutive campaign, Neil Johnston of the Philadelphia Warriors was the NBA scoring leader. He totaled 1,631 points. He set a freethrow record by sinking 589 foul shots.

AMATEUR

Tournaments

NCAA—San Francisco (defeated La Salle, Philadelphia, in final, 77-63)
 National (New York) Invitation—Duquesne (defeated Dayton in final, 70-58)

(445); doubles: Tom Fitzgerald and George Vetos, Fall River (861); team: Guida's Dairy-Blue Ribbons, New Britain, Conn. (1,988); mixed doubles: Frances Kupec, Windsor, Conn., and George Pelletier, Danielson, Conn. (792); women's all-events: Elizabeth Barger, Baltimore (1,152); women's singles: Edith Christensen, Washington, D.C. (420); women's doubles:

Julie Dubiel and Ann Plude, Avon, Conn. (766); women's team: Brunswick Red Crowns-Pimlico, Baltimore (1,800).

BOXING

Boxing had an interesting year in 1955. The unbeaten world heavyweight champion, Rocky Marciano, made two defenses of his crown and extended his string of victories to 49. One of his opponents was Archie Moore, the light heavyweight titleholder, and the other was Don Cockell of England. Marciano won both fights by ninth-round knockouts.

The Marciano-Moore encounter was held at Yankee Stadium, New York, on September 21, and drew a crowd of 61,574, the top fight gathering of the year. The gate receipts were \$948,117.95, putting the bout high on the all-time money list.

Moore furnished surprising resistance before capitulating to the pulverizing blows of the champion. The challenger sent Marciano to the canvas for a count of 4 in the second round. It was the first time the heavyweight king had been felled since Joe Walcott dropped him in Philadelphia in 1952.

The light heavyweight champion made one successful title defense before meeting Marciano. Moore stopped Carl (Bobo) Olson, the middleweight titleholder, in the third round at New York on June 22. On December 10, Olson's reign as 160-pound ruler was ended by Sugar Ray Robinson, who had retired as champion of the class in 1952. Robinson, by halting Olson in the second round at Chicago, became the first middleweight champion to hold the title three times.

The welterweight division also commanded considerable attention. Tony DeMarco of Boston captured the crown by knocking out Johnny Saxton in the 14th round on April 1. DeMarco, however, held the title for only 70 days, the shortest reign in the class. Carmen Basilio took the laurels by stopping DeMarco in the 12th at Syracuse, N.Y., on June 10. In a return match, at Boston on November 30, Basilio again stopped DeMarco in the 12th.

WORLD PROFESSIONAL

(As of Dec. 31, 1955)

Heavyweight—Rocky Marciano, Brockton, Mass
Light Heavyweight—Archie Moore, Miami, Fla.
Middleweight—Ray Robinson, New York

UNITED STATES CHAMPIONS

(New York, N.Y., June 9–17)
 Individual—*Foil*: Albert Axelrod, Salle Santelli, New York; *épée*: Abram Cohen, Fencers Club, New York; *saber*: Richard Dyer, Salle Csiszar, Philadelphia; *women's foil*: Mrs. Maxine Mitchell, Hollywood (Calif.) A.C.
 Team—*Foil*: Fencers Club, New York; *épée*: Salle Santelli; *saber*: Salle Santelli; *women's foil*: Salle Santelli; *3-weapon*: Fencers Club, New York

NATIONAL COLLEGIATE AA CHAMPIONSHIPS

(East Lansing, Mich., March 25–26)
 Individual—*Foil*: Herman Velasco, Illinois; *épée*: Donald Tadrawski, Notre Dame; *saber*: Barry Pariser, Columbia
 Team—*3-Weapon*: Columbia (62 pts.)

INTERCOLLEGIATE FENCING ASSOCIATION CHAMPIONSHIPS (New York, N.Y., March 11–12)

Individual—*Foil*: Aubrey Seeman, C.C.N.Y.; *épée*: Richard Pew, Columbia; *saber*: John Parker, Navy
 Team—*3-Weapon*: Cornell (70 pts.); *foil*: Navy (27 pts.); *épée*: Columbia (22 pts.); *saber*: Columbia (28 pts.)

FLY AND BAIT CASTING

NATIONAL ASSOCIATION CHAMPIONS
(St. Louis, August 17-21)

All-Around—Marion Garber, Toledo
 All-Distance—Jon Tarantino, San Francisco (3,334 ft.)
 Distance Baits—William J. Lovely, St. Louis (2,311 ft.)
 Distance Flies—Jon Tarantino (1,105 ft.)
 All-Accuracy—Robert Budd, Jeffersonville, Ind., and Jim Kangas, Toledo (391 pts. each)
 Accuracy Baits—Rolland Williams, Baytown, Texas (197 pts.)
 Accuracy Flies—Jim Kangas (197 pts.)

Women

All-Accuracy—Mel Gavin, St. Louis (384 pts.)
 Accuracy Baits—Mel Gavin (190 pts.)
 Accuracy Flies—Mel Gavin (194 pts.)

* Total distance for three longest of five casts made in each of two events, involving different baits or flies.

FOOTBALL

Oklahoma, Michigan State, Maryland, and the University of California at Los Angeles, in that order, were rated the top college football teams in the United States in 1955. Oklahoma and Maryland had perfect (10-0) records, but Michigan State and U.C.L.A. suffered one setback apiece. Oklahoma defeated Maryland, 20 to 6, in the Orange Bowl, and Michigan State won the Rose Bowl classic by snatching victory from U.C.L.A. with a 41-yard field goal in the closing seconds of the game.

Oklahoma has won eight consecutive Big Seven Conference championships since Bud Wilkinson became coach. The Sooners have notched 53 victories in a row in the circuit under Wilkinson.

Michigan State rebounded from an early defeat by Michigan to take the runner-up spot in the season-end polls of The Associated Press and The United Press. The Spartans, under Duff Daugherty, beat five Big Ten opponents, but lost the title to Ohio State, which was undefeated in six circuit games.

Jim Tatum developed another powerhouse at Maryland, but the Terps were tied by Duke for the Atlantic Coast Conference crown. U.C.L.A., which bowed to Maryland, 7-0, easily won the Pacific Coast Conference title. Princeton beat Yale and went on to win its first Ivy League championship since 1951. Yale topped Harvard, 21-7, in their classic, and Army upset Navy, 14 to 6.

Howard (Hopalong) Cassidy, Ohio State halfback, was selected for the two major awards, the Heisman and the Maxwell trophies, as the outstanding college player of the year. The Heisman runner-up was Jim Swink, a Texas Christian back, with George Welsh, Navy's talented quarterback, third.

Attendance at college games increased over 1954 in every section of the country except the East, where rain and snow were chiefly responsible for a drop of about 10%. The professionals had another big year at the gate, attracting 2,722,685 spectators during their 72 regular-season games, for a 12.7% increase over 1954. Close races were the rule in both divisions of the National Football League.

MAJOR BOWL GAMES

(Games played Jan. 2, 1956, unless otherwise indicated)
 Rose (Pasadena, Calif.)—Michigan State 17, U.C.L.A. 14

Sugar (New Orleans)—Georgia Tech 7, Pittsburgh 0
 Cotton (Dallas, Texas)—Mississippi 14, Texas Christian 13

Orange (Miami, Fla.)—Oklahoma 20, Maryland 6
 Blue-Gray Game (Montgomery, Ala., Dec. 31, 1955)—South (Gray) 20, North (Blue) 19

Senior Bowl (Mobile, Ala., Jan. 7, 1956)—South 12, North 2

Shrine North-South Game (Miami, Fla., Dec. 26, 1955)—South 20, North 7

Shrine East-West Game (San Francisco, Calif., Dec. 31, 1955)—East 29, West 6

Gator (Jacksonville, Fla., Dec. 31, 1955)—Vanderbilt 25, Auburn 13

Sun (El Paso, Texas)—Wyoming 21, Texas Tech 14

Tangerine (Orlando, Fla.)—Juniata (Pa.) 6, Missouri Valley 6

Prairie View (Houston, Texas)—Prairie View 59, Fisk 0

COLLEGE CONFERENCE AND LEAGUE CHAMPIONS

National (A.P. and U.P. polls)—Oklahoma
 Eastern (Lambert Trophy)—Pittsburgh
 Ivy League—Princeton

Atlantic Coast Conference—Duke and Maryland (tie)
 Southeastern Conference—Mississippi

Southern Conference—West Virginia

Southwest Conference—Texas Christian

Western Conference—Ohio State

Big Seven Conference—Oklahoma

Skyline Conference—Colorado A. & M.

Missouri Valley Conference—Detroit and Wichita (tie)

Rocky Mountain Conference—Idaho State

Border Conference—Texas Tech

Pacific Coast Conference—U.C.L.A.
 Canadian (Grey Cup)—Edmonton Eskimos
 Canadian Intercollegiate—Queen's

NATIONAL FOOTBALL LEAGUE (PROFESSIONAL)

(Final Standings, Regular 1955 Season)

Eastern Conference	W.	L.	T.	Pct.	Points For	Points Agst.
Cleveland Browns*	9	2	1	.818	349	218
Washington Redskins	8	4	0	.667	246	222
New York Giants	6	5	1	.545	267	223
Philadelphia Eagles	4	7	1	.364	248	231
Chicago Cardinals	4	7	1	.364	224	252
Pittsburgh Steelers	4	8	0	.333	195	285

Western Conference

Los Angeles Rams*	8	3	1	.727	260	231
Chicago Bears	8	4	0	.667	294	251
Green Bay Packers	6	4	0	.500	258	276
Baltimore Colts	5	6	1	.455	214	239
San Francisco Forty-Niners	4	8	0	.333	216	298
Detroit Lions	3	9	0	.250	230	275

* The NFL title was won at Los Angeles on Dec. 26, 1955, by Cleveland, who defeated Los Angeles, 38-14.

GOLF

For the second time in a row, a little-known professional captured the United States Open championship. Jack Fleck of Davenport, Iowa, succeeded Ed Furgol, the 1954 titleholder, after a stirring struggle. Playing at the Olympic Country Club, San Francisco, Calif., Fleck finished the regulation 72-hole tournament in a tie for first place at 287 with Ben Hogan, who was after an unprecedented fifth triumph in the 1955 event. In an 18-hole play-off, Fleck, who had not previously won a major tourney, defeated the most successful golfer of this generation, 69 to 72, with a brilliant display of putting.

The United States Amateur crown went to Harvie Ward, who crushed William Hyndman by 9 and 8 in the final at the Country Club of Virginia in Richmond.

Making his first appearance in the tournament, Doug Ford annexed the Professional Golfers' Association national title. The Yonkers (N.Y.) athlete turned back Cary Middlecoff, 4 and 3, in the championship round. Middlecoff earlier in the year won the Masters tournament at Augusta by a record seven strokes, with a total of 279.

Julius Boros captured the richest event of the year by taking the professional division prize in the Tam O'Shanter "world" tourney. The 1952 National Open champion played 72 holes in 281 and earned \$50,000 in cash and a \$50,000 exhibition contract.

A U.S. Air Force officer gained the British Amateur laurels. Lieut. Joe Conrad beat Alan Slater of England, 3 and 2, in the scheduled 36-hole final. In the British Open championship, Peter Thomson of Australia was victorious for the second year in a row. His 72-hole total of 281 won by two strokes.

A United States team turned back Great Britain, 8 to 4, in the men's professional team matches for the Ryder Cup. The United States also defeated a British squad of amateurs, 10 to 2, to take the Walker Cup for the 14th time in 15 attempts. The American professional team of Ed Furgol and Chick Harbert captured the Canada Cup with a total of 560.

American professionals also annexed the Hopkins International Trophy by beating Canada, 17 points to 10. The triumph was the fourth straight for the United States.

Pat Lesser became the women's United States Amateur champion by halting Jane Nelson, 7 and 6, in the final. Fay Crocker of Uruguay shot 299 to take the women's National Open crown.

MEN'S INDIVIDUAL CHAMPIONS

U.S. Open—Jack Fleck, Davenport, Iowa
 U.S. Amateur—Harvie Ward, San Francisco
 PGA—Doug Ford, Yonkers, N.Y.

"World Open" (Tam O'Shanter)—Julius Boros, Southern Pines, N.C.

"World Amateur" (Tam O'Shanter)—Doug Sanders, Cedartown, Ga.

All-American (Tam O'Shanter) Professional—Doug Ford
 All-American (Tam O'Shanter) Amateur—Doug Sanders
 Tournament of Champions—Gene Littler, Palm Springs, Calif.

U.S. Public Links—Sam Kocis, Detroit

Augusta Masters—Cary Middlecoff, Kiamasha Lake, N.Y.

Western Open—Cary Middlecoff

Western Amateur—Eddie Merrins, Meridian, Miss.

Eastern Open—Frank Stranahan, Toledo, Ohio

Southern Amateur—Charlie Harrison, Atlanta

NCAA—Joe Campbell, Purdue University

British Open—Peter Thomson, Australia

British Amateur—Lieut. Joe Conrad, San Antonio

French Open—Byron Nelson, Denton, Texas

French Amateur—Henri de Lamaze, France

Canadian Open—Arnold Palmer, Latrobe, Pa.

Canadian Amateur—Moe Norman, Kitchener, Ont.

Canadian PGA—Al Balding, Toronto Credit Valley, Ont.

Mexican Open—Roberto de Vicenzo, Argentina

SPORTS, GAMES, AND SHOWS

Mexican Amateur—Doug Sanders
Australian Open—Bobby Locke, South Africa

MEN'S TEAM CHAMPIONS

Ryder Cup (professionals)—U.S. 8, Great Britain 4
Walker Cup (amateurs)—U.S. 10, Great Britain 2
Hopkins Trophy (professionals)—U.S. 17, Canada 10
Canada Cup (professionals)—U.S. (Ed Furgol, 279; Chick Harbert, 281)
National Public Links (Harding Trophy)—Miami, Fla. (Joe Sam Filippo, 72; Marshall Carlson, 75; Ralph Allen, 77)

NCAA—Louisiana State (574 pts.)
Devonshire Cup (seniors)—U.S. 37, Canada 8

WOMEN'S INDIVIDUAL CHAMPIONS

U.S. Open—Fay Crocker, Montevideo, Uruguay
U.S. Amateur—Pat Lesser, Seattle
PGA—Beverly Hanson, Indio, Calif.
"World Open"—(Tam O'Shanter)—Patty Berg, Chicago
"World Amateur"—(Tam O'Shanter)—Wiffi Smith, St. Clair, Mich.

All-American Professional (Tam O'Shanter)—Patty Berg
All-American Amateur (Tam O'Shanter)—Wiffi Smith
Titleholders—Patty Berg
Eastern Amateur—Mary Ann Downey, Baltimore
Southern Amateur—Mrs. Scott Probasco, Chattanooga
Western Open—Patty Berg
Western Amateur—Pat Lesser
U.S. Intercollegiate—Jackie Yates, Univ. of Redlands
Canadian Amateur Closed—Marlene Stewart, Fonthill, Ont.
Canadian Amateur Open—Marlene Stewart
British Amateur Open—Jessie Valentine, Scotland

GYMNASTICS

NATIONAL AAU CHAMPIONSHIPS

(Rochester, N.Y., April 29–30)

All-Around—John Miles, Florida State Gymkana, and Karl Schwenzfeier, Penn State (327 pts. each)
Tumbling—James Sebbio, Jersey City (N.J.) Department of Recreation (28.1)
Horizontal Bar—Abie Grossfeld, West Side YMCA, New York (56.2)
Long Horse—John Miles (55.4)
Free Exercise—John Beckner, U.S. Army (56.7)
Trampoline—Robert Elliott, Maverick Boy's Club, Texas (27.8)
Side Horse—James Brown, Los Angeles State College (55.3)
Parallel Bars—Edward Scrobie, St. Mary's Recreation Center, New York (56.7)
Still Rings—John Miles (56.4)
Rope Climb—Robert Hammond, U.C.L.A., and John Goldman, Pasadena (Calif.) City College (tied; time, 0:03.2)
Swinging Rings—Samuel Bailie, U. of Iowa (28.8)
Team—Florida State Gymkana (41%)

Women

All-Around—Ernestine Russell, Windsor (Ont.) Gym Club (27.7)
Individual Free Calisthenics—Ernestine Russell (57.1)
Balance Beam—Ernestine Russell (56.6)
Side Horse—Ernestine Russell (57.7)
Uneven Parallel Bars—Ernestine Russell (55.6)
Swinging Rings—Doris Fuchs, CYO, Rochester, N.Y. (54.0)
Tumbling—Barbara Galleher, Dallas (Texas) A.C. (28.1)

NATIONAL COLLEGIATE AA CHAMPIONSHIPS

(Los Angeles, March 25–26)

All-Around—Karl Schwenzfeier, Penn State (1,620 pts.)
Horizontal Bar—Carlton Rintz, Michigan State (284)
Parallel Bars—Carlton Rintz (283)
Side Horse—Carlton Rintz (286)
Flying Rings—George Wikler, Southern California (286)
Rope Climb—Robert Hammond, U.C.L.A. (time, 0:03.1)
Trampoline—Richard Albershardt, Indiana (284)
Tumbling—Lloyd Cochran, Southern California (277)
Free Exercise—Don Faber, U.C.L.A. (286)
Team—Illinois (82); second: Penn State (69)

HANDBALL

World Team Champion—Germany (defeated Switzerland in final, 25–13)
National AAU—1-Wall Singles: Harold Hanft, Rockaway (N.Y.) H.C.; 1-wall doubles: Oscar and Rubrecht Obert, McBurney YMCA, New York; 4-wall singles: Sam Costa, Brooklyn Central YMCA; 4-wall doubles: Joseph Ingrassia and John Abate, New York A.C.
U.S. Handball Association—4-Wall Singles: Jimmy Jacobs, Los Angeles A.C.; 4-wall doubles: Sam Haber and Ken Schneider, Irving Park YMCA, Chicago; 4-wall masters doubles: Alex Boisseres and Joe Shane, Los Angeles A.C.; team: Los Angeles Fire Department

HARNESS RACING

Scott Frost, a 3-year-old trotter owned by Saul A. Camp of Shafter, Calif., and Adios Harry, a 4-year-old

pacer owned by J. Howard Lyons of Greenwood, Del., were the standouts in light harness racing in 1955.

Scott Frost, on his way to a single-season money-winning record of \$186,101, swept the four richest events for trotters. He emulated his sire, Hoot Mon, by winning the \$86,863 Hambletonian and then captured the \$75,000 American Classic, the \$73,840 Yonkers Futurity, and the \$62,702 Kentucky Futurity. In his 28 starts, Camp's star won 23 races, was second twice, and third once. The previous earnings mark of \$110,299 was set by Good Time in 1952.

Adios Harry topped the pacers in the money department with winnings of \$97,000, and entered his name in the record book when he equaled Billy Direct's world mark of 1:55 on a mile track. Billy Direct also was a 4-year-old when he set his record in a time trial at Lexington, Ky., on Sept. 28, 1938. Adios Harry sped on one-mile courses in 1:55% and 1:56½ shortly before he became the first to hit the 1:55 mark in a race at Vernon Downs, N.Y., on July 16, 1955. Adios Harry's stake victories included the Nassau Pace, the Good Time, and the American Pacing Derby.

The tracks offered the record amount of \$20,626,774 in purses in 1955, and wagering showed an increase over the previous year.

CHAMPIONS—MILE TRACK

Two-Year-Olds—Pacer: Greentree Adios (time, 2:00%); trotter: Egyptian Princess (2:02)
Three-Year-Olds—Pacer: Meadow Ace and Frisco Creed (each 1:59); trotter: Scott Frost (1:59%)
Four-Year-Olds—Pacer: Adios Harry (1:55); trotter: Prince Victor (1:59%)
Aged—Pacer: Times Square (1:58½); trotter: Kimberly Kid and Gayleway (each 1:59%)

CHAMPIONS—HALF-MILE TRACK

Two-Year-Olds—Pacer: Belle Actor (2:02%); trotter: Gratis Hanover (2:05%)
Three-Year-Olds—Pacer: Dottie's Pick (2:00); trotter: Galophone (2:01%)
Four-Year-Olds—Pacer: Adios Harry (1:59%); trotter: Lady's First (2:01%)
Aged—Pacer: B'Haven (2:00); trotter: Kimberly Kid and Lady Dunn (each 2:02%)

STAKE WINNERS

Trotting

American Championship—Jamie
American Classic—Scott Frost
Castleton Farm—Saboteur
Californian—Sharp Note
Gotham Trot—Kimberly Kid
Hambletonian—Scott Frost
Horseman Futurity—Galophone
Horseman Stake—Saboteur
Illinois Colt (two-year-old)—Peggy Key
Illinois Colt (three-year-old)—Marathon Hanover
Kentucky Futurity—Scott Frost
Roosevelt Trot—Gene Mac
Yonkers Futurity—Scott Frost

Pacing

American Classic—Hillsota and Times Square (tie)
American Derby—Adios Harry
W. H. Cane Futurity—Quick Chief
Fox Stake—Bachelor Hanover
Good Time—Adios Harry
Horseman Futurity—Meadow Ace
Illinois Colt (two-year-old)—Double Mc
Illinois Colt (three-year-old)—Frisco Flyer
Little Brown Jug—Quick Chief
McMahon Memorial—Buckeye
Motor City—Pearl Creed
Nassau—Adios Harry
National Derby—Adios Boy
New York Championship—Torrid and Adios Boy (dead-heat)
Roosevelt Tournament—Adios Boy

HOCKEY

The Detroit Red Wings extended their record to seven consecutive National Hockey League titles by defeating the Montreal Canadiens, 6 to 0, on the final night of the 1954–55 season. Detroit finished with 95 points, two more than Montreal, the runner-up.

The Red Wings then made it two Stanley Cups in a row with a 4-games-to-3 victory over the Canadiens in the final round of the series that is emblematic of the world professional championship. En route, the Motor City sextet set a circuit mark of 15 triumphs in a row.

Montreal was seriously handicapped during the late stages of the regular season and the play-offs by the loss of Maurice (the Rocket) Richard. The fiery Canadian forward was suspended on March 16 for the remainder of the season for punching a linesman and attacking a rival player during a game with Boston.

The suspension had violent repercussions in Montreal. During a game at Montreal's Forum on March 17, Clarence Campbell, the league president, who had suspended Richard, was attacked by Canadian fans. The outburst flared into a riot, which spread to the streets of the Canadian city. Property damage was high, and more

than 100 persons were arrested before the police were able to restore order after seven hours.

A number of managerial changes were made after the close of the season. Frank Boucher resigned as general manager of the Rangers, and was succeeded by Murray (Muzz) Patrick. Phil Watson replaced Patrick as the club's coach. Hector (Toe) Blake became manager of the Canadiens, replacing Dick Irvin, who moved to a similar capacity in Chicago.

NATIONAL HOCKEY LEAGUE

(Final Standings, March 20)

Team	Won	Lost	Tied	Points	Goals for	Goals against
Detroit.....	42	17	11	95	204	134

Chicago.....	13	40	17	43	161	235

Stanley Cup Play-Offs

Semifinals—Detroit defeated Toronto, 4 games to 0;
Montreal defeated Boston, 4 games to 1
Finals—Detroit defeated Montreal, 4 games to 3

Individual National Hockey League Awards

Hart Trophy (most valuable player)—Ted Kennedy, Toronto
Ross Trophy (leading scorer)—Bernie Geoffrion, Montreal
Lady Byng Trophy (sportsmanship)—Sid Smith, Toronto
Calder Trophy (outstanding rookie)—Eddie Litzenberger, Montreal-Chicago
Vezina Trophy (leading goal tender)—Terry Sawchuk, Detroit
Norris Trophy (best defenseman)—Doug Harvey, Montreal

OTHER PROFESSIONAL CHAMPIONS

American Hockey League—Pittsburgh (won 31, lost 25, tied 8); *Calder Cup play-offs*: Pittsburgh (defeated Buffalo in finals, 4 games to 2)
Western Hockey League—Edmonton (won 39, lost 20, tied 11); *play-offs*: Edmonton defeated Calgary in finals, 4 games to 0)

AMATEUR CHAMPIONS

World—Canada (Penticton V's) defeated USSR, 5-0
International League—*Regular season*: Cincinnati
U.S. Amateur—*Senior*: New Haven (Conn.) Delise Coffee Raiders; *junior*: Lewiston (Me.) St. Dominicks

Canadian

Allan Cup (senior amateur)—Kitchener-Waterloo Dutchmen
Memorial Cup (junior amateur)—Toronto Marlboros
Intercollegiate—Toronto

United States Intercollegiate

NCAA—Michigan (defeated Colorado College in final, 5-3)
Pentagonal League—Harvard (won 7, lost 0, tied 1)

HORSE RACING

A two-colt struggle for the laurels in the 3-year-old division highlighted the year in horse racing. The principals were William Woodward, Jr.'s Nashua and Rex Ellsworth's Swaps. Nashua, the Eastern champion, won the title on the strength of a six-and-a-half-length triumph over Swaps, the Western ruler, in a match race for a \$100,000 purse at Washington Park on August 31.

Swaps had beaten Nashua by a length and a half in the Kentucky Derby in May for Nashua's only setback in the division during the year. After that race Nashua was unbeaten until he finished third to High Gun and Jet Action in the Sysonby Stakes at Belmont Park. The Woodward color-bearer won such noted events as the Preakness Stakes, the Belmont Stakes, the Dwyer Stakes, the Arlington Classic, and the Jockey Club Gold Cup. Nashua set a single-season earnings record of \$752,550 and lifted his career mark to \$945,415, second only to Citation (\$1,085,760) on the list.

Woodward did not live to see Nashua crowned horse of the year in the annual polls. The owner was shot dead on October 30 by his wife, Mrs. Ann E. Woodward, who mistook him for a prowler.

The King Ranch's High Gun was rated the top handicap horse. He was closely pressed for the honors by William Helis, Jr.'s Helioscope.

Willie Hartack captured the riding title and became the second jockey in history to pass the 400 mark. Willie Shoemaker was the first, with 485 winners in 1953. Hartack rode his 400th at Gulfstream Park, Coral Gables, Fla., on Dec. 3, 1955. Johnny Longden reached a milestone in his brilliant career when he rode his 4,600th winner on September 14.

Major improvements were planned in the New York area, starting in 1956, with the formation of the Greater New York Racing Association, headed by B. A. Tompkins.

WIDE WORLD

University of Maryland halfback carries the ball against UCLA, which Maryland defeated, 7-0, on Sept. 24, 1955.

The group purchased all the stock in the tracks with the purpose of constructing a "super" course at Belmont Park.

In 1955, according to a United Press survey, 28,402,459 persons (0.06% less than in 1954) wagered \$2,066,102,588 (an increase of 1.4% over 1954) during 3,054 racing days in 1955.

THOROUGHBRED RACING ASSOCIATIONS CHAMPIONS

American Champion—Nashua
Handicap Division—High Gun
Handicap Filly or Mare—Parlo
3-Year-Old Colt—Nashua
3-Year-Old Filly—Misty Morn

500 Meters—Toivo Salonen, Finland (time, 0:42.6)
1,500 Meters—Oleg Goncharenko, USSR (2:20.6)
5,000 Meters—Knut Johannessen, Norway (8:33.0)
10,000 Meters—Sigge Ericsson, Östersund, Sweden (17:09.8)
Champion—Sigge Ericsson

World Championships—Women

(Kuopio, Finland, February 12-13)
500 Meters—Tamara Rylova, USSR (0:48.9)
1,000 Meters—Sofia Kondakova, USSR (1:40.9)
3,000 Meters—Mrs. Rimma Zhukova, USSR (5:33.1)
5,000 Meters—Mrs. Rimma Zhukova, USSR (9:26.4)
Champion—Mrs. Rimma Zhukova

European Championships—Men

(Eauln, Sweden, February 5-6)
500 Meters—Eugenij Grischin, USSR (0:44.7)
1,500 Meters—Eugenij Grischin and Hroar Elvenes, Norway (tied at 22:27.8)
5,000 Meters—Sigge Ericsson (8:57.2)

10,000 Meters—Sigge Ericsson (18:32.8)
Champion—Sigge Ericsson

North American Outdoor Championships

(Saranac Lake, N.Y., February 12-13)

Senior Men

220 Yards—Jay Hasbrouck, Newburgh, N.Y. (0:20.2)
440 Yards—Jay Hasbrouck (0:37.9)
880 Yards—Jay Hasbrouck (1:28.3)
¾ Mile—Jay Hasbrouck (3:12.8)
¾ Miles—Dick Walton, New York (6:24.3)
5 Miles—Alex Crogan, Pittsfield, Mass. (16:25.6)
Champion—Jay Hasbrouck

Senior Women

220 Yards—Pat Gibson, Madison, Wis. (0:21.7)
440 Yards—Pat Gibson (0:42.8)
880 Yards—Jeanne Robinson, Detroit (1:35.4)
¾ Mile—Pat Gibson (2:35.5)
1 Mile—Pat Gibson (3:26.0)
Champion—Pat Gibson

Other Champions

Junior Boys—Dave Arends, Cedar Rapids, Iowa
Junior Girls—Mary Novak, Chicago
Intermediate Boys—Kenneth Lebel, Lake Placid, N.Y.
Intermediate Girls—Jeanne Ashworth, Wilmington, Mass.

North American Indoor Championships

(Milwaukee, Wis., March 6-8)

Senior Men

440 Yards—Bill Disney, Pasadena, Calif. (0:39.8)
880 Yards—Bill Disney (1:23.1)
¾ Mile—Jim Campbell, Chicago (2:09.2)
1 Mile—Jim Campbell (2:59.1)
2 Miles—Bill Disney (6:04.8)
Champion—Bill Disney

Senior Women

440 Yards—Pat Underhill, Edmonton, Alberta (0:43.2)
880 Yards—Barbara M. DeSchepper, Detroit (1:26.4)
¾ Mile—Barbara M. DeSchepper (2:18.3)
1 Mile—Barbara M. DeSchepper (3:11.8)
Champion—Barbara M. DeSchepper

United States Outdoor

(Lake Como, St. Paul, Minn., January 29-30)

Senior Men

220 Yards—Bill Carow, West Allis, Wis. (0:18.4)
440 Yards—Ken Bartholomew, Minneapolis (0:38.8)
880 Yards—Ken Bartholomew (1:21.2)
¾ Mile—Ken Bartholomew (2:36.2)
1 Mile—Arnold Uhrless, Newburgh, N.Y. (3:30.7)
2 Miles—Gene Sandvig, Minneapolis (5:46.8)
5 Miles—Ken Bartholomew (15:57.8)
Champion—Ken Bartholomew

Senior Women

220 Yards—Pat Gibson (0:20.2)
440 Yards—Pat Gibson (0:40.8)
880 Yards—Pat Gibson (1:36.8)
¾ Mile—Pat Gibson (2:27.6)
1 Mile—Pat Gibson (3:33.8)
Champion—Pat Gibson

Other Champions

Intermediate Boys—Allen Olson, Illinois S.A., and Floyd Bedbury, Eastern Minnesota S.A. (tied)
Intermediate Girls—Karen Smith, Minnesota S.A.
Junior Boys—Ron Eikaas, Minnesota S.A.
Junior Girls—Mary Novak, Chicago S.A.

United States Indoor

(Saranac Lake, N.Y., February 26-27)

Senior Men

440 Yards—Bill Disney (0:40.1)
880 Yards—Bob Olson, Glendale, Calif. (1:16.0)
¾ Mile—Jay Hasbrouck (2:06.6)
1 Mile—Jay Hasbrouck (2:56.3)
2 Miles—Stan Fail, Paramount, Calif. (6:14.3)
5 Miles—Bill Disney (15:49.1)
Champion—Bill Disney and Jay Hasbrouck (tied)

Senior Women

440 Yards—Barbara M. DeSchepper (0:43.4)
880 Yards—Barbara M. DeSchepper (1:29.3)
¾ Mile—Barbara M. DeSchepper (2:21.6)
1 Mile—Barbara M. DeSchepper (3:15.2)
Champion—Barbara M. DeSchepper

Other Champions

Intermediate Boys—Ken Lebel
Intermediate Girls—Jeanne Ashworth
Junior Boys—Don Prather
Junior Girls—Mary Lou Bromback

JUDO

(National AAU Championships)

(Los Angeles, Calif., May 28-29)
130-Pound—Ben Takahashi, Hollywood, Calif.
150-Pound—Kenji Yamada, Seattle, Wash.
180-Pound—John Osako, Chicago
Unlimited—Eugene Le Bell, Hollywood
Tournament Champion—Eugene Le Bell

LACROSSE

National Open—Mt. Washington Club, Baltimore
 Intercollegiate—(rankings) (1) Maryland, (2) Navy,
 (3) Yale, (4) Rutgers and Hofstra (tied), (5)
 Princeton; (division champions) *Cy Miller*, Mary-
 land; *Laurie Cox*, Rutgers and Hofstra (tied); *Roy*
Taylor, New Hampshire
 North-South Game (Baltimore, June 10)—South 12,
 North 11
 Canadian Senior Box Lacrosse Championship and Mann
 Cup—Victoria (B.C.) Shamrocks

LAWN BOWLING

NATIONAL CHAMPIONS

Professional Preliminary Handicap—Cliff Doughman, Morrow, Ohio (26 yds., 91 × 100)
Champion of Champions—Tony Biagi, Highland Park, Ill. (99 × 100)
Women's Champion of Champions—Mrs. Ruth Winterrowd, Chicago (99 × 100)
North American Clay Target—Ned Lilly, Stanton, Mich. (200 × 200)
Women's North American Clay Target—Helen C. Thomas, Los Angeles (197 × 200)
Professional North American Clay Target—D. Lee Braun, San Francisco (199 × 200)
High-Over-All—Ned Lilly (962 × 1,000)
Women's High-Over-All—Joan Pflueger, Miami, Fla. (902 × 1,000)
Professional High-Over-All—Cliff Doughman (941 × 1,000)
National Doubles—Hugh McKinley, Harrisburg, Ohio (97 × 100)
Women's National Doubles—Helen C. Thomas (82 × 100)
Professional National Doubles—Homer Clark, Jr., Alton, Ill. (96 × 100)
All-Around—Morrell Feltus, Washington, Miss. (384 × 400)
Women's All-Around—Joan Pflueger (357 × 400)
Professional All-Around—Cliff Doughman (381 × 400)

SKIING

UNITED STATES CHAMPIONSHIPS

Jumping (Leavenworth, Wash., Feb. 6)—Rudy Maki, Ishpeming, Mich. (jumps of 270 and 259 ft.)
Cross-Country (Willamette Pass, Oreg., Feb. 12—13)—18 kilometers: Tauno Pulkkinen, Finnish Ski Club, Flushing, N.Y. (time, 1:20:29.1); 30 kilometers: Tauno Pulkkinen (1:53:10.0)
Downhill (Franconia, N.H., March 12)—Chiharu Igaya, Dartmouth, and Billy Beck, Mt. Mansfield, Vt. (tied: 1.6-mile course: 1:55.3); women (North Conway, N.H., March 12): Mrs. Andrea M. Lawrence, Parshall, Colo. (mile course: runs of 1:07.4 and 1:06.1)
Slalom (Franconia, N.H., March 13)—Ralph Miller, Hanover, N.H. (2,000-ft. course: runs of 57.4 and 51.4); women (North Conway, N.H., March 13): Mrs. Andrea M. Lawrence (½-mile course; total time for 2 runs: 2:12.0)
Combined—Chiharu Igaya; women: Mrs. Andrea M. Lawrence
Giant Slalom (Seattle, Wash., April 3)—Ralph Miller (½-mile course: 2:10.0); women: Jeannette B. Bray (approx. ¾-mile course: 1:37.0)

CANADIAN CHAMPIONSHIPS

(Mont Tremblant, Que., Feb. 26—27)
Downhill—Ralph Miller, Hanover, N.H. (1:50.9 and 1:50.9); women: Carlyn Kruger, Montreal Nordic Ski Club (one run: 2:06.5)
Slalom—Art Tommy, Ottawa (1:07.7 and 1:09.9); women: Monique Langlois, Quebec
Combined—Ralph Miller; women: Lucille Wheeler, St. Jovite (Que.) Ski Club

NORTH AMERICAN CHAMPIONSHIPS

Jumping (St. Paul, Minn., Jan. 30)—Ansten Samuelstuen, Steamboat Springs, Colo. (jumps of 190 and 189 ft.)
18-Kilometer Cross-Country (Minneapolis, Minn., Jan.

SPORTS, GAMES, AND SHOWS

29)—Sven S. Johansson, Anchorage, Alaska (1:12:27.0)
 Downhill (Norden, Calif., April 16)—Bill Beck, Mt. Mansfield, Vt., and Ralph Miller, Camp Hale, Colo. (tied with identical runs of 57.5 and 57.0); *women*: Cathy Carey, Denver (one run: 1:06.5)
 Slalom (Norden, Calif., April 17)—Ralph Miller (52.1 and 50.1); *women*: Gladys Werner, Steamboat Springs, Colo. (59.2 and 1:02.6)
 Combined—Ralph Miller; *women*: Gladys Werner

NATIONAL INTERCOLLEGIATE (NCAA) CHAMPIONS
 Slalom—Chiharu Igaya, Dartmouth
 Downhill—Chiharu Igaya
 Cross-country—Larry Damon, Vermont
 Jumping—Bill Olson, Denver (jumps of 122 and 119 feet)
 Team—Denver (567,050 points)

SOCCER

National Challenge Cup—Eintracht, Astoria, N.Y.
 National Amateur Cup—Heidelberg (Pa.) Tornados
 National Junior Cup—Gotschee, New York, and Schwaaben, Chicago (co-champions)
 American League—Philadelphia Uhriks
 Lewis Cup—Philadelphia Uhriks
 New York State Cup—Lithuanians, New York
 German-American League—German Hungarians, New York
 National League—Ukrainians, New York
 Dr. Manning Cup—Great Neck, N.Y.

BRITISH CHAMPIONS

British International—England
 Scottish Cup—Clyde
 Welsh Cup—Barry Town
 Irish Cup—Dundela
 Football Association Cup—Newcastle United
 Football Association Amateur Cup—Bishop Auckland

SOFTBALL

AMATEUR SOFTBALL ASSOCIATION CHAMPIONS
 Men—Raybestos Cardinals, Stratford, Conn.
 Women—Orange (Calif.) Lionettes

SQUASH RACQUETS

Lapham International Trophy (men)—Canada (defeated U.S., 7-6)
 Wolfe-Noel Cup (women)—England (defeated U.S., 4-1)
 U.S. Professional—Hashim Khan, Pakistan
 U.S. Open—G. Diehl Mateer, Jr., Philadelphia
 U.S. Amateur—Henri Salaun, Boston; *veterans singles*: Germain Glidden, New Canaan, Conn.; *doubles*: Ed and Joe Hahn, Detroit; *women*: Janet Morgan, London, England; *women's doubles*: Janet Morgan and Sheila Speight, Cheltenham, England
 Gold Racquet—G. Diehl Mateer, Jr.
 U.S. Intercollegiate—*Singles*: Roger Campbell, Princeton; *team*: Princeton
 Canadian—G. Diehl Mateer, Jr.
 Canadian (Toronto) Pro-Amateur—G. Diehl Mateer, Jr.
 British Open—Hashim Khan, Pakistan

SQUASH TENNIS

National Singles—H. Robert Reeve, Jr., New York A.C.

SWIMMING

Long-distance swimming blossomed into a fad during 1955. Crossings of all sorts of bodies of water throughout the world were attempted. The old stand-by, the English Channel, as usual, cast its spell over would-be masters.

One of the notable conquerors of the stretch of water between England and France was Marilyn Bell. The 17-year-old Toronto (Canada) schoolgirl swam from Cape Gris-Nez, France, to a point between Folkestone and Dover, England, a distance of approximately 20 miles as the crow flies, in 14 hours 36 minutes on July 31. Marilyn, who crossed Lake Ontario in 1954, became the youngest person to achieve the channel feat.

On August 15 a field of 16 competed in a cross-channel race. Abdel Latif Abu Heif of Egypt won the test, France to England, in 11 hours 45 minutes. Thomas Laurie Park of the United States, second, and Damian Beltran, Mexico, third, were the only other official finishers. Bill Pickering of England set an England-to-France record of 14 hours 6 minutes on August 10, but the record lasted only until October 12, when Florence Chadwick of San Diego, Calif., the only woman to swim the channel both ways, lowered the mark to 13 hours 55 minutes.

A former U.S. Marine frogman, Bert Thomas, became the first person to traverse the 18.3-mile Juan de Fuca Strait on July 8. He covered the stretch of icy water between Port Angeles, Wash., and Victoria, B.C., in 11 hours 10 minutes. It was his 13th attempt. A two-day, 42-mile international marathon along the Nile River, Egypt, was won by Hamed Mustafa of Egypt.

Helga Weiss of West Berlin, Germany, was the women's division victor. In the Canadian National Exhibition marathon on Lake Ontario on September 9, Cliff Lumsden of New Toronto was the only finisher.

The National Amateur Athletic Union's outdoor championships at Los Angeles spurred American hopes for success in the 1956 Olympic Games. New records were set, and two new diving stars appeared. Bob Mattson set an American mark for the 200-meter breaststroke, and Yoshinobu Oyakawa set one for the 200-meter backstroke. Don Harper and Gary Tobian won the 3-meter and 10-meter diving titles, respectively. Oyakawa also took the 100-meter backstroke crown. The New Haven Swim Club captured both the outdoor and indoor team laurels.

In the indoor meet, Ford Konno annexed two titles, as did Oyakawa. These established stars also paced Ohio State to a successful defense of the National Collegiate AA honors. Yale continued its dual-meet success by going through the season undefeated and extending its string of victories to 127 in a row. (See also above, under *Pan-American Games*.)

MEN'S AAU OUTDOOR CHAMPIONSHIPS

(Los Angeles, Calif., July 20-22)
 100-Meter Freestyle—Hendrick Gideonse, New Haven S.C. (time, 0:57.6)
 200-Meter Freestyle—Bill Woolsey, Honolulu (2:08.2)
 400-Meter Freestyle—Ford Konno, Hawaii S.C. (4:38.7)
 1,500-Meter Freestyle—George Onekea, Jr., Hawaii S.C. (18:52.3)
 100-Meter Backstroke—Yoshi Oyakawa, Hawaii S.C. (1:05.3)
 200-Meter Backstroke—Yoshi Oyakawa (2:26.1; American record)
 200-Meter Breaststroke—Robert Mattson, North Carolina State (2:46.8; American record)
 200-Meter Butterfly—William Yorzyk, New Haven S.C. (2:29.1)
 400-Meter Individual Medley—George Harrison, Berkeley, (Calif.) City Club (5:23.3; American record)
 400-Meter Medley Relay—New Haven S.C. (P. Kennedy, Charles Hardin, W. Yorzyk, H. Gideonse; 4:28.6)
 800-Meter Freestyle Relay—New Haven S.C. "A" Team (John Phair, W. Yorzyk, David Armstrong, Martin Smith; 8:54.2)
 3-Meter Diving—Don Harper, Columbus, Ohio (597.85 pts.)
 10-Meter Diving—Gary Tobian, Los Angeles A.C. (551.10 pts.)
 Leading Scorer—George Onekea (15 pts.)
 Team Champion—New Haven S.C. (65 pts.)

MEN'S AAU INDOOR CHAMPIONSHIPS

(New Haven, Conn., March 30-April 2)
 100-Yard Freestyle—John Glover, New York A.C. (0:49.8)
 220-Yard Freestyle—Ford Konno, Columbus, Ohio (2:04.0)
 440-Yard Freestyle—Ford Konno (4:28.2)
 1,500-Meter Freestyle—George Breen, Cortland State (18:52.4)
 100-Yard Backstroke—Yoshi Oyakawa, Columbus (0:57.2)
 220-Yard Backstroke—Yoshi Oyakawa (2:22.5)
 220-Yard Breaststroke—Robert Gawboy, Minneapolis (2:36.0; world record)
 220-Yard Butterfly Stroke—Eulalio Rios, Mexican Swimming Federation (2:30.2; world record)
 400-Yard Individual Medley—Jack Wardrop, Ann Arbor, Mich. (4:36.9; world record)
 400-Yard Medley Relay—North Carolina State A.A. (R. Mattson, D. McIntyre, R. Fadgen, W. Sonner; 3:51.5)
 400-Yard Freestyle Relay—New Haven S.C. "A" Team (D. Armstrong, H. Gideonse, R. Aubrey, K. Donovan; 3:21.8)
 1-Meter Diving—Gerry Harrison, Columbus (521.85 pts.)
 3-Meter Diving—Gerry Harrison (576.90 pts.)
 Leading Scorer—Jack Wardrop (17 pts.)
 Team—New Haven (Conn.) Swim Club (72 pts.)

WOMEN'S AAU OUTDOOR CHAMPIONSHIPS

(Philadelphia, Pa., August 11-14)
 100-Meter Freestyle—Wanda Werner, Walter Reed S.C. (1:06.1)
 400-Meter Freestyle—Dougie Gray, Walter Reed (5:16.1)
 800-Meter Freestyle—Carolyn Green, Ft. Lauderdale (Fla.) S.A. (10:54.3)
 1,500-Meter Freestyle—Carolyn Green (21:15.4)
 100-Meter Backstroke—Carin Cone, Ridgewood, N.J. (1:15.6)
 200-Meter Backstroke—Carin Cone (2:45.6)
 100-Meter Butterfly—Betty Mullen, Walter Reed (1:15.0)
 200-Meter Breaststroke—Mary J. Sears, Walter Reed (3:01.4)
 400-Meter Individual Medley—Marie Gillett, Walter Reed (6:01.5)
 400-Meter Medley Relay—Walter Reed (Shelley Mann,

Mary J. Sears, Betty Mullen, Wanda Werner (5:07.0)
 800-Meter Freestyle Relay—Walter Reed (Shelley Mann, Marie Gillett, Dougie Gray, Wanda Werner; 10:10.3)
 1-Meter Diving—Mrs. Patricia McCormick, Los Angeles A.C. (446.10 pts.)
 3-Meter Diving—Mrs. Patricia McCormick (525.15 pts.)
 10-Meter Diving—Mrs. Juno Irwin, Pasadena A.C. (262.95 pts.)
 Leading Scorer—Dougie Gray (21 pts.)
 Team Champion—Walter Reed S.C. (109 pts.)

WOMEN'S AAU INDOOR CHAMPIONSHIPS (Daytona Beach, Fla., April 7-9)

100-Yard Freestyle—Shelley Mann, Walter Reed S.C., Washington, D.C. (0:58.7)
 250-Yard Freestyle—Shelley Mann (2:49.4; American record)
 500-Yard Freestyle—Carol Tait, Santa Clara (Calif.) S.C. (6:01.4)
 100-Yard Backstroke—Coralie O'Connor, Lafayette (Ind.) S.C. (1:07.8)
 200-Yard Backstroke—Maureen Murphy, Multnomah A.C., Portland, Ore. (2:27.4)
 100-Yard Butterfly Stroke—Betty Mullen, Walter Reed (1:05.4; American record)
 250-Yard Breaststroke—Mary J. Sears, Walter Reed (3:29.8)
 400-Yard Individual Medley—Shelley Mann (5:19.7)
 400-Yard Medley Relay—Walter Reed (S. Mann, M. J. Sears, B. Mullen, W. Werner, 4:33.5; American record)
 400-Yard Freestyle Relay—Walter Reed (B. Mullen, M. Gillett, W. Werner, S. Mann; 4:02.3)
 1-Meter Diving—Mrs. Patricia McCormick, Los Angeles A.C. (439.15 pts.)
 3-Meter Diving—Mrs. Patricia McCormick (570.90 pts.)
 Leading Scorer—Shelley Mann (25 pts.)
 Team—Walter Reed Swim Club (95 pts.)

NATIONAL COLLEGIATE AA CHAMPIONSHIPS

(Oxford, Ohio, March 24-26)
 50-Yard Freestyle—Kerry Donovan, Yale (0:22.8)
 100-Yard Freestyle—Rex Aubrey, Yale (0:50.7)
 220-Yard Freestyle—Jack Wardrop, Michigan (2:04.2)
 440-Yard Freestyle—Ford Konno, Ohio State (4:31.1)
 1,500-Meter Freestyle—Ford Konno (18:16.1)
 100-Yard Backstroke—Yoshi Oyakawa, Ohio State (0:58.0)
 200-Yard Backstroke—Yoshi Oyakawa (2:16.7)
 200-Yard Butterfly Stroke—Philip Drake, North Carolina (2:13.7)
 200-Yard Orthodox Breaststroke—Robert Mattson, North Carolina State (2:26.0)
 150-Yard Individual Medley—Albert Wiggins, Ohio State (1:26.5)
 300-Yard Medley Relay—Ohio State (Y. Oyakawa, A. Wiggins, E. Kawachika; 2:42.2; American record)
 400-Yard Freestyle Relay—Yale (D. Cornwell, M. Aldrich, R. Aubrey, H. Gideonse; 3:24.9)
 1-Meter Diving—Fletcher Gilders, Ohio State (535.05 pts.)
 3-Meter Diving—Gerry Harrison, Ohio State (590.25 pts.)
 Team—Ohio State (90 pts.)

CONFERENCE TEAM CHAMPIONS

Eastern Intercollegiate—Yale
 Eastern Collegiate—Pittsburgh
 Atlantic Coast—North Carolina State
 Southern—Virginia Military Institute
 Southeastern—Georgia
 Southwestern—Texas
 Western (Big Ten)—Ohio State
 Big Seven—Oklahoma
 Pacific Coast—Northern Division: Washington; Southern Division: Stanford

TABLE TENNIS

WORLD CHAMPIONSHIPS

(Utrecht, Netherlands, April 15-24)
 Men's Team (Swaythling Cup)—Japan
 Women's Team (Corbillion Cup)—Rumania
 Singles—Tashiaki Tanaka, Japan; women: Mrs. Angelica Rozeanu, Rumania
 Doubles—Ivan Andreadis and Ladislav Stipek, Czechoslovakia; women: Mrs. Angelica Rozeanu and Ella Zeller, Rumania; mixed: Kalman Szepesi and Eva Koczian, Hungary

UNITED STATES CHAMPIONSHIPS (Rochester, N.Y., March 18-20)

Singles—Richard Miles, New York; women: Mrs. Leah Neuberger, New York
 Doubles—Erwin Klein, Los Angeles, and Richard Bergman, London, England; women: Mrs. Leah Neuberger and Peggy Foulke, New York; mixed: Mildred Shahian, Chicago, and Richard Miles

TENNIS

Australia's recapture of the Davis Cup and Tony Trabert's remarkable individual play held the spotlight in tennis during 1955.

Only eight months after losing the Davis Cup to the United States, 3-2, the Australians regained the trophy that represents the world team championship, 5 matches to 0. At the West Side Tennis Club, Forest Hills, N.Y., in August, Ken Rosewall defeated E. Victor Seixas, Jr., of Philadelphia, and Lewis Hoad beat Trabert in the opening singles matches. The Aussies clinched the cup when Hoad and Rex Hartwig toppled Trabert and Seixas in the doubles test. Hoad downed Seixas, and Rosewall halted Hamilton Richardson in the final two singles matches.

The United States team was handicapped because Trabert was not in prime condition. Several weeks before the cup matches Tony suffered a shoulder injury, which prevented him from competing in a number of tournaments which preceded the cup test.

Prior to the injury Trabert had been almost invincible in competition at home and abroad. After being beaten by Rosewall, the eventual title winner, in the Australian national championships in January, the Cincinnati athlete did not suffer defeat until upset by Orland Sirola in a match in Germany on May 20.

Trabert began his triumphant march by capturing the United States indoor singles title. After sweeping through numerous nontitle tournaments, he added the French singles crown to his collection in June. From Paris he went to Wimbledon, where he crushed Kurt Nielsen in the All-England final. He went through the tournament without the loss of a set. Returning home, Tony gained his third successive title by winning the United States clay court honors in July.

Shortly thereafter Trabert suffered the injury which was to handicap him in the Davis Cup challenge round. By the time the United States outdoor championships rolled around in September, Tony was back at his peak competitive edge. He annexed the national title for the second time to cap the finest record in amateur tennis in many years. On October 11, the world's foremost amateur signed a professional contract calling for a record guarantee of \$75,000.

Louise Brough of Beverly Hills, Calif., made a brilliant comeback to win the women's singles title at Wimbledon for the fourth time. Doris Hart took the United States crown for the second year in a row. Before the year was out, Doris accepted a contract to become a teaching professional.

The United States women's team won the Wightman Cup for the 19th straight time, by beating Great Britain, 6 to 1.

MAJOR AMATEUR TOURNAMENTS

Davis Cup—Australia (defeated United States, 5-0, at Forest Hills, N.Y., Aug. 26-28)
 Wightman Cup (Women)—United States (defeated Great Britain, 6-1, at Rye, N.Y., Aug. 14-15)
 U.S. Outdoor (Forest Hills, N.Y.; finals, Sept. 11)—Tony Trabert, Cincinnati; women's singles: Doris Hart, Coral Gables, Fla.; mixed doubles: E. Victor Seixas, Jr., Philadelphia, and Doris Hart
 U.S. Clay Court (Atlanta, Ga.; finals, July 16-17)—Tony Trabert; doubles: Tony Trabert and Hamilton Richardson, Baton Rouge; women's singles: Mrs. Dorothy H. Knode, Alameda, Calif.; women's doubles: Mrs. Dorothy H. Knode and Janet Hopps, Seattle; mixed doubles: Yola Ramirez, Mexico City, and Sam Giammalva, Houston
 U.S. Hard Court (La Jolla, Calif.; finals, Dec. 12)—Herb Flam, Beverly Hills, Calif.; women's singles: Miami Arnold, Redwood City, Calif.
 U.S. Men's Indoor (New York, N.Y.; finals, Feb. 22)—Tony Trabert; doubles: E. Victor Seixas, Jr., and Tony Trabert
 U.S. Women's Indoor (Brookline, Mass.; finals, March 24)—Kay Hubbell, Conway, N.H.
 U.S. Doubles (Brookline, Mass.; finals, Aug. 28)—Kosei Kamo and Atsushi Migayi, Japan; women's doubles: Louise Brough, Beverly Hills, Calif., and Mrs. Margaret du Pont, Wilmington, Del.
 Canadian National (Quebec City; finals, Aug. 14)—Bob Bedard, Sherbrooke, Que.; women's singles: Mrs. Hanna Sladek, Montreal
 Australian Amateur (Adelaide; finals, Jan. 29-31)—Ken Rosewall, Sydney; doubles: E. Victor Seixas, Jr., and Tony Trabert; mixed doubles: George Worthington and Thelma Long
 Wimbledon (England; finals, July 1-2)—Tony Trabert; doubles: Lew Hoad and Rex Hartwig, Australia; women's singles: Louise Brough; women's doubles: Angela Mortimer and Ann Shilcock, England; mixed doubles: E. Victor Seixas, Jr., and Doris Hart
 French International (Paris; finals, June 4-5)—Tony Trabert; doubles: E. Victor Seixas, Jr., and Tony Trabert; women's singles: Angela Mortimer; women's doubles: Darlene Hard, Montebello, Calif., and Mrs. Beverly B. Fleitz, Long Beach, Calif.; mixed doubles: Hope G. Forbes, South Africa, and Darlene Hard

MAJOR PROFESSIONAL TOURNAMENTS

World Professional (Cleveland, Ohio; finals, April 2)—Richard Gonzales, Los Angeles
 U.S. Clay Court (Fort Lauderdale, Fla.; finals, April 17)

SPORTS, GAMES, AND SHOWS

—Donald Budge, New York; *doubles*: Donald Budge and Bobby Riggs

MAJOR COLLEGIATE CHAMPIONS

NCAA—Jose Agüero, Tulane; *doubles*: Pancho Contreras and Joaquin Reyes, S. California; *team*: S. California

Eastern Association—Yale

Atlantic Coast—North Carolina

Southern Conference—Davidson

Southeastern Conference—Tulane

Southwest Conference—Texas

Missouri Valley Conference—Houston

Western (Big Ten) Conference—Michigan

Big Seven Conference—Oklahoma

Pacific Coast Conference—*Northern Division*: Washington; *Southern Division*: Southern California

TRACK AND FIELD

Spectators at a meet in White City Stadium, London, England, on May 28, 1955, had the great good fortune of seeing one of history's magnificent foot races. On that day three men bettered 4 minutes for the mile distance. Laszlo Tabori, a 24-year-old Hungarian soldier, won the race in 3 minutes 59 seconds. Tabori finished six feet ahead of Chris Chataway and Brian Hewson, both of England. Chataway crossed the line inches in front of Hewson. Each of the latter two was timed at 3:59.8. The three runners joined Roger Bannister of England and John Landy of Australia in the under-4-minutes' circle.

An American, Wes Santee, made several gallant but vain attempts to join the select group. His best effort was 4:00.5, an American record, at the Texas Relays.

Another Hungarian, Sandor Iharos, burst brilliantly on the scene. An army lieutenant, he surpassed five world records during the year. His feats were: 3,000 meters, 7:55.6; 2 miles, 8:33.4; 1,500 meters, 3:40.8; 3 miles, 13:14.2; and 5,000 meters, 13:40.6.

The New York Athletic Club captured the National Amateur Athletic Union outdoor team title with 111 points, while the Pioneer Club of New York took the indoor crown with 24 points. The University of Southern California annexed the National Collegiate AA (outdoor) laurels with 42 points. Manhattan College won both the indoor and outdoor ICAAAA championships. Hideo Hamamura of Japan finished first in the 59th annual Boston Marathon in the record time of 2:18:22.

Harrison Dillard of Cleveland, track star of the 1948 and 1952 Olympics, was named winner on Dec. 31, 1955, of the 1955 James E. Sullivan Memorial Trophy, as the amateur athlete of the year. (See also above, under *Cross-Country*; *Pan-American Games*.)

NATIONAL AAU TRACK AND FIELD CHAMPIONSHIPS

Senior Outdoor—Men

(Boulder, Colo., June 24-25)

100-Yards—Bobby Morrow, Abilene Christian College (time, 0:09.5)

220-Yards—Rod Richard, U.S. Army (0:21.0)

440-Yards—Charles Jenkins, Villanova (0:46.7)

880-Yards—Arnold Sowell, U. of Pittsburgh (1:47.6)

1 Mile—Wes Santee, U.S. Marine Corps (4:11.5)

3-Miles—Horace Ashenfelter, New York A.C. (14:45.2)

6-Miles—Dick Hart, Collegiate Track and Field Club, Philadelphia (31:58.5)

2-Mile Steeplechase—Ken Reiser, Eugene (Oreg.) Town Club (10:20.7)

2-Mile Walk—Henry Laskau, N.Y.C. 92d St. YMHA (15:09.4)

120-Yard High Hurdles—Milt Campbell, U. of Indiana (0:13.9)

220-Yard Low Hurdles—Charles Pratt, N.Y. Pioneer Club (0:23.5)

440-Yard Hurdles—Josh Culbreath, Morgan State College (0:52.0)

Hammer Throw—Harold Connolly, Boston A.A. (199 ft. 8 in.; American record)

Shot-Put—Parry O'Brien, U.S. Air Force (58 ft. 5¾ in.)

Discus Throw—Parry O'Brien (175 ft. 7 in.)

56-Pound Weight Throw—Bob Backus, New York A.C. (43 ft. 5 in.; American record)

Hop, Step, and Jump—Victor Paredes, Cuba (50 ft. 4 in.)

Running Broad Jump—Gregory Bell, Terre Haute (26 ft. ½ in.)

High Jump—Ernie Shelton, Los Angeles A.C., and Charles Dumas, Compton, Calif. (tied at 6 ft. 10 in.)

Pole Vault—Robert Richards, Los Angeles A.C. (15 ft.)

Javelin Throw—Franklin Held, San Francisco Olympic Club (260 ft. 3 in.)

Team—New York A.C. (111 pts.)

Senior Outdoor Relays

1⅞-Mile Medley Relay—U. of Chicago Track Club (K. Stapley, J. Brown, B. Conrardy, and P. Coleman; 7:21.1)

1 Mile Relay—N.Y. Pioneer Club (Frank Bowens, Harry Bright, Reginald Pearman, and Richard Maiocco; 3:16.0)

440-Yard Relay—N.Y. Pioneer Club (Arnold Budd, Thomas Beach, James Gathers, Andy Stanfield; 0:41.5)

Long-Distance Events

Marathon (26 miles, 385 yards)—Nicholas Costes, Farrell, Pa. (time, 2:31:12.4); *team*: N.Y. Pioneer Club

15-Kilometer Run—Browning Ross, Penn A.C. (54:02)

20-Kilometer Run—Charles Robbins, N.Y. Pioneer Club (1:10:47)

25-Kilometer Run—Browning Ross (1:24:35)

30-Kilometer Run—Browning Ross (short course, 1:21:25)

10-Kilometer Walk—Henry Laskau, N.Y.C. (92d St.) YMHA (48:43:3)

15-Kilometer Walk—Henry Laskau (1:14:46)

20-Kilometer Walk—Henry Laskau (1:44:08)

25-Kilometer Walk—James Hewson, Buffalo, N.Y. (2:14:32)

30-Kilometer Walk—Alex Oakley, Ontario, Canada (2:36:11)

35-Kilometer Walk—Leo Sjogren, Finnish-American A.C., New York (3:17:57)

40-Kilometer Walk—Guillermo Weller, Argentina (3:40:58)

50-Kilometer Walk—Leo Sjogren (4:30:57)

Other Events

All-Around—Lyman Frasier, Baltimore Olympic Club (6,733 pts.)

Decathlon—Robert Richards, Los Angeles A.C. (6,873)

Pentathlon—Des Koch, U. of S. California (3,216 pts.)

Senior Indoor—Men

(Madison Square Garden, New York, N.Y., February 19)

60 Yards—John Haines, U. of Pa. (time, 0:06.1; equals world indoor record)

60-Yard High Hurdles—Harrison Dillard, Cleveland (0:07.3)

600 Yards—Charles Jenkins, Villanova (1:11.9)

1,000 Yards—Arnold Sowell, Pittsburgh (2:08.2; equals world indoor record)

1 Mile—Wes Santee, Lawrence, Kans. (4:07.9)

1 Mile Walk—Henry Laskau (6:30.4)

(Left) Lew Hoad of Australia—which won the Davis Cup in 1955—exchanges volley with Tony Trabert of the U.S. (facing camera). (Center) Pitt's Arnold Sowell wins the 1,000-yard run in 2:08.2 in the 1955 AAU indoor track and field championship on February 19. (Right) Paul Anderson of the U.S. lifts 320 pounds at the 1955 world weight-lifting championships at Munich, Germany, October 16. He set a world record with a three-event lift of 1,130 pounds.

(LEFT AND RIGHT) UNITED PRESS; (CENTER) WIDE WORLD

3 Miles—Horace Ashenfelter, N.Y.A.C. (13:54)
 1,060-Yard Sprint Medley Relay (440-100-220-300)—
 N.Y. Pioneer Club (Frank Bowens, James Ryan,
 James Gathers, Andy Stanfield; 1:53.8)
 Mile Relay—Morgan State (Herman Wade, Rudy Solom-
 on, James Rogers, Josh Culbreath; 3:18.5)
 2-Mile Relay—Syracuse (Bob Milner, Les Vielbig, Steve
 Armstrong, Don Shupe; 7:39.7)
 Running Broad Jump—Roselyn Range, U.S. Armed
 Forces (25 ft. 1 in.)
 High Jump—John Hall, U.S. Armed Forces, and Ernie
 Shelton, Los Angeles (tied at 6 ft. 8¾ in.)
 Pole Vault—Robert Richards (15 ft. 4 in.)
 16-Pound Shot-Put—Parry O'Brien, Los Angeles A.C.
 (59 ft. 5½ in.; new world indoor record)
 35-Pound Weight Throw—Robert Backus, N.Y.A.C. (60
 ft. 4½ in.)
 Team—N.Y. Pioneer Club (24 pts.)

Senior Outdoor—Women

(Ponca City, Okla., June 17-18)

50-Yards—Isabel Daniels, Tennessee State (time, 0:
 06.0)
 100-Yards—Mae Faggs, Tennessee State (0:10.8)
 220-Yards—Mae Faggs (0:25.1)
 80-Meter Hurdles—Bertha Diaz, Cuba (0:11.5; Ameri-
 can record)
 440-Yard Relay—Tennessee State (Martha Hudson, Lu-
 cinda Williams, Isabel Daniels, and Mae Faggs;
 0:49.1)
 Running Broad Jump—Mrs. Nancy Phillips, German-
 American A.C., N.Y.C. (17 ft. 5¾ in.)
 Running High Jump—Mildred McDaniel, Tuskegee (5 ft.
 6½ in.; American record)
 Baseball Throw—Amelia Wershoven, Equitable Life,
 N.Y.C. (249 ft. 1¼ in.)
 Discus Throw—Alejandra Ibarra, Cuba (117 ft. 8 in.)
 Javelin Throw—Karen Anderson, Mercury A.C., Lans-
 downe, Pa. (150 ft. 1¼ in.)
 Shot-Put—Wanda Wejzgowicz, Polish Falcons, Clevel-
 and (37 ft. 4¾ in.)
 Team—Tennessee State (87½ pts.)
 Pentathlon—Barbara Mueller, Chicago (3,539 pts.)

Senior Indoor—Women

(Chicago, Ill., February 5)

60 Meters—Isabel Daniels, Tennessee State (0:07.9)
 100 Meters—Barbara Jones, Chicago Comets (0:12.3)

 13.9)
 220-Yard Low Hurdles—Charles Pratt, Manhattan (0:
 23.1)
 Shot-Put—Bill Nieder, Kansas (57 ft. 3 in.)
 Broad Jump—Joel Shankle, Duke (24 ft. 3¼ in.)
 Javelin Throw—Les Bitner, Kansas (246 ft. 1 in.)
 Discus Throw—Des Koch, U.S.C. (176 ft. ¾ in.)
 Pole Vault—Don Bragg, Villanova (15 ft. 1 in.)
 High Jump—Ernie Shelton, U.S.C. (6 ft. 11½ in.)
 Team—University of Southern California (42 pts.)

INTERCOLLEGIATE AAAA OUTDOOR CHAMPIONSHIPS

(Randalls Island, New York, N.Y., May 27-28)

100 Yards—John Haines, U. of Pa. (time, 0:09.5)
 220 Yards—Art Pollard, Penn State (0:20.8)
 440 Yards—Charles Jenkins, Villanova (0:47.2)
 880 Yards—Arnold Sowell, Pittsburgh (1:49.1)
 Mile—Burr Grim, Maryland (4:09.9)
 2 Miles—George King, New York University (9:15.7)
 120-Yard High Hurdles—Joel Shankle, Duke (0:14.1)
 220-Yard Low Hurdles—Charles Pratt, Manhattan (0:
 23.0)
 Mile Relay—Villanova (James Moran, Eugene Maliff, Al
 Peterson, Charles Jenkins; 3:15.2)
 Discus Throw—Roosevelt Grier, Penn State (170 ft.
 6 in.)

Hammer Throw—Donald Seifert, Brown (186 ft. 10 in.)
 Javelin Throw—Al Cantello, LaSalle (228 ft. 8½ in.)
 Shot-Put—Roosevelt Grier (55 ft. 11 in.)
 Broad Jump—Joel Shankle (24 ft. 8 in.)
 High Jump—Wilfred Lee, U. of Pa. (6 ft. 6½ in.)
 Pole Vault—Don Bragg, Villanova (14 ft. 6 in.)
 Team—Manhattan (38 pts.); second: Penn State (35¼)

INTERCOLLEGIATE AAAA INDOOR CHAMPIONSHIPS

(Madison Square Garden, New York, N.Y.,

February 27-28)

60 Yards—John Haines, U. of Pa. (time, 0:06.3)
 600 Yards—Charles Jenkins, Villanova (1:11.2)
 1,000 Yards—Arnold Sowell, Pittsburgh (2:14.7)
 Mile—Alex Breckenridge, Villanova (4:19.9)
 2 Miles—George Terry, Boston U. (9:16.8)
 60-Yard High Hurdles—Charles Pratt, Manhattan (0:
 07.4)
 Mile Relay—Pittsburgh (Ed Saunders, Joe Dudas, Wil-
 liam Green, Arnold Sowell; 3:19.8)
 2-Mile Relay—Syracuse (Robert Milner, Les Vielbig,
 Steve Armstrong, Don Shupe; 7:49.1)
 Broad Jump—Bernard Bruce, Boston U. (23 ft. 10¼ in.)
 High Jump—Wilfred Lee, U. of Pa. (6 ft. 6 in.)
 Pole Vault—Don Bragg, Villanova, and Dave Seed, Cali-
 fornia (tied at 14 ft.)
 16-Pound Shot-Put—Roosevelt Grier, Penn State (53 ft.
 4½ in.)
 35-Pound Weight Throw—Stewart Thomson, Yale (58
 ft. 11¼ in.)
 Team—Manhattan (27 pts.); second: Villanova (22½)

OTHER COLLEGE TEAM CHAMPIONS

Heptagonal Games—Outdoor and indoor: Cornell
 Metropolitan (New York) Association—Outdoor and in-
 door: Manhattan
 Middle Atlantic Association—St. Joseph's
 Atlantic Coast Conference—Outdoor and indoor: North
 Carolina
 Southern Conference—Outdoor and indoor: V.M.I.
 Southeastern Conference—Auburn
 Southwest Conference—Texas
 Central Collegiate Conference—Michigan
 Western (Big Ten) Conference—Outdoor and indoor:
 Michigan
 Missouri Valley Conference—Oklahoma A. & M.
 Big Seven Conference—Outdoor and indoor: Kansas
 Pacific Coast Conference—Southern California

VOLLEYBALL

National Open (U.S. Volleyball Association, Oklahoma
 City, May 11-14)—Men: Stockton (Calif.) YMCA;
 women: Santa Monica (Calif.) Mariners; intercol-
 legiate: Florida State; YMCA: Stockton; YMCA
 veterans: Central Houston (Texas); armed forces:
 Los Alamitos, Calif.
 AAU—Chicago Wilson YMCA (won 12, lost 0)

WATER POLO

AAU—Indoor: Illinois A.C. (defeated New York A.C. in
 final, 9-7; outdoor: Illinois A.C. (defeated Mexico
 in final, 10-2)

WATER SKIING

National Championships (Lakeland, Fla., August 26-28)
 —Men: Butch Rosenberg, Winter Haven, Fla.;
 women: Willa McGuire, Winter Haven

WEIGHTLIFTING

WORLD CHAMPIONSHIPS

(Munich, Germany, October 12-16)

Bantamweight—Vladimir Stogov, USSR
 Featherweight—Rafael Tchimichikjan, USSR
 Lightweight—Nikolau Kostylev, USSR
 Middleweight—Pete George, U.S.
 Light Heavyweight—Tommy Kono, U.S.
 Middle Heavyweight—Arkadi Vorobiev, USSR
 Heavyweight—Paul Anderson, U.S.
 Team—USSR (29 pts.); second, U.S. (25)

NATIONAL AAU CHAMPIONSHIPS

(Cleveland, Ohio, June 4-5)

123-Pound Class—Charles Vinci, Cleveland (690
 pounds)
 132-Pound Class—Isaac Berger, New York (705)
 148-Pound Class—Joseph Pitman, Vero Beach, Fla.
 (765)
 165-Pound Class—Richard Giller, Akron, Ohio (810)
 181-Pound Class—Tommy Kono, Sacramento, Calif.
 (940)
 198-Pound Class—David Sheppard, Astoria, L.I. (965)
 Heavyweight Class—Paul Anderson, Toccoa, Ga. (1,145)
 Team—York (Pa.) Barbell Club
 "Mr. America" Contest—Steve Klisanin

WRESTLING

NATIONAL AAU CHAMPIONSHIPS

(Amityville, L.I., N.Y., March 31-April 3)

Freestyle

114.5 Pounds—Katsuhoshi Yakayama, Japan
 125.5 Pounds—Shuhei Iwano, Japan

136.5 Pounds—Motoichi Matohashi, Japan
 147.5 Pounds—Joseph Scandura, New York A.C.
 160.5 Pounds—Dr. Melvin Northrup, Olympic Club, San Francisco
 174 Pounds—Wenzel Hubel, Ft. Campbell, Ky.
 191 Pounds—Tim Woodin, Ithaca (N.Y.) Grapplers
 Heavyweight—William Kerslake, Cleveland
 Team—New York Athletic Club (19 pts.)

Greco-Roman

114.5 Pounds—Katsuhoshi Yakayama, Japan
 125.5 Pounds—Epsuma Imada, Japan
 136.5 Pounds—Tadashi Mumajiri, Japan
 147.5 Pounds—Newton Copple, New York A.C.
 160.5 Pounds—Henrik Hansen, McBurney YMCA
 174 Pounds—Jim Peckham, Boston YMCA
 191 Pounds—Bob Steckle, Kitchener YMCA, Toronto
 Heavyweight—William Kerslake, Cleveland
 Team—Fort Campbell, Kentucky (22 pts.)

NATIONAL COLLEGIATE AA CHAMPIONSHIPS (Ithaca, N.Y., March 25-26)

115 Pounds—Terrence McCann, Iowa
 123 Pounds—Ed Peery, Pittsburgh
 130 Pounds—Myron Roderick, Oklahoma A. & M.
 137 Pounds—Lawrence Fornicola, Penn State
 147 Pounds—Edward Eichelberger, Lehigh
 157 Pounds—Bill Weick, Iowa State Teachers
 167 Pounds—Fred Davis, Oklahoma A. & M.
 177 Pounds—Dan Hodge, Oklahoma
 191 Pounds—Peter Blair, Navy
 Heavyweight—William Oberly, Penn State
 Team—Oklahoma A. & M. (40 pts.)

YACHTING

NATIONAL CHAMPIONS

Mallory Cup (men's North American)—Bill Buchan, Jr., Seattle
 Adams Trophy (women's national)—Manhasset Bay Yacht Club, New York (Toni Monetti, skipper)
 Sears Cup (national junior)—Royal Canadian Y.C., Toronto

ONE-DESIGN CLASSES

World Star—Carlos de Cardenas, Havana, Cuba
 North American Star—Jorge de Cardenas, Havana
 World Snipe—Mario Capio, Italy
 National Snipe—Harry Allen, Westport, Conn.
 National Raven—P. James Roosevelt, Oyster Bay, N.Y.
 110-Class International—Cornelius Shields, Jr., Larchmont, N.Y.
 Comet International—Howard Lippincott, Riverton, N.J.
 Rebel National—Dr. Robert Wilson, Grenville, Ohio
 Moth National—Sonny Cabell, Norfolk, Va.

OTHER CHAMPIONS

One-ton Cup (six-meter)—Andre Firmenich's *Ylliam IX*, Sweden
 British-American Cup (six-meter)—United States
 Gold Cup (5.5-meter)—M. Oerti's *Twins VII*, Italy
 Norway—Manhasset Bay, N.Y.—Norway
 Buzzards Bay Bowl—Canada
 Bermuda—Long Island Sound (Amorita Cup)—Spring; Bermuda; fall: United States

DISTANCE RACING

Newport-to-Marstrand, Sweden—Richard S. Nye's *Carina* (yaw), Greenwich, Conn.
 Havana-San Sebastian, Spain—Enrique Urrutia's *Mare Nostrum* (yaw), Spain
 Los Angeles-Honolulu—Ira P. Fulmor's *Staghound* (ketch), Newport Beach, Calif.
 Fastnet Race (England)—*Carina*
 Gotland Race (Sweden)—W. S. Gubelmann's *Windige* (yaw), United States
 Port Huron-Mackinac Island—Jim Carlin's *Glory Bea II* (sloop)
 New London-Annapolis—Henry Sears' *Actaea* (sloop), New York
 Southern Ocean Racing Conference—Worth Brown's, Charles Ulmer's, and Woody Pirie's *Hoot Mon* (yaw), Miami, Fla.

NEW YORK YACHT CLUB CRUISE

Queen's Cup—John N. Matthews' *Vim* (12-meter), New York
 Astor Cup—Gilbert Verney's *Sea Lion* (yaw), Nantucket, Mass.

STANDARDS OF LIVING (LEVELS OF LIVING). United States.—A strong and maintained rise in

levels of living was the major force behind the record activity achieved by the United States economy in 1955. More than three fifths of the unusually sharp increase in the gross national product which occurred between the second quarter of 1954 (the low point of the 1953-54 recession) and the third quarter of 1955 was due to consumption expenditures. Consumer demand also brought home-building close to the all-time record of 1950, and stimulated a sharp upward revision in business investment programs.

Consumer buying of goods and services during the first three quarters of 1955 exceeded the record set in 1954 by some \$14 billion, or 6%, on a seasonally-adjusted annual rate basis. The increase in the volume of goods bought was at least as great, since average consumer prices edged slightly downward. It also was evident that the better quality goods were in relatively greater demand. In housing, too, there was a definite trend toward larger homes with more quality features.

The most notable increase in consumer demand was for automobiles, with some 6.3 million sold domestically during the first 10 months of 1955 (see also AUTOMOBILES). Rising incomes, the movement of the population to the suburbs, and an increase in two-car families, with easier credit terms, lower prices, and the attractiveness of the new models, helped account for the record volume. Registered passenger cars rose about 2½ million during the year to 51 million, or one car for every 3.21 civilians.

Demand for other consumer durable goods also expanded strongly and was at least 10% greater than in 1954, which had been as good a year as any on record. Output of major household goods during the first three quarters of 1955 was somewhat greater than in the earlier record year of 1950, when both consumers and retailers were building stocks for anticipated war shortages. Output of laundry and refrigeration appliances was well above earlier peaks, and furniture, television, and heating apparatus production also was very high.

Expenditures for nondurable goods continued to move upward, reaching a record annual rate of \$127 billion in the third quarter, some \$6 billion higher than a year earlier. Expenditures for clothing and shoes, which had remained almost stable in dollar terms since 1951, also increased somewhat. Apparel output reached a postwar peak, and leather goods output equaled the best postwar year. As in earlier years, food accounted for a large part of the rise.

The energy value of the American diet exceeded 3,200 calories per capita in 1955, which was about the same as in most postwar years and well above the daily allowance of about 2,700 calories recommended by the Food and Nutrition Board of the National Research Council. The largest change in civilian food habits over the year was a sharp rise in meat consumption to a new record of 161 pounds per capita. In recent years there has been a slight upward trend in calories derived from fat, due to increased use of meats and dairy products (excluding butter), but this has been offset in calories by a decline in carbohydrates as a result of the long downtrend in the importance of cereals and potatoes. In 1955, carbohydrates supplied 47% of the calories consumed; fats, 41%; and protein, 12%. In 1935-39 the ratios had been 53%, 36%, and, 11%, respectively.

Expenditures for services in 1955 rose at a rate of well over a billion dollars a quarter, due

partly to increased costs of various services, but mainly reflecting population growth and increasing demand. Residential power consumption during the first 8 months was 11% greater than in 1954, and had doubled since 1949.

A little over 1.1 million new dwelling units were started by private builders in the first 10 months of 1955—a record exceeded only in 1950. Public housing activity continued to decline, however, with only 15,000 units placed under construction. (See also BUILDING AND CONSTRUCTION; HOUSING.)

Purchasing power to support the new levels of demand also reached new highs in 1955. Personal income after taxes was 5% higher in the first 9 months of the year than in the similar period of 1954, reaching a record seasonally adjusted annual rate of \$272 billion in the third quarter. While the gains were greatest in labor income, rises were widespread in all sectors except farming, reflecting new employment records, longer hours of work, and increased returns to both capital and labor. Average hourly earnings of factory workers rose 10 cents between October 1954 and October 1955, and weekly earnings were up about \$6.50.

The gain in income more than kept pace with the rapid population rise, so that per capita average disposable income rose to \$1,642 for the third quarter of 1955 from \$1,563 a year earlier. In real terms, this average was nearly 5% higher than the record established in 1953.

The rise in consumer buying (see CONSUMER CREDIT) in 1955 exceeded the rise in income, however. Credit was available and was used freely, and the ratio of spending to income was higher than in any year since the outbreak of the Korean War. Current savings made by individuals in the form of currency, deposits, securities, and private insurance reserves amounted to \$7.4 billion in the first half of 1955, compared with \$6.2 billion in the same period of 1954. But at the same time, mortgage debt rose nearly \$6 billion and short-term debt rose \$2.2 billion, resulting in the largest margin of new debt over new savings since 1948.

The paradox of the low-income population was studied by the Joint Committee on the Economic Report, which issued a report assembling currently available data. The number of families with incomes under \$2,000 (in 1948 dollars) appeared to have remained about the same in 1954 as in 1948 (about 9½ million), while there had been a large increase in the number of families with \$5,000 or more. (See accompanying table.)

INCOME (IN 1948 DOLLARS) OF U.S. FAMILIES AND INDIVIDUALS, 1948 AND 1954

(Numbers in thousands)

	1948		1954	
	Families	Individuals	Families	Individuals

(See also CENSUS DATA, U.S.; COST OF LIVING; INCOME; INDUSTRIAL PRODUCTION; LABOR;

RETAIL STORE SALES; SAVINGS; SOCIAL WELFARE.)

Western Europe.—Data from the Organization for European Economic Cooperation on the volume of private consumption in its member countries showed combined per capita consumption in 1954 to be 11% higher than in the prewar period, and almost 5% higher than in 1953. The most striking increase occurred in France and the Saar combined, with Germany and the Netherlands in second and third place, respectively. The only one of the 13 reporting countries which showed no increase between 1953 and 1954 was Portugal.

Information for the first six months of 1955 indicates that the rise in consumption levels in Western Europe was continuing. Unemployment for the latest month reported in 1955 was lower than in the comparable month of 1954, except in Denmark and Italy. The number unemployed in Denmark was small in comparison to the total labor force. In Italy the number of the unemployed and underemployed remains a perennial problem, particularly in the south. However, the economic situation in southern Italy in 1955 showed improvement over the previous year at about the same rate as the rest of the country. Progress in land reform in Italy has resulted in the settlement since 1950 of about 90,000 families.

Price levels in mid-1955 were somewhat higher than in 1954 in most Western European countries. Wages had increased somewhat more than retail prices in all those nations for which figures are available. Inflation appeared to be a rising problem in a number of countries. In Great Britain, an excess of imports was accompanied by a great increase in domestic purchases of consumer durable goods. Measures taken early in 1955 did not solve the problem. In October 1955, a new government budget was adopted which considerably increased existing sales taxes on consumer goods and imposed new ones, reduced subsidies for low-cost housing, and raised taxes on distributed profits.

The 1955 report of the U.N. Food and Agriculture Organization showed that the nutritional content of diets in Western Europe continued to improve through 1953–54. Average calorie consumption, average protein intake, and average intake of animal protein all rose moderately in 1955. Consumption of potatoes and other starchy roots continued to decline, and there was some indication that the per capita consumption of cereals was declining.

Canada, Australia, and New Zealand.—In these Commonwealth countries, high levels of consumption continue. In 1955 the rise in levels of living in Canada was resumed after a slight drop in 1954. The seasonal rise in unemployment which always characterizes the Canadian economy in the winter and early spring was more severe than usual in 1953–54, but it declined sharply in 1955. Meanwhile, average weekly earnings of the employed have risen. In both Australia and New Zealand employment is at very high levels and unemployment negligible.

Latin America.—An increase of less than 1% from 1951 to 1954 in the consumption of goods and services available per capita in Latin America is shown in the July 1955 report of the U.N. Economic Commission for Latin America. The largest increase over this period (6.4%) occurred in Venezuela, which is in a favorable position to import both capital and consumer goods in return for its exports of petroleum. The next larg-

est increase (4.9%) was in the countries exporting coffee and cocoa (Brazil, Colombia, Costa Rica, the Dominican Republic, Ecuador, El Salvador, Guatemala, Haiti, and Nicaragua). In the remaining countries of Latin America the commission estimated a decline of 2.9% in the availability of consumer goods per capita. In these countries the increase of population had outstripped economic growth.

In 1954 there was much more than average increase (on a per capita basis) in the consumer goods and services produced and imported. The annual growth rate was 13.3% in the coffee- and cocoa-exporting countries, 7.5% in Venezuela, and 1.3% in the rest of the area.

USSR and Eastern Europe.—In 1955 the Soviet Union completely reversed the economic policy of increasing the rate of investments in consumer goods production. The reversal in 1955 means that except for the favored few, the population of the Soviet Union and satellites will have little hope for improvement of living levels in the near future. The 1955 budget reflected the newly announced policy of greater emphasis on heavy industry production at the expense of consumer goods, and doubled the 1954 amount of compulsory bond purchases by the Soviet people. In addition, the 1955 budget allocation for the production and distribution of consumer goods dropped to about 76% of the 1954 figure: from 36.6 billion rubles to 27.9 billion.

The critical state of the Soviet consumer goods situation was confirmed by the failure of the government to announce a price cut in 1955. (Since 1947 there had been annual price cuts affecting many types of consumer commodities.) Virtually frozen wage rates in the Soviet Union and the satellites have continued to limit purchasing power. In striking contrast to previous years, only one price cut decree affecting consumer goods was announced in the Soviet orbit. That was in Czechoslovakia, early in 1955.

Asia and the Far East.—Progress in both agricultural and industrial production in this area during 1954 brought the very low average consumption to higher levels. Production of food grains was 11% higher than in 1934–38, and total consumption of cotton piece goods in the whole area (outside of mainland China) was 50% higher than in 1951. Higher cement production provided material for much needed new housing, schools, hospitals, and roads, as well as for factories. The energy and protein content of food intake per capita per day continued to rise in 1953–54 in the 5 Asian countries reporting to the FAO (Ceylon, India, Japan, Pakistan, and the Philippines). Cereal consumption was nearly up to the prewar quantity. Average consumption of animal products did not increase and appeared to be still somewhat below the very low levels prevailing before the war.

In Japan, the most highly industrialized of the Asian countries, average levels of living are probably higher than in any other part of the area. In spite of the postwar decline in the Japanese birth rate, pressure of population on resources remains a serious problem.

In India, consumption of all types of food in 1954 was still lower on a per capita basis than in the prewar period. Industrial production continued to rise and in the first half of 1955 was at the highest level ever recorded. Meanwhile government programs for village improvement were being actively continued in a number of the Indian States.

Africa.—An analysis by the U.N. Department

of Economic and Social Affairs of data on economic growth in Africa from 1950 to 1954 shows that agricultural production in Africa in 1954 was over 10% higher than the 1948–50 average. There has been a general increase in the availability of electric power, with 1953 electric energy output being 30% above that for 1950. Wide regional differences in the continent and lack of information about consumption levels of the people make it impossible to generalize about changes in their status.

STARS. See **ASTRONOMY.**

STASSEN, Harold Edward, American public official: b. West St. Paul, Minn., April 13, 1907. A three-time governor of Minnesota, he later served in a number of key positions in the Eisenhower administration. On March 19, 1955, he was appointed by President Eisenhower as special assistant to the president for disarmament, an unprecedented post with cabinet rank, and on July 29, he was nominated to become the American deputy representative on the U.N. Disarmament Commission.

Educated at the University of Minnesota (B.A. 1927 and LL.B. 1929), he was admitted to the Minnesota bar in 1929 and began practicing law in South St. Paul. In 1930 and again in 1934 he was elected attorney for Dakota County; and in 1937, as head of the Minnesota Young Republican League and as a reform candidate, he became the youngest governor ever to gain office in his state. Stassen's sweeping reform program won him national attention and subsequent reelection in 1940 and 1942. He resigned the governorship on April 27, 1943, to enter the U.S. Navy as a lieutenant commander. He served with distinction in the Pacific campaign of World War II as assistant chief of staff and flag secretary on the staff of Admiral William F. Halsey, and in 1945 was discharged as a captain. From April 25 to July 6, 1945, he served as a member of the American delegation to the San Francisco Conference of the United Nations. On July 29, 1948, he was appointed president of the University of Pennsylvania, a post he held until Jan. 20, 1953.

Stassen was a leading but unsuccessful contender for the Republican presidential nomination in both 1944 and 1948; he was a favorite son candidate at the Republican National Convention in 1952, but transferred his votes to General Eisenhower. During the campaign, he aided the Republican Party as a political strategist and adviser. With the election of Eisenhower to the presidency, Stassen was appointed director of the Mutual Security Administration, taking office on Jan. 28, 1953. When that agency was abolished and its economic functions were transferred to the Foreign Operations Administration (FOA), Stassen was appointed director of the newly created agency by President Eisenhower on Aug. 1, 1953. In this capacity he recommended substantial economic and technical aid to free Asian countries as a means of combating Communist encroachment.

On March 19, 1954, President Eisenhower named Stassen as special assistant to the president for disarmament, a new cabinet-level post

popularly labeled secretary of peace. The position was created by the president to develop "the broad studies, investigations and conclusions which, when concurred in by the National Security Council and approved by the president, will become basic policy toward the question of disarmament." Stassen maintained his FOA post until June 30, 1955, when the FOA expired as an independent agency.

STEVENS, Wallace, American poet: b. Reading, Pa., Oct. 2, 1879; d. Hartford, Conn., Aug. 2, 1955. A successful business executive who won the 1954 Pulitzer Prize in poetry (announced on May 2, 1955), he bridged the gap between the worlds of art and business to become one of the outstanding contemporary poets in the United States.

Educated at Harvard College (1897-1900) and the New York Law School, Stevens was admitted to the New York bar in 1904. After a period of general practice in New York City, he joined the Hartford Accident and Indemnity Company, Hartford, Conn., in 1916, becoming vice president of the firm in 1934.

He first gained an audience as a poet in 1914 when four of his poems, entitled *Phases*, were included in a special wartime issue of *Poetry*. Extremely self-critical, he did not publish his first volume of poetry, *Harmonium*, until 1923. In the majority of these poems, Stevens paints a world of sensory profuseness. The poems are suggestive incantations rather than direct statements; colors, sound, rhythms, and images are subtly fused to evoke an aesthetic rather than an emotional or intellectual response. His second volume, *Ideas of Order*, was published in 1935, after a 12-year silence. In these poems, as in *Harmonium*, the emphasis lies in the ambiguous overtones suggested by his subject rather than on the subject itself, but there is also present in a few of the pieces an implicit awareness of the disorder of contemporary life.

With the publication of *The Man with the Blue Guitar* (1937), Stevens' preoccupation with the "essential gaudiness of poetry" was superseded by a philosophical concern, the principal theme of which was the artist and his relationship with reality. Since he believed that life is awareness and that awareness is heightened by the imagination, much of his later poetry was a development of the implications of this idea.

The volumes that followed this shift in emphasis include *Parts of a World* (1942); *Transport to Summer* (1947); *Three Academic Pieces* (1947); *The Auroras of Autumn* (1950); and *The Necessary Angel* (essays, 1951). *The Collected Poems of Wallace Stevens* (1954), which won the Pulitzer Prize for 1954, was published in commemoration of the poet's 75th birthday. Stevens also won the Bollingen Prize in Poetry for 1949, the Poetry Society of America Gold Medal for 1951, and the National Book Award for 1950 and 1954. He was a member of the National Institute of Arts and Letters.

STEVENSON, Adlai E(wing), American political leader: b. Los Angeles, Calif., Feb. 5, 1900. Since his defeat by Dwight D. Eisenhower in the presidential election of 1952, he has maintained leadership of the Democratic opposition, and during 1955 continued to voice strong criticism of both the foreign and domestic policies of the Republican administration. On Nov. 15, 1955, he announced his candidacy for the Democratic presidential nomination in 1956.

WIDE WORLD

Adlai E. Stevenson, who announced his candidacy for the 1956 Democratic presidential nomination on Nov. 15, 1955, vacations in Jamaica, B.W.I., in September.

Educated at Princeton University (B.A. 1922), Harvard Law School, and Northwestern University (J.D. 1926), he was admitted to the Illinois bar in 1926 and subsequently worked as a newspaper reporter and editor, counsel to various federal agencies, special assistant to the secretaries of the navy and state, and a member of the United States delegation to the United Nations. He was elected Democratic governor of Illinois for the term 1949-53.

On April 11, 1955, after the administration had made known its intention to defend the islands of Quemoy and Matsu against a threatened Communist Chinese invasion, if it should be determined that such an invasion were ultimately directed against Formosa, Stevenson set the tone and pattern of his attacks on the administration's foreign policy when he declared that "the maintenance of our alliances and the respect and goodwill of the uncommitted nations of Asia" would be far more important to the United States "than the possession of these off-shore islands by Gen. Chiang Kai-shek ever could be." Throughout the year he reiterated his belief that the State Department was tending to distort and obscure the peaceful purposes of the United States, thus frightening its allies, alienating the uncommitted peoples of the world, and allowing the Communist bloc to assume the initiative in the area of propaganda.

Stevenson was no less critical of the administration's domestic policies. He attacked its farm policies, and expressed concern over the plight of the farmer. In the field of labor, he characterized the unfavorable reactions of certain leading Republicans to the merger of the American Federation of Labor and the Congress of Industrial Organizations as an apparent "design to play the ugly politics of group conflict and hatred." During the year he also denounced the administration's polio vaccination program as disorderly (May 24), its immigration policy as too rigid (June 1), and its housing and educational programs as inadequate (July 6 and November 30, respectively).

After entering the presidential race in November, Stevenson announced his intention to participate in the presidential primaries of five regional states—California, Florida, Pennsylvania, Illinois and Minnesota. By the end of the year he had gained the support of a large number—although by no means all—of Democratic Party leaders.

STOCKS AND BONDS. Stock prices continued to climb during the greater portion of 1955 in an extension of the bull market that started in September 1953. The first setback of any magnitude in this major two-year advance took place after President Dwight D. Eisenhower was stricken with a heart attack on Sept. 24, 1955—a development that disturbed investors because of the prospect that he would not be a candidate for reelection in 1956. Confidence in the policies of the administration had been a strong factor buoying investment sentiment.

The subsequent decline, which lasted about two weeks, trimmed 11% from the combined market value of the stocks in the Standard & Poor's daily industrial stock price indexes. By mid-November, stock prices were again carried to new highs, but the market then moved irregularly during the remainder of the year. The year closed with net gains (compared with 1954 year-end levels) of 30% in the industrials, 13% in the rails, and 6% in the utilities. Swings in these three major stock groups (Standard & Poor's daily indexes) are indicated in the accompanying table.

	Dates*	Indus- trial	Rails	Util- ities	Com- bined
1953 low.....	Sept. 14	226.1	60.5	92.3	180.4
1954 opening.....	Jan. 1	249.4	63.1	104.4	198.2
1954 close.....	Dec. 31	371.0	92.8	123.7	285.7
1955 high.....	Nov. 14	493.5	109.3	136.3	368.6
1955 close.....	Dec. 30	482.6	104.4	131.5	361.1

* Dates are for industrials. Rail and utility highs and lows in some instances occurred on other dates.

A powerful combination of underlying forces supported the rise in stock prices. The general economy reached a new high plane and was still headed upward at the close of the year. Earnings of leading corporations averaged about 30% higher than in 1954, reaching a new record high. Another new record was established by corporate cash dividend payments, which were about 10% above the previous 1954 peak.

Additional factors contributing to sharp price movements and flurries of activity in individual stocks were the record number of stock splits during the year, as well as numerous mergers and combinations.

There was more widespread participation of the general public in the market, notwithstanding increases in margin requirements from 50% to 60% on January 5 and to 70% on April 23. As a consequence, turnover on the New York Stock Exchange rose to 650 million shares from 573 million shares in 1954, the largest volume of trading for any year since 1933.

In the bond market, prices continued under pressure as the Federal Reserve System (q.v.), in an effort to slow the pace of the business boom, shifted from a credit policy of "mild restraint" to one of definite "restraint." One of the restrictive measures taken was the raising of the discount rate on April 14 from 1½% to 1¾%; to 2% on August 3-5; to 2¼%, commencing August 3 (by the Federal Reserve banks of Cleveland), August 30 (St. Louis), and September 9 (Minneapolis); and to 2½% on November 18. The interest rate on prime commercial loans rose from 3% to 3¼% on August 3 and to 3½% on October 14.

Reflecting the hardening of money, as well as the competition encountered by the bond market from the high volume of mortgages, the average yield on long-term government bonds, which stood at 2.57% at the end of 1954, rose to 2.95% early in August 1955, but then closed the year at 2.90%.

Total new security offerings continued at a high level in 1955. According to the Securities and Exchange Commission (q.v.) the grand total for the first 10 months of 1955 reached \$23 billion, compared with \$25.7 billion a year earlier. Corporate financing was up to \$8.6 billion from \$8 billion, but total state and municipal flotations declined to \$4.8 billion from \$5.5 billion. The most significant change for the year was in new offerings of common stock, which increased to \$1,857 million from \$1,042 million. STRIKES AND WALKOUTS. See Index entry.

STRYKER, Lloyd Paul, American lawyer; b. Chicago, Ill., June 5, 1885; d. New York, N.Y., June 21, 1955. One of the most colorful figures of the criminal law courts, he combined histrionic ability with a wide knowledge of legal techniques to give his court appearances the effect of command performances.

The son of a minister who later became president of Hamilton College (Clinton, N.Y.), Stryker was drilled in public speaking from early youth through college (Hamilton, B.A., 1906; M.A., 1909). Having been admitted to the New York bar in 1909, he served as assistant district attorney of New York from 1910 to 1912. During World War I he was an officer in the field artillery.

Two of Stryker's attempts to gain public office were unsuccessful. In 1914 he failed to be elected to the city court bench, and in 1929 Congress adjourned before confirming his appointment by President Calvin Coolidge to the District Court of the United States for the Southern District of New York. Stryker himself preferred being a trial lawyer with what he called its "ordeal by battle," and as such built up a successful New York practice, numbering among his clients the Board of Aldermen in its investigation of relief practices in the 1930's. He also cleared William F. X. Geoghan, district attorney of Kings County, of charges of misconduct in office, and obtained 194 acquittals out of 200 cases for the New York Medical Society.

In 1938 he crossed verbal swords with Thomas E. Dewey, then district attorney of New York, at the trial of James J. Hines, a Tammany

leader charged with selling political protection to policy racketeers. Though Hines was convicted in a second trial, his first trial was adjudged a mistrial. Later, Stryker's unsuccessful defense of restaurateur Henry Lustig, accused of tax evasion, was equally colorful. It was during the first trial of Alger Hiss in 1949, however, that Stryker gained the widest attention. As Hiss' defense counsel, he conducted a rapierlike cross-examination of Whittaker Chambers that contributed to a hung jury.

Stryker was the author of *Andrew Johnson: A Study in Courage* (1929); *Courts and Doctors* (1932); *For the Defense* (1947), a biography of the 18th century British lawyer Thomas Erskine; and *The Art of Advocacy* (1954).

SUGAR. United States sugar beet production in 1955 was estimated by the Department of Agriculture at 12,498,000 short tons, as compared with 14,082,000 tons in 1954. Major producing states were California (3,504,000 tons), Colorado (1,628,000), and Idaho (1,465,000). Production of sugarcane syrup in 1955 was estimated at 5,825,000 gallons, with Louisiana (3,320,000 gallons), Florida (800,000), and Georgia (760,000) as the major producing states. Total 1955 production is compared with 5,085,000 gallons of sugarcane syrup produced in 1954. Estimated production of refined sugar from the 1955 sugarcane and sugar beet crop was 2,369,000 tons, as compared with 2,653,000 in 1954. Production of molasses was estimated at 48,800,000 gallons, as compared with 48,589,000 in 1954. The United States sugar marketing quota was set at 8,400,000 tons for 1955, as compared with 8,250,000 tons for 1954.

World Production.—World production of centrifugal cane and beet sugar for 1954-55 totaled 40,542,000 short tons (raw value), as compared with the 1953-54 total of 40,454,000 tons and the 1952-53 total of 36,200,000 tons. Production for 1955-56 was estimated at 41,126,000 tons. Output by major countries is shown in the accompanying table.

CENTRIFUGAL SUGAR PRODUCTION
BY MAJOR COUNTRIES¹
(In thousand short tons)

¹ Excludes armed forces overseas for years after 1940.

² Estimate based on 10% sample.

SULFUR. The United States produces more than 90% of the world's supply of native sulfur. This supply is greatly supplemented by sulfur derived from native and imported pyrite; from byproduct acid obtained by roasting sulfide ores of copper, lead, and zinc; and from byproduct sulfur and its compounds, derived from natural and industrial gases.

SULFUR IN THE UNITED STATES
(Thousands of long tons)

Stocks.....	2,837.4	3,068.9	3,022.5	3,228.0

* Sulfur content. (Source: U.S. Bureau of Mines.)

Production of native sulfur in the first 9 months of 1955 reached 4,086,580 long tons and of byproduct sulfur, 294,800 tons. In the same period of 1954 the figures were, respectively, 4,116,876 and 267,400 tons. (See MINERAL PRODUCTION for table showing output of leading countries.)

SULFURIC ACID. Byproduct sulfuric acid produced from the sulfur content of sulfide ores at copper and zinc plants in the United States totaled 885,975 tons (basis, 100%) in 1954, as compared with 868,077 tons in 1953, according to the U.S. Bureau of Mines. In addition, some of the zinc plants reporting to the Bureau of Mines produced 156,984 tons of sulfuric acid in 1954 (229,951 tons in 1953) from native sulfur.

SUMATRA. See INDONESIA.

SUMMERALL, Charles Pelot, former U.S. Army chief of staff; b. Lake City, Fla., March 4, 1867; d. Washington, D.C., May 14, 1955. An ardent exponent of modern artillery tactics, he was recognized as one of the great American field commanders of World War I.

Summerall was graduated from the U.S. Military Academy and commissioned a 2d lieutenant in 1892. In 1899 he participated in the Philippine campaign, and in 1900 he served with his battery in the Boxer Rebellion. From 1901 until 1917 he held a variety of posts, including that of senior artillery tactics instructor at the U.S. Military Academy (1905-11).

With the entrance of the United States into World War I, General Summerall, who by August 1917 had attained the rank of brigadier gen-

eral in the National Army, was sent to Europe to study the organization and training methods of the British and French armies. After his return to the United States, he took command of the 67th Field Artillery Brigade of the 42d Division, and in October 1917 he joined the American Expeditionary Force in France. Later he commanded the 1st Division, and the 5th, 9th, and 4th Army corps. Summerall brilliantly demonstrated in the crucial Cantigny, Aisne-Marne, St. Mihiel, Soissons, and Meuse-Argonne offensives of 1918 that artillery action should be coordinated with infantry movement. After the war he served as a member of the Inter-Allied Commission at Fiume (July-August 1919) and as a member of the American Missions to Negotiate Peace (September 1919).

After returning to the United States in 1919, Summerall held a number of domestic commands, including the 1st Division (1920-21), the Hawaiian Department (1921-24), and the 8th and 2d corps areas (1924-26).

On Nov. 21, 1926, General Summerall was appointed U.S. Army chief of staff; and on Feb. 20, 1929, he was promoted to the rank of full general. Maintaining that trench warfare had become obsolete, he strongly advocated the establishment of a mechanized and mobile army throughout his four-year tenure. He retired as chief of staff on Nov. 20, 1930; and in the following year became president, until 1953, of The Citadel at Charleston, S.C., one of the oldest military colleges in the country.

SUMMERFIELD, Arthur Ellsworth, American public official: b. Pinconning, near Bay City, Mich., March 17, 1899. A former chairman of the Republican National Committee, he became postmaster general in President Dwight D. Eisenhower's cabinet on Jan. 21, 1953.

Going to work at the age of 13, Summerfield subsequently became a local distributor for the Pure Oil Company (1924) and organizer and president (1929) of one of the largest United States retail automobile agencies, both in Flint, Mich. In 1940 he entered Republican politics, becoming active in turn on county, state, and national levels. At the 1952 Republican National Convention he campaigned strongly for Eisenhower's nomination, and from July 1952 to January 1953 he was chairman of the Republican National Committee.

As postmaster general, Summerfield has attempted to reorganize the Post Office Department and cut its annual \$500 million deficit. On Jan. 24, 1955, he urged Congress to increase postal rates by \$340.5 million a year, the largest increase to be in first-class mail rates, which he said should be raised from 3 to 4 cents for the first ounce. On October 31, after conferring with the president, he again urged rate increases.

Summerfield was a major figure in the 1955 controversy concerning postal employees' pay increases. On February 7, he told the Senate Post Office and Civil Service Committee that he would oppose any increases over the 5% recommended by the president. The committee's chairman, Sen. Olin Johnston, had asked for raises of 10%. Summerfield advised the president to veto a compromise bill which granted average increases of 8.8% (it was vetoed on May 19), but finally, on June 10, the president signed a second compromise bill granting average increases of 8%.

SURGERY. Human Arterial Grafts.—Reconstruction of devitalized, disrupted, or destroyed segments of major arteries has been a historically pressing problem to man. For many decades the only treatment for damaged arterial segments was ligation. This resulted frequently in the loss of the part distal to the point of ligation. Later came the possibility that a substitute tube implanted in an arterial defect might bridge successfully and permanently the gap between severed or disrupted ends.

Artery-bridging tubes have been constructed from ivory, glass, aluminum and silver, methyl methacrylate and polyethylene (synthetic plastic materials). For the most part these have been abandoned because of the high percentage of thrombosis (blood clot formation) or anastomosis disruption. Another approach has been to substitute a large vein, of comparable caliber, to fill and bridge the vessel gap. In some instances, particularly in small and medium-sized vessels, this has been successful. In general, the strength of the substituted vein wall has not been sufficient to withstand the arterial pressure applied to it, and thrombosis or rupture has again occurred.

More recently enthusiastic use has been made of preserved arterial segments, obtained from humans who have died recently. The criteria of artery suitability are: (1) death must be due to causes other than malignant or infectious disease; (2) the donor must have been refrigerated from the time of death until necropsy, a period which should not exceed 24 hours; and (3) regardless of chronologic age, the aorta and principal arterial trunks must exhibit no gross evidence of arteriosclerosis (hardening of the arteries). Two major problems present themselves as soon as the segment is at hand: (1) preservation of the vessel; and (2) sterilization. Initially, vessels were kept suitably in a moist atmosphere at 4°-6°C. This made possible their use for 30-40 days, after which deterioration of the vessel wall made it unsuitable for use. However, when tissues are subjected to freeze-drying* and reconstituted in physiologic saline solution just prior to use, they are thought to be suitable for use after an indefinite period of storage.

Freeze-drying fails to alter the activity and viability of most bacteria. The sterilization of vessels may be accomplished by immersion in liquid ethylene oxide for 30 minutes, as advised by Drs. Oscar Creech, Michael DeBakey, Denton A. Cooley and Milton M. Self of the Department of Surgery at Baylor University, or by exposure to gamma radiation from a cobalt-60 (radioactive cobalt) source. This latter technic has been investigated recently by Drs. J. A. MacCris, Herbert Sloan, and J. E. Orebaugh from the Department of Surgery at the University of Michigan. In this latter technic the grafts are again freeze-dried and exposed for 16 hours to a

* Freeze-drying is essentially a process in which the water content of tissues is reduced to ice; and this is evaporated from the frozen mass, following which additional removal of moisture from the final dry solid is accomplished by the vacuum pump at a final vacuum of 0.0005 mm. Hg. The final content of moisture must be less than 1% if the substance is to be preserved at room temperature. The proteins of tissues thus treated appear to be unaltered. The fats of such graft materials also show no chemical change so long as they are not stored in a container containing oxygen; when not stored in a vacuum, fat tissues undergo oxidation and become rancid.

cobalt source which delivers in this period 4,000,-000 rep. of radiation to the graft.

A third method of sterilization of these tissues is that described by Drs. D. E. Szilagyi, P. R. Overhulse, C. P. Shannard and G. A. LoGrippe from the Henry Ford Hospital, Detroit. These surgeons have utilized an unstable ester of hydroxypropionic acid, Beta-propiolactone, as a sterilizing agent. Arterial segments exposed to this compound at a concentration of 0.75 per cent by weight for 2 hours were found to be sterile in every instance.

Excellent results have been reported with grafts of human material so treated and used to replace damaged vessels in other humans. In spite of the success which usually attends the use of homologous human arterial grafts, tissues so transplanted do not survive as living structures but are replaced gradually and completely, or in large part, by new tissue from the host. Since homologous grafts thus appear to function principally as physical struts which undergo host replacement, the question arises whether their use offers any great advantage over grafts made of an inert and nonreactive foreign material. Moreover, there are definite and obvious limits to the availability of human grafts.

Artificial Arterial Grafts.—Effective plastic materials should be readily available substitutes for the homologous human tissues. During 1955 several such materials were used experimentally with success in replacement of animal aortas. Four types of materials were investigated by Drs. E. J. Harris, H. B. Shumacker, Jr., Harry Siderys, T. C. Moore, and P. F. Grice of the Department of Surgery at the Indiana University Medical Center. The fabrics used were nylon filter fabric, nylon fused between thin sheets of polythene, polythene fused to a single sheet of nylon, and vinyon-N cloth. Of the various plastic materials studied, the nylon filter fabric made the best arterial prosthesis.

Plastic grafts were prepared by sewing together the sides of these materials with a sewing machine and fine nylon thread. The materials were sterilized by boiling or autoclaving and then implanted. In experimental animals the results with prosthetic grafts were compared with those of freeze-dried, liquid ethylene oxide sterilized, homografts. Although the plastic grafts, as judged from immediate and relatively short-term results, were not as ideal as arterial homografts, they had certain advantages, chief among which were ready availability, ease of acquisition, and sterilization.

Drs. Arthur H. Blakeman and A. B. Voorhees, Jr., have reported the use of vinyon-N cloth on 18 patients with aneurysms of the great vessels of the lower abdomen and legs at the Presbyterian Hospital, New York. Ten of the patients have survived and all are symptom free. In only one of these who failed to survive could death be attributed in any way to the type of prosthetic material used.

Six patients were treated by Drs. H. B. Shumacker, Jr., and Harold King at the Indiana University Medical Center by the use of nylon fused to a thin sheet of polythene. All six patients had aneurysmal dilatations of the aorta. Four of the six patients have survived a reasonable period of time since their operations.

Human Organ Transplants.—One of the most intriguing challenges to physicians has been the much-needed, fervently hoped-for ability to transplant whole organs from one individual to another successfully. This hope was foremost, ini-

tially, in the early work on arterial grafts, until it was recognized that the function of vessels is primarily that of support for a column of liquid, blood, and that substitute tissues may effect this role very well. On the other hand an entirely different problem exists where whole organs are needed. Here the specific, individual cell function is required, and replacement by host tissue simply destroys the cell and deprives the host of all its function. An example of the human needs so obvious to physicians is the individual with diabetes mellitus (sugar diabetes). Here the surgeon's ability to transplant a whole organ, the pancreas, would immediately begin to solve many of the dilemmas of the more than 1,500,000 known diabetics in the United States today.

Some encouragement of these hopes has been sustained for the past decade by Dr. H. S. N. Greene of the Department of Pathology at Yale University, where a continuing program of tumor implantation by heterologous (different species) and homologous (same species) transfer has resulted in tissue survival and growth under certain well-defined limitations. Greene has documented well the fact that certain adult tissues, human embryonic tissues, and human cancer tissues, when transplanted into suitable sites in laboratory animals, possessed the ability to grow. With regard to tumors which display the morphologic changes considered characteristic of cancer, this heterotransplantability appeared related closely to the ability of that tumor to spread, in the original host, by the way of lymph gland metastases.

Embryonic tissues after homologous and heterologous transfer showed the ability to grow and to differentiate and organize into functional structures. To make use of these observations on embryonic tissues, as a means of supplying human beings with organs or tissues of which they are in need, seemed reasonable and possible. However, to date this has not been successfully accomplished. Despite the sporadic report of initial acceptance by the host of organ transplants, (with the exception of monozygotic-identical-twins), they have ultimately been rejected.

The key to this predicament appears to lie in the immunologic response of an individual, the host, to the replacement tissues grafted on him. The evidence supporting the immunologic theory is remarkably good in that the time required for rejection of homotransplants is approximately the same as that required for antibody formation; substances which diminish antibody formation prolong the survival time of the transplants, and it has been possible to demonstrate antibodies in the blood stream of the recipient subject about the time of the beginning of rejection of certain homologous transplants.

The opportunity to test such thesis, despite its rather good theoretical support came to Drs. Richard L. Varco, L. D. MacLean, J. B. Aust, and R. A. Good of the University of Minnesota Department of Surgery, when they were presented with several patients with a congenital malformation known as agammaglobulinemia. This is a congenital defect which occurs only in males and results in a "immunological paralysis" associated with a secondary inability to create gamma globulin. Two patients have now been rather carefully studied by this group of investigators for the express purpose of acquiring critical evidence about the mechanism of failures of homotransplants in man. Upon each of them, skin grafts were placed. These small fragments of skin were removed from individuals, with normal immuno-

logic backgrounds, who were adults and were of different or dissimilar blood types. In each instance the grafts took well, promptly, and had survived 13 months and 3½ months, respectively, by late 1955.

The preceding workers were fortunate in being able to study, in a comparable fashion, two patients with acquired agammaglobulinemia. Here again skin was grafted to defects upon these two individuals with the acquired form of disease. Whereas again the grafts "took" initially and readily, the graft was in each instance eventually rejected completely.

Neurogenic Factors Affecting the Heart.—Within the past year Dr. R. A. Cowley, and Dr. Sidney Scherlis of the University of Maryland School of Medicine have carried on a series of studies concerned with the investigation of the nervous or neurogenic factors which influence the circulation of the heart muscle. Their clinical observations emphasized strongly that not only are neurogenic factors important in precipitating pain in the presence of an irritable or damaged coronary vascular bed, but may also be important in precipitating irreparable damage in the heart muscle itself. By stimulating branches of the nerves to the heart, the vagus nerves and their branches, as well as the sympathetic nerve ganglia, they were able to produce certain types of irregularities of rhythm of the heart.

One of the most striking effects was that produced by the stimulation of certain branches of the vagus nerve leading to the heart which resulted in prompt and profound electrocardiographic changes. These resembled the pattern seen after acute heart muscle injury from occlusion or thrombosis of the coronary artery. In some instances the nerve stimulation was sufficient to produce sudden death in the experimental animal. These investigators felt that neurogenic influences play a definite and significant role in precipitating occlusion of the coronary vessels as well as the characteristic pain seen in the human with characteristically diseased coronary blood vessel.

Two particular points of stimulation of the various nerves about the upper end of the heart were of special interest. Stimulation of certain branches of the vagus nerve produced irregularities of rhythm and changes similar to those encountered in patients who had acute myocardial damage. Stimulation of the sympathetic nerve ganglion in the immediate vicinity produced heart tracings with changes resembling acute coronary artery insufficiency.

Cardiovagal Neurectomy.—In their most recent report, these authors have described the effects of an operation designed to cut these particular nerve fibers. Patients operated on were very carefully selected because the very severe angina pectoris which they experienced was definitely the result of coronary artery disease. Treatment with drugs, rest, and psychotherapy had been unsuccessful; each patient was severely incapacitated, and two patients suffered severe unrelenting pain. Each patient permitted the operation of cardiovagal neurectomy and each was markedly benefited as a result. Two of the patients returned to a gainful occupation, a third is engaged in activity much greater than that tolerated prior to his operation, and the fourth patient has subsequently succumbed to another disease wholly unrelated to his heart disease.

Professor of Surgery, University of Maryland
School of Medicine.

SURINAM (NETHERLANDS GUIANA). An autonomous territory of the Kingdom of the Netherlands on the north coast of South America. Area, 55,143 square miles; pop. (est. 1954), 220,000. Paramaribo (86,000) is the capital and only large city. The mixed population consists mainly of Negroes and persons of Negro descent, and descendants of workers once imported from India and Java. About 24,000 Negroes and 4,000 Carib Indians inhabit the jungle. There are also a few thousand Chinese and Europeans (mainly Dutch). Languages are chiefly Dutch and a lingua franca called Surinam-tongo.

Government.—Under the Statute of the Realm, which came into force on Dec. 29, 1954, Surinam became an autonomous member of the realm under the House of Orange. The Netherlands exercises effective control of foreign relations and defense. A Dutch governor represents the Netherlands crown in Surinam. The States of Surinam (Legislative Council) consists of 21 members elected for 4 years. The ministry is responsible to the legislature.

Education and Religion.—In 1953 there were 155 public and private schools (41,000 pupils), and 31 mission schools (1,100). Chief religious groups are Moslems, Hindus, Moravian Brethren, and Roman Catholics.

Finance.—Revenue in 1954 was estimated at 35,510,000 Surinam guilders; expenditure, 35,616,000. The Surinam guilder equals U.S. \$0.536.

Economy.—Surinam is the world's leading producer of bauxite (1954 output: 3,421,171 metric tons). Agriculture engages about half the population. Chief crops are rice, sugarcane, coffee, coconuts, citrus fruits, corn, bananas, cacao, and peanuts. Forest products include balata and hardwoods. Manufactures are mainly rum, molasses, plywood products, footwear, soft drinks, tobacco products, and other light items. Exports in 1954 totaled 55.18 million guilders; imports, 51.87 million. Bauxite, going almost entirely to the United States, comprises the bulk of exports. Imports are mainly machinery and vehicles, iron and steel, fuels, and foodstuffs.

Transportation and Communications.—Surinam has about 250 miles of main roads, mostly around Paramaribo. The one railway (Paramaribo-Kabestation) totals 107 miles. International airlines provide services to Zandery airport, south of Paramaribo. Motor vehicles numbered 2,018 in 1955; telephones, 3,186.

Principal Events, 1955.—Elections for the Legislative Council on March 29 resulted in a strong victory of the opposition United Front over the government coalition. Surinam's 10-year development plan (1955-65) received further impetus in 1955 when the Netherlands agreed in principle to provide 171 million (half as a loan, half as a grant) of the 250 million guilders in expenditures under the plan. Queen Juliana and Prince Bernhard toured Surinam, October 27—November 6. The visit highlighted the territory's newly won status as an autonomous member of the realm.

SVALBARD. A Norwegian Arctic territory comprising the Spitsbergen archipelago and several other islands about 400 miles north of Norway. Chief islands of the Spitsbergen group are West Spitsbergen (14,633 sq. mi.), North East Land, Edge Island, and Barents Island. Svalbard's total area is 24,101 square miles; pop. (winter, 1952-53), 1,296, not including 1,961 Russian miners operating Soviet concessions at Isfjord on West Spitsbergen. Svalbard is administered by a governor residing at Longyearbyen, West Spitsbergen. Coal is the chief product. Output of Norwegian mines in 1954 totaled 338,400 metric tons.

SWAZILAND. An enclave within the Union of South Africa, Swaziland is one of three High

Commission Territories, together known as British South Africa (see also BASUTOLAND and BECHUANALAND PROTECTORATE). It has an area of 6,705 square miles—half native reserve, half under white settlement—and a population (1946 census) of 185,215 (Africans 181,269; Europeans, 3,201; Euraficans, 745).

A resident commissioner (D. L. Morgan, appointed March 5, 1951), representing the high commissioner, has his headquarters at Mbabane, the capital; a paramount chief (Sobhuza II) and a queen mother share authority in the native reserve. Revenue in 1953-54 was £1,150,872, including grants from the Colonial Development and Welfare Fund; expenditure, £990,651. There are 234 schools for Africans, 8 for Europeans, and 4 for Euraficans. Pupil enrollment totaled 18,428 in 1954, and 124 schools received government aid amounting to £32,600.

The economic wealth of the territory lies in its natural resources, which included 420,662 cattle, 154,421 goats, and 35,737 sheep in 1953. Development has continued in agriculture, forestry, irrigation, mining (value of 1954 production, £2,114,127), and cattle ranching. Crops include maize (corn), sorghum, cotton, rice, tobacco, peanuts, bananas, citrus, and other sub-tropical fruits. Three private companies and the Colonial Development Corporation, an enterprise of the British government, are engaged in forestation; by the end of 1954 pine trees had been planted on 122,000 acres. Minerals (1954 production, £2,113,974) include asbestos, tin, iron ore, barite, and coal. Exports in 1954 were valued at £3,135,362 (including asbestos, £2,085,514; slaughter stock, £387,022; seed cotton, £155,286; peanuts, £144,592; butter, £69,565; rice (paddy), £51,783; hides and skins, £48,369; and wattle bark, £43,000). Roads aggregate about 1,150 miles (trunk roads, 700 miles). There are no railways. Motorbuses connect many parts of the territory with the Union of South Africa railway system.

SWEDEN. A northern European kingdom occupying the southern and eastern part of the Scandinavian Peninsula, Sweden borders Norway on the north and west, and Finland on the northeast. With an area of 173,378 square miles, Sweden is somewhat larger than the State of California.

Population.—The population (est., Jan. 1, 1955) is 7,234,664, an increase of 42,348 persons over the preceding year. The total number of foreigners in Sweden at the beginning of 1955 amounted to 3.7% of the population. Representing some 60 nations, 3.2% of the male workers in Swedish industry and 6.9% of the women employees were foreigners. There are 133 incorporated cities, of which the largest (with Jan. 1, 1955, populations) are Stockholm, the capital, 777,038; Göteborg, 376,628; Malmö, 205,770; Norrköping, 88,400; Hålsingborg, 73,279; Örebro, 70,477; and Uppsala, 68,484.

Government.—Sweden is a constitutional monarchy. The reigning sovereign, Gustaf VI Adolf, of the House of Bernadotte, succeeded his father, Gustaf V, in 1950. He exercises his powers through responsible ministers in the Council of State, and presides at cabinet meetings. Dr. Tage Erlander heads the coalition government of Social Democrats and Agrarians (Peasant Party) which took office on Oct. 1, 1951. The Riksdag, or Parliament, is bicameral, with both houses having equal power. The upper house (Första Kammaren) is elected indirectly for 8 years by the county and city councils, and consists of 150 members. Late in 1955 it contained 78 Social Democrats, 25 Agrarians, 14 Conservatives, 30 Liberals, and 3 Communists. The lower house (Andra Kammaren) of 230 members is elected every 4 years by universal suffrage; after the general elections of Sept. 21, 1952, it consisted of 110 Social Democrats, 25 Agrarians, 31 Conservatives, 59 Liberals, and 5 Communists.

Education and Religion.—Education has been compulsory in Sweden since 1842. In 1950, Parliament passed a bill providing for extensive reform and modernization of the whole educational system, including an increase in the period of compulsory education from 7 to 9

years. In the universities and professional schools there were approximately 50,000 students in 1953. The two national universities are at Uppsala and Lund. There are private universities at Stockholm and Göteborg. Adult education is unusually widespread and varied, with 60 so-called people's colleges in the country, enrolling more than 9,000 students annually. The Evangelical Lutheran Church is the established church of Sweden. Uppsala is the metropolitan see, and the country has 13 bishoprics and 2,550 parishes.

Finance.—Sweden's budget was presented at the opening of the Riksdag on Jan. 12, 1955, with receipts and expenditures balanced at approximately 9,106 million kronor (approximately \$1,800 million at the existing rate of exchange; U.S. \$1 = 5.173 kronor). The social welfare budget, as usual, was the highest, totaling 2,519 million kronor, or 142 million more than the preceding year. Old-age pensions were estimated to cost 1,365 million kronor, an increase of 37 million, which is the biggest single item in the budget. The defense budget totaled 2,195 million kronor, a decrease of 10 million as compared with the year before.

Agriculture and Forestry.—Sweden's 9.2 million acres of arable land are distributed among some 375,000 farmers. Most of these are small landowners with farms not exceeding 25 acres. About 93% of the country's arable land is privately owned. Two thirds of Sweden's area consists of forests and interior bodies of water, and forest products in the last few years have accounted for 41% of the total export value. Principal crops are wheat, rye, hay, fodder peas, potatoes, sugar beets, fodder roots, and oats. Progress in scientific farming has made Sweden practically self-sufficient in basic foods.

Mining.—Next to the land, forests, and water power, Sweden's most important natural resource is iron ore. Production during 1953 totaled 16,984,000 tons. Production in 1953 of various minerals (in metric tons) was: sulfur pyrites, 388,990; auriferous arsenic ore, 74,560; and manganese ore, 12,068. In the same year Sweden also produced 284,648 metric tons of coal and 181,127 metric tons of fire clay.

Manufacturing.—Industries other than mining include the manufacturing of wood products, machinery, motors, electrical appliances, railroad and aviation equipment, airplanes, automobiles, trucks, buses and streetcars, textiles, apparel, pharmaceuticals, foodstuffs, and a wide variety of other consumer goods. About 95% of Swedish industry is operated under private enterprise: corporations, partnerships, and privately or family-owned concerns account for 91%, and cooperative enterprises for 4%. About 43% of the population earn their living in industry or from crafts.

Foreign Trade.—The principal exports are forest products; pulp, paper, and lumber bring in almost half the foreign trade income. Yearly gross earnings of the Swedish merchant fleet total about 1,300 million kronor. Sweden was third among shipbuilding nations in 1954. Swedish shipyards launched 67 vessels of 550,000 gross tons and delivered 70 vessels of 533,000 tons. Among the world's shipbuilders, three leading Swedish yards occupied the third, fourth, and fifth places, respectively. In both volume and value, exports as well as imports reached new highs during 1954. Exports expanded by 7% compared with 1953, the total being 8,218 million kronor. Imports totaled 9,198 million, an increase of 13%. Great Britain maintained its position as Sweden's foremost customer. Swedish exports to Britain amounted to 1,526 million kronor, representing 19% of the total export value. Sweden's exports to the dollar area declined from 10% of the total in 1953 to 7.8% in 1954. Imports from the dollar countries showed only a small decline, or from 11.4% to 11% of the total.

Transportation and Communications.—Swedish state railways own 10,236 miles of a total track-

age of 10,262 miles; 40% of the railways are electrified. The Scandinavian Airlines System (SAS), a combine of Danish, Norwegian, and Swedish airlines, operates routes between Sweden and 72 cities in 41 countries of the world. Sweden's merchant fleet, numbering over 1,800 ships with a gross tonnage of about 2,650,000, is one of the 12 largest in the world. On Sept. 8, 1953, the country's first highway, laid out after Continental and United States patterns, was opened between Malmö and Lund in southernmost Sweden. The ultimate goal of the new superhighway is Stockholm, a distance of about 360 miles. Highways and roads totaled 54,800 miles in 1955.

In 1955 there were 4,321 post offices, 7,170 telephone stations, and 34 radio transmitters. With 1.8 million telephones, or 25.2 per 100 inhabitants, Sweden ranks second only to the United States. Radios number approximately 2.2 million, or almost one to every family. Sweden's 229 daily newspapers have a combined circulation of more than 3.5 million copies.

Labor and Co-operatives.—In proportion to its population, Sweden has the largest free labor organization in the world. The number of unions within the Federation of Swedish Trade Unions decreased in 1953 by 13, due to mergers of various locals, bringing the current total to 8,902. The total membership is now about 1,500,000. Hourly wages for male industrial workers average 4.11 kronor, and for female workers, 2.84 kronor.

The Swedish Cooperative Union had a total membership in 1955 of 1,070,073, an increase of more than 20,000. There were 688 affiliated local societies, and a turnover in 1954 of almost 2.5 billion kronor, which was 3.2% higher than the year before. The number of cooperative supermarkets in Sweden increased in 1954 by 307 to a total of 1,140.

Principal Events, 1955.—In March, the Swedish security police uncovered a widespread espionage network, resulting in the arrest on March 14, of 5 Swedes, one German, one Rumanian, and 4 Czechoslovakians. As a result, 4 members of the two Eastern European legations in Stockholm were expelled as *personae non gratae*. A new Swedish-Soviet trade agreement for 1955 was signed in Stockholm on April 22. Swedish imports, according to this agreement, remain rather high, while exports to the Soviet Union continue to be of smaller scope.

King Gustaf VI Adolf and Queen Louise of Sweden paid a state visit to the Netherlands in April as guests of Queen Juliana and her consort, Prince Bernhard. On May 19, King Gustaf VI Adolf received an honorary doctor's degree from the University of Oxford. The 50th anniversary of the peaceful dissolving on June 7, 1905, of the union between Sweden and Norway was observed on both sides of the border. On July 1, an agreement was signed in Washington, D.C., by the governments of the United States and Sweden, concerning cooperation between the two countries regarding the utilization of atomic power for peaceful uses.

On October 1, Sweden officially abolished the so-called "Bratt System," which for a period of four decades had regulated the sale and distribution of hard liquor and wines. Noncommercial television was introduced under the authority of the Swedish Radio, Inc., after several years' experimentation.

SWITZERLAND. A European republican confederation of 19 cantons and 6 half-cantons, bounded by Germany, Liechtenstein, Austria, Italy, and France. Area, 15,941 square miles; pop. (est. June 30, 1955), 4,978,000. Chief cities and populations (1950): Zurich, 390,020; Basel, 183,543; Bern (the capital), 146,499; Geneva, 145,473; and Lausanne, 106,807. German (spoken by about 72% of the population), French (20%), Italian (6%), and Romansh (1%) are the 4 national languages, the first 3 being also the official languages.

Vital Statistics.—The birth rate in 1954 was 17.0; the death rate, 10.0; and the infant mortality rate, 27.2. Average life expectancy for the period 1939-44 was 62.68 years for males and 66.96 for females.

Government.—Legislative power is vested in a bicameral Federal Assembly. The National Council (Nationalrat) has 196 members elected every 4 years. The Council of States (Ständerat) has 44 members, 2 from each canton. Male citizens over 21 years of age are entitled to vote. Executive power is vested in a Federal Council of 7 members elected by the Federal Assembly for a 4-year term. The head of the Federal Council is also president of the confederation—a largely honorary office. The president and vice president are elected by the Federal Assembly for a 1-year term. Customarily, the vice president is chosen to succeed the outgoing president. On Dec. 15, 1955, Dr. Markus Feldmann (Peasants, Artisans and Middle Class) was elected president for 1956, succeeding Max Petitpierre.

Education and Religion.—Elementary education is free, secular, and compulsory. In the school year 1951-52 there were 476,331 pupils in primary schools and 80,207 in secondary and lower middle schools. There are also many commercial, technical, agricultural, teacher-training and other type schools. Switzerland's 7 universities had a total enrollment of 12,444 in 1953-54. In 1950, Protestants constituted 56% of the population; Roman Catholics, 42%; and Jews, 0.4%. There is complete freedom of worship.

Finance.—Revenue in 1954 totaled 2,320 million francs; expenditure, 1,959 million. The overall surplus, deducting the capital investment deficit of 131 million francs, amounted to 230 million. The Swiss franc equals U.S.\$0.233.

Production.—Swiss national income in 1954 was estimated at 21.9 billion francs, a rise of about 5% over the 20.83 billion of 1953. About 47% of the Swiss labor force is employed in manufacturing and construction. Chief industries are metal works, machines, apparatus, and instruments; textiles; watches and jewelry; clothing; food and tobacco; chemicals; graphic arts; and wood products. Electricity production (mainly hydraulic) totaled 11,244 million kw-hr. in 1954, about 1% over 1953. Construction in 1954 totaled a record 3.43 billion francs.

Swiss agriculture provides a little over half the nation's food requirements. Livestock and dairy products account for the greater part of farm output. The index of agricultural production (1939 = 100) rose from 112 in 1952 and 1953, to 117 in 1954. Output of major livestock products in 1954 was: meat, 78,000 metric tons; milk (delivered by farmers), 1,932,000; and cheese (factory production), 50,760. Chief crops and 1954 output in thousands of bushels were: wheat, 9,370; rye, 1,425; barley, 2,440; and oats, 5,300.

Foreign Trade.—Exports in 1954 totaled 5,264 million francs; imports, 5,587 million. Watch exports in 1954 were valued at 1,040 million francs, a decline of 6% from 1953. Other major exports are chemicals, textiles, and instruments and apparatus. Major imports are foodstuffs, animal feeds, machinery, automobiles, fuels, and raw cotton and wool. The United States and Canada together took 14% of Switzerland's 1954 exports and provided 16% of imports. Germany took 12% of Swiss exports and provided 22% of imports.

Transportation and Communications.—Swiss railways have a total route length of 3,211 miles (1953). The highway network includes 10,500 miles of main roads. Basel is the terminus of the Rhine waterway, navigable all the way from the North Sea. The Swiss merchant marine comprises 34 vessels aggregating 124,714 gross registered tons (end of 1953). Swissair operates international flights. Passenger cars in 1953 numbered 211,140; telephones, 1,074,216; radio receiver licenses, 1,387,700; and TV receiver licenses, 2,800 (mid-1954). There were 127 daily newspapers in 1952 with a total circulation of 1,442,000.

Principal Events, 1955.—In the six-month period following the 50% increase in the United States tariff on Swiss watches in July 1954, Swiss watch exports to the United States fell about 28%, occasioning some unemployment in the Swiss watch industry. Although the decrease in watch exports to the United States was more than compensated for by increased sales to other countries during 1955, an agreement was concluded on June 8 whereby the United States extended certain tariff concessions to Switzerland on goods other than watches. Under the Atoms for Peace program, the United States and Switzerland concluded an agreement on August 20 transferring to Switzerland a nuclear reactor which had formed part of the United States exhibit at the International Conference on Peaceful Uses of Atomic Energy, held at Geneva, August 8–20.

Four Rumanian anti-Communists seized the Rumanian legation in Bern on February 15, killing a legation employee, but surrendered to Swiss police and troops the following day. A Rumanian request for the extradition of the four men was refused by the Swiss government on February 17.

An agreement with Japan was signed in Bern on January 21, whereby Japan undertook to pay 12,250,000 Swiss francs in settlement of Swiss claims regarding damages to Swiss nationals and property caused by Japanese forces in Southeast Asia in World War II.

In domestic affairs, a development of considerable interest was the beginning of government action to repeal the Swiss constitutional prohibitions against activities in Switzerland of the Roman Catholic order of the Jesuits. Dr. Markus Feldmann, head of the Department of Justice and Police, announced in the Council of States on June 23 that the government was preparing legislation toward this end.

Boom conditions continued in most sectors of the Swiss economy during 1955. Spurred by strong domestic and foreign demand, most industries were at high or record levels, although the textile industry experienced some idleness due to Japanese competition abroad. Construction activity exceeded the record level of 3.43 billion francs in 1954. Unemployment was negligible and some 200,000 foreign workers were employed in Switzerland to ease the labor shortage. Despite the lifting of price and rent controls on March 13, the cost of living remained virtually stable during the year.

In the national elections of Oct. 30, 1955, the Social Democrats emerged as the largest party in the National Council, obtaining 53 seats, a gain of 4. The Radical Democrats obtained 50 seats; Catholic Conservatives, 47; and Peasants, Artisans, and Middle Class, 27—each of the 3 parties suffering a loss of 1 seat. Among the minor parties, the Independents received 10 seats; the Liberal Democrats, 5; Democratic and Evangelical, 5; and Labor (Communist), 4. With the ex-

ception of the loss of a seat by the Labor Party, seating among the minor parties was the same as in 1951.

SYNTHETICS. See CHEMISTRY; PLASTICS; RUBBER; SOAP AND SYNTHETIC DETERGENTS; TEXTILE INDUSTRY.

SYRIA. A republic in the Middle East on the shore of the eastern Mediterranean. Area, about 72,000 square miles; population (July 1954 est.), 3,670,000, excluding (1945 est.) 288,400 nomads and seminomads. Chief cities and populations (1952): Damascus, the capital (372,708); Aleppo, northern metropolis and communications center (380,919); Homs (261,904); Hama (155,671); and Latakia (105,636), the only seaport.

Government.—Syria's government is based on a constitution approved by popular referendum in July 1953. At the head of the government is a president (Shukri el-Kuwatly, who took office on Sept. 6, 1955, after election by the Chamber of Deputies on Aug. 18, 1955); a premier (Saïd el-Ghazzi, who succeeded on Sept. 14, 1955, and who also is foreign minister) heads the cabinet. The Chamber of Deputies has 142 members. (See also below, *Principal Events, 1955.*)

Religion and Education.—The majority of Syrians are Moslems of the Sunnite sect. There are politically important minorities (Alawites, Bedouins, and Druzes) and small communities of Isma'ites and Shi'ites. The Christian elements, mostly Eastern Christian communities, constitute about 12% of the population. There are also a few thousand Jews. In 1953–54 there were 2,584 primary schools (310,484 pupils), 212 secondary schools (53,250 pupils), 12 technical schools (1,970 students), and 6 teacher-training schools (1,225 students). There are also the Higher Teachers' Training College and the Syrian University (with 3,332 students), and the Arab Academy (founded in 1919), all at Damascus.

Finance.—The budget for the calendar year 1955 totaled £\$260 million, the major allotments being £\$75 million for defense, £\$41 million for education, and £\$25 million for public works and communications. Revenues were estimated at £\$167 million from indirect taxation, including the revenue from the Iraq Petroleum Company pipelines, and £\$93 million from direct taxation. At the official exchange rate the Syrian pound equals about 45 U.S. cents, but at the current free exchange rate it is worth 28 U.S. cents.

Production.—In 1952 Syria's national income was estimated at £\$1,140 million, with per capita income of £\$300. More than two thirds of the people make their living from farming and stock raising. Only 20% of the land is fit for cultivation, and today only 12% is under cultivation. The distribution of cultivable land is a problem for the government. Another serious problem is the scarcity of rural credit. It is hoped to increase the cultivable land by the El Ghab drainage scheme and by irrigation projects on the Euphrates, the Nahr el-Kebir in Latakia, the Barada (near Damascus), and the Khabur (in the northeast) rivers. These projects form part of the 5-year \$530 million irrigation and farm-development program recommended by the International Bank for Reconstruction and Development in April 1955.

Output of principal crops in 1954 was reported as follows (in metric tons): wheat, 800,000; barley, 561,000; millet, 102,819; sugar beets, 55,000; lentils, 62,814; olives, 48,202; and rice, 24,548. Cotton and tobacco continue to be the chief cash crops. Cotton production in 1954 was 65,000 tons; in 1955, it is expected to be between 80,000 and 100,000 tons. The 1955 grain yield was expected to be 20% less because of the unseasonal drought in many areas. Industry continued to expand in 1955, with the biggest gains in textiles. The cement industry prospered, and there is a new glass industry. Other manufactures or finished products include soap, olive oil, sugar, tanned leather, and footwear. The search for petroleum in Latakia and the Deir-ez-Zor region

was intensified in 1955, and some surveys indicated the presence of chrome, manganese, and sulfur deposits.

Foreign Trade.—Syria's export trade in 1954 totaled \$194 million, while imports were held at \$171 million. Cotton and tobacco are the principal exports (in 1953 raw cotton valued at £\$134,703,000 was exported). In 1954 Syria's best customer was Lebanon (26.6%), with France ranking second (15.5%). While 4% of Syria's exports went to the United States, 12% of Syria's imports came from the United States. France and Great Britain each provided 11% of Syria's imports.

Transportation and Communications.—The total mileage of Syria's three railway systems is 517. There are about 3,000 miles of asphalted roads, and 1,500 miles of second-class macadamized roads. The one airport of the country (in Damascus) is used by several international airlines. A Syrian-United States air transport agreement was approved on March 17, 1955, enabling United States airlines to serve Syria. The port of Latakia was nationalized on Feb. 6, 1955, and is being modernized and enlarged. Telephones number approximately 24,000, and in 1954 there were 83 motion picture theaters and one broadcasting system, the Syrian Broadcasting Service at Damascus.

Principal Events, 1955.—Since the middle of 1954 some degree of political stability has been restored in Syria. Although there were disturbances in some areas, such as the clash between factions near Aleppo on March 5 and another on the following day, there was no major internal trouble during 1955. Even the murder of the Syrian Army's deputy chief of staff, Col. Adnan el-Maliky, on April 22, did not have any serious

repercussions.

The cabinet of Premier Faris el-Knoury, formed in October 1954, resigned on Feb. 7, claiming that it no longer had a coalition character. At the invitation of the president, Sabri el-Assali formed a new coalition cabinet on February 13. In August, 95-year-old President Hashim el-Atassi retired, and on September 6, Shukri el-Kuwatly became president. Thereupon the el-Assali cabinet resigned, and on September 14, Said el-Ghazzi was recalled; he formed a coalition cabinet, in which he also holds the post of foreign minister.

Syria's relations with Israel and Turkey deteriorated in 1955. On January 15, there was an anti-Turkish demonstration in Aleppo. Turkey protested against the announcement by Syria, Egypt, and Saudi Arabia on March 6 of plans for a collective security pact, and when Syria sent a note explaining that the pact would be aimed against Israel, Turkey refused to accept the note. On October 30, several clashes took place between Turkish and Syrian border patrols, and on October 20, an Egyptian-Syrian defense treaty was signed. On November 1, Iraq was considering an offer for a defense pact between the two countries.

On December 11, Israeli forces raided a Syrian army post at the northeast corner of the Sea of Galilee; 56 Syrians and 6 Israelis were killed. Syria brought the matter before the U.N. Security Council where, on the basis of a report by the United Nations truce supervisor in Palestine, the Western Big Three powers agreed to censure Israel in "strong and unequivocal terms."

TARIFFS. At the close of 1955, the world tariff structure retained the general stability which had characterized it over the past several years, despite major tariff changes instituted during the year by a number of countries. Honduras, Kenya, Nicaragua, Somaliland, Formosa, and Viet-Nam completed general tariff revisions in 1955, and the Federation of Rhodesia and Nyasaland instituted its first tariff. Partial tariff revisions which resulted in increased rates of duty on a substantial number of individual items were placed into effect by several countries, including Bolivia, Chile, Colombia, Ecuador, Egypt, Finland, Greece, Guatemala, Mexico, and the Union of South Africa. Decreases in import duties on a substantial number of items were announced by a few countries, including Costa Rica and West Germany.

General Agreement on Tariffs and Trade (GATT).—The contracting parties to GATT held their

ninth session at Geneva, Switzerland, from Oct. 28, 1954, to March 7, 1955. As a result of this session, a number of amendments to the provisions of GATT, as well as an Agreement on the Organization for Trade Cooperation (OTC), were submitted to the member countries for their acceptance.

The proposed amendments to the provisions of the GATT took three forms: routine technical changes designed to correct or clarify certain of the provisions; changes to adapt the agreement to the proposed OTC; and changes of substance in several provisions of the agreement, such as those relating to quantitative restrictions, export subsidies, antidumping duties, and governmental assistance to new industries.

In their review, the contracting parties amended Article 28 so as to extend from mid-1955 to the end of 1957 the assured life of the tariff concessions that had been granted by the member countries in GATT. Prior to such extension, however, a contracting party was permitted under Article 28 to renegotiate any of the individual tariff concessions that it had granted. Some 20 member countries, among them Austria, Canada, France, India, Italy, the Netherlands, Sweden, and Union of South Africa, indicated their intention to modify or withdraw certain of their concessions in accordance with the article.

The OTC was proposed by the contracting parties to provide permanent administrative arrangements for GATT. If accepted by member countries, the new organization would replace the sessions of the contracting parties and meetings of the Intersessional Committee. It would sponsor periodic, multilateral tariff negotiations; serve as an intergovernmental forum on matters of foreign trade; and collect, analyze, and publish statistical data and other information bearing on foreign trade and commercial policy. According to its provisions, the OTC would become effective on acceptance by member countries accounting for 85% of the combined external trade of the GATT countries. On Sept. 1, 1955, Greece had accepted the OTC definitively; Chile, West Germany, the Netherlands, Turkey, and the United States had accepted it *ad referendum*. These countries accounted for 31.5% of the external trade of GATT. In the United States, President Eisenhower requested Congress to authorize United States membership in the OTC.

The ninth session and the tenth session of GATT, the latter held in the fall of 1955 and ending on December 3, considered regular business matters arising out of the operation of the agreement. These included complaints that various member countries had violated the agreement's provisions, and also included requests by various members for waivers of their GATT obligations. Belgium was given a period of grace in which to adapt its quota system of protection relating to fruits and vegetables to GATT regulations against quotas.

In 1955 Japan formally acceded to GATT. At a conference held in Geneva from February to June, Japan engaged in tariff negotiations with 17 of the 34 contracting parties to GATT.¹ At the completion of the negotiations on June 7, the contracting parties were asked to vote on Japan's accession. All 34 member countries cast favorable votes, and Japan became a member on September 10. Under Article 35 of the agreement, however, 14 contracting parties² which had not negotiated with Japan and which account for about half of the combined foreign trade of all GATT members, gave formal notice that their trade relationships with Japan would not be governed by GATT provisions.

United States Tariff Actions.—In September 1955 the United States announced its intention to enter into trade-agreement negotiations early in 1956 with other contracting parties to GATT.

Earlier in 1955 the United States granted tariff concessions to Switzerland to compensate for the increased duties on watches and watch movements that the United States had imposed in 1954 under the escape-clause procedure.

In mid-1955, Congress enacted the Trade Agreement Extension Act of 1955. This measure included two major features. It extended through June 30, 1958, the period during which the president might enter into trade agreements with foreign countries; and it granted to the president authority to reduce United States import duties—subject to the peril-point and escape-clause procedures of the existing legislation—by 15% of the rate of duty existing on Jan. 1, 1955, and to reduce rates of duty which exceeded 50% ad

UNITED PRESS

Bill extending reciprocal trade agreements another three years is signed by President Eisenhower, June 21, 1955.

valorem (or its equivalent) to that level, in equal stages each of the 3 years.

During 1955, the United States terminated its bilateral trade agreement with Guatemala and agreed to terminate its agreement with Ecuador. The revision of the United States-Philippine trade agreement, which had been concluded late in 1954, was approved in 1955 by the congresses of the two countries.

Work of the U.S. Tariff Commission.—In 1955, the U.S. Tariff Commission conducted a variety of investigations pursuant to public law and executive order; continued its tariff-simplification study; and furnished technical and statistical data and other information to Congress, other government agencies, and the public. As in other recent years, the commission's investigatory activities occupied a large part of its time.

Under Section 7 of the Trade Agreements Extension Act of 1951, as amended, the commission had nine escape-clause investigations pending before it during the first 10 months of 1955. By October, five of the investigations had been completed. In three of the completed actions—those on glue of animal origin, hardwood plywood, and red fescue seed—the commission did not recommend to the president that existing trade agreement concessions be modified. In the two other completed investigations—those on alsike clover seed and bicycles—the commission recommended that increased import restrictions be imposed on the commodities. The president followed these recommendations in part and granted relief to the domestic industries involved.

As required by Executive Order 10401, the commission submitted to the president periodic reports reviewing the escape-clause actions previously taken by the United States on women's fur felt hats, hatters' fur, and dried figs. In each instance, the commission found that continuation of the modified duty under the escape-action was necessary to prevent serious injury to the industry involved. The president approved these findings.

¹ Burma, Canada, Chile, Denmark, the Dominican Republic, Finland, West Germany, Greece, Indonesia, Italy, Nicaragua, Norway, Pakistan, Peru, Sweden, the United States, and Uruguay.

² Australia, Austria, Belgium, Brazil, Cuba, France, Haiti, India, Luxembourg, the Netherlands, New Zealand, the Rhodesia-Nyasaland Federation, the Union of South Africa, and the United Kingdom.

During 1955, the commission completed three peril-point investigations and instituted a fourth such investigation under Section 3 of the Trade Agreements Extension Act of 1951, as amended. Two of the completed investigations related to the trade agreement negotiations involving Japan, and the third related to the negotiations with Switzerland. The fourth investigation, which was begun in September, related to the proposed negotiations sponsored by GATT for early in 1956.

Under Section 22 of the Agricultural Adjustment Act, as amended, the commission conducted seven investigations during 1955. In three investigations—two relating to peanuts and one relating to shelled filberts—the commission recommended to the president the removal or liberalization of the import restrictions that had been imposed previously under Section 22. In an investigation of rye, rye flour, and rye meal, the commission recommended the imposition of an import quota on those products. The president carried out the commission's recommendations in whole or in part. Two investigations—those of durum wheat or flour and edible tree nuts—were discontinued prior to their completion. As of Oct. 15, 1955, the president had not acted on a report relating to Italian-type cheese.

Pursuant to Section 332 of the Tariff Act and resolutions of the Senate Committee on Finance, the commission completed and sent to the Senate reports on general investigations of the domestic hardboard and fluorspar industries.

Under Section 336 of the Tariff Act, the commission during 1955 received applications from domestic producers for investigations of the differences in costs of production in the United States and foreign countries of cotton gloves, cork insulation, photographic shutters, and camera shutters. The commission dismissed three of the applications after preliminary inquiry. On October 15, a preliminary inquiry respecting camera shutters was in progress.

During 1955 three domestic producers filed complaints with the commission under Section 337 of the Tariff Act, alleging unfair methods of competition and unfair acts in the importation of articles into the United States. Late in the year, preliminary inquiries into the complaints, which related to knitted garments, electrolytic apparatus for treating metal surfaces, and electron tubes, were in progress.

Under Section 201(a) of the Antidumping Act, 1921, as amended, the U.S. Tariff Commission has the responsibility of making injury determination investigations for purposes of that act.

In 1955 the commission had five such investigations pending before it. In three of the investigations—those on muriate of potash from West Germany and France, pocket pencil sharpeners from West Germany, and nicotine sulfate from the Netherlands—the commission found that the domestic industry involved was not being injured by imports of these products. In a fourth investigation, relating to muriate of potash from East Germany, the commission was equally divided in its decision, which resulted in no finding of injury. The fifth investigation, relating to cast iron soil pipe from the United Kingdom, was in process late in 1955.

The Customs Simplification Act of 1954 directed the U.S. Tariff Commission to make a comprehensive study of the laws of the United States prescribing the import status of imported articles. On March 15, 1955, the commission

presented an interim report on its study to the president and to Congress.

EDGAR B. BROSSARD,
Chairman U.S. Tariff Commission.

TAXATION. There was a substantial delay in the issuance of U.S. Treasury regulations for use in administering and explaining the completely revised Internal Revenue Code of 1954. Although one year had passed since enactment of the entirely rewritten tax law, only a small proportion of the new provisions had been covered by regulations. As a stopgap measure, the old regulations under the previous tax law were continued in force to the extent they were not inconsistent with the new law provisions.

A special subcommittee of the Congressional Joint Committee on the Economic Report undertook a basic study of federal tax policy. One of the chief goals was to compare the benefits derived from a program of offering tax incentives for investment (by reducing corporate taxes, capital gains taxes, estate and gift taxes, and upper and middle income bracket individual taxes) as against a policy of tax stimulation of consumption of goods (through cutting taxes on lower and middle income bracket taxpayers, cutting or eliminating excise taxes, and increasing the government's reliance on corporation, gift, estate, and capital gains taxes).

Tax Rates.—No general rate changes were made in any of the major federal tax categories in 1955. Provisions had existed for a reduction of the corporate normal tax rate from 30% to 25% for taxable years beginning after March 31, 1955. Excise tax rates on automobiles, trucks, automobile parts, gasoline, liquor, and cigarettes had also been scheduled to revert to pre-Korean War levels after March 31, 1955. However, President Eisenhower signed Public Law 18, which postponed the effective date for both the corporate and excise tax reductions to April 1, 1956.

Legislation.—Actual tax legislation during 1955 was confined to measures of a technical or limited nature. For businessmen generally, the most important change was the retroactive repeal (P.L. 74) of two provisions which had been enacted in the Internal Revenue Code of 1954. One would have permitted deductions for certain estimated expenses to be incurred in future years, while the other would have permitted certain prepaid income to be deferred and reported in future years.

Just before adjournment in August, Congress passed 18 minor tax bills, of which 17 were signed by the president and one was vetoed. The two most widely applicable laws of the group deal with (1) the burden of proof where a corporation is penalized for unreasonable accumulation of earnings, and (2) the penalty tax on personal holding companies which own real property and lease it to their stockholders.

Supreme Court Decisions.—The U.S. Supreme Court held that the purchase and sale of commodity futures by a business, in order to protect itself against price increases in its raw materials, gave rise to capital gain or loss rather than ordinary income or loss. It also ruled that payments received from wrongdoers as punishment for unlawful conduct did not thereby lose their character as taxable income to the recipient. In a case dealing with the pre-1954 law, the court decided that a corporation's purchase and sale of its own stock at a profit to key employees, under a plan to limit ownership of the stock to the manage-

ment group, did not result in gain or loss to the corporation. The high court also dealt with some technical problems created by the World War II excess profits tax. (See also LAW.)

Other Court Decisions.—The lower courts furnished taxpayers with many favorable precedents. Income from oil and other mineral royalties was held to be convertible into capital gain taxed at preferential rates, by making a sale of some part of the royalty. An employee benefit plan could qualify for favored tax treatment under the Internal Revenue Code even though 58% of the plan benefits went to officers of the employer and only 42% went to rank and file employees. The cost of a stair-seat elevator installed because of a taxpayer's heart condition was deductible as a medical expense. Voluntary payments made by an employer to a deceased employee's widow were treated as a nontaxable gift rather than as taxable income to the widow. The distribution of "windfall" profits by corporations which built apartment houses with the aid of FHA-insured loans was held not to be taxable to the stockholders.

Treasury Rulings.—If a husband and wife report dividend income from jointly owned stock in their joint income tax return, each one is entitled to treat up to \$50 of the dividends as tax-free. The U.S. Treasury changed its view to agree with the courts that dividend checks on savings and loan share certificates should be reported on the tax return for the year in which the checks are received, even though the dividend was declared and payable at the end of the preceding year.

No deduction may be taken for damage caused by moths. The U.S. Treasury says that moth damage does not happen suddenly enough to qualify as a casualty loss. If jointly owned Series E bonds are reissued solely in the name of the person who did not pay for the bond originally, there is a taxable gift to this person. Also, the other previous co-owner who bought the bond originally, must pay a tax on the amount by which the bond increased in value since its purchase.

If stock is given with the intention of making a gift to a child, but is registered in the name of an adult because the local law prohibits registration in the name of a minor, the Treasury is willing to treat the gift as made to the child even though the stock is not in his name. A qualified employee pension or profit-sharing plan may be set up by a corporation even if it has only one employee, providing all statutory requirements are otherwise satisfied.

Government Revenue Collections.—As a result of the individual income tax and excise tax reductions which took effect in 1954, internal revenue collections of \$66,271,290,000 for the fiscal year 1955 were well under the \$69,919,991,000 collected in the preceding fiscal year. This marked the first decline in federal revenue collections in five successive fiscal years.

State tax collections continued their unbroken climb to reach a record \$11,584 million for the fiscal year 1955, as against \$11,089 million for the fiscal year 1954. The highest percentage of increase in collections over 1954 was 7.9, registered by state individual income taxes and by state license taxes on motor vehicles and operators. Corporate income taxes showed the greatest percentage decrease, 4.5.

On a per capita basis, state collections ranged from about \$116 in Washington to \$45 in New Jersey, with a 48-state average of \$72.

Local tax collections rose from \$10,356 million in the fiscal year 1953 to \$10,978 million, or \$67.60 per capita, for the fiscal year 1954. Property taxes accounted for almost 90% of all local revenues. Sales and gross receipts levies were the only category of local taxes producing less revenue in 1954 than in 1953.

Tax Developments in Other Countries.—Canada cut its personal income tax rates by 2 percentage points in all income brackets and also reduced the basic corporation tax rate by 2 points, from 47% to 45%. The excise tax on automobiles was lowered from 15% to 10%, while the 10% excise tax on replacement tires and tubes was entirely eliminated.

Chile sought to encourage greater copper production by United States companies through lowering the basic income tax rate to 50% and providing a 25% surtax which is reduced by one eighth of 1% for each 1% production increase over a base figure.

Ceylon raised its export tax on tea by 6 cents a pound, and Colombia raised its special import taxes. Cuba levied a tax on automotive vehicles ranging from \$7.50 on the smallest automobiles to \$35 on trucks. Denmark imposed heavy sales taxes on many commodities. Ecuador provided for a number of substantial tax increases, including boosts in the stamp tax, capital transactions tax, and property tax.

France reformed and simplified its tax collection procedures in answer to widespread protests from small businessmen about the tactics used by tax collectors. France claimed the right to impose taxes totaling about 8½% on royalty payments from French licensees to American licensors, but the United States objected and the matter was still in process of negotiation.

Great Britain reduced its personal income tax rates and increased the personal income tax exemptions. At the same time, the sales tax on household textiles was cut from 50% to 25%. Later in 1955, the tax on distributed corporate earnings was raised from 22½% to 27½%, all existing sales taxes were increased by 20%, and many previously exempt household articles, such as brooms, kitchen scales, etc., were subjected to a sales tax of 30% of wholesale value. A royal commission rejected the idea of enacting a capital gains tax for Great Britain.

Guatemala encouraged the investment of for-

eign capital by eliminating the 5% to 43% absentee tax on profits remitted abroad. Israel also offered incentives to foreign investors by reducing income taxes, in effect, from 50% to 25%. Ireland increased its income tax allowance for children, and Italy placed an additional tax of 10% on wagers, thereby forcing many race tracks to close.

South Korea was trying to negotiate a settlement of its tax claims against United States corporations. American businessmen complained of unjust, retroactive taxes, taxation of income earned outside Korea, and exorbitant rates. New Zealand gave its taxpayers a 20% income tax rebate, and Norway expanded its sales tax to cover new and used automobiles and housing and construction. Sweden re-imposed a 10% excise tax on automobiles and began to increase the corporate tax rate, which will ultimately reach 50%.

A tax treaty between the United States and Japan went into effect following exchange of ratification instruments. A tax treaty with Italy was signed but was still awaiting ratification.

LEON GOLD,

Chairman, Tax Department, Research Institute of America, Inc.

TAYLOR, Maxwell Davenport, American army officer: b. Keytesville, Mo., Aug. 26, 1901. One of the foremost divisional commanders during World War II, he succeeded retiring Gen. Matthew B. Ridgway as U.S. Army chief of staff on June 30, 1955.

Graduating from the U.S. Military Academy in 1922, Maxwell Taylor was assigned to the Engineer School at Fort Humphreys, Va., for a year of further study. After assignments with engineer units in the United States and Hawaii, he was transferred to the 10th Field Artillery in 1926.

Following a summer at the University of Paris, Taylor served as instructor of French and Spanish at the U.S. Military Academy from 1927 to 1932. Subsequently he studied at the Command and General Staff School in Fort Leavenworth, Kans. (1933-35); at the American embassy in Tokyo (1935-39), where he was a student of Japanese; and at the Army War College in Washington, D.C. (1939-40). In 1941 he commanded the 12th Field Artillery Battalion at Fort Houston, Texas, and later served as assistant secretary to the War Department General Staff.

During 1942, Taylor, then temporary lieutenant colonel and chief of staff of the 82d Infantry Division, assisted in the organization of the U.S. Army's first airborne units at Camp Claiborne, La. In March 1943, after his promotion to temporary brigadier general, he was assigned to overseas duty, and led the 82d Division's airborne invasions of North Africa, Sicily, and Italy. In March 1944, he was named commanding officer of the 101st Airborne Division, and in May was promoted to temporary major general. He led the unit's airborne landings in France and Holland, and subsequently led it through central Germany into Bavaria.

On Sept. 1, 1945, General Taylor became superintendent of the U.S. Military Academy, serving until January 1949, when he was named chief of staff for American forces in Europe. Subsequently he served as commander of the American Military Government and army forces in Berlin (1949-51) and assistant (later deputy) chief of staff for operations in Washington (1951-53). On Feb. 11, 1953, he succeeded Gen. James A. Van Fleet as commander of the

Eighth Army in Korea, and on June 10 he was promoted to full general. On Nov. 20, 1954, he was named U.S. Army commander in the Far East, a post which he held at the time of his appointment as U.S. Army chief of staff.

TEA. World output of tea in 1954 (excluding China, the USSR and Indochina) was estimated at 1,425 million pounds, an increase of 9.5% over the 1953 output.

Exports from the major producing countries have been regulated under the International Tea Agreement, to which India, Ceylon, Indonesia, and Pakistan are parties. A new 5-year international agreement was reached in 1955, removing curbs on the export of tea from these countries.

United States imports of tea in 1954 totaled 115.2 million pounds, compared with 108.1 million pounds in 1953. The value of these imports was \$62.7 million in 1954 and \$47.6 million in 1953. Principal suppliers were India and Ceylon, each providing 35½% of the United States tea imports in 1954; Indonesia, 13%; Japan, 5%; and Formosa, 4%.

Per capita consumption of tea in the United States was estimated at 0.68 pounds in 1955, the same as in 1954, compared with 0.66 pounds in 1953, 0.62 pounds in 1952, and an average of 0.47 pounds in 1947-49. (See also articles on the major tea-producing countries.)

C. J. ENZLER,

Administrative Officer, Office of the Secretary, U.S. Department of Agriculture.

TEETH. See DENTISTRY.

TELEGRAPHY. Rapid growth in the number of facsimile and private wire systems provided to government and industry, and the installation of additional thousands of Desk-Fax facsimile telegraph machines in the offices of business firms featured the progress of the telegraph industry in 1955.

Leased Wire Systems.—New private wire systems were leased to firms in many industries, bringing Western Union's private wire business to a rate of \$27 million a year, up 126% from \$11.5 million in 1950.

This growth was aided by the increasing use of private wire systems by large companies for integrated data processing purposes, to coordinate sales, production, shipping, and other operations at widely separated points. At the close of 1955 a nationwide system was being installed for Sylvania Electric Products, Inc., which was specially designed for automation use. The 12,000-mile network will link 51 cities with Sylvania's data-processing center at Camillus, N.Y. A 9,600-mile system, being installed for E. F. Hutton & Co., was specially designed with new features to meet the needs of this brokerage firm.

Intrafax.—Installation of long-distance and interstate Intrafax leased facsimile systems began late in 1955. Intrafax systems operating over shorter distances already were in use by numerous institutions and firms. Many companies now use Intrafax to flash communications between their offices, departments, and buildings. The newest Intrafax machine transmits a standard-size letter in less than three minutes, and short memoranda in seconds.

Ticketfax.—In 1955, Ticketfax, an electronic facsimile system, was installed for two railroads. With it, main reservation bureaus flash Pullman and reserved coach tickets to ticket offices in eight seconds so that the tickets can be handed to passengers at the counter, ready for immediate

use on the train. Wide use of Ticketfax to speed reservations in various fields was planned.

Desk-Fax.—Installations of the compact Desk-Fax machines with which businessmen send and receive their own telegrams instantly in "picture" form were expected to reach a total of about 26,000 firms by the end of 1955. Since 23,000 other firms have Western Union printing telegraph machines in their offices, nearly 50,000 companies now have direct-wire connections with Western Union's national transmission networks through which telegrams flash to their destinations without manual retransmission at any point.

Extended Radio Beam.—The world's first commercial microwave network, installed by Western Union in 1948 between New York, Philadelphia, Washington, and Pittsburgh, will be extended in 1956 to Cincinnati and Chicago, providing additional circuits to handle the growing volume of telegraph communications.

Business Developments.—A one-third interest in Microwave Associates, Inc., of Boston, which designs and produces a wide range of electronic devices and controls, was purchased by Western Union.

Financial.—To provide funds for further expansion of its plant, Western Union issued an additional 1 million shares of stock in 1955. The company also split its stock 4 for 1, and as a result the number of its share owners increased 25%, indicating wider investor interest and ownership in the company. In addition, the company refunded its entire bonded indebtedness, at a lower interest rate, issuing \$38,500,000 of 25-year 4½% debentures.

GEORGE P. OSLIN,
Publicity Director, Western Union Telegraph Company.

TELEPATHY. See PARAPSYCHOLOGY.

TELEPHONE. Great progress was made in both continental and intercontinental telephone communication during 1955. Work progressed on three twin submarine cable systems linking North America with Great Britain, Hawaii, and Alaska. Within the United States, it became possible for an increasing number of telephone users to dial many of their long-distance calls.

By the end of the year, there were 101 million telephones in the world. Thirteen countries had more than a million telephones. They were the United States (with 56 million), the United

Kingdom (6½ million), Canada (more than 4 million), the German Federal Republic, France, Japan, Sweden, Italy, Australia, Switzerland, Argentina, the Netherlands, and Spain.

TELEPHONES IN CONTINENTAL AREAS

(As of January 1, 1955)
(Partly estimated)

Continental area	Number of telephones	Per cent of world total	Per 100 population
North America.....	56,688,800	60.0	31.6
Middle America.....	700,300	0.8	1.2
South America.....	2,422,900	2.6	2.0
Europe.....	27,244,200	28.8	4.5
Africa.....	1,247,400	1.3	0.6
Asia.....	4,006,900	4.2	0.3
Oceania.....	2,189,500	2.3	15.3
World.....	94,500,000	100.0	3.7

Overseas Calling.—Bell System overseas service was extended to Ascension Island, in the South Atlantic, Oman, on the Arabian Peninsula, and French Equatorial Africa during 1955, bringing to 112 the number of connecting countries or territories. A telephone user in the United States may now call any one of 97 million telephones throughout the world.

Transoceanic Cables.—On June 22, 1955, the laying of the first part of a submarine telephone cable system between Clarenville, Newfoundland, and Oban, Scotland, was begun from H.M.T.S. *Monarch*. It was scheduled to be completed in 1956 and will provide 36 telephone channels.

Amplifiers, called "repeaters," are the heart of the system. They amplify the voice currents a million times every 40 miles. The amplifiers built had to meet three difficult specifications. First, they had to withstand enormous water pressure on the ocean floor—up to three tons per square inch at some points. Second, they had to be built into the cable, yet be thin and flexible enough to pass through cable-laying gear. Third, they were to operate for years without attention.

The second overseas cable project on which construction began was the one linking Port Angeles, Wash., and Ketchikan, Alaska. Similar to the Atlantic cable in most respects, it will also supply 36 telephone channels and was scheduled to go into service in late 1956.

The third cable system will stretch from Point Reyes, Calif., to Koko Head, Oahu, Hawaii. Plans called for completion in 1958.

(Left) The new transatlantic cable, laid in the summer of 1955, is reeled from the deck of the H.M.T.S. *Monarch*, off the coast of Newfoundland. (Right) At Americus, Ga., a telephone line is powered for the first time by a solar battery, which converts the sun's energy directly into electricity.

AMERICAN TELEPHONE AND TELEGRAPH COMPANY; BELL TELEPHONE LABORATORIES

The transatlantic cable is a joint undertaking of American Telephone and Telegraph Company, the British Post Office, and the Canadian Overseas Telecommunication Corporation. Only the Bell System is involved in the Alaskan cable, while the third project involves both the A. T. & T. and the Hawaiian Telephone Company.

Cables on the ocean floor make overseas telephoning more reliable, since they are not subject to the atmospheric disturbances that sometimes affect radiotelephone.

Dial Telephones.—About 84% of the 56 million telephones in the United States were dial-operated at the end of 1955. From an increasing number of localities (63 at year's end), it was possible to dial calls directly to many other cities. This service, called direct distance dialing, began experimentally in Englewood, N.J., in 1951.

Financing.—Financing the postwar growth of the telephone industry has been a tremendous task. During 1955, the total investment in the telephone industry in the United States (including the 4,800 companies that are not in the Bell System) passed \$17 billion. In the few years since World War II, the industry has grown about as much as it had during the previous 70 years of its existence.

During 1955 the number of share owners in the American Telephone and Telegraph Company—parent company in the Bell System—passed 1,385,000. It is the most widely owned of any business.

Harnessing the Sun.—On Oct. 4, 1955, for the first time, the sun began furnishing power directly to a telephone line. The operation was a part of experiments being conducted near Americus, Ga., to develop more and better rural telephone service. The system uses the Bell Solar Battery and transistors. Both were invented by the Bell Telephone Laboratories.

The Bell Solar Battery is the first successful device to convert the sun's energy directly and efficiently into substantial amounts of electricity. It is at least 15 times more efficient than the best previous solar energy converters. Excess current from the solar unit not needed for immediate telephone use feeds into a storage battery which provides power at night and during periods of bad weather. Transistors, which require only small amounts of power, were being used in the system instead of the traditional vacuum tubes. (See also ELECTRICAL DEVELOPMENTS.)

Defense Developments.—At the request of the U.S. Air Force, a project to integrate radar stations and defense weapons into a nationwide semiautomatic system was begun in 1955. It will include numerous centers where radar information will be electronically computed to guide defensive weapons. Thousands of communications channels will be needed for the interconnecting network.

Just below the Arctic Circle, across the northern rim of the North American continent, construction began in 1955 on the distant early warning (DEW) line. This is a series of radar stations to give the United States and Canada advance warning of an air attack. Western Electric, manufacturing and supply unit of the Bell System, is prime contractor for the U.S. Air Force in construction of the radar fence, which is a joint venture of Canada and the United States.

M. P. COSGROVE,

Public Relations Manager, American Telephone and Telegraph Company.

TELEVISION. See RADIO AND TELEVISION.

TENNESSEE. South Central state, United States; admitted to the Union, June 1, 1796. The "Volunteer State" ranks 33d in area and 16th in population (1955) among the 48 states.

Area and Population.—Area: 42,244 square miles (land, 41,797; inland water, 447), divided into 95 counties. Population: (1950) 3,291,718; (est., July 1, 1955) 3,399,000. Urban places with 1950 populations above 10,000 are as follows:

Bristol.....	16,771	Johnson City.....	27,864
Chattanooga.....	131,041	Kingsport.....	19,571
Clarksville.....	16,246	Knoxville.....	124,769
Cleveland.....	12,605	Memphis.....	396,000
Columbia.....	10,911	Morristown.....	13,019
Dyersburg.....	10,885	Murfreesboro.....	13,052
Elizabethton.....	10,754	Nashville ¹	174,307
Jackson.....	30,207	Oak Ridge ²	30,229

¹ Capital. ² Unincorporated.

Executive.—Chief state officers in 1955:

Governor: Frank G. Clement (Democrat)

Lieutenant Governor: Jared Maddux

Secretary of State: G. Edward Friar

Treasurer: Ramon C. Davis

Attorney General: George F. McCannless

Commissioner of Education: Quill C. Cope

Constitution and Judiciary.—The present constitution went into effect in 1870. The Supreme Court comprises 5 justices; chief justice in 1955: Albert B. Neil.

Legislature.—The General Assembly (Senate, 33 members; House of Representatives, 99) meets in odd-numbered years commencing the first Monday in January.

The 1955 session of the General Assembly increased the sales tax from 2 to 3% and extended its application, and applied the excise tax and the franchise tax to out-of-state corporations active within the state and the tax on motor fuels to that used within the state by interstate carriers. It also appropriated \$97.5 million for education and set the compulsory education limit at 16 years; extended social security coverage to members of state retirement funds; created a permanent Commission on Youth Guidance and extensively revised laws concerning children; established a daytime speed limit of 65 miles per hour and a nighttime limit of 55 miles, and increased motor vehicle registration fees. Other legislation tightened gambling laws; increased workmen's compensation benefits; extended the unemployment tax to employers of 4 or more employees; banned delivery within the state, without Public Service Commission approval, of electric power generated outside the state; created commissions on alcoholism and water resources; and authorized urban renewal projects.

Finances.—State treasury receipts (1954-55 fiscal year) approximated \$300,000,000; expenditures, \$291,373,960; treasury balance, \$112,573,761; long-term indebtedness, \$113,835,000.

Taxation.—State tax revenue (1954-55 fiscal year): \$194,127,526.69, including \$55,096,351.29 from a 2% general sales tax and selective sales, and gross receipts taxes; \$124,641,121.01 from licensing; and \$14,390,054.39 from corporate income taxes. The state has no individual income or poll tax.

Banking.—As of June 30, 1955, the state's 76 national banks had \$1,901,714,000 in assets, \$1,325,112,000 in demand deposits, and \$430,129,000 in time deposits; the state's 219 other banks had \$752,455,697.02 in assets, \$430,339,143.42 in demand deposits, and \$254,176,602.50 in time deposits.

Education.—School attendance is compulsory for all between the ages of 7 and 16, inclusive. Operating expenditures of \$97,017,547.88 (\$151.69 per pupil) for public schools in the 1953-54 school year comprised \$39,280,959.65 from local school districts, \$57,107,740.78 from the state, and \$628,847.45 from the federal government. Expenditures for construction and improvements totaled \$21,374,532.18. Teachers' salaries averaged \$2,824.79.

In the 1954-55 school year there were 3,511 schools (grades 1-12) with 25,307 teachers and 740,933 students, and 7 state colleges and universities with 1,861 teachers and 33,409 students.

Social Welfare.—Public assistance expenditures from state and federal funds (excluding institutional costs) in the 1954-55 fiscal year totaled \$46,761,244.80, including \$28,222,611.90 for old-age assistance, \$16,260,168.90 for dependent children, and \$1,623,583.20 for the needy blind; a monthly average of 149,970 persons received public assistance. Expenditures for correctional

and penal institutions amounted to \$1,821,000, excluding \$755,221.64 for construction and improvements.

TENNESSEE WELFARE INSTITUTIONS

Type of institution	No.	Pop.
Hospitals for mentally deficient and epileptic (June 30, 1955).....	1	1,078
Hospitals for the mentally ill (June 30, 1955).....	3	7,541
Psychiatric hospitals (June 30, 1955).....	1	39
Hospitals for the tubercular (Sept. 9, 1955).....	4	956
Schools for the blind (1954-55).....	1	210
Schools for the deaf (1954-55).....	1	420
Training schools for delinquent boys (Aug. 1, 1955).....	2	148
Training schools for delinquent girls (Aug. 1, 1955).....	2	205
Prisons (Aug. 1, 1955).....	2	2,277
Prison farms (Aug. 1, 1955).....	1	535

Labor Force.—Nonagricultural employment in July 1955 numbered 830,700, and for the full year 1954 averaged 882,300. Insured unemployment on Aug. 20, 1955, amounted to 28,400 persons, and the state paid \$37,538,153 in unemployment compensation during 1954.

Manufacturing.—Establishments numbered 5,100 in 1954. Value added by manufacture in 1953 totaled \$1,685,237,000, and investment in new plant and equipment (1954) approximated \$75,000,000. Earnings of production workers in manufacturing averaged \$57.71 for an average work week of 39.8 hours in 1954, and \$60.98 for 41.2 hours in the first half of 1955.

MAJOR TENNESSEE MANUFACTURES, 1954

	Persons engaged	Payroll & profit income (millions of dollars)	Value of output (millions of dollars)

Agriculture.—Cash farm income for the first half of 1955 totaled \$160,585,000, and for the full year 1954 comprised \$224,982,000 from livestock and livestock products, \$244,522,000 from crops, and \$8,626,000 from government payments. Receipts from principal crops and livestock in 1954 included: cotton lint, \$100,047,000; tobacco, \$81,466,000; cattle, \$68,982,-

000; dairy products, \$67,287,000; and hogs, \$51,047,000.

The state's 203,149 farms (17,654,324 acres; harvested cropland, 4,860,793) averaged 86.9 acres and \$7,521 in value of land and buildings per farm in 1954. There were 61,544 farms with telephones and 184,783 with electricity. Live-stock on farms on Jan. 1, 1955, included 1,771,000 cattle, 1,012,000 hogs, and 8,644,000 chickens (excluding commercial broilers). During the week of Sept. 26-Oct. 2, 1954, 393,488 family and hired workers were engaged in farming.

TENNESSEE CROP STATISTICS

Crop (and unit of production)	Average 1944-53	1954	Est. 1955
Apples (1,000 bu.).....	388	376	94

* Average, 1949-53. (Source: U.S. Dept. of Agriculture.)

Transportation and Communications.—State and federal funds disbursed for highways in the 1954-55 fiscal year totaled \$51,673,000.

Highways and roads on June 30, 1955, totaled 8,314 miles (8,163 surfaced). Registered *motor vehicles* numbered 1,129,776 in March 1955, including 887,973 passenger cars. There were (1955) 28 *railroads* operating 3,209.59 line miles, and 9 regularly scheduled *airlines* and 75 *airports and airfields* (53 commercial and municipal, 2 military, and 20 private).

Communications media included (1954) 77 AM and 11 FM *radio stations* and 9 operating *television outlets* (8 VHF and 1 UHF); (1955) 28 daily *newspapers* (circulation, 977,778) and 131 other newspapers; and (Jan. 1, 1955) 213,676 business and 567,828 residential *telephones*.

Principal Events, 1955.—When the General Assembly of 1955 failed to enact a reapportionment law, a suit was filed in the Davidson County Chancery Court to have the apportionment law of 1901 declared unconstitutional, since the state constitution requires a reapportionment every ten years. In November, Chancellor Thomas W. Steele rendered a decision to the effect that the law of 1901 was invalid, but the decision was appealed to the state Supreme Court.

The Dixon-Yates contract for a steam power plant in West Memphis, Ark., was ordered cancelled by President Eisenhower on July 11, when the city of Memphis decided to build its own power plant rather than accept power from a private utility. In the Memphis mayoralty election of November 10, the defeat by Edmund Orgill of what remained of the political organization of the late Edward H. Crump made it likely that the Memphis plant would be integrated into the Tennessee Valley Authority (q.v.) system. In October the TVA's Kingston steam plant, the largest in the world, was dedicated.

During the lengthy strikes, in the spring, of the CIO's Communications Workers against the Southern Bell Telephone Company and of "non-operating" railroad workers against the Louisville and Nashville Railroad, much vandalism occurred in Tennessee. Transportation was seriously restricted, several telephone cables were cut, three small telephone exchanges were closed, and shots were fired into the homes of nonstrikers. Knoxville's mayor, George Dempster, during his

unsuccessful campaign for re-election against Republican Jack Dance on November 17, revealed that he had received information of a plot to blow up a large telephone exchange unit in the city.

The Tennessee Board of Education proposed a gradual plan of desegregation in state-supported colleges one year at a time beginning with graduate students in the state colleges of education. The plan received the approval of a federal district judge in a decision of October 17 relating to the attempt of Negro students to gain admission to Memphis State College. The Board of Trustees of The University of Tennessee, which institution had already admitted Negroes to its graduate and law schools because of a previous court decision, adopted the same plan. The only public schools in the state to adopt a desegregation policy at the beginning of the 1955 fall term were those of Oak Ridge, which are under a system of federal control.

At the national convention of the Future Farmers of America, Joe Moore of Liberty was selected as the Star Farmer of America in 1955. On July 23, the most prominent Tennessean of recent times, Cordell Hull (q.v.), died at Bethesda, Md.

*Principal Events by: STANLEY J. FOLMSBEE,
Professor of History, University of Tennessee.*

TENNESSEE VALLEY AUTHORITY. Traffic on the channel provided by TVA's system of multiple-purpose dams exceeded 1,250 million ton-miles during 1954, saving shippers an estimated \$14 million, and reached 895 million ton-miles during the first seven months of 1955. This was an increase of 27% over the same period in 1954. In March 1955 the system reduced the crest of a moderate flood by 13.5 feet at Chattanooga, Tenn. Damage of \$400,000 was averted at that point, and \$580,000 damage was saved in the lower Ohio and Mississippi basins. Total flood damage averted since 1936 reached \$59,846,000. This represents only a part of total flood-control benefits.

TVA sold 42,044,954,000 kw.-hr. of electricity in the fiscal year 1955, of which 21,770,451,000, or 52%, went to the Atomic Energy Commission and other federal defense agencies. In the previous fiscal year they had used 11.8 billion kw.-hr. Installed generating capacity was increased by 1,734,300 kw., mainly in new steam electric generating units, bringing the installed capacity of the system to 7,809,985 kw.

Power revenues were \$188,163,000. Net operating revenues of \$47,901,000 represented a return of 4¼% on the net average power investment, somewhat above the 4% average of the past 22 years. TVA paid \$50 million to the U.S. Treasury during the fiscal year. An additional \$14 million payment after the end of the fiscal year retired the last of TVA's outstanding bonds, originally totaling \$65 million.

The 148 municipal and cooperative systems which distribute TVA power had 1,376,000 customers at the end of the fiscal year 1955. Average annual residential use per customer was 5,240 kw.-hr., nearly double the national average. Purchasing 13,556,622,000 kw.-hr. from TVA for resale, municipal and cooperative systems had revenue of \$138,500,000 and a combined net income of \$24,100,000.

TVA provided personnel for operation and maintenance of the U.S. Army's Phosphate Development Works, located at Muscle Shoals, Ala., largely because of TVA's technological experi-

ence in phosphorus production and the fact that it could provide elemental phosphorus to the plant. TVA's experimental plants produced 350,000 tons of fertilizer materials which were distributed in 36 states in an experimental sales program and for farm test-demonstrations to encourage improved fertilizer practices among farmers. Industry continued to draw heavily upon TVA's experience in chemical engineering and research for fertilizer and munitions development.

TVA provided about 15 million seedlings which were used by landowners to reforest about 15,000 acres in the fiscal year 1955. This brought the total of TVA seedlings planted on valley lands to 280 million. The value of nonfederal recreation facilities on TVA lakes increased to about \$47.7 million. No malaria infection of local origin was found among people living along TVA lakes, indicating the continued effectiveness of TVA control measures. Nearly 1,800 persons from 70 foreign countries visited TVA during the year.

The TVA Board of Directors consists of Brig. Gen. Herbert D. Vogel (Ret.), chairman, Dr. Harry A. Curtis, and Dr. Raymond R. Paty.

KENNETH R. KENNEDY,
TVA Information Office.

TENNIS. See SPORTS, GAMES, AND SHOWS.

TEXAS. Southwestern state, United States; admitted to the Union, Dec. 29, 1845. The "Lone Star State" is largest in area and 6th in population (1955) among the 48 states.

Area and Population.—Area: 267,339 square miles (land, 263,513; inland water, 3,826), divided into 254 counties. Population: (1950) 7,711,194; (est., July 1, 1955) 8,351,000. Urban places with 1950 populations above 15,000 are as follows:

Executive.—Chief state officers in 1955:

Governor: Allan Shivers (Democrat)
 Lieutenant Governor: Ben Ramsey
 Secretary of State: A. M. Muldrow
 Treasurer: Jesse James
 Attorney General: John Ben Shepperd
 Commissioner of Education: J. W. Edgar

Constitution and Judiciary.—The present constitution went into effect in 1876. The highest civil court, the Supreme Court, comprises nine justices; chief justice in 1955 was J. E. Hickman.

Legislature.—The legislature (Senate, 31 members; House of Representatives, 150) meets in odd-numbered years commencing the second Tuesday in January.

The 1955 legislative session passed an omnibus tax bill which included an increase from 4 to 5 cents per package on cigarettes, from 4 to 5 cents per gallon on gasoline, from 6 to 6½ cents per gallon on special fuels, and from \$2 to \$4.30 per barrel on beer; a \$1 increase in drivers' license fees; and an increase in the franchise tax. State employees were brought under social security, and the governor's salary was increased to \$25,000 and salaries of Supreme Court justices and judges and commissioners of the Court of Criminal Appeals, to \$17,500. A Commission on Higher Education was created; tax rate limits of school districts were liberalized; stricter narcotics penalties were imposed; obscene publications were outlawed; a Corporation Code, a Probate Code, and a

new Securities Act were promulgated; a state Building Commission was created; and retail and wholesale grocers were prohibited from selling below cost. (See also below, *Principal Events, 1955.*)

Finances.—State treasury receipts (1954–55 fiscal year), \$967,787,654.42; expenditures, \$968,969,959.39; and treasury balance, \$207,861,136.29.

Taxation.—State tax revenue (1954–55 fiscal year): \$547,118,304, including \$188,551,242.56 from gross receipts and production taxes; \$135,729,225.94 from highway motor fuel taxes; and \$47,771,979.49 from automobile licensing. The state levies a poll tax of \$1.75 per person.

Banking.—As of June 30, 1954, the state's 442 national banks had \$7,957,663,000 in assets, \$6,275,904,000 in demand deposits, and \$1,086,475,000 in time deposits; the state's 467 other banks had \$1,905,683,392.52 in assets, \$1,530,966,969.88 in demand deposits, and \$235,087,103.63 in time deposits.

Education.—School attendance is compulsory for all between the ages of 6 and 16, inclusive. Operating expenditures of \$316,069,542 (\$228.96 per pupil) for public elementary and secondary education in the 1953–54 fiscal year comprised \$124,799,556 from local school districts, \$182,438,674 from the state, and \$8,831,312 from the federal government. Expenditures for construction and improvements amounted to \$78,418,498. Teachers' salaries (1954–55) averaged \$3,747 (elementary school teachers, \$3,632; high school teachers, \$3,982).

In the 1953–54 school year the state's 4,000 public elementary schools had 37,780 teachers and 1,256,130 students, and its 1,782 public secondary schools had 18,231 teachers and 335,404 students. In 1954–55 the state supported 34 junior colleges and 16 colleges and universities, and there were 9 private junior colleges and 37 private colleges and universities.

Social Welfare.—Public assistance expenditures from federal and state funds (excluding institutional costs) in the 1953–54 fiscal year totaled \$120,455,830, including \$102,788,692 for old-age assistance, \$14,447,740 for dependent children, and \$3,219,398 for the needy blind; a monthly average of 248,373 persons received public assistance. Operating expenditures for health and welfare institutions amounted to \$22,781,444; for correctional and penal institutions, \$6,891,654.

TEXAS WELFARE INSTITUTIONS

(As of Aug. 31, 1955, unless otherwise indicated)

Type of institution	No.	Pop.
Hospitals for mentally deficient and epileptic.	4	4,962
Hospitals for the mentally ill.	9	16,445
Sanatoriums for the tubercular.	3	2,173
Schools for the blind (Sept. 1, 1955).	1	210
Schools for the deaf (June 1, 1955).	1	490
Schools for Negro blind, deaf, and orphans (June 1, 1955).	1	151
Homes for dependent children.	1	219
Homes for veterans' widows.	1	21
Training schools for delinquent boys.	1	578
Training schools for delinquent girls.	2	262
Prisons.	2	2,188
Prison farms.	9	6,591

Labor Force.—The state's nonfarm labor force totaled 2,870,200 on Aug. 1, 1955. Persons employed in nonagricultural establishments numbered 2,753,300, and in the previous year averaged 2,727,600. There were 116,900 unemployed workers on Aug. 1, 1955, and the state paid \$17,304,435 in unemployment insurance during the preceding 12 months.

Manufacturing.—Value added by manufacture in 1953 was \$3,486,240,000, and investment in new plant and equipment totaled \$504,688,000. Earnings of production workers in manufacturing averaged \$72.04 for an average work week of 41.4 hours in 1954, and \$75.05 for 42.4 hours in the first half of 1955.

Mining.—Texas normally ranks first among the states in production of petroleum, natural gas, natural gas liquids, sulfur, helium, bromine, and graphite. The annual value of its mineral products (more than \$3.5 billion) far exceeds that of any other state, accounting in 1953 for 25.37% of the United States total.

TEXAS MINERAL PRODUCTION, 1954¹

(In short tons, except as noted)

Mineral	Quantity	Value
Cement (bbl.)	21,350,000	\$ 53,500,000
Clays ²	1,800,000	4,300,000
Gypsum	1,100,000	3,250,000
Helium (1,000 cu. ft.)	111,313	1,863,000
Iron ore (long tons)	834,750	3
Lime	340,000	3,200,000
Natural gas (1,000 cu. ft.)	4,600,000,000	325,000,000
Natural gasoline (bbl.)	67,000,000	201,000,000
Petroleum (bbl.)	980,000,000	2,700,000,000
Petroleum gases (bbl.)	75,000,000	125,000,000
Salt	2,750,000	5,400,000
Sand and gravel	17,500,000	15,200,000
Stone ⁴	8,000,000	7,200,000
Sulfur (long tons)	3,450,000	75,100,000
Other minerals	...	37,987,000
Total	...	\$3,558,000,000

¹ Preliminary. ² Excluding clays sold or used for cement.

³ Value included in "Other minerals." ⁴ Excluding that used in making cement and lime. (Source: U.S. Bureau of Mines.)

Fisheries.—During 1953, the state's commercial fish and shellfish catch comprised 70,020,000 pounds of fish (\$1,514,000) and 71,942,000 pounds of shellfish (\$25,659,000). The most valuable catch (\$25,354,000 in 1953) is shrimp, landings of which totaled 79,092,603 pounds during the 12 months ending August 1955.

Agriculture.—Cash farm income for the first half of 1955 totaled \$638,486,000, and for the full year 1954 comprised \$765,322,000 from live-

TEXAS CROP STATISTICS

Crop (and unit of production)	Average 1944–53	1954	Est. 1955
Broomcorn (tons)	6,670	7,600	9,900
Corn (1,000 bu.)	47,111	33,184	50,690

Wheat (1,000 bu.)	55,404	40,894	13,464

stock and livestock products, \$1,147,756,000 from crops, and \$22,840,000 from government payments. Receipts from principal crops and livestock in 1954 included: cotton lint, \$637,350,-

000; cattle, \$386,619,000; dairy products, \$128,394,000; sorghum grain, \$115,522,000, cottonseed, \$90,237,000, eggs, \$76,834,000; and rice, \$75,675,000.

The state's 292,946 farms (145,962,287 acres; harvested cropland, 24,884,775) averaged 498.3 acres and \$29,093 in value of land and buildings per farm in 1954. There were 111,395 farms with telephones and 269,219 with electricity. Live-stock on farms on Jan. 1, 1955, included 8,501,000 cattle, 5,331,000 sheep, 1,087,000 hogs, and 21,388,000 chickens (excluding commercial broilers). During the week of Sept. 26-Oct. 2, 1954, 723,393 family and hired workers were engaged in farming.

Transportation and Communications.—State and federal funds disbursed for highways in the 1954-55 fiscal year totaled \$200,162,000, and newly completed construction and reconstruction aggregated 2,500 miles. Bond issues totaling \$183 million were sold during 1955 to finance a 223-mile road connecting the Dallas-Fort Worth area with Houston; an 83-mile road connecting Dallas with Waco; and a 30-mile expressway between Dallas and Fort Worth.

Highways and roads on Sept. 1, 1955, totaled 199,380 miles (58,869 surfaced). Registered motor vehicles numbered 3,781,235 on March 31, 1955, including 2,805,240 passenger cars. There were (1955) 53 railroads operating 15,324.34 line miles, and 11 regularly scheduled airlines and 1,219 airports and airfields (188 commercial and municipal, 26 military, 405 private, and 600 others).

Communications media (1955) included 221 AM radio stations and 36 operating television outlets (31 VHF and 5 UHF); 114 daily newspapers (circulation, 2,601,817) and 558 other newspapers; and (Jan. 1, 1955) 761,474 business and 1,654,232 residential telephones.

Principal Events, 1955.—The 54th Legislature convened January 11 and adjourned June 7 after adopting a record budget of \$1.5 billion for the 1955-57 biennium and passing a compromise \$98 million tax measure. Among major legislative enactments were those which: (1) strengthened the administration of the scandal-torn veterans land program; (2) strengthened the regulation of insurance companies; (3) prohibited strikes or picketing to force recognition of unions not representing a majority of a firm's employees; and (4) abolished the law which permitted cross-filing by political candidates. (See also above, *Legislature*.) Although water conservation was considered the most important problem facing the Legislature, a \$100 million water bond bill was not passed.

Under the leadership of Gov. Allan Shivers, the conservative faction of the Democratic Party removed Wright Morrow as national committeeman. This move indicated a split within the conservative faction and strengthened the hopes of the loyalists (Democrats who supported the national Democratic ticket in 1952) that they might win control of the state delegation to the Democratic National Convention in 1956.

Texas generally experienced record prosperity in 1955. Retail sales, construction, electric power consumption, crude oil production, and oil-well drilling all exceeded the previous year's levels. However, farm income was down about 9 per cent from 1954.

A killing freeze covered most of the state on March 26. The 22-degree cold around Jacksonville resulted in total loss of the 1955 fruit crop and extensive damage to orchards.

A few local school districts, mostly in the western part of the state, opened school in September on a desegregated basis in accordance with U.S. Supreme Court decisions. As a result

of a decision in June by its Board of Education, El Paso became the first major city in the state to announce the elimination of racial segregation in its public schools. Other communities provided for partial integration of white and Negro students with the plan to be expanded in subsequent years. A citizens group sought an injunction in a state district court to prevent integration in Big Spring and to prevent the state comptroller from issuing state warrants to school districts operating on an integrated basis. The Texas Supreme Court upheld the trial court's decision denying the injunction. In a move toward gradual desegregation of state-supported higher institutions of learning, the Board of Regents on July 8 abolished segregation at Texas Western College and in the Graduate School of the University of Texas.

The U.S. Wildlife Service closed to hunters an additional 4,640 acres adjoining the 47,000-acre Aransas Wildlife Refuge in order to provide additional protection in Texas for the almost-extinct whooping crane. Twenty adult cranes and eight babies had returned from Canada to the refuge by December 1, as compared with 21 in 1954.

Principal Events by: JOHN E. HODGES, Associate Professor of Economics, Rice Institute.

TEXTILE INDUSTRY. United States consumption of cotton, wool, silk, and man-made fibers aggregated 6,019 million pounds in 1954, a decrease of 534 million pounds from 1953. By mid-1955, however, consumption had risen to an annual rate of 6,758 million pounds.

Raw cotton consumption was at an annual

Woolen & worsted ⁵	339	279	158
Total, broad woven.....	12,947	12,289	6,491

¹ Scoured basis. ² The rayon + acetate data are United States producers' domestic shipments plus imports for consumption, while the noncellulosic fiber data are United States producers' production less exports plus imports for consumption. ³ Except tire fabric. ⁴ Includes nylon, silk, and related fabrics. ⁵ Excludes carpets, rugs, and felts. (Source: U.S. Bureau of the Census, and Textile Economics Bureau, Inc.)

1955 rate of 4,424 million pounds, based on data for the first half of the year, compared with 4,124 million pounds in 1954. Total raw wool use was at a 1955 annual rate of 428 million pounds; by type, apparel class wool consumption was run-

ning 8% over the previous year, while carpet wool showed an increase of 13%.

In the field of man-made fibers, the 1955 annual rate of consumption for rayon+acetate filament yarn was 872 million pounds, 21% above the 1954 total. Consumption of these yarns for "textile" uses, at a 1955 rate of 466 million pounds, was 20% above 1954; for tires and related uses, consumption of rayon yarn in the first half of 1955 was at an annual rate of 406 million pounds, or 22% over the previous year. For rayon+acetate staple, the 1955 annual rate of consumption as of midyear was 592 million pounds, 36% above 1954.

Consumption of noncellulosic man-made fibers* continued its upward trend. The 1955 annual rate was 434 million pounds or 27% above the previous year.

While the relationship of the various fiber poundages shown in the accompanying table reveal relatively small change over the past few years, it should be remembered that competition between fibers cannot be entirely measured by the poundage figures. For the newer man-made fibers, it has been estimated that the poundages shown in the table might be approximately doubled to take into account: (1) the lower processing losses involved; (2) the longer wear of the resulting products; and (3) the fact that fabrics made from the newer fibers are typically lighter in weight than those from natural fibers, which means that the same covering is obtained with less fiber material.

Tire Cord and Fabric Production.—During the first half of 1955, tire cord and fabric production was at an annual rate of 522 million pounds, only 2% below the record 531 million pounds of 1952. Man-made fiber tire cord and fabric continues to dominate the field, the use of cotton having declined to a nominal level.

Broad Woven Goods Production.—After an overall decline in 1954, broad woven goods production recovered during the first half of 1955 to an annual rate of 12,982 million yards, 6% above 1954 production. Cotton broad woven goods showed the smallest increase, the 1955 annual rate of 10,090 million yards being only 3% above the 1954 level. Man-made fiber fabrics increased to 2,576 million yards, or 15% above 1954.

Imports and Exports.—In the first half of 1955, United States exports of textile fibers and manufactures were at an annual rate of \$1,322 million, or 7% below 1954, but 13% above the 1953 figure. Imports in 1955 were at an annual rate of \$967 million, 22% above the \$795 million imported in 1954 and 4% above the \$926 million of 1953.

Per Capita Consumption.—United States civilian consumption of cotton, wool, and man-made fibers was at an annual rate of 36.6 pounds per person during the first half of 1955; the 1953 and 1954 totals were 36.2 and 32.6 pounds, respectively. For man-made fibers, the 1955 rate indicated a new all-time high of 10.5 pounds per capita.

Prices.—During the first eight months of 1955, there was a general price decline for natural fibers, but there were some price increases in the rayon and acetate fibers. Thus the 14-market spot price for 15/16" middling cotton was 33.7 cents a pound, while the corresponding 10-market price for 1953 and 1954 was 32.9 and 34.1 cents, respectively.

* Noncellulosic fibers include nylon, acrylic, polyester, polyethylene, polyvinyl acetate, protein, saran and textile glass fiber for textile applications.

Wool showed a decided drop, the price of fine-grade territory wool (scoured basis at Boston) having declined from \$1.55 a pound in January 1955 to \$1.39 in August. The 1953 and 1954 averages were \$1.73 and \$1.71 per pound, respectively.

Both rayon and acetate staple prices were lowered in April 1953 to 34 cents a pound; rayon staple continued at that price to August 1955; and acetate staple prices were raised to 37 cents a pound in March 1955. The price of 150-denier viscose filament yarn remained at 78 cents a pound from January 1951 until March 1955, when it rose to 83 cents. The 150-denier acetate filament yarn held at 74 cents a pound from November 1953 until March 1955, and then climbed to 80 cents.

Inter-Fiber Competition.—A recent study reveals that between 1937 and 1953 the use of man-made fibers increased 1,205 million pounds, or 353%, while the four natural fibers (cotton, wool, silk and linen) increased 594 million pounds, or 14%. Industrial uses accounted for 582 million pounds of the increase of man-made fibers, while natural fibers used industrially showed a loss of 490 million pounds. The balance of the man-made fiber gain of 623 million pounds and the natural fiber increase of 1,084 million pounds was in apparel and household uses.

Linen and Flax.—United States imports of flax as a raw material or as yarn over the past few years have ranged from 8 to 12 million pounds per year (hackled, not-hackled, noils, and tow, as well as flax yarns and threads). In addition, the imports of linen fabrics into the United States run in the neighborhood of 15 million pounds per year, including table damasks and toweling. Moreover, 1954 imports of principal manufactured linen items included 1,750,000 dozen handkerchiefs, 275,000 dozen towels, and 350,000 dozen napkins.

Canadian Developments.—After showing a marked improvement in late 1952 and the early months of 1953, activity in the Canadian textile industry turned downward and, despite a slight upturn beginning in late 1954, remained at generally unsatisfactory levels through the middle of 1955. The industry placed much of the blame on competition from imports.

During 1950-51, the Canadian textile industry employed more than 100,000 workers and produced almost 500 million yards of cloth. By 1955, employment had declined to about 82,000, and fabric output of all types was at an annual rate of about 400 million yards. On the positive side, Canadian textile producers have made large capital expenditures in recent years to keep their plants modern and efficient, and have thus placed themselves in a relatively stronger competitive position.

STANLEY B. HUNT,

President, Textile Economics Bureau, Inc.

TEXTILES, Synthetic. See Index entry.

THAILAND (formerly SIAM). A kingdom of Southeast Asia, bordered by Laos, Cambodia, Burma, and Malaya. Area, 198,500 square miles; pop. (est. mid-1955), 20,302,000. Chief cities and 1947 populations: Bangkok, the capital, 688,832; Thonburi, 167,046. The Thai are chiefly peasant tillers of rice. The Chinese minority of about 3 million is important in trade and the professions. There are also some 650,000 Malaysians and smaller numbers of Indians, Cambodians, and Annamese.

Government.—Thailand has been a constitutional monarchy since 1932. Phumiphon Adundet (b. 1927) ascended the throne as King Rama IX on May 5, 1950. On Nov. 29, 1951, a group of military leaders seized control of the government in a bloodless coup, re-establishing the authoritarian constitution of 1932 with some amendments. The unicameral National Assembly consists of 246 members, half of whom are appointed by the king and half elected by the people. Field Marshal Pibul Songgram has held the premiership since 1947.

Education and Religion.—The literacy rate in 1947 was reported at 54%. In 1952 there were 364 government schools (83,852 pupils), 18,584 local public and municipal schools (2,661,112), and 1,284 private schools (267,943). Students enrolled at the university level totaled 10,656. Higher institutions include Chulalongkorn University, the University of Medical Sciences, the University of Agriculture, and the University of Fine Arts. Most rural schools are conducted by Buddhist monasteries. Buddhism is the religion of the great majority of the population. There are small Moslem and Christian minorities.

Finance.—Budgeted expenditure in 1954 totaled 5,677 million baht, including 1,232 million for economic development; estimated revenue, 4,192 million. At the official selling rate, the baht equals 7.967 cents in United States currency; at the free rate the baht equaled about 4.6 cents in late 1955. In the fiscal years 1951-54 the United States allotted a total of \$31 million to aid Thailand's economy; the allotment for 1955 was \$47 million.

Agriculture.—Agriculture employs 85% of the gainfully occupied population. Approximately 87% of farmland is owned by its tillers. Thailand is the world's largest rice exporter and devotes 92% of its cultivated area to this staple. Output of rough rice in 1953-54 approximated 18,090 million pounds, with the 1954-55 estimate totaling 15,500 million. Production of other crops included: cotton (1954-55), 39,000 bales; soybeans (1953), 743,000 bushels; tobacco (1954), 40.1 million pounds; centrifugal sugar (prelim. 1954), 42,000 short tons; deseeded kapok fiber (exports, 1954), 2.9 million pounds; pepper (prelim., 1954), 500,000 pounds; and peanuts (prelim., 1954), 89,000 short tons. Corn, mung beans, coffee, nutmeg, sesame seed, and copra are also grown. Fish landings in 1953 totaled 205,000 metric tons.

The important rubber crop, grown chiefly on small holdings by Thai and Malayan owners in the south, yielded 118,600 metric tons of exports in 1954. Teak production in 1953 totaled 328,200 cubic meters; output of yang, 245,300. Other forest products include sticklac, seedlac, shellac, gutta percha, camphor, turpentine, and bamboo.

Manufacturing and Mining.—Manufacturing, comprising mainly small enterprises, accounts for about 14% of national income. Chief industries are rice-milling, rubber goods, sawmills, textiles, tobacco products, and cement. Local factories produce soap, paper, whiskey, furniture, woven baskets, toys, matches, soft drinks, glass, canned foods, and other light items. Two small blast furnaces produce structural steel. Cement output in 1954 totaled 382,800 metric tons, a rise of 33% over 1953. Electricity production in the Bangkok area was 156.8 million kw.-hr. in 1954, a 53% increase. Production of tin concentrates in 1954 totaled 9,960 metric tons (metal content); tungsten (1953), 1,054. Lead, gypsum, antimony, iron ore, and salt are also produced.

Foreign Trade.—Exports in 1954 totaled \$283.4 million; imports, \$311.7 million. Shipments of milled rice amounted to 1,004,000 metric tons, valued at \$145.7 million. Rubber exports were valued at \$43.9 million; tin, \$17.9 million. Chief imports are textiles and yarns, foodstuffs, fuels, metal manufactures, and machinery. Thailand's chief trading partners are Malaya and Singapore, Hong Kong, Japan, the United States, and the United Kingdom.

Transportation and Communications.—Inland

waterways carry the bulk of internal traffic in produce. The Royal State Railways in 1954 totaled 2,084 miles in route length. Roads (in Bangkok and Thonburi provinces only) totaled 3,956 miles. Bangkok is a major international air terminus. The Thai Airways Co., Ltd., operates some 2,500 miles of internal routes. Passenger cars (in Bangkok and Thonburi) numbered 16,800 in 1953; commercial vehicles, 11,570. In 1952 there were 30 daily newspapers with a total circulation of 75,000.

Principal Events, 1955.—Thailand was further strengthened as an anti-Communist bastion in Southeast Asia during 1955. Bangkok was the scene of the first meeting of the Council of the Southeast Asia Collective Defense Treaty, February 23-25, and Thailand's capital was designated the headquarters of the Council representatives, as well as of the Secretariat. In the course of Premier Marshal Pibul Songgram's 10-week world tour (April-June), during which he was received by President Eisenhower in Washington on May 2, the Thai leader stressed that communism could only be halted by superior force. In May, Thai forces cooperated with Malayan and British police in operations against Communist bands in the southern border area.

Development of Thailand's economic and military potential proceeded with United States aid. In February, work was begun on the construction of a 35-mile stretch of railroad track from Udon, in northeastern Thailand, to Nongkhai, on the Laotian border. The project was financed by \$4 million in United States aid. In July the U.S. International Cooperation Administration announced that it would provide \$6.5 million toward construction of a 200-mile highway linking Bangkok with the northeastern provinces. A loan of \$13 million by the Bank of America for improvement projects in Bangkok was announced in June, and on August 10 the International Bank for Reconstruction and Development extended a \$12 million loan to Thailand for railroad expansion and modernization.

During a week-long visit to Thailand by Burmese Premier Nu, beginning March 7, religious ties between the two Buddhist nations were stressed and means of increasing economic and cultural cooperation were discussed. On April 9 it was announced in Tokyo that Prince Wan Waithayakon, Thailand's foreign minister, had negotiated a settlement of Thailand's World War II claims of \$375 million against Japan arising out of Japanese issuance of occupation scrip. Japan was to pay the equivalent of \$41,666,666 in cash, goods, and services over a period of years. Premier Pibul Songgram paid a return visit to Burma, December 14-18.

On March 15 a Bangkok court found 49 persons guilty of seeking to set up a Communist regime in Thailand and sentenced them to 20 years in prison each. At the Asian-African Conference (q.v.) in Bandung, Indonesia, in April, an agreement was reached between Thailand and North Viet-Nam on the evacuation to North Viet-Nam of 40,000 Vietnamese refugees in Thailand whom the Thai government regarded as a source of Communist infiltration.

The principal internal political development of the year involved Premier Pibul Songgram's efforts to increase his power at the expense of Gen. Phao Sriyanond, director general of the police and one of the nation's strong men. In the course of cabinet changes carried through by Pibul during August 2-5, while General Phao was outside the country, the general was dis-

missed as deputy minister of finance and several of his supporters were ousted from cabinet posts. Pibul, backed by the army, relieved the police of certain powers, including press censorship, and banned police officers from business activities. The premier also acted to abolish certain government monopolies which provided ministers with profitable incomes.

M.J.G.

THEATER. People continued to complain, in 1955, that there were not enough good plays to be seen in New York. The sentiment was disproved by the fact that it was extremely difficult, and very expensive, to get tickets to what was available. The top price for a seat to a musical had become well over \$7, and for a play almost \$5.

The household organ of show business, *Variety*, made the pronouncement at the end of the official theatrical season, on May 31, that the 1954-55 season had been the best in years. Broadway and touring show receipts showed a \$5,417,400 gain over 1953-54. Broadway, with a total gross of \$32,087,800, hit an eight-year record. (In 1953-54, previously the peak year, Broadway had done a total business of \$30,169,200.) The road, which had hit a record low of \$17,623,200 during 1953-54, bounced back with a \$3,498,800 increase for 1954-55, bringing the total gross to \$21,122,000. This was the third highest gross for the road in a seven-season period covered by *Variety*. (The record breakers were 1948-49, with \$23,657,900, and 1952-53, with \$23,417,600.)

The summer theaters boomed as never before, with 154 barns and tents franchised by Actors' Equity, an increase of 10 over 1954. The New York theater had by far its best summer of recent years.

Production costs also rose as never before. A one-set play like *A Hatful of Rain* cost about \$30,000 for the rehearsal and out-of-town tryout. A musical like *The Vamp*, however, cost around \$315,000 to bring into New York and, unfortunately, lost \$335,000. The total loss on such a complete failure as *Ankles Aweigh* was \$340,000, according to *Variety*. What everybody hoped for was such a play as *The Teahouse of the August Moon*, which already had made profits of over \$1,000,000, or a musical like *The King and I*, which had made over \$1,200,000.

A vivid example of how expensive Broadway productions had become was shown in connection with *Joyce Grenfell Requests the Pleasure*. Miss Grenfell was assisted by three dancers, and the staff that the various unions required to maintain four people on stage amounted to nearly 40, including stagehands, musicians, and wardrobe attendants. Thus this small review had to take in \$12,500 every week in order to break even, and despite excellent notices, closed in less than two months.

An innovation of recent years that contributed interestingly to the New York theater in 1955 was the show train, which encouraged people from 16 cities to see plays in New York. Groups were made up of about 200 patrons who attended an average of four shows a trip, with a total of \$160,000 in receipts for the box offices. Sponsored usually by local newspapers, they came from such cities as Cleveland, Indianapolis, Columbus, and Louisville. For example, a Columbus show train charged a fee of \$89.50, which included round-trip train fare, hotel accommodations, and tickets in the orchestra to four shows.

Evansville, Ind., had one show plane of 44 persons, charging \$160 for the round-trip plane fare, hotel accommodations, and tickets to four plays. A survey made of various groups revealed that 42% of their members had never before seen a Broadway production.

The early part of the year brought several outstanding productions. The New York City Center provided a superior revival of William Saroyan's *The Time of Your Life*, with a top-notch cast that included Franchot Tone, Myron McCormick, and Harold Lang, although Gloria Vanderbilt got the major portion of the publicity for a walk-on bit. Joseph Hayes adapted his successful novel, *The Desperate Hours*, into an exciting play, with an especially moving performance by Karl Malden. Katharine Cornell and Tyrone Power appeared in Christopher Fry's *The Dark Is Light Enough*, a florid costume piece set in Austria at the time of Emperor Francis Joseph. The first hit play of the year was William Inge's *Bus Stop*, again made memorable by a fine cast that included Kim Stanley, Elaine Stritch, and Albert Salmi. Tennessee Williams' *Cat on a Hot Tin Roof* arrived a few weeks later in a storm of debate and controversy. While many considered it a meaningful piece of work, others thought of it as the worst play by an important playwright in decades. The presence of Barbara Bel Geddes, Ben Gazzara, Mildred Dunnock, and Burl Ives, and the direction of Elia Kazan, contributed enormously to the production. A play about the Scopes trial, *Inherit the Wind*, starring Paul Muni, was a noteworthy sociological study. There were also three outstanding musicals in the spring: *Plain and Fancy*, which had the Amish country of Pennsylvania as a colorful setting; *Silk Stockings*, a new version of the movie *Ninotchka*, which brought Don Ameche back to the stage; and *Damn Yankees*, in which for the first time big-league baseball provided the background for a hit musical.

During the summer the United States sent to Paris a Salute to France in the form of three productions which had been giants at home. These were *Oklahoma!*, Judith Anderson in *Medea*, and Thornton Wilder's comedy, *The Skin of Our Teeth*. The Wilder play, with a superlative cast that included Helen Hayes, Mary Martin, Florence Reed, and George Abbott, came back to New York for a brief run of singular popularity. Three months later, on November 21, Miss Hayes became the second living actress to have a Broadway theater named for her (Ethel Barrymore was the first), when the Fulton was renamed the Helen Hayes Theater in honor of the 50th anniversary of her stage debut as a small child.

The first hit of the fall was Arthur Miller's *A View from the Bridge*, followed a few days later by Michael Redgrave in Christopher Fry's version of a Jean Giraudoux play now called *Tiger at the Gates*. The dramatization by Frances Goodrich and Albert Hackett of *The Diary of Anne Frank* was thought by many to be the best play of the year. Joyce Grenfell came over from London with a hilarious evening of sketches, several of them with music. Ira Levin's *No Time for Sergeants* was counted the best comedy, and Andy Griffith considered the comic find of the year. George Axelrod, whose play *The Seven Year Itch* had been wildly acclaimed, provided a burlesque of Hollywood life called *Will Success Spoil Rock Hunter?* Shirley Booth was welcomed back to Broadway in a minor comedy by William Marchant, *The Desk Set*. Enid Bagnold wrote a charming, conversational play, *The Chalk Gar-*

BILL DOLL AND COMPANY

A barn is built on stage in this production number from *Plain and Fancy*, a musical about the Pennsylvania Dutch.

den, with an excellent cast headed by Gladys Cooper and Siobhan McKenna, a young Irish actress who had had great success in London.

The Comédie Française brought from Paris a repertory of plays, delighting the French-speaking residents of the city. Shelley Winters of Hollywood fame and Ben Gazzara were both outstanding in a first play by Michael V. Gazzo, *A Hatful of Rain*, a terrifying study of drug addiction. Carol Channing starred in a musical about early silent motion pictures, *The Vamp*, which was both lavish and tedious. Julie Harris played Joan of Arc in *The Lark* to enormous critical approval. The ever-reliable Margaret Sullavan appeared in a very funny comedy, *Janus*, about one woman's double life.

Richard Rodgers and Oscar Hammerstein II created a musical, *Pipe Dream*, from a John Steinbeck novel, considered by most of their admirers to be a lesser effort. Then, as the year was nearly over, Ruth Gordon came from London with her great success, Thornton Wilder's *The Matchmaker*, in which she had also performed at the Edinburgh Festival in 1954. Nobody could believe that she was 59 years old as she flounced about the stage, and, as one critic said of her unbelievably hilarious performance, he kept waiting for her generous mouth to encircle her head.

The Stratford Shakespearean Festival in Stratford, Ontario, completed its third and most successful season on August 27. With Tyrone Guthrie continuing as artistic director, the company presented two plays by William Shakespeare, *Julius Caesar* and *The Merchant of Venice*, and added a third, Sophocles' *Oedipus Rex*. With *The Merchant of Venice* as by far the most popular attraction, the nine-week engagement grossed approximately \$421,000, with a total attendance of 126,500 for the 72 performances. Attendance for the 1,927-seat tent averaged 91% of capacity, for an increase in attendance of 1,345 and in revenue of \$29,000 over 1954. A plan was launched for a campaign to raise funds to erect a permanent theater to replace the tent playhouse.

The United States answer to the success of the Canadian group was the opening of the American Shakespeare Festival Theatre and Academy in Stratford, Conn. Situated on a 12-acre site on the Housatonic River, the 1,500-seat, wood-and-steel theater cost about \$750,000 and opened on July 12 with a repertory of two plays, *Julius Caesar* and *The Tempest*, for an eight-week season. Raymond Massey, Jack Palance, Hurd Hatfield, and Leora Dana were the best-known people heading the casts. Neither play

was received enthusiastically, but it was thought that by another year the group would be more experienced and the standard of production would be higher.

Two plays, *The Teahouse of the August Moon* and *Witness for the Prosecution*; two musicals, *The Pajama Game* and *Fanny*; and Victor Borge's one-man show, *Comedy in Music*, all of which were playing when the year began, were still alive as the year ended. Four shows with notably long runs closed during 1955: *Tea and Sympathy*, on June 18, after 709 performances; *Can-Can*, on June 25, after 892 performances; *The Seven Year Itch*, on August 13, after 1,141 performances; and *Anniversary Waltz*, on September 24, after 611 performances.

THE BROADWAY THEATER IN 1955

The following is an alphabetical list of the shows presented on Broadway during the calendar year 1955:

All in One, a program consisting of Leonard Bernstein's opera, *Trouble in Tahiti*, with Alice Ghostley and John Tyers; Tennessee Williams' play, *27 Wagons Full of Cotton*, with Maureen Stapleton and Myron McCormick; and dancing by Paul Draper; opened April 19 (47 performances).

Almost Crazy, a revue with sketches by James Shelton, Hal Hackady, and Robert Bernstein; songs by Portia Nelson, Raymond Taylor, and James Shelton; with Kay Medford and James Shelton; opened June 20 (16 performances).

Ankles Aweigh, a musical comedy with book by Guy Bolton and Eddie Davis; lyrics by Dan Shapiro; music by Sammy Fain; with Betty and Jane Kean and Lew Parker; opened April 18 (176 performances).

Bus Stop, a play by William Inge; with Kim Stanley, Anthony Ross (d. Oct. 25, 1955), Elaine Stritch, and Albert Salmi; opened March 2 (continuing at end of year).

Cat on a Hot Tin Roof, a play by Tennessee Williams; with Barbara Bel Geddes, Ben Gazzara, Mildred Dunnock, and Burl Ives; opened March 24 (continuing at end of year).

Catch a Star!, a revue with lyrics by Paul Webster and Ray Golden; music by Sammy Fain and Phil Charig; sketches by Danny and Neil Simon; with Pat Carroll and David Burns; opened September 6 (23 performances).

Chalk Garden, The, a play by Enid Bagnold; with Gladys Cooper and Siobhan McKenna; opened October 26 (continuing at end of year).

Champagne Complex, a farce by Leslie Stevens; with John Dall, Polly Bergen, and Donald Cook; opened April 12 (23 performances).

Comédie Française, a tour of the famous company from Paris in a repertory of *Le jeu de l'amour et du hasard*, by Pierre Marivaux, with *Un caprice*, by Alfred de Musset; *Le barbier de Séville*, by Pierre Beaumarchais, with *Arlequin poli par l'armour*, by Marivaux; and *Le bourgeois gentilhomme*, by Molière; opened October 25 (limited engagement of 32 performances).

Damn Yankees, a musical comedy with book by George Abbott and Douglas Wallop; lyrics and music by Richard Adler and Jerry Ross; based on Mr. Wallop's novel, *The Year the Yankees Lost the Pennant*; with Gwen Verdon, Stephen Douglass, and Ray Walston; opened May 5 (continuing at end of year).

Dark is Light Enough, The, a play by Christopher Fry; with Katharine Cornell and Tyrone Power; opened February 23 (69 performances).

Day by the Sea, A, a play by N. C. Hunter; with Jessica Tandy, Hume Cronyn, and Dennis King; opened September 26 (24 performances).

Deadfall, a melodrama by Leonard Lee; with Joanne Dru and John Ireland; opened October 27 (20 performances).

Desk Set, The, a comedy by William Marchant; with Shirley Booth; opened October 24 (continuing at end of year).

Desperate Hours, The, a play by Joseph Hayes, adapted by him from his novel of the same name; with Karl Malden, Nancy Coleman, and Paul Newman; opened February 10 (213 performances).

Diary of Anne Frank, The, a dramatization by Frances Goodrich and Albert Hackett of the book of the same name; with Joseph Schildkraut, Susan Strasberg, and Gusti Huber; opened October 5 (continuing at end of year).

Festival, a comedy by Sam and Bella Spewack; with Paul Hengreid and Betty Field; opened January 18 (23 performances).

Finian's Rainbow, a revival of the musical comedy with book by E. Y. Harburg and Fred Saidy; lyrics by

Mr. Harburg; music by Burton Lane; with Helen Gallagher and Will Mahoney; opened May 18 (limited engagement of 16 performances).

Fourposter, The, a revival of the play by Jan de Hartog; with Jessica Tandy and Hume Cronyn; opened January 5 (limited engagement of 16 performances).

Grand Prize, The, a comedy by Ronald Alexander; with June Lockhart and John Newland; opened January 26 (21 performances).

Guys and Dolls, a revival of the musical comedy with book by Jo Swerling and Abe Burrows; music and lyrics by Frank Loesser; with Tom Pedi, Helen Gallagher, Walter Matthau; opened April 20 (limited engagement of 40 performances).

Half of Rain, A, a play by Michael V. Gazzo; with Shelley Winters and Ben Gazzara; opened November 9 (continuing at end of year).

Heavenly Twins, The, an adaptation by Louis Kronenberger of Albert Husson's comedy, *Les pavés du ciel*; with Faye Emerson and Jean Pierre Aumont; opened November 4 (35 performances).

Henry IV, Part I, a revival of the play by William Shakespeare; by the Brattle Shakespeare Players; opened September 21 (limited engagement of 16 performances).

Honeys, The, a comedy by Roald Dahl; with Jessica Tandy, Hume Cronyn, and Dorothy Stickney; opened April 28 (36 performances).

Inherit the Wind, a play by Jerome Lawrence and Robert E. Lee; with Paul Muni, Ed Begley, and Tony Randall; opened April 21 (continuing at end of year).

Island of Goats, a translation by Henry Reed of the play by Ugo Betti; with Uta Hagen and Laurence Harvey; opened October 4 (7 performances).

Janus, a comedy by Carolyn Green; with Margaret Sullivan, Robert Preston, and Claude Dauphin; opened November 24 (continuing at end of year).

Joyce Grenfell Requests the Pleasure, a revue written by and starring Miss Grenfell; with music by Richard Addinsell; opened October 10 (64 performances).

Lark, The, an adaptation by Lillian Hellman of Jean Anouilh's play, *L'alouette*; with Julie Harris and Boris Karloff; opened November 17 (continuing at end of year).

Matchmaker, The, a comedy by Thornton Wilder; with Ruth Gordon, Eileen Herlie, and Loring Smith; opened December 5 (continuing at end of year).

No Time for Sergeants, a comedy by Ira Levin; based on Mac Hyman's novel of the same name; with Myron McCormick, Roddy McDowall, and Andy Griffith; opened October 20 (continuing at end of year).

Once upon a Tailor, a comedy by Baruch Lumet; with Oscar Karlweis and Jennie Goldstein; opened May 23 (8 performances).

Othello, a revival of the tragedy by William Shakespeare; by the Brattle Shakespeare Players; opened September 7 (limited engagement of 16 performances).

Pipe Dream, a musical play by Richard Rodgers and Oscar Hammerstein II; based on John Steinbeck's novel, *Sweet Thursday*; with Helen Traubel, Judy Tyler, and William Johnson; opened November 30 (continuing at end of year).

Platin and Fancy, a musical comedy with book by Joseph Stein and Will Glickman; lyrics by Arnold B. Horwitz; music by Albert Hague; with Richard Derr, Barbara Cook, and David Daniels; opened January 27 (continuing at end of year).

Red Roses for Me, a play by Sean O'Casey; with Kevin McCarthy and Eileen Crowe; opened December 28 (continuing at end of year).

Righteous Are Bold, The, a play by Frank Carney; with Denis O'Dea, Irene Hayes, and Nora O'Mahony; opened December 22 (continuing at end of year).

Roomful of Roses, A, a comedy by Edith Sommer; with Patricia Neal; opened October 17 ('88 performances).

Seventh Heaven, a musical play with book by Victor Wolfson and Stella Unger; lyrics by Stella Unger; music by Victor Young; based on Austin Strong's play of the same name; with Kurt Kasznar, Gloria De Haven, Ricardo Montalban, and Robert Clary; opened May 26 (44 performances).

Silk Stockings, a musical with book by George S. Kaufman, Leueen MacGrath, and Abe Burrows; lyrics and music by Cole Porter; based on the motion picture, *Ninotchka*; with Don Ameche and Hildegarde Neff; opened February 24 (continuing at end of year).

Skin of Our Teeth, The, a revival of the play by Thornton Wilder; with Helen Hayes, Mary Martin, George Abbott, and Florence Reed; opened August 17 (limited engagement of 22 performances).

Songs and Impressions, a one-man show with Maurice Chevalier; opened September 28 (limited engagement of 47 performances).

South Pacific, a revival of the musical comedy with book by Oscar Hammerstein II and Joshua Logan; lyrics by Mr. Hammerstein; music by Richard Rodgers; adapted from James A. Michener's short stories, *Tales of the South Pacific*; opened May 4 (limited engagement of 16 performances).

Southwest Corner, The, a play by John Cecil Holm; adapted from Mildred Walker's novel; with Eva Le Gallienne and Enid Markey; opened February 3 (36 performances).

Three for Tonight, a revue with lyrics and special material by Robert Wells; music by Walter Schumann; with Marge and Gower Champion, Harry Belafonte, and Hiram Sherman; opened April 6 (85 performances).

Tiger at the Gates, a translation by Christopher Fry of the play by Jean Giraudoux; with Michael Redgrave and Leueen MacGrath; opened October 3 (continuing at end of year).

Time of Your Life, The, a revival of the play by William Saroyan; with Franchot Tone, Myron McCormick, Harold Lang, and John Carradine; opened January 19 (limited engagement of 16 performances).

Tonight in Samarkand, a play by Jacques Deval and Lorenzo Semple, Jr.; with Louis Jourdan and Jan Faland; opened February 16 (29 performances).

Vamp, The, a musical with book and lyrics by John Latouche and Sam Locke; music by James Mundy; with Carol Channing; opened November 10 (60 performances).

View from the Bridge, A, a play by Arthur Miller; with Van Heflin and J. Carrol Naish; opened September 29 (continuing at end of year).

Wayward Saint, The, a comedy by Paul Vincent Carroll; with Paul Lukas, Liam Redmond, and William Harrigan; opened February 17 (21 performances).

Will Success Spoil Rock Hunter?, a comedy by George Axelrod; with Jayne Mansfield, Orson Bean, and Walter Matthau; opened October 13 (continuing at end of year).

Wisteria Trees, The, a revival of the play by Joshua Logan; based on Anton Chekhov's play, *The Cherry Orchard*; with Helen Hayes, Walter Matthau, and Ella Raines; opened February 2 (limited engagement of 16 performances).

Wooden Dish, The, a play by Edmund Morris; with

(Left) Kim Stanley (l.) as the nightclub singer, with Anthony Ross (who died Oct. 25, 1955) as the disillusioned professor, and Phyllis Love as the counter girl, in William Inge's comedy, *Bus Stop*. (Center) Burl Ives plays Big Daddy and Mildred Dunnock his wife in Tennessee Williams' Pulitzer Prize-winning drama, *Cat on a Hot Tin Roof*. (Right) Susan Strasberg, shown here with David Levin, plays the title role in *The Diary of Anne Frank*.

(LEFT AND CENTER) ZINN ARTHUR; (RIGHT) FRED FEHL

Louis Calhern; opened October 6 (12 performances). *Young and Beautiful, The*, a play by Sally Benson; based on four short stories by F. Scott Fitzgerald; with Lois Smith and Douglas Watson; opened October 1 (65 performances).

(See also ENGLISH LITERATURE; FRENCH LITERATURE; GERMAN LITERATURE; PRIZES AND AWARDS; SOVIET LITERATURE.)

STEWART JOHNSON,
Editorial Staff, "The New Yorker."

THEORELL, (Axel) Hugo (Teodor), Swedish biochemist: b. Linköping, Östergötland, Sweden, July 6, 1903. He was awarded the 1955 Nobel Prize in medicine on Oct. 20, 1955, for his work on the nature and action of oxidation (or "breathing") enzymes.

Theorell studied at Stockholm University, from which he received a doctorate in physiological chemistry in 1930. Several years at the University of Uppsala followed (1932-36) before he went to the Nobel Medical Institute in Stockholm in 1937 as chairman of the department of biochemistry.

For several decades he has studied the structure and function of enzymes, paying special attention to the oxidation enzymes, which help the cells burn oxygen. Using apparatus he devised himself, he first isolated a pure yellow "breathing" enzyme, which he divided into its two component parts, coenzyme and apoenzyme. Then he recombined these elements, which are inactive in isolation, to form a potent enzyme again. Later, he analyzed in the same way the entire range of oxidation enzymes. This was the first time that an enzyme had been divided and artificially recreated, a scientific achievement which has had important consequences in biochemistry, physiology, and medicine.

Dr. Theorell was also the first scientist to produce in a pure form myoglobin, the red coloring substance in the muscles. His separation of the alcohol-burning enzyme has paved the way for a new method of determining the alcohol content of blood. More recently he has been engaged in experiments on an antibiotic remedy for tuberculosis.

THERMONUCLEAR WEAPONS. See Index entry, *Hydrogen Bomb*.

THURSTONE, Louis Leon, American psychologist: b. Chicago, Ill., May 29, 1887; d. Chapel Hill, N.C., Sept. 29, 1955. One of the pioneers in psychological testing, Dr. Thurstone developed the American Council on Education intelligence tests, used by most of the colleges and universities in the United States.

After graduating from Cornell University in 1912 (during which year he worked with Thomas Edison), Dr. Thurstone continued his education at the University of Chicago, from which he received his Ph.D. in 1917. He served on the faculty of the Carnegie Institute of Technology from 1915 to 1923, and on the faculty of the University of Chicago from 1924 until his retirement in 1952. In World War I, he was the author of the occupational classification tests for the U.S. Army; and during World War II, he was a member of the adjutant general's committee on the classification of military personnel.

Dr. Thurstone's work in psychology included the development of multiple factor analysis, the isolation of primary mental abilities, application of the psycho-physical theory of social values, and the isolation of primary factors in temperament. He was the author of numerous books, including *The Nature of Intelligence* (1924), *Fundamentals of Statistics* (1924), *The Vectors*

of Mind (1935), and *Multiple Factor Analysis* (1947).

TIBET. A plateau region of central Asia forming an autonomous province of the Chinese People's Republic. Estimated area, 470,000 square miles (boundaries are not entirely defined). The Chinese census of 1953 gave the population of "the Tibet region and Chang-tu area" as 1,273,969. Chief cities are Lhasa, the capital (20,000), Shigatse, and Gyantse.

Following the penetration of eastern Tibet by Chinese Communist forces in October 1950, an agreement was concluded in Peking on May 23, 1951, providing for Chinese control of Tibetan foreign relations and defense, with Tibetan autonomy in internal affairs. A Chinese military mission was subsequently established at Lhasa and Chinese military control extended throughout the territory. On April 29, 1954, a Sino-Indian agreement was signed whereby India accepted the principle that Tibet was part of China. Regulations were also set forth governing the movement of trade and religious pilgrims between Tibet and India.

Tibetan society has been of a feudal-theocratic character, dominated by the Buddhist lamaseries and landed nobility. The Dalai Lama, as the living incarnation of Buddha, is theoretically the supreme authority, and the Panchen Lama the highest temporal authority. The majority of Tibetans are peasant cultivators, nomads, or handicraftsmen. Crops grown on the lower Himalayan slopes include barley, fruits, pulses, and vegetables. Livestock raising yields wool, felt, yak's hair, hides, butter, cheese, and dried meat. Minerals are believed abundant, although only coal (at Shigatse) and salt have been exploited to any appreciable extent. External trade is mainly with India. Tibet exports wool, yak tails, furs, borax, salt, and musk, in exchange for cotton textiles and foodstuffs.

Both the Dalai Lama and the Panchen Lama took part as deputies in the National People's Congress in Peking in September 1954. On their departure from Peking for Tibet on March 12, 1955, it was announced in Peking that a committee had been established to prepare for the formation of an expanded Tibetan Autonomous Region. The committee, termed a state organ subordinate to the Central State Council (of the Peking government), was headed by the Dalai Lama, with the Panchen Lama as first vice chairman and Gen. Chang Kuo-hua (the Chinese military commander in Tibet) as second vice chairman. The committee was also to include 15 representatives of the Tibet local government, 10 from the Panchen Kanpo Lija (former religious and secular institution of the Panchen Lama), 10 from the People's Liberation Committee of Chamdo, 5 from Peking government personnel in Lhasa, and 11 from major monasteries, religious orders, and people's organizations.

The announcement concerning the preparatory committee also stated that the Central State Council had approved plans for the extension of the Tsinghai-Tibet highway to Shigatse and the construction of a road from Shigatse to Gyantse; construction of a hydroelectric station at Lhasa and a smaller thermal plant at Shigatse; establishment of a leather works and a small iron works at Lhasa; repair and improvement of flood-control facilities; and expansion of the school systems in Lhasa and Shigatse.

On April 1, 1955, Indian and Chinese representatives signed an agreement at Lhasa transferring to Chinese control the Tibetan postal, telegraph, and public telephone services formerly operated by India.

TIMOR. See PORTUGUESE TERRITORIES.

TIN. The United States supply of tin ore is derived entirely from imports. According to figures compiled by the U.S. Bureau of Mines, imports of tin in ore declined from 35,973 long tons in 1953 to 22,135 tons in 1954, while tin metal

imports dropped from 74,538 long tons in 1953 to 65,596 tons in 1954. Smelter production from imported ore declined from 37,562 long tons in 1953 to 27,002 tons in 1954. Consumption declined from 85,640 long tons in 1953 (53,959 tons of primary and 31,681 tons of secondary) to 82,891 tons in 1954 (54,427 tons of primary and 28,464 tons of secondary). Of the 1954 consumption, tin plate accounted for 33,026 tons; solder, 19,389 tons; and other alloys, 30,476 tons. Primary tin consumption of 30,000 tons and secondary tin consumption of 15,800 tons during the first half of 1955 were, respectively, 7% and 16% higher than in the corresponding period of 1954. (See MINERAL PRODUCTION for table showing output of major producing countries; and for further references see Index entry, *Tin*.)

TITANIUM. Titanium metal, first produced commercially in 1948, has become an important addition to the list of commercial metals. Production has grown remarkably, from 2,241 short tons in 1953 to 5,370 tons in 1954, and to an estimated 7,500 tons in 1955. Titanium was produced in 1954 by four commercial companies and by the U.S. Bureau of Mines. On July 16, 1954, the United States government added titanium sponge to its list of strategic and critical materials.

The principal ores of titanium are ilmenite and rutile, but only a small proportion of these minerals is used as a source of the metal. The principal use of ilmenite is for making titanium pigments, whereas rutile is used mainly for welding rod coatings. Domestic production of ilmenite was 547,711 short tons in 1954, and of rutile, 7,411 tons. Imports of ilmenite concentrates reached 275,005 short tons in 1954, and of rutile concentrates, 15,060 tons. India was the chief foreign source of ilmenite, whereas nearly all of the rutile came from Australia.

World production of ilmenite in 1954 was 1,097,000 short tons, the principal foreign producers of which were India, Norway, and Canada. Rutile world production was 57,800 short tons, of which about 50,000 tons was mined in Australia. (See also MINING.)

TOBACCO. World production (excluding Manchuria) of leaf tobacco in 1955 was estimated at 8,130 million pounds, about 2% more than the amount harvested in 1954 and one eighth more than the 1947-51 average. Most of the increase was accounted for by larger output in Japan, China, Turkey, and the United States. The most sizable production declines were in Canada, India, France, and Brazil. Tobacco acreage in 1955 was about the same as in 1954, but yields were slightly higher.

TOBACCO PRODUCTION IN MAJOR COUNTRIES
(In thousands of pounds)

	1947-51	1954	1955*
U.S.	2,082,727	2,236,408	2,277,709
Canada	129,445	184,763	135,480
Brazil	233,120	323,499	311,395
Turkey	194,109	214,905	258,934
China	1,425,000	1,340,000	1,425,000
India	547,150	600,320	555,520
Pakistan	113,883	182,000	200,000
Indonesia	62,230	211,798	200,000
Japan	208,092	248,365	324,865
World	7,255,971	7,945,947	8,130,390

* Preliminary.

United States production of unmanufactured tobacco, about 510 million pounds, was 12% more than in 1954 and the third largest since 1946. The increase is accounted for mainly by

sales under Public Law 480, which provides for the acceptance of foreign currencies for surplus agricultural products under certain conditions.

Cigarette output in the United States was estimated at 415 billion, 3% more than in 1954, but 5% below the record 435 billion in 1952. Domestic consumption increased in 1955, after a decline in 1954 due largely to the publicity concerning cigarettes and health. Consumption in 1955 was 383 billion, compared with 367 billion in 1954 and 394 billion in 1952. General prosperity was the biggest factor in the 1955 increase.

Cigar consumption in the United States and by overseas forces was estimated at 6.1 billion, about 1½% above 1954 and the highest since 1930.

C. J. ENZLER,
*Administrative Officer, Office of the Secretary,
U.S. Department of Agriculture.*

TOBAGO. See TRINIDAD AND TOBAGO.

TOBIN, Daniel Joseph, American labor leader: b. Miltown Malbay, County Clare, Ireland, April 1875; d. Indianapolis, Ind., Nov. 14, 1955. For 45 years the head of the Teamsters' Union, he was one of the most powerful figures in American labor and politics in recent years.

An immigrant to the United States in 1889, he attended grammar and evening high schools in Cambridge and Boston, Mass., and took his first job as a wagon driver at \$11 a week. In 1907 he was elected president of the recently formed International Brotherhood of Teamsters, Chauffeurs, Warehousemen, and Helpers of America, a post he occupied until 1952. At the time of his retirement the union, which had a membership of a few thousand in 1907, was the most powerful in the American Federation of Labor and, with 1,250,000 members, the largest in the country.

He was a close associate of Samuel Gompers, the founder of the AFL, and was a dominant personality in AFL affairs for many years, serving as vice president and member of the executive council from 1933. Generally considered to have been a moderate in labor policies, he strongly supported the unification of the labor movement, having taken part in conferences in 1935 and 1950 with the Congress of Industrial Organizations toward that end.

An admirer and close labor adviser of President Roosevelt, he held several posts in government during the Roosevelt administration. In all four Roosevelt campaigns, he was the chairman of the Labor Division of the Democratic National Committee. It was reported that he had been offered the post of secretary of labor in 1943 and again in 1947.

TOGOLAND. A territory in west Africa comprising two United Nations trusteeships, administered by France and Great Britain, respectively. The Ewes, largest of the ethnic groups, have sought unification of the trusteeships under one administration. The territory's future status will also be affected by the imminent attainment of self-government by the Gold Coast (with which British Togoland has been administered).

A United Nations visiting mission toured British Togoland in August-October 1955. In its report to the U.N. Trusteeship Council on Oct. 30, 1955, the mission recommended that a plebiscite be held on the trusteeship's political future. On Dec. 15, 1955, the U.N. General Assembly passed a resolution calling for the holding of such a plebiscite in which the people of British Togo-

land would state whether they wished the merger of the territory with an independent Gold Coast, or its separation from the Gold Coast and continuance as a trusteeship pending ultimate determination of its political future. Regarding French Togoland, the General Assembly endorsed the recommendation of a visiting commission (which toured the territory in the autumn of 1955) that the administering authority implement its contemplated political reforms, so that the people of French Togoland would be enabled soon to decide democratically on their political future.

French Togoland (Togoland under French Trusteeship).

The French trusteeship, adjoining Dahomey, French West Africa, comprises the eastern and larger portion of Togoland. Estimated area, 21,230 square miles; pop. (est. 1955), 1,070,000, including about 1,500 nonautochthonous persons, chiefly French. Ewe and Mina tribes predominate in the south; Hamitic peoples in the north. Lomé (35,089) is the capital and chief port. The French commissioner is aided by a 9-member Council of Government (5 elected by the Territorial Assembly, 4 appointed by the commissioner) and by an elected Territorial Assembly of 30 members. The 1954 budget totaled 2,031 million francs CFA. About 37% of school-age children attend school. In 1954 there were 1,045 primary classes (57,409 pupils), 49 secondary classes (1,145), and 21 technical classes (470).

Chief subsistence crops are yams, cassava, millet, sorghum, corn, beans, and rice; chief cash crops: cacao, coffee, palm oil, palm kernels, cotton, castor oil, shea nuts, peanuts, and copra. Exports in 1954 totaled 4,274 million francs CFA; imports, 2,719 million. Chief exports and quantities (in metric tons) were: cacao, 12,633; coffee, 4,086; copra, 5,911; and palm kernels, 8,787. Three short railways from Lomé aggregate 278 miles. All-weather roads total 737 miles. Lomé has an airport. Telephones numbered 758 in 1955.

British Togoland (Togoland under United Kingdom Trusteeship).—For administrative purposes this territory (area, 13,041 square miles; pop., 423,000, est. July 1, 1954) adjoining the Gold Coast is divided into two sections, the northern savannah country being administered as part of the Northern Territories of the Gold Coast, and the forested southern area as part of the Trans-Volta Togoland Region. Ho, in Togoland, is the administrative headquarters of the latter.

Fourteen constituencies (northern, 8; southern, 6) elect one member each by universal adult suffrage to the Gold Coast Legislative Assembly. Local government is exercised by district and local councils, two thirds popularly elected and one third elected by traditional authorities. A report submitted to the 15th (1955) session of the U.N. Trusteeship Council noted that health and educational facilities in the territory had been expanded, and that practical efforts (reflected in major development projects) were being made to diversify the economy.

Estimated revenue in 1953-54 was £2,617,327; expenditure, £2,730,373. Schools and colleges number 444 (47,985 students); in 1954 the government spent £758,782 on education. Imports in 1954 totaled £3,840,962. Of total exports (value, £3,911,802), cacao (21,226 tons) accounted for £3,099,880. External trade figures are included in those of the Gold Coast (see BRITISH WEST AFRICA). Road mileage aggregated about 1,700 in 1954.

TOMATOES. See **VEGETABLES.**

TONGA or FRIENDLY ISLANDS. Comprising some 150 islands east of Fiji in the southwestern Pacific, this British-protected self-governing kingdom has an area of 270 square miles, and a population (52,575, Dec. 31, 1953 est.) comprising 51,400 Tongans, 230 Europeans, 570 of mixed racial origin, 300 Pacific islanders, and 75 others. Principal island groups are Tongatabu (on which is Nukualofa, the capital; pop., 5,500), Haabai, and Vavau. Nukualofa and Neiafu, on Vavau, are ports of entry. Outlying islands include Niuafo, Tafahi, and Niuaotubutu. There are active volcanoes on four of the islands.

Constitutional government under a sovereign (Queen Salote Tubou, acceded in 1918) comprises, besides the judiciary, a 7-member Privy Council and cabinet, and a Legislative Council consisting of the premier and ministers of the crown (including the governors of Vavau and Haabai), 7 nobles, and 7 representatives elected

triennially by popular franchise. The governor of Fiji (q.v.) is the representative of Great Britain in relation to Tonga. Introduced to Christianity in 1826, Tongans are members of various denominations, and include 24,449 Wesleyans.

The Tonga and Australian pound have the same exchange value. Revenue in 1954 was estimated at £A443,971; expenditure, at £A460,681. In 1953 there were 70 government and 63 denominational schools (11,311 pupils) and 10 secondary schools (2,314 pupils).

Total imports (principally of food, hardware, textiles, kerosine, and tobacco) were valued at £A782,000 in 1954 (£A637,000 in 1953); exports, valued at £A1,080,000 (£A771,000 in 1953), consisted principally of copra (14,200 tons). Roads approximate 60 miles (metaled) in Tongatabu, and 18 miles in Vavau.

TORONTO. The capital of the Province of Ontario, Toronto, which extends along 13 miles of Lake Ontario's north shore, is Canada's second largest city. Within a 100-mile radius of the city is located one third of the nation's purchasing power. The name applies both to the city proper (area, 35 square miles; population, 682,415) and to the Municipality of Metropolitan Toronto (area, 245 square miles; population, 1,254,000).

The municipality is administered by a Council of 24 members (12 heads of municipalities and 12 city members) under Chairman F. G. Gardiner. The municipal budget for 1955 was \$62,528,455. Construction projects under way in 1955 included 10 miles of water mains, water plants, sewage disposal plants, storm drainage works, a 9-mile lakeshore expressway, a midtown cross-town highway, a home for the aged, a golf course, and a building for the Juvenile and Domestic Court.

The city proper is governed by a mayor (Nathan Phillips in 1955), 4 controllers, and 18 aldermen. The publicly owned Toronto Transit Commission operates subway, electric car, trolley coach, and ferry facilities in both the city and the municipality.

A great increase in apartment house building, due to a new zoning law, took place in 1955; and 366 new units were built in Regent's Park under the slum clearance plan, bringing the total of such units constructed to 1,097. Some important structures which were completed or under construction in 1955 were the Bell Telephone Company building, the Confederation Life building, the Crown Life building, the Imperial Oil building, the Ontario Cancer Research building, the Woodbine Race Track, the Bank of Canada building, and the Stair Office Building.

Known as "The Convention City," Toronto had its best tourist and convention year in 1955. The 1955 Canadian National Exhibition had a total attendance of 2,809,500. The Royal Agricultural Fair took place from November 11 to 19, and the International Trade Fair was held at the end of June.

The port of Toronto has acquired a new 26-acre dock site, in anticipation of the completion of the St. Lawrence Seaway; and work on the dock's retaining wall and fill was nearly completed during 1955. The new Marine Terminal No. 11, put into operation in 1955, has Canada's first customs examination room in a waterfront terminal. The port, which serves 20 foreign lines, handled 3,165,365 tons of cargo in the first 9 months of 1955, and its direct overseas tonnage was 5,000 tons more than in 1954. The Toronto Stock Exchange, which trades the largest volume of stock in North America, did more business in the first 10 months of 1955 than in any previous 12-month period. The value of traded stocks was \$2,327,916,566, and the number of traded shares was 1,358,072,000.

In December, Mayor Phillips was re-elected,

and the electors voted to extend the term of office of the government from one to two years. The electors turned down a proposal to build a new City Hall.

University of Toronto Library.

TOURISTS. Domestic and foreign travel by United States residents in 1955 surpassed all previous records. The number of passports issued and revalidated by the Passport Office of the Department of State during the first seven months of 1955 surpassed the total issued in the same period in 1954 by more than 50,000; three fourths of all passports were for travel in Europe and the Mediterranean area.

In 1954, United States residents traveling abroad spent \$1,360 million, including payments to all carriers; estimates for 1955 spending reached \$1,500 million. Domestic travel volume estimates ranged from \$8 billion to \$12 billion for 1954. Spending in Canada and Mexico in 1954 amounted to about the same as in 1953.

Latest U.S. Department of Commerce estimates indicated that in 1954 United States residents traveled in overseas areas as follows: Europe and the Mediterranean area, 420,000; the West Indies and Central America, 432,000; South America, 36,000; and other areas, 24,000.

Means and Costs of Travel.—In the first six months of 1955 more United States visitors to Europe traveled by plane than by ship. The deferred payment plan was in part responsible for this rise. Surface carriers also continued to receive increasingly large total revenues and to carry capacity passenger loads.

Travel expenditures of American travelers within foreign countries increased again in 1954, and estimates of such expenditures in 1955 approximated \$1,100 million. Foreign carriers earned \$186 million in 1954; domestic carriers, \$214 million.

EXPENDITURES BY U.S. RESIDENTS FOR
TRAVEL IN FOREIGN COUNTRIES¹
(In millions of dollars)

Area	1950	1951	1952	1953	1954
Canada	261	255	257	282	284
Mexico	145	159	180	192	190
Europe and Mediterranean	225	195	256	306	352
West Indies—Central America	60	75	78	76	87
South America	22	25	25	20	22
Other areas	13	13	15	20	23
Totals ²	727	722	811	895	958

¹ Excludes fares paid to United States and foreign vessels.

² Columns may not add to totals because of rounding of figures. (Source: U.S. Department of Commerce.)

Since 1951 the number of United States travelers to the European area has increased steadily, as have their average expenditures. Per capita spending reached \$839 in 1954. France continued to be the number one target spot, with the United Kingdom second and Italy third.

Domestic Travel.—Expenditures for domestic travel in 1955 were believed to have exceeded previous records. An estimated 85% of domestic vacations were by private automobile. The report of the National Park System predicted that the 1955 figure on visitors would pass the 50 million mark.

Travel to the United States.—An estimated half-million travelers from countries other than Canada visited the United States between July 1, 1954, and June 30, 1955. (Visitors from Mexico planning to remain 72 hours or more were in-

cluded in this total.) These travelers spent approximately \$540 million in the United States in 1954. (See also CUSTOMS, U.S. BUREAU OF.)

Tourist Surveys.—Several intensive studies on tourism were circulated in 1955. All pointed up the importance of tourism to the national economy. One study estimated that \$10,500 million was spent for recreational travel by American families in 1954. Another survey showed that the hotel industry was the seventh largest service industry in the United States from the standpoint of sales volume, with a gross of approximately \$2,150,360,000. (See also HOTELS.)

Canada.—Canadian tourist spending abroad rose to \$382 million in 1954, compared with \$302 million spent by tourists visiting Canada. In 1954, residents of the United States spent \$280 million in Canada, and Canadian tourists spent \$313 million in the United States.

ALICE G. MULHERN,
International Travel Staff, U.S. Department
of Commerce.

TOWERS, John Henry, American naval officer: b. Rome, Ga., Jan. 30, 1885; d. Queens, N.Y., April 30, 1955. One of the first licensed navy pilots and the first naval airman to attain the rank of admiral, he successfully promoted naval aviation throughout his career, which included two terms as assistant chief, and one as chief, of the naval Bureau of Aeronautics.

Commissioned an ensign two years after his graduation from the U.S. Naval Academy in 1906, he was assigned to aviation duty in 1911, and for two years was in charge of the Naval Aviation Camp at Annapolis. Despite serious injuries incurred in a plane crash in 1913, he continued his flying career, becoming, in 1914, executive officer of the Naval Air Station at Pensacola, Fla. During World War I he was an aviation observer at the American embassy in London before his appointment as assistant director of naval aviation. His belief in the practicality of long-distance flying brought him the command of the first transatlantic crossing in May 1919 of three planes, two of which, including his own, were forced down near the Azores. The third, reaching Plymouth, England, was the first plane to cross the Atlantic. He was next assigned senior aide to the commander of Pacific Fleet Aircraft Squadrons, following which he returned briefly to Pensacola before touring the American embassies in Europe as assistant attaché for aviation. Towers' next assignments were as executive officer and then as captain of the U.S.S. *Langley*, the first American aircraft carrier. He was with the navy's Bureau of Aeronautics from 1928 to 1931, becoming, in April 1929, its assistant chief. A second appointment to this office in 1938 resulted in his being named chief a year later. Between these appointments he served as chief of staff to the commander of aircraft of the battle force, aboard the U.S.S. *Saratoga*, and as commanding officer of the Naval Air Station at San Diego. Later, he rejoined the *Saratoga*, remaining until 1938. With the Pacific Fleet (1942-44) as commander of its air force, Towers next became deputy commander in chief of the entire fleet and of Pacific Ocean Areas in February 1944, and commander in chief in November 1945. Two years later he retired with the rank of admiral, and joined Pan American World Airways as a vice president.

TOWN PLANNING. See CITY PLANNING.

TOY INDUSTRY. Toy production in 1955, estimated on a worldwide basis, increased about

18% over that of 1954. In the United States the value of toy output climbed to a record high of \$1.25 billion (in retail sales). The increased consumption in the United States is influenced by the growing child population, high employment, and greater consumer purchasing power. In 1954 the United States exported \$13,974,329 worth of toys, mostly to Canada and South America. Japan, however, is the world's largest exporter; the United States is second; and Germany ranks third. In the first eight months of 1955, American toy imports increased by 23% over those for a comparable period in 1954.

The toy industry in the United States leads the world in manufacturing facilities. About 60,000 persons are employed in some 2,000 plants, which have an annual payroll of \$180,000,000. Although plants are located in virtually every state, the concentration is particularly heavy in the Northeast, Middle Atlantic, and Pacific coast areas.

During 1955 the first official market and opinion survey of the American toy industry was completed. The report, sponsored by the Toy Manufacturers of the U.S.A., Inc., revealed some interesting statistics, including the following: (1) upwards of \$920 million dollars was spent on toys by American families during the 1954 Christmas season; (2) about 78% (33,000,000) of the families in the United States buy toys during the Christmas season; (3) the average American family spends about \$28 each on Christmas toys; (4) the major toy market is for children from two to six years of age; (5) women purchase about 75% of the toys sold; and (6) 60% of all Christmas toys are sold through department stores, variety stores, and five-and-ten-cent stores.

During 1955 increases in sales and production were shown in games, playground equipment, childrens' books, craft and do-it-yourself items, and Christmas decorations and ornaments. The 52d Annual Toy Fair, sponsored by the Toy Manufacturers of the U.S.A., Inc., was held in New York City in March 1955 and attracted 1,350 manufacturers and over 14,000 buyers.

TREASURY OF THE UNITED STATES. Expenditures of the United States government for the fiscal year ended June 30, 1955, amounted to \$64,494,075,559, or \$3,278,277,686 less than expenditures in the previous fiscal year. Net receipts during the same period were \$60,302,503,608, as compared with \$64,655,386,989 for the fiscal year 1954. Lower receipts reflected the tax reduction program in effect in 1954.

The government ended the fiscal year 1955 with a budget deficit of \$4,191,571,951, as compared with \$3,116,966,256 at the end of the fiscal year 1954. The U.S. Treasury closed the 1955 fiscal year with a general fund balance of \$6,215,665,047. The balance at the end of fiscal 1954 was \$6,766,455,061.

Public Debt.—The public debt of the government on June 30, 1955, subject to the legal limi-

Budget deficit (-)	-4,191,571,951	-3,116,966,256

¹ Internal revenue and customs receipts are stated on the basis of reports of collections received from collecting officers. Other receipts are reported on the basis of confirmed deposits in Treasury accounts. ² Distribution between income taxes and employment taxes made in accordance with provisions of Sec. 109(a)(2) of the Social Security Act Amendments of 1950, for appropriation to the Federal Old-Age and Survivors Insurance Trust Fund. Appropriation for the fiscal year has been reduced by \$350,230,985 representing overappropriation

Receipts from and Payments to the Public.—The total flow of money between the public and the federal government (indicated in Table 2) is sometimes referred to as "the consolidated cash budget." To derive the totals shown for receipts and payments, transactions of the trust funds are consolidated with budget transactions. Transactions between the two types of funds, such as interest paid by the Treasury to trust funds, are eliminated. Certain other noncash transactions are also eliminated in the consolidation. For example, interest which accrues on savings bonds is counted as a budget expenditure at the time of accrual. Since the interest is not paid in cash until the bond is redeemed, the consolidation eliminates the interest accruals and includes the interest paid on bonds which are redeemed.

The figures for federal receipts from and payments to the public are not the same as those for Treasury cash deposits and withdrawals as presented in the Daily Treasury Statement. For example, transactions from various agency accounts with commercial banks are not included in Treasury cash deposits and withdrawals, but are reflected in the figures shown in Table 2.

TABLE 2—RECEIPTS FROM AND PAYMENTS TO THE PUBLIC, FISCAL YEARS 1955 AND 1954
(In billions of dollars)

Description	Fiscal 1955 (actual)	Fiscal 1954 (actual)
Budget receipts	\$60.3	\$64.7
Trust fund receipts	9.5	9.2
Less: Intragovernmental transactions	2.0	2.1
Seigniorage on silver	...	...
Total receipts from the public	67.8	71.6
Budget expenditures	64.5	67.8
Trust fund expenditures	8.5	7.2
Net expenditures of receipts (-) of government-sponsored enterprises	1	-4
Less: Intragovernmental transactions	2.0	2.1
Net accrued interest and other non-cash transactions	3	6
Total payments to the public	70.8	71.9
Excess of payments over receipts	3.0	2

Note: Details may not add to totals because of rounding.
* Less than \$50 million. (Source: Review of the 1956 Budget.)

Savings Bonds.—Sales of Series E and H savings bonds during the first eight months of the calendar year 1955 were \$3,730 million, an increase of 12% over the \$3,325 million in sales during the same period of 1954. For the first eight months of 1955, Series E and H sales exceeded redemptions of both matured and unmatured bonds of these series by \$571 million, as compared with \$301 million for the first eight months of the previous year.

Of the \$18,586 million of Series E bonds which have matured since May 1951, when they first came due, more than 70% were still being held under the automatic extension plan. Holders of these bonds have earned \$540 million in additional interest during the extended maturity. The value of all series of United States savings

to the trust fund of \$90,000,000 in fiscal year 1952, \$210,000,000 in fiscal year 1953, and \$50,230,985 in fiscal year 1955.

³ Amounts equal to taxes on carriers and their employees (minus refunds) are appropriated to the Railroad Retirement account. ⁴ Expenditures are stated on the basis of checks issued and cash payments made as reported by government disbursing officers. ⁵ Includes adjustment effected during June 1955 between accounts of the military departments and of the mutual military program for cumulative expenditures and cumulative deliveries for the fiscal years 1950-55, inclusive. Where no figures appear on certain lines there was either no activity reported or comparative figures are not available on account of changes in classification.

bonds outstanding on Aug. 31, 1955, was \$58,703 million, of which \$39,553 million was in Series E and H bonds, an all-time record.

Money in Circulation.—Coin and currency in circulation outside the U.S. Treasury Department as of Aug. 31, 1955, amounted to \$30,316,575,-841. On the basis of latest census estimates, this represented a per capita circulation of \$182.87.

TREASURY INFORMATION SERVICE.

TRIBHUVANA BIR BIKRAM (full name TRIBHUVANA BIR BIKRAM JUNG BAHADUR SHAH BAHADUR SHAMSHER JUNG), king of Nepal: b. Nepal, June 30, 1906; d. Zurich, Switzerland, March 13, 1955. The titular head of Nepal (q.v.), he initiated a series of social and political reforms in the early 1950's which marked the ending of a hereditary feudal-type government which had ruled Nepal since 1846.

King Tribhuvana succeeded his father, Prithvi Bir Bikram, to the throne of Nepal on Dec. 11, 1911, at the age of five. Considered by the Nepalese as an incarnation of the Hindu god, Vishnu, he nevertheless had no political power and rarely made a public appearance. Actually, the country was governed by a hereditary prime minister of the autocratic Rana family. Spurred after World War II by growing demands within Nepal for a more democratic government, the king took a firm stand against the nobility, but on Nov. 7, 1950, was deposed through the efforts of the prime minister, Maharaja Mohan Shamsheer Jung Bahadur Rana. He subsequently took refuge in New Delhi, India, but was recalled on Feb. 15, 1951, when pressure was brought to bear on the Nepalese prime minister by the Congress Party of Nepal and by India's prime minister, Jawaharlal Nehru.

Following the king's return from exile, Prime Minister Rana was stripped of his powers, and plans were announced for the election of a constituent assembly to frame a democratic constitution. After an unsuccessful attempt to form a compromise cabinet, King Tribhuvana appointed one which excluded the former prime minister, thus bringing to a close the 104-year rule of the Rana family. The king then gave his cabinet authority to institute sweeping reforms aimed at relieving the Nepalese from burdens imposed by a feudal state. Communist activity and Nepalese unfamiliarity with democratic processes, however, contributed to political unrest and confusion, so that in August 1952, after the collapse of a Communist-inspired revolt, the king assumed complete governing powers.

The victim of a heart ailment, King Tribhuvana spent his last months in Europe undergoing medical treatment. Following his death, his body was flown from Zurich to Nepal and cremated on March 17, on the banks of the sacred Bagmati River. Crown Prince Mahendra Bir Bikram, whom the king had appointed as regent in February 1953, acceded to the throne on March 14, 1955.

TRIESTE. The former Free Territory of Trieste, established under the Italian Peace Treaty of 1947, comprised a strip of Adriatic coastline on the eastern part of the Istrian Peninsula. Under the 1947 treaty it had been divided into two military occupation zones: Zone A, under Anglo-American occupation (area, 86 sq. mi.; est. pop. 1954, 298,000); and Zone B, under Yugoslav occupation (area, 199 sq. mi.; pop. 1945, 67,461). On Oct. 5, 1954, a memorandum was initiated in London by representatives of Italy, Yugoslavia, the United States, and Great Britain, ending the

military occupation and dividing the territory between Italy and Yugoslavia. Italy obtained all of Zone A (which included the city of Trieste), with the exception of a strip of about 5 square miles in the vicinity of Crevatini. Yugoslavia obtained Zone B plus the Crevatini strip. Yugoslavia instituted civil control of its area on Oct. 25, 1954; Italy, on October 26.

During 1955 the joint Yugoslav-Italian boundary commission continued its work in defining the precise demarcation line agreed upon in 1954. Italy charged several times that Yugoslavia was illegally impeding the movement of migrants and property from the Yugoslav to the Italian sector. Yugoslavia accused Italy on March 18 of mistreating the Slovene minority on the outskirts of Trieste (city). On August 27, Yugoslavia was reported to have accepted an Italian request for a three-month extension (to Jan. 5, 1956) of the agreed period for the movement of migrants.

TRINIDAD AND TOBAGO. These West Indian islands off the northeast coast of Venezuela constitute a British colony aggregating 1,980 square miles in area (Trinidad, 1,864 square miles; Tobago, 116 square miles). The aggregate population was estimated at 698,000 in mid-1954 (in 1953: Trinidad, 645,300; Tobago, 33,000). Port of Spain (pop., 111,150) is the capital and chief port. United States naval and air bases are maintained on Trinidad.

A governor (Sir Edward Beetham, appointed Feb. 10, 1955) is assisted by a 9-member Executive Council (including 6 nonofficials—5 elected, 1 nominated) and a 26-member Legislative Council (including 23 nonofficials—18 elected, 5 nominated). Revenue in 1955 was estimated at BWI\$74,700,000 (the British West Indies dollar equals U.S.\$0.58); expenditure, at BWI\$73,800,000.

Enrollment in 355 primary schools was 132,000 by the end of 1953. There were also 8 intermediate, 139 private primary, and 14 secondary schools. A government Technical Institute was opened in San Fernando in 1954.

The colony's economic progress in 1954 was reflected in exports totaling (in sterling) £54,600,000 (£53,500,000 in 1953) and imports valued at £52 million (£49,200,000 in 1953). Production of crude petroleum advanced to 3,328,000 tons in 1954 from 3,147,000 tons in 1953; exports of refined petroleum totaled 4,665,000 tons (4,764,000 tons in 1953). Exports in 1954 (with comparative figures for 1953 shown in parentheses) included grapefruit, 7,655,000 pounds (14,006,000); oranges, 3,366,000 pounds (4,820,000); grapefruit juice, 762,000 gallons (1,467,000); lime juice, 21,900 gallons (62,700); orange juice, 166,000 gallons (295,000); cocoa, 7,880 tons (9,700); bananas, 5,540,000 pounds (2,610,000); coffee, 35,500 hundred-weight (21,200); and sugar, 150,000 tons exported from production of 174,000 tons (130,000 tons, from 153,000 tons).

A 32-mile pipeline from the Ortoire area to Point Fortin was completed in 1954, and the sinking of a marine oil well 6 miles from Cedros Point was begun. The Cocoa Board expected to complete in 1955 a new propagating station to make available 1 million clonal plants (rooted cuttings) per year. Cooperative societies numbered 52 in 1954, including consumer, fishing, marketing, and producer organizations; there were 384 agricultural credit societies, and 211 credit unions with more than 16,000 members.

There are 1,891 miles of main roads, including a new highway between Port of Spain and San Fernando, inaugurated by Princess Margaret during her 4-day visit to the colony early in February 1955, and 1,318 miles of local roads.

Piarco airport, 12 miles from the capital, is served by British, American, Canadian, Dutch, French, and several South American airlines. (See also BRITISH WEST INDIES).

TUBERCULOSIS. There are approximately 400,000 cases of active tuberculosis in the United States; about 100,000 are under treatment in tuberculosis hospitals. During 1954, 100,540 new cases were reported in the United States, as compared with 106,925 new cases in 1953, and 109,837 in 1952. The number of new cases reported each year is declining more slowly than is the death rate. In 1952 the death rate was 15.8 per 100,000 population; in 1953 it was 12.3; and the provisional rate for 1954 is 10. By contrast, death rates in 1900 and 1940 were 194 and 46, respectively. It should be emphasized that the size of the tuberculosis problem is measured more accurately by the number of new cases reported each year than by the change in death rate.

Treatment.—The past year was notable for the increasing number of unoccupied beds in tuberculosis sanatoria in certain localities. Many hospitals reported no patients awaiting admission for the first time in their history, and several institutions closed for lack of patients. The increase in unoccupied beds, where it occurs, arouses much notice, but in some parts of the country there is actually a shortage of beds. In any event, the number of cases in the entire country requiring hospitalization exceeds the number of beds.

Authorities agree that the decline in the number of new cases does not account for the decrease in hospitalized patients. It is due more probably to (1) shorter periods of hospitalization, and (2) the fact that more patients are now treated at home. Many patients now receive drug treatment after discharge from the tuberculosis sanatorium. Prehospital drug therapy, which was first tried in the years when there were long waiting lists and many patients worsened or died before beds became available, is also being used in some areas. The best treatment, however, calls for the admission to a tuberculosis hospital when the diagnosis is first made. The practice of having patients complete drug treatment at home after discharge appears feasible in selected cases where all conditions are favorable.

A new anti-tuberculosis drug was announced during the past year: Cycloserine, an antibiotic derived from the mold, *Streptomyces orchidaceus*. It is administered by mouth in a dosage of 1.0 gram a day. Its chief toxicity is on the nervous system; convulsions occasionally occur. Cycloserine has been used in relatively few cases of tuberculosis and its value has not yet been established. Experience with it thus far, however, suggests that it is not a potent drug in the same category with streptomycin or isoniazid.

The mainstays of tuberculosis chemotherapy are the three drugs, streptomycin, isoniazid, and para-aminosalicylic acid. Combinations of any two of these drugs are extremely effective. Other drugs used in treatment are viomycin, terramycin, and pyrazinamide. These are rarely drugs of choice; they are employed chiefly when patients' tubercle bacilli have become resistant and are no longer affected by the three drugs previously mentioned.

A number of questions regarding the chemotherapy of tuberculosis remain unanswered, primarily: (1) which combination of drugs is the most effective; (2) the optimum duration of drug therapy; (3) the types of pulmonary tuberculosis which require surgery in addition to drugs; and (4) how much rest is necessary when drugs are used. There is general agreement that all cases of active tuberculosis should receive drugs for at least a year without interruption. Many physicians continue drugs for 1½ or even 2 years. However, the optimum length of chemotherapy is in fact unknown. Pneumothorax (the partial collapse of the lung with air) is used much less than before drugs became available. Surgery, both resection and thoracoplasty, continue to be employed with much success.

Prevention.—In the control and prevention of tuberculosis, emphasis is placed chiefly on the removal from the general population of individuals who have the disease in its infectious form. Their detection is accomplished by the periodic X-ray of apparently healthy individuals in factories, schools, etc.; by X-raying patients in general hospitals; and by the liberal use of the chest X-ray in the physician's office practice. BCG, the vaccine made of attenuated tubercle bacilli, continues to be used in isolated instances where exposure to tuberculosis has been heavy. There is little dependence on it in the United States for the prevention of tuberculosis in the community at large.

NICHOLAS D. D'ESOP, *Chief, Tuberculosis Service, Veterans Administration Hospital, West Haven, Conn.*

TUNGSTEN (WOLFRAM). Mine production of tungsten in the United States has increased from 1,448 short tons of metal content in 1949 to 4,629 tons in 1953, and to 6,568 tons in 1954. Imports increased from 3,679 tons of metal content in 1949 to 14,360 tons in 1953, but declined to 11,494 tons in 1954. Consumption has varied widely, ranging from a low of 2,479 tons of metal content in 1949 to a high of 5,705 tons in 1951. Consumption declined, however, to 3,867 tons in 1953, and to 2,019 tons in 1954. In the first half of 1955, United States mine production was 3,738 tons of metal content, imports were 3,965 tons, and consumption was 2,158 tons. Almost all of the 1954 domestic production was purchased for the national stockpile. (See MINERAL PRODUCTION for table showing output of major producing countries).

TUNISIA. A French protectorate on the Mediterranean coast of North Africa. Area, 48,332 square miles; pop. (est. 1954), 3,700,000. The French numbered 143,977 in 1946; Italians, 84,935; other Europeans, 10,637; and native Jews, 71,543. Chief cities and populations (1946): Tunis, the capital, 364,593; Sfax, 54,637; and Bizerte, 39,327.

The People.—The Moslem majority consists chiefly of rural workers, peasants, and nomadic Bedouins (in the central and southern sections). French settlers (*colons*) are concentrated in the limited fertile area in the north. The French control the principal industrial and mining enterprises and predominate in the professions, skilled occupations, and higher civil service. The Tunisian nationalist movement is led mainly by Tunisian intellectuals backed by some 80,000 industrial and agricultural workers of the General Union of Tunisian Workers.

Government.—Tunisia has been a French protectorate since the Treaty of Bardo in 1881. Until 1955, nominal authority emanated from the bey of Tunis, although actual power was exercised by a French resident general appointed in Paris. On Aug. 31, 1955, a Franco-Tunisian agreement came into effect, retaining the Treaty of Bardo but providing for Tunisian autonomy under the bey, with France retaining responsibility for foreign relations and

UNITED PRESS

French Premier Faure (seated, with Tunisian Premier Tahar Ben Ammar (right), signs treaty on June 3, 1955, paving the way toward internal autonomy for Tunisia.

defense. On Sept. 17, 1955, Bey Sidi Mohammed al-Amin invested the first all-Tunisian cabinet since 1881. It consisted of 5 Neo-Destour ministers, 6 independents, and 1 Socialist, and was headed by Premier Tahar ben Ammar, independent.

The Franco-Tunisian agreement, signed on June 3, 1955, consisted of 3 conventions and attached protocols transferring authority in internal affairs to the Tunisian government, providing for Franco-Tunisian cooperation in the economic and cultural spheres, and defining the position of the French community in Tunisia. The Tunisian government is to take over responsibility for public order in stages over a 20-year period. Tunisian courts are accorded jurisdiction over cases involving Tunisians only, while mixed Franco-Tunisian courts are to be established within 5 years to handle cases involving a Tunisian and a non-Tunisian. The Tunisian government is given power over the educational system, and Arabic is established as the official language, although French is to have special status as a second language. The Tunisian government is to manage its own budget and financial affairs, although Tunisia will remain within the franc area and French economic interests are to be protected.

The French community is to retain representation in the economic chambers and the municipal councils. The French resident general is replaced by a high commissioner (Roger Seydoux, appointed Sept. 13, 1955) who is the depositary of French powers in Tunisia, protects the interest of the French population in Tunisia, and serves as an intermediary between the French and Tunisian governments. A mixed Franco-Tunisian Council of Arbitration is to be established in Paris to decide on disputes arising out of the new relationships.

Education.—In 1953 there were 641 public primary schools (136,226 indigenous and 32,435 nonindigenous pupils), 17 secondary schools (14,497 pupils), and 62 vocational schools (12,818 pupils). Private schools had an additional 12,752 pupils; and modern Koran schools, 33,271. There was one institution for higher education with 833 indigenous and 640 nonindigenous students.

Finance.—In the fiscal year 1954-55, revenue totaled 53,024 million francs; expenditure, 55,524 million. In 1954, France granted the equivalent of \$37 million toward Tunisia's economic and social development program.

Production.—The Tunisian economy is mainly agricultural and pastoral. Handicrafts are important, and there is some development of mineral industries and manufactures. Chief crops are cereals; 1954 yields in bushels were: wheat, 22,940,000; barley, 7,810,000; and oats, 790,000 (1953). Also important are oranges (1,059,000 boxes in 1954, prelim.) and olive oil (58,400 short tons in 1954, prelim.). Other crops are potatoes, flaxseed, dates, esparto grass, and grapes for wine. Livestock (chiefly sheep and goats) yield meat and dairy products. Forest products include cork (7,700 metric tons in 1954), timber, firewood, and tanner's bark.

In 1953 there were 338 industrial enterprises employing 80,865 workers. Chief manufactures are foodstuffs, chemicals, construction materials, textiles, leather goods, soap, and wood and cork products. Output of electric power (thermal) in 1954 totaled 203.5 million kw.-hr., a rise of 13%

over 1953. Production of chief minerals in 1954 was (in metric tons): phosphates, 1,846,000; iron ore, 951,800; lead ore, 41,700; and zinc ore, 9,500.

Foreign Trade.—Exports in 1954 totaled 42,690 million francs; imports, 59,211 million. Chief exports in order of value were (in metric tons): olive oil, 44,689; wheat, 147,939; phosphates, 1,948,464; iron ore, 905,849; and lead and alloys, 26,278. Imports are mainly machinery and parts, sugar, cotton cloth, petroleum products, and other manufactures and foodstuffs. France took 60% of Tunisia's 1954 exports and provided 76% of imports.

Transportation and Communications.—Roads totaled 9,120 miles in 1955, including about 4,340 miles suitable for heavy traffic. The railroad network aggregated 1,297 miles (route length). Tunisia has one international airport (El Aouina) and 10 secondary airports. Passenger cars numbered 27,798 in 1954; telephones, 32,215 (1955); and radio sets, 86,407 (end of 1953). There were 8 daily newspapers in 1952, with a total circulation of 113,000.

Principal Events, 1955.—Negotiations on Tunisian autonomy, based on former French Premier Pierre Mendès-France's offer of July 31, 1954, took place in Paris from September 1954 to May 1955. Heading the Tunisian delegation was Premier Tahar ben Ammar, a moderate nationalist. The principal Tunisian figure, however, was Habib Bourguiba, who, though not a member of the delegation, was the leader and spokesman of the Neo-Destour Party, the dominant political force in Tunisia.

The course of the nine-month negotiations was by no means a smooth one. The French, seeking to retain their controlling position in Tunisia's economy, defense, and external affairs, were faced with a growing nationalist movement which demanded more than the mere trappings of self-rule. However, most Tunisian leaders, particularly Bourguiba, recognized that Tunisian economic development and modernization was impossible without French aid, which meant continuing French supervision and influence. Bourguiba's assent to the draft terms was secured at a private meeting in Paris between the Neo-Destour leader and French Premier Edgar Faure on April 21. The conventions and protocols were then signed by Faure and ben Ammar in Paris on June 3 and came into effect on August 31, with the deposit of ratifications in the French capital.

The 1955 agreement provided for Tunisian self-rule in the internal spheres of public order, justice, administration, education, and finance, with France retaining control of defense and foreign relations. Certain powers, such as education and finance, were handed over immediately to the Tunisians. Others, such as control over the police and the judiciary, are to be transferred in stages over a period of 20 years. Participation of the French community in Tunisian political institutions is preserved, and French economic interests are protected. Shortly after the agreement took effect, ben Ammar headed a new cabinet on September 17, the first all-Tunisian government since 1881. (See also above, under *Government*.)

The new status of Tunisia by no means satisfied all wings of the Tunisian nationalist movement. Bourguiba, who returned to Tunisia from French exile on June 1, hailed the new relationship as a step toward full independence. The anti-Western, traditionalist wing of the Neo-Destour, headed by Salah ben Youssef, de-

nounced the agreement as guaranteeing continuing French overlordship. Ben Youssef was expelled from the Neo-Destour on October 12, and his expulsion was confirmed at the party congress the following month. At the Neo-Destour Congress held at Sfax, November 15-18 (the party's first legal congress since 1938), Bourguiba was re-elected president, and a program was adopted for raising living standards and establishing a constitutional government. Ben Youssef's faction, however, continued to agitate against the agreement, and violent clashes between the nationalist groups took place in early December. Despite the conflict among the nationalists, security conditions as a whole had improved considerably since the surrender of most of the anti-French *fellagha* bands in December 1954.

M.J.G.

TUNNELS. Third Lincoln Tube.—Constructors pushing the third tube of the Lincoln Tunnel under the Hudson River, from New Jersey to New York City, crossed the state line on Oct. 5, 1955. The \$100 million shield-driven tunnel project was begun in 1952 and is scheduled to be completed early in 1957. Total underriver length will be 5,486 feet. The work is progressing in compressed air approximately 100 feet deep in the silty river bottom. When finished, this tube will carry two lanes of traffic, bringing to six the total number of lanes in the three tubes. It will be possible to use four lanes in the direction of heavy traffic, and two in the opposite direction, thus doubling present rush-hour capacity in and out of New York City via the Lincoln Tunnel.

Baltimore-Harbor Tunnel.—Construction was begun in 1955 on a twin-tube tunnel under Baltimore Harbor. It is to be a trench-type structure 6,300 feet long, with approaches on either side totaling 14.3 miles. Plans call for completion of the entire \$155 million project in December 1957. Trench construction of the two tubes means that they will be prefabricated in steel shell sections and sunk into place in a dredged trench across the harbor. The bottom of the tunnel will rest 101 feet below the river's surface at its deepest point.

Hampton Roads.—A combination bridge and tunnel will cross Virginia's Hampton Roads. A 6,900-foot tunnel section will have trestle approaches on either side totaling 10,000 feet. The cost of the whole project will be \$58.5 million. This will be another trench-type tunnel project, with 23 tunnel sections to be floated out and sunk into place in the prepared trench.

Tecolote Tunnel.—A most unusual tunnel holed through early in 1955 was a U.S. Bureau of Reclamation water-supply tunnel in the Santa Ynez Mountains of California. It was distinguished by having been bored through several hundred feet of hot rock and steaming hot water. The \$43.8 million tunnel, started in 1950, is 6.4 miles long. The 7-foot bore progressed normally until the zone of hot groundwater was reached. About \$1 million worth of air-conditioning equipment had to be installed on the project, and pumps were required to remove the water so that working conditions could be made bearable.

Delaware Water Supply Tunnel.—The world's longest tunnel is New York City's 85-mile Delaware Aqueduct. With construction of new water supply projects beyond its upstream end, there have been shorter tunnels built to connect new reservoirs to the aqueduct. Late in 1954 the city's Board of Water Supply contracted for another 20 miles of 11-foot, 4-inch diameter con-

crete-lined tunnel (called the West Delaware Tunnel) through deep, hard rock. The total length of this tunnel, when completed, will be 44 miles, making it the world's second longest.

Colorado Tunnels.—Two tunnels are planned to be built under the Continental Divide in Colorado, according to present plans. First, a \$16 million vehicular tunnel under the divide moved a step forward in 1955 when legislation was passed to put state credit behind bond financing of the planned toll facility. Second, and more important in many ways, would be a \$98 million water-supply project, including a tunnel planned to pass beneath the divide. This 23-mile bore would carry west slope water of the Blue River to the thirsty east slope city of Denver. The tunnel alone would cost over \$36 million.

Canada.—A 7.5-mile horseshoe-shaped tunnel through rock was holed through in northeastern Quebec in June 1955. This 31-foot finished diameter bore is to carry water to the underground hydroelectric powerhouse of the Bersimis project of the Quebec Hydro-Electric Commission. This is a very large-diameter rock tunnel, and it is further distinguished by having at its downstream end a 680-foot vertical surge shaft—a sort of safety valve to the air above from deep inside the mountain. This vertical shaft is being mined to 84-foot diameter at its top.

Australia.—A rate of tunneling that was hailed in May 1955 as a new world record was set in Australia on the Ecumbene-Tumut Tunnel of the Snowy Mountain hydroelectric development. The work advanced 402 feet in a six-day week on a 24-foot diameter working face. This waterpower tunnel is to be a 14-mile link in the extensive hydroelectric project. The construction was a joint venture of United States firms called Kaiser-Walsh-Perini-Raymond.

Scotland.—A probable European record for tunneling in rock was established on the Breadalbane project of the North of Scotland Hydro-Electric Board. A 10-foot tunnel was pushed 428 feet through rock in seven 24-hour working days.

Sweden.—In this land of underground construction—factories, garages, shelters, and power plants—rock tunnels larger than any others in the world have come to be almost commonplace. Sweden's latest tunnel will have a cross-sectional area of 3,875 square feet. Lightweight drilling equipment with hard metal bits has improved and sped up rock excavation to the extent that Sweden has assumed a degree of leadership in tunneling.

TURKEY. The Republic of Turkey (area, 296,185 square miles; pop., provisional figures of the 1955 census, 24,109,641) consists of Anatolia (Asia Minor) and Eastern Thrace (European Turkey). The country's capital is Ankara (1955 pop., 552,369); other principal cities include Istanbul (formerly Constantinople; pop., 1,240,233), Izmir (431,560), Adana (242,716), Bursa (218,252), and Eskişehir (140,791). The majority of the people are Moslems (98%) and speak Turkish as their mother tongue (88%). Of the total population 71.5% live in rural areas.

Government.—Turkey is a republic, and all men and women over 21 years of age are entitled to vote for the unicameral Grand National Assembly, which serves for a four-year term, unless it dissolves itself sooner. Each province (*villayet*), of which there are at present 66, serves as an assembly election district, and voting is by

plurality and generally for party lists. In the most recent election of May 2, 1954, the Democratic Party polled 58%, the Republican People's Party 35%, and the Republican National Party 5% of the vote; the assembly was originally composed of 504 Democrats, 31 Populists, 5 Nationalists, and 1 Independent.

The president of the republic is elected by a majority of the assembly from its own membership for the duration of the assembly's term. The present incumbent, Mahmud Celâl Bayar (Democrat) was reelected for a second term on May 14, 1954. The prime minister is selected by the president and, with his cabinet, is confirmed by the assembly. Adnan Menderes, leader of the Democratic Party, has been premier since 1950. The opposition is divided among the Republican People's Party of İsmet İnönü and Kasım Gülek, the newly formed Freedom Party of F. L. Karaosmanoglu and F. Çelikbaş, and the Republican National Party. (See also below, *Principal Events, 1955.*)

Finance.—The Turkish lira (T £) is officially pegged at U.S.\$0.3571, although a variety of lower official rates are also in effect. The free rate, which at the beginning of 1955 was \$0.147, had fallen by December to \$0.10. The budget for the year ending Feb. 29, 1956, called for expenditures of T £2.96 billion and anticipated revenues of T £2.79 billion. In 1954, receipts from taxes, customs, state monopolies, stamp duties, and other sources totaled T £2.09 billion. According to official figures the internal public debt stood at T £2.16 billion, and the foreign debt at T £990 million (July 1955); the Central Bank's gold and foreign exchange holdings amounted to T £590 million, and its foreign liabilities, T £793 million (August 1955); and monetary circulation totaled T £1.94 billion (September 1955).

Since the formulation of the Truman Doctrine in 1947, the United States has provided Turkey with approximately \$1 billion in military and \$566 million in economic and technical aid.

Education.—Nearly all Turkish schools are operated and supervised by the Ministry of Education. In 1954-55 approximately 1,877,000 pupils attended the primary grades; in 1952-53, there were 86,000 students in the 474 secondary schools, 30,000 in the 95 lycées, 38,800 in the 321 professional schools, and 26,300 in the 33 higher institutes and universities. Literacy has risen steadily since the 1920's, but in 1950 amounted to only 34.6% of the population over 7 years of age.

Economic Conditions, 1955.—The Turkish economy in 1955 was undergoing a severe crisis. Over the past seven years the government's development efforts had roughly doubled agricultural yields and raised industrial output and national income by nearly one half. But a period of high cash supports for crops, combined with heavy capital expenditures and growing consumer demand, led to domestic inflation and a consistently adverse balance of trade. The 1954 drought demonstrated how precarious Turkey's recent prosperity had been. Unable to furnish promised wheat to her trade partners, the government's diplomatic efforts were largely directed at satisfying or stalling the most urgent demands of her creditors.* Turkish efforts to secure a \$300 million loan from the United States remained fruitless, but American aid for the fiscal year 1956 was raised from \$70 million to \$100 million.

The government, despite warnings from many quarters, continued to force the pace of development. Construction of new port facilities proceeded at Istanbul, Izmir, and Samsun; 8 new sugar refineries were being built; and contracts had been let for 21 new cement factories, 18 hydroelectric projects, and 3 new radio stations. A disproportionate amount of the country's capital however, was invested in nonproductive facilities such as residential building. Foreign exchange difficulties led to a curtailment in the flow of imported spare parts and raw materials essential for the very industrial development the government was sponsoring.

* Thus Yugoslavia in January 1955 suspended all exports to Turkey in view of a \$35 million deficit on the previous year's trade, and resumed deliveries on a much reduced scale in May. An agreement with Britain provided for the payment over a 5-year period of Turkey's accumulated sterling debt. A new trade agreement with Italy in April provided for annual delivery of 100,000 tons of wheat for 5 years.

Agriculture.—Of the total land surface, in 1953 about 45% consisted of meadows and pastures, 22% was used for cereals and other field crops, 13% was covered with forest, 2% was vineyards and gardens, and 17% was unproductive. Only one tenth of the land sown to cereals was irrigated. After a number of bumper crops, a serious drought in 1954 reduced the wheat harvest by about 40%. Principal crops in 1954 were produced in the following amounts: wheat, 4.9 million metric tons; barley, 2.4 million tons; sugar beets, 1.2 million tons; potatoes, 1 million tons; cotton, 142,000 tons; hazelnuts, 127,000 tons; and tobacco, 100,000 tons. Production of cereals in 1955 was estimated at 13,000,000 tons, or 3,369,000 tons more than in 1954.

Mining.—In the decade since World War II, Turkey has substantially increased her mineral production. The output of iron ore has increased by four times; copper, by two and one-half times; and coal, by one half. Chromite and manganese production declined slightly after setting all-time records in 1953. Production figures for 1954 were as follows: coal, 5.7 million metric tons; lignite, 2.1 million tons; chromite, 530,000 tons; iron ore, 480,000 tons; manganese, 48,000 tons; copper, 25,000 tons; and crude petroleum, 59,000 tons.

Industrial Production.—Industrial production has increased steadily since 1945, with the most notable advances registered in the sugar, steel, and cement industries. Output of major industrial products in 1954 was as follows: electric power, 1.3 billion kw.-hr.; coke, 313,000 tons; steel, 169,000 tons; pig iron, 196,000 tons; artificial fertilizers, 25,000 tons; cement, 707,000 tons; refined sugar, 199,000 tons; and cotton and woolen textiles, 137 million meters.

Foreign Trade.—Turkey's exports in 1954 were valued at T £938 million, and imports at T £1,339 million—decreases of T £171 million and T £152 million, respectively, from 1953—leaving a slightly larger unfavorable trade balance (T £-401 million). Figures for the first eight months of 1955 indicated slightly lower exports (mainly due to the poor cereal crop in 1954) and higher imports. Exports consist largely of agricultural products (tobacco, T £240.5 million in 1954; cereals, T £215.8 million; and cotton, T £146.8) so that foreign earnings depend heavily on weather conditions and prices for a few commodities. The leading imports are machinery, building materials, textiles, iron and steel, and petroleum. Turkey's major trade partners are West Germany (17.3% of imports and 18% of exports), the United States (15% and 17.4%), and Great Britain (8.7% and 6.9%).

Transportation and Communications.—Turkey's road network, although inadequate, is being rapidly expanded and improved. At the end of 1954 there were 16,778 miles of stabilized highway serving 23,938 passenger cars, 5,510 buses, 24,722 trucks, and 6,587 motorcycles. (See also *Highways.*) The total railway net measures 5,293 miles, nearly all of which is single track. The Turkish State Airways connects the principal towns and cities of Turkey, and a number of major foreign airlines link the nation with all parts of the world. The Turkish Maritime Lines, which previously concentrated on coastal and Mediterranean traffic, began a regular monthly passenger-freight service between Istanbul and New York in September 1955. Turkey has three radio stations, all government operated; 935,000 radio sets were in use at the beginning of 1955.

Principal Events, 1955. Foreign Affairs.—In 1955, Turkey entered into close relations with

her Near Eastern neighbors and thus continued to play a leading part in the free world's defense planning for that region. In the pact of mutual cooperation between Iraq and Turkey (the Baghdad Pact), signed on February 24 and unanimously ratified by the Turkish Assembly on February 26, the two countries undertook "to cooperate for their security and defense." By the time the Ministerial Council, provided for by the pact, met at Baghdad (November 21), Britain, Pakistan, and Iran had joined the treaty. Hopes that other Arab countries would join the pact failed to materialize. When Syria, in March, joined Egypt and Saudi Arabia in outlining the principles of a new military-economic treaty, the Turkish-Syrian border was temporarily closed amid mutual recriminations.

In April, Turkey participated in the Asian-African Conference (q.v.) held at Bandung, Indonesia. On May 3, the United States and Turkey signed the first bilateral agreement for the peaceful use of atomic energy. Earlier Turkey, Greece, and Yugoslavia supplemented their year-old alliance by providing for a Balkan Consultative Assembly (March 2). But Greece and Turkey took sharply differing positions on the Cyprus question. Presenting his country's case, Premier Menderes declared that "maintenance of the status quo is the minimum acceptable to Turkey. If a change occurs in the status of the island it should revert to Turkey." As a result, discussions in London (August 29—September 7) among Britain, Greece, and Turkey ended in deadlock. (See also *CYPRUS*.)

Domestic Events.—The Cyprus issue also provided the immediate cause for the most severe internal crisis which Turkey experienced in 1955. Reports from Salonika, Greece, of a dynamite explosion near the home where Kemal Atatürk, founder of the Turkish Republic, was born led to anti-Greek mass demonstrations which turned into frenzied rioting in Istanbul and Izmir on September 6. In Istanbul the mobs smashed and looted stores and homes of Greek-speaking citizens, other non-Moslems, and in some cases wealthy Turks, and set fire to some 20 Greek churches. In Izmir the Greek consulate and homes of Greek officers with NATO's southeastern command were attacked. In Istanbul alone at least 400 victims of the rioting were hospitalized; preliminary damage claims filed with the authorities by early November amounted to \$25 million. The government proclaimed a state of siege in Istanbul, Izmir, and Ankara, and expressed its profound regrets over the incidents. Some 3,000 suspects were held for questioning by the police. On September 8 the North Atlantic Council was called into emergency session to consider the situation.

One of the central issues in the internal political debate in 1955 was the amount of freedom of expression which independent journalists, the opponents of Premier Menderes, and even his party followers were to enjoy. On March 18, H. C. Yalçın, 80-year-old editorial writer for the People's Party's *Halkçı*, was released after 3½ months in prison for "insulting" the premier. Kasım Gülek, leader of the opposition, was repeatedly arrested for his vigorous criticism of the govern-

ment. In August the People's and National Parties announced that they would boycott the provincial and municipal elections on September 26 and November 15. Erol Güney, a naturalized Turkish citizen and reporter for *France Presse*, was arrested on March 19 on unspecified charges and subsequently denaturalized and deported. In October a group of 19 deputies were expelled or forced to resign from the Democratic (government) Party for sponsoring a bill that would have liberalized the stringent press laws on some points. In December the dissident group, which had grown to 30 deputies, formed the Freedom Party.

Even those who stayed in the Democratic fold showed signs of restiveness, and events indicated that the political center of gravity was shifting from the premier to the assembly majority. In a heated caucus debate on November 29 the Democratic deputies reviewed Turkey's economic status and policies, and forced the resignation of the Menderes cabinet, which was held responsible for the growing crisis. Premier Menderes, who in a dramatic plea had won a personal vote of confidence, was reappointed by President Bayar to form another cabinet, his fourth in five years. On December 18 the new cabinet of 18 ministers, including 9 holdovers, won the assembly's confidence by a vote of 398 to 58 after promising a modification of the forced pace of economic development and a return to more democratic procedures toward the opposition. On December 22 the Democratic majority decided on a full-scale parliamentary inquiry into alleged irregularities in the issuing of foreign exchange permits, with a view to possible impeachment proceedings against three members of the outgoing cabinet.

UNION OF SOVIET SOCIALIST REPUBLICS. The USSR has the largest contiguous territory of any nation, and ranks third in the world in population, following only China and India. The areas and populations of the Soviet republics constituting the USSR in 1955 are shown in the accompanying table.

AREAS AND POPULATIONS OF THE SOVIET REPUBLICS

Republic	Area (sq. miles) ¹	Population (estimated) ²
Russian SFSR.....	6,500,000	121,200,000
Ukrainian SSR.....	223,000	42,900,000
Belorussian SSR.....	80,000	9,300,000
Kazakh SSR.....	1,042,470	7,200,000
Uzbek SSR.....	150,000	6,300,000
Georgian SSR.....	29,000	3,600,000
Azerbaijani SSR.....	33,000	3,300,000
Lithuanian SSR.....	25,000	3,000,000
Moldavian SSR.....	13,000	2,700,000
Latvian SSR.....	25,000	2,100,000
Kirgiz SSR.....	76,000	1,800,000
Tadzhik SSR.....	55,000	1,800,000
Armenian SSR.....	11,500	1,500,000
Turkmen SSR.....	187,000	1,500,000
Estonian SSR.....	17,370	1,200,000
Karelo-Finnish SSR.....	69,000	600,000
Total.....	8,536,340	210,000,000

¹ Area figures taken from *The Sixteen Republics of the Soviet Union*, by N. Mikhailov, USSR Embassy, Washington, D.C., 1951. ² Population statistics based on 1954 USSR election districts, dividing the nation into regions of 300,000 people each.

The largest Soviet cities are Moscow, the capital (est. 1954 pop., 5,400,000), and Leningrad (est. 1954 pop., 3,300,000). In other regions, the biggest cities are: Kiev, in the Ukraine; Gorki, in the Volga Valley; Baku, in the Caucasus; Sverdlovsk, in the Urals; Novosibirsk, in Siberia; and Tashkent, in Central Asia.

Despite the growth of population in Soviet Asia, 72% of the Soviet people still live in the European USSR west of the Urals. Siberia contains 14% of the population; Central Asia, 9%; and the Caucasus, 5%. The Soviet populace was still predominantly rural in 1955, with only 83 million persons (40% of the total) residing in cities. Great Russians constitute 50% of the population, and Ukrainians, 20%; the remainder is divided among 58 ethnic groups. About 20% of the population is of Mongoloid stock.

Religion.—The Soviet government is officially atheistic, and disseminates atheistic propaganda through its press, schools, museums, theaters, and Communist-led public organizations. In 1955, however, the USSR press complained that religion was still strong, with the largest following among the Russian Orthodox, Sunnite Moslem, Roman Catholic, Lutheran, Baptist, Judaic, and Buddhist groups.

Education and Culture.—In 1955 the USSR had

approximately 57 million students, with 2 million studying in the nation's 800 colleges and universities, 1,790,000 enrolled in the 4,000 vocational high schools, and about 20 million receiving training through night schools, adult education courses, or correspondence schools.

During 1955 the grade and high school curricula were altered, decreasing the classroom time devoted to the humanities to 47% of the total and increasing the time allotted to mathematics and science to 37%. Grades 1 to 4 now include as regular courses manual labor; grades 5 to 7, machine shop; and grades 8 to 10, practice work in farming, machine building, and electronics.

The Soviet press complained in 1955 about the mass student failure in mathematics and the Russian language in many grade schools. Disciplinary troubles were also reported in both grade and high schools, and the government recommended that unruly students be expelled and forced to take useful jobs.

The Soviet Union in 1955 had 60,000 motion picture theaters, and its 390,000 libraries contained 1.2 billion books. During the year the USSR published approximately 1 billion books, the largest categories of which were schoolbooks, technical manuals, and propaganda pamphlets. There were 7,200 newspapers with a total circulation of 47 million copies, and 1,700 magazines with a combined circulation of 13 million.

Government and Political Developments, 1955.—

The USSR is a dictatorship ruled by the powerful policymaking Presidium (formerly Politburo) of the Central Committee of the Communist Party of the Soviet Union. The formal framework of government, however, as of the close of 1955 was as follows:

(1) The Council of Ministers, consisting of a premier (Nikolai A. Bulganin), five first vice premiers (Vyacheslav M. Molotov, foreign minister; Lazar M. Kaganovich, chairman for the State Committee of Labor and Pay; Anastas I. Mikoyan; Mikhail G. Pervukhin; and Maksim Z. Saburov, chairman of the State Economic Commission), 8 vice premiers, and some 60 ministers or heads of organizations of ministerial rank. The Council of Ministers is the chief executive and legislative organ of the USSR, and is appointed by the Supreme Soviet or the latter's Presidium. The premier and five first vice premiers also constitute an inner cabinet, which on occasion meets separately.

(2) The Presidium of the Supreme Soviet, consisting of President Kliment E. Voroshilov (who is considered the president of the USSR), 16 vice presidents (the presidents of the 16 Soviet republics), a secretary, and 15 members. It has legislative, appointive, judicial, and treaty-making powers.

(3) The Supreme Soviet of the USSR, consisting of two equal houses elected for four years: the Soviet of the Union, with 708 deputies (one deputy per 300,000 inhabitants); and the Soviet of Nationalities, with 25 deputies from each Soviet republic, 11 from each autonomous republic, 5 from each autonomous region, and 1 from each national area. The Supreme Soviet meets only one to two weeks each year and, in the interim, delegates its supreme legislative power to the Council of Ministers and the Presidium.

All of the officials named above are also members of the all-powerful Presidium of the Central Committee of the USSR Communist Party. The other members of this party presidium are: Nikita S. Khrushchev, first secretary of the Central Committee of the USSR Communist Party; M. A. Suslov, a USSR party secretary; A. I. Kirichenko, first secretary of the Ukrainian Communist Party, and Georgi M. Malenkov, USSR minister of electric power stations.

The most spectacular event on the USSR internal political scene during 1955 was the resignation of Premier Georgi M. Malenkov on February 8. His letter of resignation, which he did not read, apologized for his inexperience in local political work, his lack of experience as an economic minister, and his responsibility for the unsatisfactory state of USSR agriculture. Upon the nomination by Secretary Khrushchev, Defense

Minister Bulganin was then appointed USSR premier on the same day.

In actuality, Malenkov's apology appeared very unreal. He had had much experience in local political work as a past leader of Moscow's college Communists; and during World War II, though not formally a cabinet minister, he supervised the entire Soviet aircraft industry. Khrushchev, rather than Malenkov, appears to have been mainly responsible for farm difficulties in the post-Stalin era.

Another unusual circumstance connected with Malenkov's resignation was Khrushchev's statement that the "Council of Elders" preferred Bulganin as premier. No such council had ever been mentioned before—nor was it mentioned again in 1955—by the Soviet press. Whether this body is a Communist Party or Soviet governmental organization still remains unexplained.

As expected, Malenkov's resignation was followed by considerable changes in the USSR governmental and Communist Party hierarchy. Malenkov himself was demoted to a vice premier and minister of electric power stations. On February 9, Bulganin was replaced as defense minister by Marshal Georgi K. Zhukov, the greatest Soviet field commander during World War II. In March, three new first vice premiers and four new vice premiers were appointed to the Council of Ministers. No less than 27 cabinet ministries received new chiefs. Six members of the USSR Supreme Court were dismissed and replaced by 7 new appointees. On March 11, ten officers of the USSR Army and Air Force were promoted to the rank of marshal or chief marshal. Regional Communist Party chiefs were purged in the Volga Valley and northern European USSR. Six former police officials in Georgia were executed, and two others were sentenced to life imprisonment for allegedly conspiring to seize supreme Soviet power with the late Kremlin collective leader, Lavrenti Beria, who himself had been executed in 1953. Two newcomers, Kirichenko and Suslov, were added to the party Presidium, and three others were appointed as USSR Communist Party secretaries. On Oct. 8, 1955, Foreign Minister Molotov was forced to publish an apology for a minor ideological error in relating the progress of "socialism" in the USSR.

By these personnel changes at a high level, Khrushchev and Bulganin apparently sought to consolidate their power. At the close of 1955 they appeared to be the new chiefs of the post-Stalin collective leadership in the USSR, replacing the earlier triumvirate of Beria, Molotov, and Malenkov. In economics the new leadership stressed the fast expansion of heavy, war-potential industry, rather than consumer goods as stressed by Malenkov. By contrast, in politics Khrushchev and Bulganin reduced the forced-labor sentences for a number of minor crimes; and in foreign affairs—at least through much of the year—they pursued a shrewd policy of Communist infiltration by friendship, rather than by the former crude methods of aggression. (See below, *Foreign Affairs*, 1955.)

Finance.—The 1955 plan for budget revenues and expenditures is shown in the accompanying table. The official exchange rate is 4 rubles per U.S.\$1.

The proportions of the various items in the 1955 budget were approximately the same as during Malenkov's premiership and before Stalin's death. The order of importance of all budget expenditures in 1955, according to the most detailed breakdown possible from published data,

Loan repayment.....	10.2	2	12.2	2
Total.....	552.8	100	563.5	100

was as follows (in billions of rubles): defense, 112.1; heavy industry (including war industry), 101.2; education and propaganda (including military training in civilian schools), 68.5; secret (probably military or military-economic), 57.2; agriculture, 55.1; public health and militarized sport, 30.5; social security (including military pensions), 25; transport and communications, 23; social insurance, 20.8; administration, 12.6; state loan repayment, 12.2; and light industry and trade, 11.5. As these figures indicate, the emphasis of the Soviet regime remained in 1955 on militarism and heavy, war-potential industry.

There is no true local taxation in the USSR, all tax funds going into the above-described combined budget, which includes 80,000 regional and local budgets. In 1955, the USSR central government itself spent 77% of the budget appropriations and turned over 23% to the regional and local authorities.

Like other recent Soviet budgets, that for 1955 showed a slight excess of revenue over expenditures, thus attempting to reduce inflation by withdrawing currency from circulation. The "profits tax" is levied on both state enterprise and cooperatives, with light industry paying the largest share. The 1955 "secret" budgetary revenue probably includes earnings from unfair trade with Soviet satellites, as well as income from state-owned machine-tractor stations within the USSR.

Personal savings accounts in the USSR during 1955 totaled 48 billion rubles. During May the annual state 20-year loan was issued, with a total subscription of 34,276,973,000 rubles. Bonds, purchasable only by the population, are actually lottery tickets. One fourth of the bonds will win prizes equal to 2% interest on the total bonds. The remaining bonds will eventually be redeemed at face value.

Armed Forces.—The Soviet Army in 1955 had a strength of approximately 3 million men, organized in 175 divisions, of which 65 were motorized or mechanized. In preparation for wartime mobilization, Soviet stockpiles of arms held a sufficient quantity of tanks, mortars, antitank guns, field artillery, and antiaircraft guns to equip 300 divisions. During the year the USSR claimed it was reducing its land army by 640,000 men.

The Soviet Navy in 1955 was estimated to comprise 800,000 men, manning 3 old battleships, 24 light cruisers, 125 destroyers, and 400 submarines. Thus the Soviet Union had the world's second largest navy (the United States being first), and its largest underwater fleet. Some of the submarines and cruisers are equipped to launch guided missiles. The naval air force consisted of 3,500 planes, all land-based since there were no known Soviet aircraft carriers. (See also NAVAL AFFAIRS.)

The Soviet Air Force in 1955 had 20,000 first-line planes and 20,000 others in reserve. Three fourths of its fighter planes are jet-propelled. There are also 2,500 twin-jet medium bombers. Though its strategic bombing force is still small, the USSR has at least several hundred big bombers capable of carrying an atom bomb from 6,000 to 10,000 miles. (See also AERONAUTICS.)

The size of the Soviet stockpile of nuclear weapons is unknown. However, a speech in May by Defense Minister Zhukov indicated that the USSR possessed at least 200 hydrogen bombs and 2,000 atom bombs. The Soviet Army is known to be experimenting with small atomic weapons, and has already tested an atomic cannon with a range of 30 miles. On November 26 the Soviet press confirmed the United States Atomic Energy Commission's report that the USSR had recently set off its largest atomic explosion to date. Party Secretary Khrushchev confirmed American suspicions that it was a hydrogen bomb, and that it had a power of several million tons of TNT. Japanese atomic scientists believed that this bomb was exploded in the Gobi Desert of Outer Mongolia. Also during 1955, Soviet research in guided missiles continued. A Soviet rocket has already been fired to a height of 240 miles.

In January 1955 a new "Ready for Labor and Defense" test was introduced for organized sportsmen in the USSR. This is a type of Soviet decathlon, combining track, field, swimming, and military skills. All Soviet athletes are pressured to attempt to pass the test. In addition, during the winter, all members of the Komsomol (Young Communist League) were urged to make rifle shooting one of their four main winter sports.

Manpower.—Excluding collective farmers, the total number of manual workers, white-collar workers, and professional people in the Soviet Union during 1955 was approximately 50 million, including perhaps 6 to 7 million in prison labor camps. At least half of the total labor force were women, including 1 million female teachers, and 2 million women doctors, nurses, and medical assistants. In addition, tens of millions of women worked on the collective farms. During the year the Soviet press urged more women to work in industry, transport, agriculture, and construction.

There were 16 million organized sportsmen in the USSR in 1955, the largest number in So-

viet history. This total included athletes in sport clubs at factories, offices, collective and state farms, machine-tractor stations, high schools, and colleges.

The Komsomol also achieved in 1955 its largest membership in Soviet history—18,825,327. During the year the organization was under considerable pressure to contribute youths to work in new governmental economic undertakings. Party Secretary Khrushchev urged that 100,000 Komsomol members move to North-Central Asia to till virgin soil, and that another 100,000 work in the chain of large cement mills the USSR is now constructing.

Standard of Living.—Since the new collective leadership of Bulganin and Khrushchev re-emphasized the old Soviet policy of favoring heavy industry at the expense of all other branches of the economy and abandoned Malenkov's modest program for a slight increase in the output of consumer goods, the Soviet standard of living remained very low in 1955. For the first year in more than half a decade, no price cuts in consumer goods occurred. Food supplies, though adequate, still provided a badly balanced diet. Clothing remained high-priced, of poor quality, and in short supply. Only Moscow, Leningrad, and a few other cities had gas for cooking in private homes. The most acute problem was the urban housing shortage, which has resulted in an average of 4 persons living in each dwelling house room. (See also STANDARDS OF LIVING.)

In an attempt to ease the housing shortage, the USSR government and the Communist Party issued a joint decree on November 9, which banned costly over-ornamentation in Soviet architecture, ordered mass construction of buildings from standard blueprints, abolished the USSR Academy of Architecture, and urged building designs to be more practical and useful. As a result of this decree, the chief architects of Moscow, Leningrad, and a number of other leading Soviet cities were dismissed and relegated to less important jobs.

Also in November the government legalized abortions for the first time since 1936. The reason for this change in official attitude was explained by the necessity of putting an end to the large number of harmful, illegal abortions that had been taking place.

Agriculture.—In 1955 the USSR had 90,700 collective farms, more than 5,000 state farms, and about 9,000 state-owned machine-tractor stations renting heavy farm machinery to the collectives. Field work in certain crops was fairly well mechanized, with agriculture utilizing 1,400,000 tractors, 350,000 harvesting combines, and 450,000 motor trucks. Only one fifth of USSR collective farms, however, had electricity.

During the year a series of agricultural innovations were undertaken in an effort to bring farm production up to plan. Henceforth the amount of livestock products which a collective farm must sell to the state will be calculated on the basis of the collective's harvests of field crops, rather than, as in the past, on the amount of land belonging to the collective.

In April 1955 the USSR Communist Party ordered 30,000 urban Communists to move into the countryside and become directors of collective farms. In addition, the amount of field crops that a collective must sell to the state will no longer be calculated on the basis of the collective's total arable land. Instead, the state stipulates how much produce each collective must sell, with the

collective then planning how much to sow in order to meet these forced sales. In turn, the local government organizations collecting food from the farms are encouraged to buy more than planned, with 70% of the above-plan procurement remaining in the region for local urban needs.

The most dramatic agricultural undertakings in 1955, however, were the sowing of 50 million acres of grain on the dry pasturelands north of the Central Asian Desert, and the planting of 40 million acres of corn throughout the USSR. Both were risky innovations aimed at greatly increasing the total grain crop. Grain will grow on semi-desert pastureland, but the Central Asian area is always endangered by periodic drought. Though corn has a higher yield per acre than other grains, most of the USSR is too dry and too cold for maize to ripen fully.

In explaining these dubious farm ventures, Communist Party Secretary Khrushchev stated that much more grain is needed immediately to fill the increasing USSR demand, supply the growing Soviet population and growing cities, lay up emergency grain reserves, increase grain exports, and feed livestock.

For the third year in a row the weather in 1955 was unkind to Soviet agriculture. The spring was late, delaying spring sowing. With a short growing season even under the best of circumstances, USSR harvesting in 1955 was, consequently, retarded, and part of the harvest perished under the autumn snow. Corn reaping was very slow throughout Belorussia and Central European Russia, and potato harvesting was slower in 1955 than in 1954 in all major potato-raising areas. Hay mowing was also much behind schedule.

However, the worst setback was the summer and autumn drought in the vast landbelt stretching from the lower Volga Valley across West Siberia and North Central Asia to the Altai region. This is the main belt in which the USSR tried to convert pastureland to grain. Even the Soviet press admitted that the 1955 harvest on these "new lands" was "insignificant."

No harvest totals have been published by the USSR for 1955, though it was claimed that overall grain production was larger than in 1954.

Industry and Mining.—Throughout 1955 Communist Party Secretary Khrushchev and other Soviet spokesmen affirmed that the USSR must give economic priority to heavy, war-potential industry, allegedly to protect the Soviet Union from the West. Any proposal that light industry be larger than or equal to heavy industry was declared "un-Marxist." Under this philosophy the USSR attempted to increase the speed of its heavy industry expansion in 1955 to a pace faster than ever before in Soviet history. The annual production goals for key heavy industries were as follows (in millions of metric tons): oil, 70; coal, 390; pig iron, 33; and crude steel, 45. The 1955 plan for electric power output was 166 billion kw.-hr. No production goals were published for consumer goods.

According to *Pravda*, over 70% of all Soviet industrial production in 1955 was capital goods, and about 50% was products of the engineering industries (including defense plants). Western experts estimated that Soviet shipyards can build a submarine per week and two cruisers each year. The Soviet press stated that the main centers of atomic research in the USSR are Moscow, Leningrad, Kiev, and Kharkov.

During the year three huge hydroelectric sta-

SOVFOTO

tions neared completion. In October the first section of the Kakhovka power station on the Dnieper River commenced operations, and in November the first section of the Gorki station on the Volga River was also opened. Also in November, construction of the dam for the Kuibyshev station on the Volga was completed.

In 1955, the USSR economy continued to be based primarily on the use of coal for fuel. Coal filled 85% of the USSR's requirements for mineral fuel, with oil and gas accounting for the remaining 15%. The chief coal basins, in order of importance, were the Donbas, in the Ukraine; the Kuzbas, in mid-Siberia; and the Mosbas, south of the Soviet capital. Some 60% of the USSR's petroleum was produced outside the Caucasus in the Volga, Ural, Central Asian, and Far Eastern fields.

Data released in 1955 indicated that Soviet consumer goods production is still highly concentrated in the Central Industrial District lying between Moscow and the Volga Valley. This district produces 70% of USSR wool cloth, and 80% of Soviet woven cottons.

Other data showed the great extent to which handicraft cooperatives and local industry (factories under local and regional governmental control) participate in the output of consumer goods. Together, the two produce all Soviet musical instruments, pens, pencils, and chinaware; 80% of the crockery; half of the furniture, pots, pans, and felt boots; 40% of the knitgoods; and 30% of the sewn goods.

In world comparisons, the USSR was second only to the United States in industrial production during 1955. Soviet output of oil, coal, iron, electricity, and steel was second, following the United States, but in certain types of armament, the USSR was first.

Foreign Trade.—During 1955, Soviet foreign trade (imports plus exports) amounted to no more than \$4 or \$5 billion in value. About 80% of USSR trade is with the Soviet satellites of eastern Europe and the Far East, who, in turn, trade mostly with the USSR and other Soviet bloc nations.

Though exporting and importing a wide range of items in 1955, the USSR continued its past practice of exporting mainly raw materials and importing machinery, transport equipment, and certain strategic raw materials in which the Soviet Union has shortages. Thus the major exports were grain, lumber, furs, manganese, chrome, petroleum, cement, and steel. Of the small amount of machinery that was sent abroad, most of it went to the Soviet satellites and consisted mainly of farm machines. The chief Soviet imports were;

(of manufactured goods) ships of all types, railway rolling stock, electric power machinery, machine tools, and cranes; (of strategic minerals) aluminum, copper, molybdenum, tin, tungsten, and zinc; and (of agricultural raw materials) hides, rubber, and wool. Uranium was imported from Czechoslovakia, Poland, the German Democratic Republic (East Germany), Rumania, and Communist China.

Of special importance was the Soviet-Austrian reparations agreement of April 15. Austria agreed to pay \$150 million in goods for 6 years and 1 million tons of oil per year for 10 years. This was in payment for Austria's Danubian shipping, oilfields, and oil refineries, which the USSR had seized at the end of World War II and was now returning to Austria.

Besides rendering technical assistance to all of the Soviet satellites, the USSR in 1955 gave technical aid to the following nations outside the Soviet bloc: Yugoslavia, Afghanistan, Burma, and India. Offers of such assistance were also made to various Asian, African, and Latin American countries. It remained to be seen whether the USSR is actually willing to export to underdeveloped countries the quantities of machinery the latter seek. Soviet trade spokesmen have threatened the USSR entry into the free world machinery market for several years. Perhaps 1955 marked the beginning of such an entry. Any real change of Soviet trade policy in this new direction would undoubtedly have grave future consequences, both political and economic, for the free world.

Communications.—Railways, the main arteries of Soviet transport, in 1955 hauled 85% of all USSR internal freight, with the remaining 15% divided between river shipping, seagoing coastal traffic, motor transport, and airways. During July electrification of the western Siberian section of the Trans-Siberian railway between Novosibirsk and Omsk was completed. In November the first 6 miles of the new Leningrad subway were opened to traffic. Direct train service was established during the year between Moscow and Ber-

Soviet Premier Bulganin (r.) chats with U.S. Ambassador Bohlen at picnic for foreign diplomats in August 1955.

SOVPHOTO

WIDE WORLD

Soviet Communist Party Secretary Khrushchev reads his speech of reconciliation on arrival in Belgrade, Yugoslavia, May 26, 1955, for talks with Marshal Tito.

lin, via Poland, and between Moscow and the North Korean capital of Pyongyang. The Soviet press boasted that 500 USSR cities had bus service in 1955, and Western experts estimated the Soviet merchant marine to be the 10th largest in the world.

Many direct air routes were also instituted during 1955 between Moscow and various capitals of the Soviet satellite countries. In each case, these routes are flown by planes from both countries. They link Moscow with the following cities: Budapest, Warsaw, Prague, Bucharest, Tirana, and Sofia. Similar airways were established from Moscow to Belgrade, Yugoslavia, and to Helsinki, Finland. Within the USSR, jet planes are now employed to carry airmail from Moscow to the largest city in Siberia, Novosibirsk.

The USSR in 1955 had millions of privately owned radio receiving sets and 30,000 public radio receivers, which retransmitted into 16 million loudspeaker outlets. There were 8 television stations, telecasting into 475,000 television reception sets. Manufacture of 500,000 new television receivers was planned during the year. In June a direct radiotelephone line was opened between the USSR and India.

Foreign Affairs, 1955.—The resignation of Premier Malenkov early in 1955 resulted in a number of personnel changes in the Soviet foreign ministry and foreign service. V. V. Kuznetsov was appointed 1st deputy minister of foreign affairs, V. S. Semenov and N. T. Fedorenko as deputy foreign ministers, and Arkadi A. Sobolev as permanent representative of the USSR to the U.N. Security Council.

USSR foreign policy during 1955 was noteworthy for a number of minor concessions to the free world. Communist Party Secretary Khrushchev claimed that not a single Western request for a visa to visit the Soviet Union had been refused. Although this claim may have been exaggerated, hundreds of Western tourists were permitted to visit the USSR during the year, including several United States congressmen and other persons well known to be anti-Soviet.

In addition, during 1955 the USSR yielded on a number of disputes with minor powers, granting favors probably small from the Soviet viewpoint, but seemingly large to the recipient. Soviet diplomacy wooed the already neutralist Arab-Asian bloc of nations, apparently seeking to detach it permanently from the West. To the West itself, the new Kremlin collective leaders

offered appeasement, pleasantries, and cooperation in unimportant matters.

Basically, however, USSR foreign policy remained unchanged. As before, the main effort was to divide, disarm, and peaceably infiltrate the free world. What appeared on the surface to be a new Soviet policy actually was a mere continuation in more subtle form of the "cold peace" begun by Stalin and extended by his first successor, Malenkov. Khrushchev declared many times during 1955 that the new Soviet smiles did not mean abandonment of Communist world revolution.

Europe.—On January 25 the Soviet Union ended its state of war with Germany. After several warnings, the USSR announced on April 9 the annulment of the Anglo-Soviet alliance of 1942 and the Franco-Soviet alliance of 1944 because both France and England had agreed to the rearmament of West Germany (the German Federal Republic) and to West Germany's adherence to the North Atlantic Treaty Organization. (See GERMANY.) On May 14 a 20-year military alliance was formed between the USSR, Albania, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, and Rumania, allegedly to counteract West German rearmament. This Communist answer to NATO includes a joint military command, headed by USSR Marshal Ivan S. Konev, with headquarters in Moscow, and a joint "political consultative committee."

The USSR finally granted Austria (q.v.) a peace treaty (May 15), the terms of which were proposed by the Soviet Union. According to these terms, to which England, France, and the United States adhered, Austria is forbidden to join Germany, may not join NATO, may not grant military bases on its soil to the Western allies, can arm only to a limited extent, and is prohibited from joining military alliances. In exchange, the USSR withdrew its troops from Austria, as did the other occupying powers, and returned Russian-held Austrian prisoners of war at Austrian expense.

On June 3, at the end of a visit by Bulganin and Khrushchev to Belgrade, the USSR announced its friendship for Yugoslavia; declared that it would respect Yugoslav sovereignty; and offered economic, cultural, and scientific cooperation to Yugoslavia, which country in 1948 had withdrawn from the Soviet orbit. (See YUGOSLAVIA.)

From September 9 to 13, West German Chancellor Konrad Adenauer visited Moscow, and the Soviet government agreed to establish diplomatic relations with the German Federal Republic and to return the 9,626 German prisoners still incarcerated in the Soviet Union.* On September 20 the Soviet Union gave theoretical full sovereignty to the German Democratic Republic, with the proviso that Soviet troops remain in East Germany. (See GERMANY.)

In October the USSR and Finland (q.v.) extended their existing military alliance to 1975, and the Soviet naval base at Porkkala on Finnish soil was returned to Finland. In November, the USSR obtained from Norway a pledge that the latter would not allow foreign military bases to be established on Norwegian soil unless that country was threatened by attack.

* By mid-October, when about 5,900 prisoners had been returned, the USSR stopped the repatriation program; on December 1, *Izvestia* revealed that the program had been halted because of what it described as Germany's forcible detainment of more than 100,000 Soviet nationals (refugees and displaced persons). The program was resumed, however, on December 11.

THE OLD DAYS—

THE NEW ERA—

JUSTUS IN THE MINNEAPOLIS STAR

"CHANGE IN THE COLD WAR"

Asia and Africa.—On January 3, despite Soviet protests, Iraq announced that it was severing diplomatic relations with the USSR. On January 25 the Soviet Union offered to establish diplomatic relations with Japan. Lengthy Soviet-Japanese negotiations, which began on June 1 and continued throughout the year, failed, however, to achieve results, since Japan refused to buy Soviet recognition at the price of breaking its alliance with the United States.

Repeatedly during 1955 the USSR urged that Communist China be admitted to the United Nations, and that either the United Nations or a predominantly Asian conference decide the disposal of Formosa. On May 25, Soviet troops evacuated Port Arthur and turned over this naval base

NOW PLAYING
SWEETNESS AND LIGHT

to Communist China. Later the USSR sold its share in the joint Soviet-Korean companies for marine transport, oil refining, and commercial aviation to North Korea, to be paid by delivery of Korean goods to the USSR over a period of years.

On June 23 the Soviet Union made a joint declaration with India, which urged that Communist China be admitted into the United Nations. On October 12 and November 26 the USSR protested violently against the adherence of Iran to the Baghdad Pact, a defensive military alliance between Turkey, Iraq, Pakistan, and Great Britain. In 1955 the Soviet Union also established diplomatic relations with Libya and renewed an old treaty of friendship with Yemen.

In the autumn, in reply to Israel's protest against the sale of Czech arms to Egypt (q.v.), the USSR stated that Near Eastern countries had the right to purchase munitions from Communist countries. On October 23 the Soviet government announced that it was not selling arms to Israel in order to offset the Egyptian armament purchases from Czechoslovakia.

In late autumn and early winter, Khrushchev and Bulganin made an extensive tour through India, Afghanistan, and Burma. In each country, their speeches advocated colonial revolution, attacked the West, and urged Asian neutralism in the East-West cold war. In India (where they visited from November 18 to December 14, except for a trip to Burma, December 1-7) they were reported to have agreed to increase trade and otherwise strengthen economic relations between the two countries; and in Afghanistan (December 15-21) they agreed to grant that country a \$100 million loan to finance a technical aid program to be organized by the USSR.

United States.—Soviet-American relations were less tense in 1955 than in previous postwar years, despite the failure to resolve basic differences at the Geneva conferences (see GENEVA CONFERENCE) of July and November. The two countries exchanged agricultural and other delegations, and during June and July the USSR returned to the United States, 62 lend-lease naval craft and paid half the damages for an American naval plane shot down over the Bering Sea by Soviet fighter planes on June 22. In September the Soviet Red Cross gave \$25,000 to the United States to aid flood victims in the Northeastern states.

The USSR claimed, however, that it had captured 2 American spies in January, and on March 5 an American Catholic priest was expelled from Moscow. The Soviet continued its strong anti-American propaganda during the year, and Khrushchev openly expressed the hope that United States workers would overthrow the American capitalistic system. (See also COMMUNISM; UNITED NATIONS; and references under the Index entry, *Union of Soviet Socialist Republics*.)

UNITED CHURCH OF CANADA. The largest Protestant communion in Canada, the United Church of Canada celebrated in 1955 the 30th anniversary of the union of the Congregational,

Methodist, and Presbyterian churches. The year saw marked progress in every phase of the United Church's life. A record 38,196 persons were received into the church on profession of faith, bringing the total membership to 894,556, with 2,200,543 persons under pastoral oversight, and with Sunday School enrollment at 636,664. Candidates for the ministry numbered 592, another record high.

Gifts to the Missionary and Maintenance Fund, which finances the various enterprises of the church, reached a record total of \$4,309,844. The Woman's Missionary Society raised an additional amount of \$1,214,055.

Church extension continued in 1955 to be the most urgent task of the church in Canada. The country's rising population, rapid suburban growth, and expanding frontiers require the building in the five years ending December 1956 of more than 300 churches and 150 manses. To supplement local support in their construction, \$2,425,000 has been raised, and another \$2,000,000 is now being sought. A new congregation of the United Church is being established every 10 days. The *Robert C. Scott* was commissioned in May as the eighth vessel in marine mission work on the Atlantic and Pacific coasts.

The church moderator is the Right Rev. George Dorey, and the secretary of the General Council, who took office on Jan. 1, 1955, is Dr. Ernest E. Long. The official church paper, *The Observer*, with 165,000 circulation, has a new editor, the Rev. A. C. Forrest. A Board of Information and Stewardship has been established with Dr. Herbert L. Pottle as secretary.

UNITED NATIONS. The following review of the major activities of the United Nations in its tenth year is organized under the following headings:

- (1) Organization of the United Nations
- (2) Tenth Anniversary Meetings
- (3) Political and Security Matters
- (4) Economic and Social Matters
- (5) Trusteeship and Non-Self-Governing Territories Matters
- (6) Legal Matters
- (7) Administrative and Budgetary Matters

(1) ORGANIZATION OF THE UNITED NATIONS

THE SECRETARIAT

Secretary General: Dag Hammarskjöld

THE GENERAL ASSEMBLY

President of Tenth Session: José Maza (Chile)
(Membership is as of the opening of the tenth session.)

Afghanistan	Ethiopia	Pakistan
Argentina	France	Panama
Australia	Greece	Paraguay
Belgium	Guatemala	Peru
Belorussian SSR	Haiti	Philippines
Bolivia	Honduras	Poland
Brazil	Iceland	Saudi Arabia
Burma	India	Sweden
Canada	Indonesia	Syria
Chile	Iran	Thailand
China	Iraq	Turkey
Colombia	Israel	Ukrainian SSR
Costa Rica	Lebanon	U. of South Africa
Cuba	Liberia	USSR
Czechoslovakia	Luxembourg	United Kingdom
Denmark	Mexico	United States
Dominican Republic	Netherlands	Uruguay
Ecuador	New Zealand	Venezuela
Egypt	Nicaragua	Yemen
El Salvador	Norway	Yugoslavia

NEW MEMBERS (ELECTED DEC. 14, 1955)

Albania	Hungary	Libya
Austria	Ireland	Nepal
Bulgaria	Italy	Portugal
Cambodia	Jordan	Rumania
Ceylon	Laos	Spain
Finland		

COMMITTEES

General: Composed of 15 members as follows: the General Assembly president; the 7 General Assembly vice presidents (chiefs of delegations or their deputies of China, Ethiopia, France, Luxembourg, the USSR, the United Kingdom, and the United States); and the chairmen of the following 7 committees, which are composed of representatives of all member countries:

First (Political and Security): Sir Leslie Munro (New Zealand).

Ad Hoc (Special) Political: Prince Wan Waithayakon (Thailand).

Second (Economic and Financial): Ernest G. Chauvet (Haiti).

Third (Social, Humanitarian and Cultural): Omar Louth (Egypt).

Fourth (Trusteeship): Luciano Joubland-Rivas (Mexico).

Fifth (Administrative and Budgetary): Hans Engen (Norway).

Sixth (Legal): Manfred Lachs (Poland).

THE SECURITY COUNCIL

(Membership ends on December 31 of the year noted; asterisks indicate permanent membership.)

Australia (1957)	France*	United Kingdom*
Belgium (1956)	Iran (1956)	United States*
China*	Peru (1956)	Yugoslavia (1956)
Cuba (1957)	USSR*	

Military Staff Committee: Chiefs of staff (or their representatives) of China, France, the USSR, the United Kingdom, and the United States.

Disarmament Commission: Members of the Security Council and Canada.

THE ECONOMIC AND SOCIAL COUNCIL

President: Sir Douglas Copland (Australia)

(Membership ends on December 31 of the year noted.)

Argentina (1957)	Ecuador (1956)	Norway (1956)
Brazil (1958)	Egypt (1957)	Pakistan (1956)
Canada (1958)	France (1957)	USSR (1956)
China (1957)	Greece (1958)	United Kingdom (1956)
Czechoslovakia (1956)	Indonesia (1958)	United States (1958)
Dominican Republic (1957)	Netherlands (1957)	Yugoslavia (1958)

THE TRUSTEESHIP COUNCIL

President: Miguel Rafael Urquía (El Salvador), 15th session; Mason Sears (United States), 16th session (Membership ends on December 31 of the year noted.)

(2) TENTH ANNIVERSARY MEETINGS

A special series of meetings in commemoration of the signing of the U.N. Charter on June 26, 1945, was held in San Francisco, Calif., on June 20-26, 1955. The delegates reaffirmed their countries' dedication to the purposes and principles of the charter, their determination to settle international disputes by peaceful means, and their pledge to continue their efforts to formulate a disarmament plan that would provide a greater measure of security and remove the threat of atomic destruction from the world. At private meetings the foreign ministers of France, the United Kingdom, the USSR, and the United

UNITED NATIONS

President Eisenhower welcomes U.N. delegates, June 20, 1955, in San Francisco. Delegates met to observe the 10th anniversary of the signing of the U.N. Charter.

States laid the groundwork for the Geneva Conference (q.v.) of the heads of government.

(3) POLITICAL AND SECURITY MATTERS

Political and security questions were considered by the tenth session of the General Assembly, held on Sept. 20-Dec. 20, 1955, by the Disarmament Commission, and by the Security Council. In addition to the items discussed separately below, the council adopted (August 11) its report to the General Assembly, and was kept informed of the dispute between Costa Rica and Nicaragua by the Council of the Organization of American States, as well as of problems in Cyprus, Kashmir, and Morocco.

Africa.—On October 27, the Ad Hoc Political Committee took up the report of the Commission on the Racial Situation in the Union of South Africa. The South African delegate stated that he had been instructed not to participate in the discussion, since his government considered the matter to be entirely within its domestic jurisdiction. When the committee voted on November 9 to continue the work of the commission, the entire South African delegation was withdrawn. By a vote of December 6 (33-7, with 9 abstentions, or less than the required two-thirds majority), however, the assembly failed to accept the committee's suggestion to continue the commission.

On December 14, the assembly called on the Union of South Africa, Pakistan, and India "to pursue negotiations" on the treatment of persons of Indian origin in the Union.

Algeria and Morocco.—On September 30, when a resolution presented by the Arab-Asian-African group to discuss the Algerian question was approved, France walked out of the General Assembly, since she claimed that this action constituted interference in her internal affairs. On November 25, however, the assembly dropped the question from its agenda, thus paving the way for the return of the French delegation four days later.

In a resolution passed on December 3, consideration of the Moroccan question was postponed in the hope that negotiations between France and Morocco would lead to a satisfactory solution.

Arab-Israeli Questions.—At 12 of its 23 meetings in 1955 the Security Council was concerned with the various charges and countercharges of Israel (q.v.) and her neighbors. The case of the Israeli ship *Bat Galim*, seized by Egypt on Sept. 28, 1954, seemed to have been peacefully settled following the release of its crew on Jan. 1, 1955,

when fighting broke out on the Gaza frontiers on February 28. After Maj. Gen. E. L. M. Burns, chief of staff of the U.N. Truce Supervision Organization, had reported orally to the council, it adopted (March 29) a unanimous resolution condemning Israel's attack on the Gaza strip. A second unanimous resolution (March 30) requested both sides to reduce border friction. Subsequent meetings in April and September considered Israel's charges of Egyptian attacks.

On September 26, General Burns sent a communication to both Israel and Egypt stating that military forces "in flagrant violation of the General Armistice Agreement" had moved into the El 'Auja demilitarized zone. The troops were withdrawn on October 2, but heavy fighting broke out again on November 2. On the following day, Secretary General Dag Hammarskjöld sent truce proposals to both parties.

A Syrian complaint on an attack attributed to Israel in the area of the Sea of Galilee on December 11 was still under consideration by the council at the end of the year (see also SYRIA).

The Conciliation Commission for Palestine, in its 14th progress report, stated that "this year . . . it had [had] no opportunity of exercising its general function of conciliation with any prospect of success, in view of the unchanged attitudes of the parties." In its report to the General Assembly, the U.N. Relief and Works Agency for Palestine Refugees in the Near East (UNRWA) described its activities in welfare, health, and education. It noted particularly that for the first time since 1948 all 200,000 refugees in the Gaza strip were living in shelters instead of tents.

Atomic Energy. Conference.—Following the suggestions made by President Dwight D. Eisenhower in his Atoms for Peace plan in 1953, the General Assembly decided on Dec. 4, 1954, to call a conference "to explore means of developing the peaceful uses of atomic energy through international cooperation." The International Conference on the Peaceful Uses of Atomic Energy, held accordingly in Geneva on Aug. 8–20, 1955, proved surprisingly successful. Much information hitherto secret was released by the great powers,

and many other countries disclosed advanced developments in the medical and industrial uses of atomic energy.

General Assembly Action.—On December 3, the assembly established a committee to study the effects of atomic radiation. In another resolution, passed unanimously on the same day, it welcomed the intention of governments to establish an International Atomic Energy Agency, and recommended the calling of a second international conference for the exchange of scientific and technical information. (See also ATOMIC ENERGY.)

Charter Review.—On November 21, the assembly decided in principle to call a conference to review the U.N. Charter "in the light of experience gained in its operation," and appointed a committee consisting of all the members of the United Nations to report to the twelfth session of the assembly in 1957, giving its recommendations on the time, place, organization, and procedure of such a conference.

Communist China.—Secretary General Hammarskjöld, on instructions from the General Assembly (Dec. 10, 1954) to seek "by the means appropriate in his judgment" the release of the United States fliers imprisoned by Communist China, visited Peking on Jan. 5–11, 1955, for direct negotiations. On May 31, 4 officers were released; the remaining 11 airmen were released on August 4 after negotiations between United States and Communist Chinese ambassadors had begun in Geneva.

In a letter of January 28, New Zealand brought to the attention of the Security Council "the occurrence of armed hostilities . . . off the coast of the mainland of China. . . ." The council debated the matter on January 31 and voted (9–1, with 1 abstention) to invite the People's Republic of China to send a representative to participate in the discussion. In a cable received on February 3, the Communist Chinese replied that only when representatives of the Nationalist Chinese had been "driven out from the Security Council [could they] agree to send a representative to take part in the discussions of the Security Council." (See also CHINA; FORMOSA.)

Disarmament.—The Subcommittee of the U.N. Disarmament Commission held 47 meetings in London (February 25–May 18) and New York (August 29–October 7), and on Oct. 7, 1955, submitted its report to the commission. The commission met on October 21 and considered a Soviet suggestion that it meet on October 26 to consider the report and to make its own report to the General Assembly. Several speakers noted the "curious coincidence" that the suggested date was one day before the Big Four foreign ministers were to meet in Geneva, while others felt that the commission should meet later so that it could consider the proposals and views which might be expressed by the ministers. The meeting was eventually held on November 23–25, when the commission considered the subcommittee's report and decided to pass it along to the assembly.

On December 16, the assembly passed a resolution giving priority to President Dwight D. Eisenhower's plan for exchanging military blueprints and mutual aerial inspection and Marshal Nikolai A. Bulganin's plan for establishing control posts at strategic centers as steps toward reaching an agreement on a comprehensive disarmament plan. The assembly also called for a resumption of the talks by the Subcommittee of the U.N. Disarmament Commission.

"THE TWAIN ARE STILL FAR FROM MEETING"

HESSE IN THE ST. LOUIS GLOBE-DEMOCRAT

Elections.—On the first ballot to elect three nonpermanent members of the Security Council for two-year terms, Cuba and Australia were chosen, but no agreement was reached on the third member. After 35 inconclusive ballots a private arrangement was made by the assembly president between the two leading contenders, Yugoslavia and Philippines. Yugoslavia was to serve for 1956 and then resign, and the Philippines would take over the seat for 1957. With this understanding in mind, the assembly, on December 20, elected Yugoslavia to the remaining council seat.

Korea.—The report of the U.N. Commission for the Unification and Rehabilitation of Korea (UNCURK) submitted to the General Assembly on Sept. 29, 1955, described the aid given to Korea in fisheries, agriculture, and health. Particular attention was given to the difficulties arising over the armistice agreement, which the South Korean government stated was being faithfully observed by the U.N. Command and flagrantly violated by North Korea.

On August 6, South Korea demanded that the Neutral Nations Supervisory Commission (NNSC) leave Korea by August 13. Rioting broke out, and United States soldiers were forced to defend NNSC members. Finally, on August 13, President Syngman Rhee urged patience on the rioters and withdrew the time limit for the commission's withdrawal.

The assembly, on November 29, took note of UNCURK's report and reaffirmed its intention "to continue to seek an early solution of the Korean question." Appreciation was expressed to Argentina and Brazil for their offer to resettle those Korean ex-prisoners of war who desire to move to the two countries from their present temporary home in India. The work of the U.N. Korean Reconstruction Agency (UNKRA) was commended by the assembly on October 25, and plans for the United Nations to take over the memorial cemetery near Pusan were approved on December 15. (See also KOREA.)

New Members.—On December 8, the General Assembly requested the Security Council to consider the pending membership applications of 18 countries "about which no problem of unification" existed. The council, on December 13, failed to recommend any of the countries. Nationalist China vetoed the application of the Mongolian People's Republic, the second name on the ballot, and the USSR then vetoed 13 applicants; the 4 Soviet bloc countries not vetoed by the USSR did not receive seven affirmative votes on the final ballot.

On the next day, the USSR requested an "urgent meeting" of the council, at which 16 countries were recommended for membership. In a dramatic evening meeting the assembly elected Albania, Jordan, Ireland, Portugal, Hungary, Italy, Austria, Rumania, Bulgaria, Finland, Ceylon, Nepal, Libya, Cambodia, Laos, and Spain to membership, thus breaking a deadlock which had existed for some of these countries since 1946. On December 15, the council met again, and an attempt was made to recommend Japan to membership, but the USSR vetoed the resolution, as she had done on the previous day. The application of the Mongolian People's Republic was then presented, but it received only one affirmative vote, that of the Soviet Union.

(4) ECONOMIC AND SOCIAL MATTERS

Economic and Social Council (ECOSOC).—The council held two sessions in 1955. The 19th ses-

sion, in two parts, met in New York on March 29—April 7 and May 16—27. The first part established a committee to prepare a supplement to the International Slavery Convention of 1926, reconstituted the High Commissioner's Advisory Committee on Refugees as the U.N. Refugee Fund Executive Committee, and discussed reports of the International Monetary Fund and the International Bank for Reconstruction and Development. By far the greatest amount of discussion, however, concerned the economic development of underdeveloped countries, and specifically the effects of accelerated industrialization on them. ECOSOC requested the secretary general to prepare a special study of this problem for its 21st session.

The second part of the 19th session, in addition to noting and approving the reports of various commissions discussed below, noted the reports of the executive board of the U.N. Children's Fund (UNICEF) and of the agent general of UNKRA. Conferences were called to draw up conventions on the enforcement of international arbitral awards and the enforcement abroad of maintenance obligations. Resolutions were passed on various phases of the problem of freedom of information, and ECOSOC "bearing in mind that in the absence of a wide measure of agreement on the basic problems involved . . . conclude [d] that further action at this stage on the draft conventions on freedom of information would be unprofitable."

The 20th session was also held in two parts: in Geneva on July 5—August 5, and in New York on December 5—15. In addition to considering and approving additional commission reports, the first part conducted a general review of the coordination of the economic, social, and human rights activities of the United Nations and the specialized agencies as a whole. The 7th report of the Technical Assistance Board (TAB), on its expenditure of \$15,111,000 in 1954 for experts, fellowships, and equipment, and on its work program for the coming year, was accepted with appreciation. At the resumed session the council discussed holding in 1956 a special 10th anniversary appraisal of the effectiveness of ECOSOC, approved the program of the Economic Commission for Latin American (ECLA), added the German Federal Republic to the membership of the Economic Commission for Europe (ECE), and approved the agendas for the council's 21st and 22d sessions.

Subcommission on Prevention of Discrimination and Protection of Minorities.—The subcommission, a subsidiary body of the Human Rights Commission, is charged with making specific studies of discrimination, using the Universal Declaration of Human Rights as a standard. At its 7th session, held in New York on January 4—28, it considered two progress reports, one on discriminatory practices in schools and in access to education, and the other on discrimination in employment. Three new studies are to be completed during the next few years—on religious rights, on political rights, and on emigration, immigration, and travel.

Commission on International Commodity Trade.—This 18-member commission, established in 1954 by ECOSOC, held its 1st session in two parts, on January 17—February 2 and April 25—May 9, so that delegates after making initial arrangements could communicate with their governments on the proposed work program to be undertaken in the next few years. The commission's final report, as approved at the 20th session of ECOSOC, proposed an intensive study of

short-term and long-term factors in commodity markets and the publication of an annual survey of the general commodity position and the situation in the markets of primary commodities. The United States, though elected to membership, decided to participate only as an observer.

A 2d session of the commission was held at Geneva on November 28—December 10. It considered the trends in commodity markets during 1955 and requested the Secretariat to prepare a report on these trends during the latter part of 1955 and the early part of 1956. This report is to serve as a basis for the commission's deliberations at its 3d session and for its report to the 22d session of ECOSOC.

Transport and Communications Commission.—The commission's 7th session, held in New York on February 7–18, discussed and made recommendations on the standardization of listing and labeling dangerous goods, on a uniform system of road signs and signals, on licensing motor vehicle drivers, and on passport and frontier formalities. The secretary general was requested to circulate to member governments the various approved standards in the hope they might implement them. The commission debated and rejected a proposal by Norway to call a conference to amend the proposed Intergovernmental Maritime Consultative Organization Convention.

Population Commission.—The commission at its 8th session, held in New York on March 14–25, had before it the papers of the 1954 World Population Conference and plans for utilizing universities and other institutions in preparing studies and standards for the worldwide population censuses to be conducted about 1960. Its report suggested that studies on economic and social population trends be encouraged, that the cooperation of national scientific organizations be obtained, and that governments examine the proceedings of the World Population Conference.

Commission on the Status of Women.—This commission, which held its 9th session in New York on March 14–April 1, continued its consideration of the political, economic, and educational rights of women and of the status of women in private law, and completed work on a draft convention on the nationality of married women.

Economic Commission for Europe (ECE).—The commission's 10th session, held in Geneva on March 15–30, reviewed the activities of subsidiary bodies and approved a work program for 1955–56. Particular emphasis was placed on continued cooperation with the specialized agencies and various European organizations. The expansion of East-West trade during the past year was commended.

Economic Commission for Asia and the Far East (ECAFE).—At its 11th session, held in Tokyo on March 28–April 7, the commission had before it the reports of its subsidiary bodies. These were approved, and special attention was given to the problems of rapid economic development, flood control, and interregional trade cooperation.

Human Rights Commission.—The commission held its 11th session in Geneva on April 5–29. In addition to dealing with the reports of its Subcommittee on Prevention of Discrimination and Protection of Minorities and other aspects of human rights, it took up the recommendations of ECOSOC and the General Assembly on the rights of peoples and nations to self-determination. Three proposals were submitted to the 20th session of ECOSOC with the report of the commission: (1) establishment of a commission "to conduct a full survey of the status of the right

of peoples and nations to permanent sovereignty over their natural wealth and resources"; (2) establishment of a commission "to examine any situation resulting from alleged denial or inadequate realization of the right to self-determination . . ."; and (3) establishment of "an Ad Hoc Commission on Self-Determination . . . to conduct a thorough study of the concept of self-determination." These ideas were incorporated in ECOSOC's report to the General Assembly.

On December 14, the assembly decided to establish an advisory service in the field of human rights in order to coordinate the activities of the specialized agencies and the various commissions of the United Nations with the technical assistance programs. On the same day, it voted to postpone until its eleventh session consideration of the draft covenants on human rights, of the recommendations with respect to the rights of self-determination, and of the draft convention on the nationality of married women.

Commission on Narcotic Drugs.—The commission, at its 10th session, held in New York on April 18–May 12, continued its consideration of the proposed single convention on narcotic drugs, which would replace all existing treaties pertaining to narcotics. Its report contained a number of recommendations to member governments on controlling illicit traffic in drugs, on addiction, on synthetic drugs, and on development of new nonnarcotic strains of cannabis. (See also NARCOTICS.)

Social Commission.—The commission's 10th session, held in New York on May 2–20, reviewed progress in social welfare and recommended 37 projects to assist governments in their social development programs. Particular emphasis was placed on strengthening community development as a means of improving living conditions, on assisting governments in training social workers, and on the problem of financing housing through international mortgages. Its report, approved by ECOSOC, requested the secretary general, the TAB, and other pertinent bodies to take note of certain resolutions, and the General Assembly was requested to allot additional funds for the advisory social welfare services of the United Nations Expanded Technical Assistance Program (ETAP).

Economic Commission for Latin America (ECLA).—The ECLA Committee of the Whole met at Santiago, Chile, on May 9–10, to discuss and approve a report on ECLA activities from Feb. 10, 1954, to May 10, 1955. Problems of agricultural development, interregional trade, and coordination between ECLA and the Inter-American Economic and Social Council, as well as the work program for the coming year, were considered.

The 6th session of the commission, held at Bogotá on August 29–September 17, had before it the *Economic Survey of Latin America, 1954*, as well as reports on economic development, technical assistance, problems of agriculture, and international trade. Resolutions were passed dealing with all of these items, as well as with the coffee situation and the development of the Amazon Basin.

Refugees.—On October 25, the General Assembly urged both members and nonmembers of the United Nations "to give . . . serious consideration to making contributions to the United Nations Refugee Fund in order that the targets for 1955 and 1956 [might] be attained." On December 3, a similar appeal was made for UNRWA.

Technical Assistance and Economic Development of Underdeveloped Countries.—On December 3, the allocation of \$29,734,085 under ETAP for 1956 was approved by a unanimous decision. On December 9, also unanimously, a resolution was passed which laid the groundwork for the establishment of a Special U.N. Fund for Economic Development (SUNFED). A questionnaire is to be sent to member nations asking their views on the role, structure, and operation of such a fund, and an ad hoc committee was set up to analyze their replies. Reports are to be submitted by this committee to the 22d session of ECOSOC and the 11th session of the General Assembly, and a final report is to be made to the 23d session of ECOSOC.

(5) TRUSTEESHIP AND NON-SELF-GOVERNING TERRITORIES MATTERS

Trusteeship Council.—In 1955 the council held two regular sessions and one special session, all in New York. At the 15th session, on January 25—March 28, it reviewed reports on the Cameroons, Togoland, and Tanganyika under British administration, on the Cameroons and Togoland under French administration, and on Ruanda-Urundi under Belgian administration. It also considered over 400 written petitions from these six territories. The particular problem of determining the wishes of the people of Togoland on the possible termination of the British trusteeship agreement and the attainment of independence by the neighboring British colony of the Gold Coast was discussed.

At the 16th session, on June 8—July 22, the council reviewed conditions in Somaliland under Italian administration, in Nauru and New Guinea under Australian administration, in the Pacific Islands under United States administration, and in Western Samoa under New Zealand administration. The council particularly welcomed the rehabilitation and compensation of the people of Uterik and Rongelap who had been displaced by atomic tests. Missions were dispatched to Togoland and the Cameroons.

A special session of the council, held on October 24—November 25, sent a mission to the Pacific. It also considered the report of the mission to Togoland (August 7—September 23), made on October 30, that it favored a plebiscite in British Togoland to determine whether the people of the territory wished to continue under trusteeship or be integrated with the Gold Coast. The council approved this report and passed it along to the General Assembly.

General Assembly Action.—The assembly recommended on December 15 that Great Britain conduct a plebiscite to determine the future status of British Togoland under the supervision of a United Nations plebiscite commissioner. France was requested to implement the "contemplated political reforms [that would enable] the wishes of the inhabitants of the Territory as to their future to be ascertained at an early date by direct and democratic methods."

With the election of Italy, which administers Somaliland, to membership in the United Nations, the number of administering authorities in

(Top) U.S. ambassador to the U.N., Henry Cabot Lodge, Jr., (r.), and U.S. presidential assistant on disarmament, Harold Stassen, confer, Aug. 29, 1955, at meeting of U.N. Disarmament Commission. UNITED NATIONS PHOTOS

the Trusteeship Council was automatically increased. Therefore the assembly, on December 16, under the provisions of Article 86c of the U.N. Charter, elected Burma as a nonadministering member in order to maintain the equal composition of the council between the two categories of membership.

Committee on Information from Non-Self-Governing Territories.—The committee held its 6th session in New York in two parts, on April 15–May 11 and September 7–8. In its discussions it emphasized particularly social conditions in the non-self-governing territories. It adopted a resolution

FLETCHER IN THE SIOUX CITY JOURNAL

"TENTH ANNIVERSARY"

that it was no longer necessary for the Netherlands to transmit information on the Netherlands Antilles and Surinam, and submitted its report to the tenth session of the assembly.

On November 8, the assembly approved the report of the committee and, over the strong objections of Belgium, extended the life of the committee until 1958.

Committee on South West Africa.—In its report to the tenth session of the General Assembly, the committee admitted that its attempted negotiations with the Union of South Africa on the status of this former mandated territory had again ended in failure. It requested a ruling from the assembly on whether it might grant a hearing to petitioners from South West Africa.

The assembly, on December 3, passed 10 resolutions appealing to the Union of South Africa to bring the territory under the trusteeship system and to improve educational and other facilities. An advisory opinion was requested of the International Court of Justice on whether the Committee on South West Africa could grant oral hearings to petitioners in relation to the territory.

(6) LEGAL MATTERS

International Court of Justice. Judgment.—On April 6, 1955, the court rendered a judgment in the case of Friedrich Nottebohm, a wealthy Ger-

man-born man whose nationality and assets were in dispute between Guatemala and Liechtenstein, in favor of the claims of Guatemala.

Advisory Opinion.—On June 7, the court gave its opinion that the procedure for voting in the General Assembly on the problem of the supervision of South West Africa was in accordance with the intent of its 1950 advisory opinion on the matter.

Applications.—On March 29, the United States filed an application dated March 22, instituting proceedings against Czechoslovakia (q.v.) for shooting down a U.S. Air Force plane in 1953.

On May 4, the United Kingdom filed applications instituting proceedings against Chile and Argentina for their claims to sovereignty over territories and islands in Antarctica (q.v.) which the British claim on the basis of discovery and occupancy. Both countries, however, rejected the arbitration of the court.

General Assembly Action.—On December 3, the assembly requested an advisory opinion from the court on whether it is "consistent with the advisory opinion of the . . . Court . . . of 11 July 1950 for the Committee on South West Africa . . . to grant oral hearings to petitioners on matters relating to the Territory. . . ."

International Law Commission.—The commission, at its 7th session, held in Geneva on May 2–July 8, continued its task of codifying maritime law. Draft articles were presented on the controversial subjects of the regime of the high seas and the territorial sea. Piracy was limited to acts by private vessels for private ends committed on the high seas, not within the territorial waters of a state. It was the commission's opinion "that international law does not justify an extension of the territorial sea beyond twelve miles." Final codification is scheduled to be placed before the eleventh General Assembly session in 1956.

(7) ADMINISTRATIVE AND BUDGETARY MATTERS

Budget.—On December 16, the assembly approved appropriations totaling \$48,566,350 for 1956.

U.N. Administrative Tribunal.—On November 8, the assembly endorsed a resolution which provides for a review procedure for the tribunal's judgments. The United States had taken issue with the compensation awarded by the tribunal in 1954 to 11 Americans dismissed from the U.N. Secretariat following congressional loyalty checks, and had proposed a method by which a member nation, the secretary general, or an individual could request of an assembly committee established for this purpose a reconsideration of the case with a possible appeal to the International Court of Justice for an advisory opinion.

CAROL CARTER MOOR,
United Nations Collection, New York University Library.

UNITED NATIONS CHILDREN'S FUND. UNICEF was established in December 1946 to help governments meet the food and health needs of children in war-devastated countries, all assistance to be given without regard for race, creed, nationality, or political belief. Since 1950 emphasis has been placed on meeting the long-range and continuing needs of children in underdeveloped countries. The U.N. General Assembly voted unanimously on Oct. 6, 1953, to continue the fund indefinitely.

The policies of UNICEF are laid down, and its operations are governed, by a 26-nation execu-

tive board designated by the U.N. Economic and Social Council. The United States representative on the board is Dr. Martha M. Eliot. Programs are approved and funds allocated at board sessions held in March and September of each year. Day-to-day administration is the responsibility of the executive director, under whom the work is carried out by an international staff of 130 members.

UNICEF aid is provided primarily in the form of supplies and equipment not available in the assisted countries. Other United Nations agencies provide technical advice and personnel to help governments implement the child-care programs or to train local personnel. UNICEF is financed by voluntary contributions from governments and private individuals. The number of governments contributing in 1954 reached a total of 61.

Primary responsibility for the child-care programs rests with the assisted governments themselves. For every dollar allocated by UNICEF in 1954, the assisted countries spent or committed \$1.94 to provide local staff, buildings, supplies, and administrative services.

Since the beginning of 1952, UNICEF aid has been extended for the first time to 44 countries and territories, of which half are in Africa. In 1955 the fund assisted 268 programs in 92 countries and territories. The executive board allocated about \$14.3 million in 1955. The target for 1956 is \$20 million. UNICEF aid falls in the following categories:

(1) Assistance for maternal and child health and welfare, including equipment and supplies for rural health centers, clinics, laboratories, hospitals, and other child-care institutions; school health programs; rehabilitation of handicapped children; care of prematurely born infants; and schools and centers for the training of health personnel.

(2) Mass disease control, including the provision of equipment, insecticides, penicillin, vaccines, drugs, and transport for mass campaigns to control diseases affecting children; and equipment for local production of insecticides, antibiotics, sera, and vaccines.

(3) Dried milk and fish-liver-oil capsules for feeding programs carried out through schools and maternal and child welfare centers; and equipment for processing milk and other high-protein foods for distribution to children.

(4) Emergency relief for child victims of war or natural disasters.

Over a period of seven years more than 135 million children have been tested for tuberculosis, and 52 million vaccinated with BCG in 61 countries and territories; more than 22 million children have been examined for yaws, and 4.2 million treated in 19 countries and territories; and 18 million children and mothers have received UNICEF milk and other food for varying lengths of time in 66 countries and territories.

UNICEF has helped 50 countries and territories in malaria control campaigns. In 1955, UNICEF and the World Health Organization launched a worldwide effort to help countries eradicate malaria, and the fund expects to provide DDT for the protection of 40 million persons annually over the next five years. In 1955 some 32 million children and mothers benefited from UNICEF-aided BCG vaccination campaigns, malaria control, yaws control, and child-feeding programs, as compared with 28.3 million benefited in 1954. The fund has also provided equipment for about 10,000 maternal and child

welfare centers in 67 countries. (See also CHILD WELFARE.)

MAURICE PATE,
Executive Director.

UNITED NATIONS EDUCATIONAL, SCIENTIFIC AND CULTURAL ORGANIZATION. A specialized agency of the United Nations, UNESCO has its headquarters in Paris. Its policies are formulated by a biannual general conference, of which the latest session was held on Nov. 12—Dec. 11, 1954, at Montevideo, Uruguay; and by an executive board composed of 22 members responsible to their governments, with Dr. Arcot L. Mudaliar of India serving as chairman. Its activities are carried out by an international secretariat headed by a director general, Dr. Luther H. Evans, former U.S. librarian of Congress, who was elected in 1953. At the end of 1955, UNESCO had 74 member states, including Ethiopia, which joined the organization on July 1. Its annual budget was \$10,800,000. The implementation of UNESCO's program depends chiefly on its member states, which act through national commissions established by governments to serve as liaison groups between UNESCO and the educational, scientific, and cultural life of their own countries, and to help carry out UNESCO's program.

Activities.—Following decisions taken at the 1954 general conference, UNESCO's program has undergone extensive remodeling. Priorities have been placed on service to member states in five specific fields: (1) free and compulsory education at the primary level; (2) fundamental education; (3) racial, social, and international tensions; (4) mutual appreciation of Eastern and Western cultural values; and (5) scientific research for the improvement of living conditions. In line with this emphasis on service, UNESCO also launched in 1955 a program of direct aid to member states. Under this program, 41 countries are to receive aid for projects ranging from research in nuclear physics to the establishment of libraries.

In general, however, education remains the organization's first concern. Statistics show that over half the world's adult population is still illiterate, a situation aggravated by a universal shortage of schools for children. Nations, especially in Africa, Asia, and Latin America, are faced with the dilemma of not being able to raise educational budgets because of low productivity, and of not being able to raise productivity because of low levels of education. UNESCO is attacking this problem by two means: (1) the extension of free and compulsory primary education, and (2) the organization of fundamental education campaigns. For the last five years, UNESCO has brought to the attention of the world the fact that some 200 million school-age children are without any school facilities whatsoever. In order to carry out its campaign for a more adequate provision of schools, UNESCO has conducted international conferences in collaboration with the International Bureau of Education in Geneva and a series of regional conferences to discuss specific educational problems facing various countries.

Fundamental education is the term used by UNESCO to cover the minimum of education required to combat the interrelated problems of illiteracy, ill health, undernourishment, and low productivity confronting the world's underdeveloped regions. UNESCO has adopted three broad approaches in this field: (1) training, (2) a system of associated projects, and (3) experi-

mental studies and activities. To train leaders of fundamental education, UNESCO has opened two regional training centers, one in Mexico to serve Latin America, and a second in Egypt for the Arab world. Through its share of the U.N. Expanded Technical Assistance Program (ETAP), UNESCO also helps a number of national fundamental education projects. A group training project for specialists in fundamental education, which was opened near Mysore, India, in 1953, was completed in May 1955, after two courses of eight months each with a total of 32 trainees. Three graduates of the course have already been sent out on UNESCO technical assistance missions to Bolivia, Cambodia, and Thailand, respectively.

To help organize an international attack on illiteracy and low living standards, UNESCO has set up a system of associated projects wherein major fundamental education activities throughout the world are linked by UNESCO's education department. In 1955 more than 50 such projects received information and, in some cases, field assistance from UNESCO. In addition, UNESCO has encouraged research and experimental activity in such fields as methods of teaching reading and writing and the use of radio in adult education.

In the field of science, UNESCO has continued its policy of encouraging action on problems of international scope, sponsoring a meeting of directors of national research centers at Milan, Italy, to discuss the professional status of research workers, and another in Paris, France, where recommendations were made to facilitate the international movement of radioisotopes. UNESCO also played a role in the organization of the International Arid Lands Symposium at Albuquerque, N. Mex.

In a move to ease restrictions on international travel for educational and cultural purposes, UNESCO and European labor organizations have continued to sponsor workers' tours. In 1955, 68 groups of workers from 17 countries, numbering in all over 1,200 persons, were able to study how their counterparts in other countries lived and worked. For the first time since the inception of this program, a United States labor organization participated, with UNESCO covering its travel costs in Europe. The annual brochure, *Study Abroad*, listing opportunities for fellowships and scholarships throughout the world, was again published in 1955.

The year 1955 was a milestone for UNESCO's program of cultural activities. On September 16, following its ratification or acceptance by 12 countries, the Universal Copyright Convention went into effect. (See also COPYRIGHTS.)

Among other activities of the organization in 1955 were a seminar in adult education in Scandinavia; an international seminar on public library development held in New Delhi, India; the inclusion of 60 secondary schools in 20 countries in a UNESCO experiment in education for international understanding; and the expansion of technical education and teacher training in the Arab refugee schools of the Middle East. Issuance of UNESCO coupons, a form of international money order used for the purchase of books, films, and scientific equipment in hard-currency countries, reached a total of \$6,500,000.

At the end of 1955, 142 experts sent out by UNESCO under ETAP were working in 39 countries.

GERALD L. CARNES,
Department of Mass Communication.

UNITED STATES. The United States of America at the beginning of 1956 comprised the 48 states (commonly referred to as the Union) and the District of Columbia. United States possessions include the territories of Alaska and Hawaii (both awaiting congressional action on statehood), the Canal Zone, the Virgin Islands, American Samoa, Guam, and other small Pacific islands. Puerto Rico became a self-governing commonwealth associated with the United States in 1952. Since World War II the United States has administered territories in the Pacific under United Nations trusteeship, and other former Japanese islands which, according to the Japanese Peace Treaty (1951), remain under United States control pending their transfer to United Nations trusteeship with the United States as sole administering trustee (see PACIFIC ISLANDS).

Area.—The area of continental United States is 3,022,387 square miles (land, 2,974,726; inland water, 47,661); that of the possessions and territories, 597,268 square miles; and that of the Trust Territory of the Pacific Islands, 8,475 square miles; total, 3,628,130 square miles. (See separate articles on the states, territories, and possessions.)

Population.—The census of April 1, 1950, placed the population residing in continental United States at 150,697,361, an increase of 14.5% over the 1940 census total of 131,669,275. (The 1950 census figure plus the estimate of armed forces overseas totaled 151,132,000.) A Census Bureau estimate of Dec. 1, 1955, placed the population as of that date at 166,512,000 (including armed forces overseas). Washington, D.C., the national capital, had a population of 802,178, according to the 1950 census. (See also CENSUS DATA.)

Government.—Republican in form, the government of the United States is divided into executive, legislative, and judicial branches.

Executive Branch.—Dwight D. Eisenhower (q.v.), Republican, was elected to the presidency in the national election of Nov. 4, 1952, and was sworn into office on Jan. 20, 1953. He receives a salary of \$100,000, plus \$50,000 for expenses; in addition, up to \$40,000, nontaxable, may be expended for traveling and official entertainment.

The vice president, Richard M. Nixon (q.v.), serves as president of the Senate. His salary is \$35,000, plus \$10,000 for expenses.

The executive branch also comprises 10 departments (the heads of which form the cabinet) and a number of independent establishments. The members of the cabinet receive salaries of \$22,500 each. As of Jan. 1, 1955, the 10 departments were:

DEPARTMENT OF STATE—Secretary, John Foster Dulles, since Jan. 21, 1953.
DEPARTMENT OF THE TREASURY—Secretary, George M. Humphrey, since Jan. 21, 1953.
DEPARTMENT OF DEFENSE—Secretary, Charles Erwin Wilson, since Jan. 28, 1953.
DEPARTMENT OF JUSTICE—Attorney General, Herbert Brownell, Jr., since Jan. 21, 1953.
POST OFFICE DEPARTMENT—Postmaster General, Arthur E. Summerfield, since Jan. 21, 1953.
DEPARTMENT OF THE INTERIOR—Secretary, Douglas McKay, since Jan. 21, 1953.
DEPARTMENT OF AGRICULTURE—Secretary, Ezra Taft Benson, since Jan. 21, 1953.
DEPARTMENT OF COMMERCE—Secretary, Sinclair Weeks, since Jan. 21, 1953.
DEPARTMENT OF LABOR—Secretary, James P. Mitchell, since Oct. 9, 1953.
DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE—Secretary, Marion B. Folsom, since Aug. 1, 1955.

Legislative Branch: Congress.—The first session of the 84th Congress was held from Jan. 5 to Aug. 3, 1955. The second session convened on

Jan. 3, 1956 (see list of members, pages 768-769), with the following party composition:

SENATE: 96 senators (49 Democrats, 47 Republicans).
HOUSE OF REPRESENTATIVES: 435 representatives (230 Democrats, 203 Republicans, 2 vacancies); 2 delegates; 1 resident commissioner. The two vacancies were filled by elections held in Pennsylvania's 30th Congressional District on Jan. 24, 1956, and in New York's 22d on Feb. 7, 1956.

The members of Congress receive salaries of \$22,500; the salary of the speaker of the House of Representatives is \$35,000, plus \$10,000 for expenses.

(For information on major congressional activities in 1955, see the section *The United States in 1955* in this article; also Index entries on special subjects, such as *Foreign Aid Programs*, *Housing*, *Labor*, *National Security*, *Taxation*.)

Judicial Branch.—The judiciary consists of a Supreme Court, circuit courts of appeal, district courts, special courts, District of Columbia courts, and territorial courts. On Jan. 1, 1956, the personnel of the Supreme Court was as follows: chief justice, Earl Warren; associate justices, Hugo L. Black, Stanley Reed, Felix Frankfurter, William O. Douglas, Tom C. Clark, Sherman Minton, Harold H. Burton, and John M. Harlan. The salary of the chief justice is \$35,500; that of the associate justices, \$35,000. (For a discussion of the Supreme Court's principal decisions in 1954-55, see the article LAW.)

Education.—The United States Office of Education is the country's chief advisory authority on education. For particulars regarding the general trend of education in the United States see the articles EDUCATION and OFFICE OF EDUCATION, U.S.; the subsection *Education* in the articles on the states and possessions; COLLEGES and UNIVERSITIES; LIBRARIES; and Index entries under *Education*.

Religion.—See the article RELIGION and Index entries under this heading.

Social Welfare.—See the article SOCIAL WELFARE and Index entries under this heading.

Finances.—See the article TREASURY OF THE U.S.

Economy.—See the Index entry, *Financial and Economic Review*.

Agriculture.—See the article AGRICULTURE and Index entries under this heading.

Industry.—See the article INDUSTRIAL PRODUCTION.

Labor.—See the article LABOR.

Mineral Production.—See the articles MINERAL PRODUCTION; MINING; and articles on minerals.

Foreign Trade.—United States exports in 1954 were valued at \$15,095.0 million, according to the U.S. Department of Commerce; and imports, \$10,210.3 million. For the first 9 months of 1955, United States exports were valued at \$11,386.3 million, and imports, \$8,296.3 million. (For a discussion of United States foreign trade, see the articles INTERNATIONAL TRADE and TARIFFS, and the Index entries on these subjects.)

Defense.—The organization for national security at the beginning of 1956 included the following principal posts:

NATIONAL SECURITY COUNCIL: Membership includes the president of the United States, the vice president, the secretaries of state and defense, and the director of the Office of Defense Mobilization.

OFFICE OF DEFENSE MOBILIZATION: Director—Arthur S. Flemming (sworn in on June 25, 1953).

SECRETARY OF DEFENSE: Charles E. Wilson (took office on Jan. 28, 1953); assisted by a deputy secretary of defense (Robert B. Anderson), 9 assistant secretaries of defense, a general counsel, and an assistant to the secretary of defense for atomic energy.

Department of the Army: Wilber M. Brucker, secretary of the army (sworn in on July 21, 1955).

UNITED PRESS

President Eisenhower delivers his State of the Union message, Jan. 6, 1955. Behind him are Vice President Nixon (left) and House Speaker Sam Rayburn of Texas.

Department of the Navy: Charles S. Thomas, secretary of the navy (sworn in on May 3, 1954).

Department of the Air Force: Donald A. Quarles, secretary of the air force (sworn in on Aug. 15, 1955).

Joint Chiefs of Staff: Chairman—Adm. Arthur W. Radford; Chief of Staff, U.S. Army—Gen. Maxwell B. Taylor; Chief of Naval Operations—Adm. Arleigh A. Burke; Chief of Staff, U.S. Air Force—Gen. Nathan F. Twining. The commandant of the Marine Corps, Gen. Randolph McCall Pate, has a voice on the Joint Chiefs of Staff whenever it considers policy or strategy measures which "directly concern the Marine Corps."

Armed Forces Policy Council: Chairman—The secretary of defense.

(See the article NATIONAL SECURITY and the Index entries *Military* and *National Security*.)

Communications.—See Index entries under this heading.

Transportation.—See Index entries under this heading.

THE UNITED STATES IN 1955

Easing international tensions and mounting prosperity kept the nation in a relaxed mood during 1955. As cold war jitters receded, persons who had shuddered for years before the Communist menace found vicarious thrills in the life of Davy Crockett, a forgotten folk hero plummeted into national fame by a Walt Disney television series, or in the fortunes of contestants on *The \$64,000 Question*, a television quiz contest that attracted the largest audiences in history and inspired newspaper headlines usually reserved for major events.

The Cold War in Asia.—The situation in the Far East, already tense as a result of Communist China's announced intention of seizing the Nationalist-held coastal islands of Quemoy and Matsu and its sentencing on Nov. 22, 1954, of 11 United States airmen and 2 civilians to prison on charges of espionage, reached a crisis on Jan. 20, 1955, when the Communists captured Yikiang, an island just north of the Nationalist-occupied Tachen Islands. On January 24, President Dwight D. Eisenhower sent a special message to Congress in which he declared that "the United States must remove any doubt regarding our readiness to fight, if necessary," and asked permission to use armed force in the defense of Formosa and the Pescadores. A resolution author-

(Continued from Page 767)

izing the president to use such "measures as he judges to be required" was passed (409-3) by the House of Representatives on January 25 after only three hours of debate, and was adopted (85-3) by the Senate on January 28. Thus armed, the president initiated diplomatic moves designed to enlist the aid of neutral nations and the United Nations in persuading Communist China to consider a peaceful settlement.

For a time the war clouds thickened. In a cable received by the United Nations on February 3, Premier Chou En-lai rejected a Security Council invitation to discuss the Formosa Strait situation with a curt announcement that Communist China would be satisfied with nothing less than Formosa. Two days later it was announced that the U.S. Seventh Fleet would aid in the evacuation of the Tachen Islands, which had been made indefensible by the capture of Yikang, despite a warning from the Peking radio that this might start "a major war." The evacuation was, however, completed without incident. Encouraged by this, the Senate approved the ratification of two treaties, one aligning the United States with other nations in the Southeast Asia Treaty Organization (q.v.), on February 1; the other assuring Nationalist China that any attack on the territories of Formosa or the Pescadores would be considered a "common danger," and would be met by the United States "in accordance with its constitutional processes," on February 9. Since the latter treaty did not bind the nation to fight in defense of Quemoy and Matsu, the Chinese Communists were left wondering whether an attack on those islands would provoke retaliation.

After more than two months of uncertainty with war constantly imminent, Communist China backed down. On April 23, Premier Chou En-lai announced that his government was willing to discuss the whole question of relaxing tensions in the Formosa Strait. Signs that a Chinese peace offensive was under way continued through the spring and summer. On May 31, 4 United States pilots grounded during the Korean War were released from China, largely through the efforts of U.N. Secretary General Dag Hammarskjöld. In June, 3 of the 21 United States soldiers who had refused to be repatriated after the Korean War expressed a desire to return home, and on July 10 they were released from Communist China to United States control in Hong Kong.

When the United States, on July 11, notified Chou En-lai that it was ready to begin the discussions proposed on April 23, ambassadors of the two powers met at Geneva, with the United States diplomat instructed to work for acceptance of the principle on nonrecourse to force and for a cease-fire in the Formosa Strait. These objectives were not immediately forthcoming, but on August 4 the Communists released the 11 United States airmen who had been convicted of espionage in 1954, and on September 10 agreed that all Americans in China who wished to return home should be allowed to do so. By the end of the year all but 13 of the Americans in jail had been released, and others had been permitted to leave China. (See also CHINA; FORMOSA.)

The Cold War in Europe.—Tensions also relaxed in Europe in 1955, as the USSR adopted a more conciliatory attitude, especially after February 8, when Nikolai A. Bulganin became premier.

As the year began, the principal United States effort was directed toward securing ratification of the Paris agreements granting sover-

eignty to West Germany and providing for its arming as a member of the North Atlantic Treaty Organization (NATO). After Italy (March 11) and France (March 27) finally ratified them, the U.S. Senate, on April 1, approved (76-2) ratification by the United States.

These signs of European accord, combined with a sudden reversal by the USSR when it announced on April 15 that it would sign an Austrian State Treaty on terms long demanded by the West (such a treaty was signed on May 15), encouraged the United States to suggest that the time was ripe for a conference of the heads of government of Great Britain, France, the USSR, and the United States. Details of a conference to be held at Geneva were worked out at San Francisco, when delegates from the 60 member nations met there on June 20-26 to celebrate the 10th anniversary of the United Nations.

Solid support for the president's peace objectives was shown on June 22, when a Senate resolution introduced by Sen. Joseph R. McCarthy, asking that the conference consider the status of the Soviet satellite states, was overwhelmingly defeated (77-4). Instead, the Senate, on July 14, agreed on a mild administration resolution assuring the satellites of the continued sympathy of the United States (88-0).

This harmonious spirit so pervaded the meeting, which opened on July 18, that a new phrase, "the spirit of Geneva," was added to the world's vocabulary. Sir Anthony Eden, Edgar Faure, Marshal Bulganin, and President Eisenhower discussed in a friendly vein the unification of Germany, the status of the satellite nations, and international atomic control. The conference's most dramatic moment occurred on July 21, when the president spoke on world disarmament, proposing (1) that the USSR and the United States give each other "a complete blueprint of . . . military establishments," and (2) that each nation provide the other with "facilities for aerial photography" as a check against hidden arms concentrations. The conference adjourned on July 23 after agreeing that the disarmament proposals should be submitted to the Subcommittee of the U.N. Disarmament Commission, and that the foreign ministers of the four powers should meet to consider details of other matters discussed at the conference.

That the spirit of Geneva could not long predominate was shown by the speeches of Secretary of State John Foster Dulles (September 22) and Foreign Minister Vyacheslav M. Molotov (September 23) at the tenth session of the U.N. General Assembly. The former deplored the suppression of free peoples in the satellite countries, charged the USSR with abuse of the veto power in the Security Council, and branded the government of Communist China as "evil." Molotov answered by asserting that only the Soviet Union and Communist China were friends of peace, that NATO must be scrapped, that the United States must abandon its bases abroad, that the veto power should be allowed to stand, and that Communist China should be admitted to the United Nations. These differences came to a head when the foreign ministers began their sessions at Geneva on October 27. After two weeks of bitter discussion, Molotov, on November 8, angrily rejected all proposals for German unification, and two days later ended all hope of a harmonious agreement on disarmament. The conference closed on November 16 after failing to reach an agreement on any topic. (See also GENEVA CONFERENCE.)

Optimists, however, could see some hope as a result of developments that occurred during the brief period when the spirit of Geneva prevailed. In this interval the Iron Curtain was raised to allow a greater popular interchange than at any time since World War II. During the summer, 12 Russian farm experts toured the American West while a similar American delegation was hospitably received in the Soviet Union. On October 3–November 10, a group of 10 Russian housing specialists toured American cities under the auspices of the National Association of Home Builders, while other organizations besieged the State Department with requests to bring similar groups to the United States. A number of congressmen went to the USSR in the summer, and tourists also took the opportunity to become acquainted with people behind the Iron Curtain.

Scientists took advantage of the new spirit to step up international cooperation. On July 29, it was announced that President Eisenhower had approved plans for the United States to launch an earth-circling satellite during the International Geophysical Year (1957–58). Data obtained from it would be available to all scientists. (See SPACE FLIGHT.) More significant was the International Conference on the Peaceful Uses of Atomic Energy, held at Geneva on August 8–20, which allowed about 1,200 scientists from 72 nations on both sides of the Iron Curtain to exchange information toward speeding the day when the atom would do more of the work of man. (See ATOMIC ENERGY.)

The Legislative Record.—A spirit of harmony also prevailed in Washington, where the 84th Congress assembled on Jan. 5, 1955, with 231 Democrats¹ and 203 Republicans in the House of Representatives, and 48 Democrats, 47 Republicans, and 1 independent (Wayne Morse of Ore-

¹ After a special election held on January 11 in Florida, there were 232 Democrats.

gon, who became a Democrat in February) in the Senate. So effectively did the Democrats work with the president that of the 20 major legislative proposals contained in his State of the Union message of January 6, 11 were adopted, though not always exactly as recommended by the administration.

The greatest unanimity was shown on measures concerned with international affairs and national defense. A bill extending the Reciprocal Trade Agreements Act for three years and authorizing the president to reduce tariffs up to 5% each year on imports from nations granting similar concessions to the United States was passed by the House (295–110) on February 18 and by the Senate (75–13) on May 4, the principal opposition being voiced by Republicans and conservative Southern Democrats; the final bill was passed on June 15. (See TARIFFS.) Congress also authorized (June 17) the expenditure of \$75 million, as requested by the president, to complete the Inter-American Highway, and appropriated (July 28) \$2,703 million for foreign aid. (See FOREIGN AID PROGRAMS, U.S.)

A military training program laid before Congress on January 18 also was approved. On June 28, a bill extending the draft for four years was passed. The Reserve program suggested by the president to assure a "higher degree of readiness to meet immediate mobilization requirements" was approved (315–78) by the House on July 25 and by the Senate on the following day. Under this program the Ready Reserve can be increased to 2,900,000, regular trainees will serve 4 years in the Reserve after their 2 years of training, and a new class of trainees will serve in the Ready Reserve for 7½ years after only 6 months of active service. The \$31.5 billion originally requested by the president for the armed services was raised to \$31.8 billion by the Senate on June 20, when it added funds to maintain the Marine Corps at 215,000 men and to increase the

"NOT SO BAD, AFTER ALL"

production of jet bombers. The final bill was passed on June 30. (See NATIONAL SECURITY.)

Administration-congressional relations were less harmonious when dealing with the economy. The president on January 6 recommended pay increases for members of Congress and the federal judiciary, as well as for postal and other federal employees. A bill to raise congressional and judicial salaries was passed by the Senate on February 28 by voice vote, and by the House on March 1 (223-213); it was signed by the president on the next day. On March 30, salaries of career military officers and noncommissioned officers were increased from 6 to 25% in order to attract more capable men into the armed forces. Against this background, congressmen feared a hostile public opinion if they voted postal employees only the 7.5% increase recommended by the president. On May 9, the House passed (328-66) a measure granting an average 8.8% raise; the Senate concurred (66-11) two days later. President Eisenhower vetoed the bill on May 19, arguing that the increase was higher than was justified by the cost of living and that it would increase the postal deficit. After the Senate upheld this veto (54-39) on May 24, Congress adopted (June 7) a substitute measure granting postal workers an 8% increase, which the president approved on June 10. Other government employees received an average raise of 7.5% in a measure signed on June 28.

Democrats also sought to win income tax relief for low-income groups. On February 25 they attached (210-205) a rider lowering each person's tax \$20 to a House bill extending for one year the corporation and excise taxes due to expire on April 1, but it was eliminated by the Senate on March 15. On July 30, Congress defied the president once more by raising the minimum wage payable under the Fair Labor Standards Act from 75 cents to \$1 an hour, effective March 1, 1956, rather than to 90 cents as requested; the bill was signed reluctantly on August 12. On June 30, an administration proposal to extend the

\$281 billion debt limit for another year was adopted.

Conflicts over welfare legislation were so intense that little was accomplished. A presidential plan announced on February 8 for a three-year, federal-state-local school construction program, to cost \$7 billion, was not acted on by Congress, partly because Democrats insisted that the program was inadequate and partly because anti-segregation riders introduced by Northern congressmen aroused Southern resentment. (See also EDUCATION.) An administration proposal to build 35,000 federal public housing units a year for the next two years was rejected by the Senate on June 7 in favor of a bill providing for 200,000 to 800,000 units to be built within four years. The House measure differed so radically that the final measure was virtually written in conference and passed the day before Congress adjourned on August 3. This provided for 45,000 units for one year only. (See also HOUSING.)

Even less successful was the president's attempt to secure approval for a 10-year road building program, to cost \$31 billion in federal funds and \$70 million in state and local funds and to be financed by special bond issues. The method of financing was denounced by House Democrats, and in July they advanced their own plan, which would cost \$50 billion over 13 years and be financed by higher taxes on gasoline and tires. On July 27, the administration proposal was defeated (221-193); then the House voted against its own plan (292-123), partly because this had aroused the opposition of the American Trucking Association.

The House also rejected the president's plea for statehood for Hawaii by first linking Hawaiian and Alaskan statehood, and then returning (218-170) the combined bill to committee on May 10. Also unacted on were administration proposals for revision of the Refugee Relief Act of 1953 and the Taft-Hartley Act, and for an expanded health program. A controversial measure to exempt natural gas producers from federal control was passed (209-203) by the House on July 28, but was deferred by the Senate, and the president's request for \$21 million to build an atomic peace ship was omitted from the atomic construction bill passed on June 29.

Possible proposals for future legislation were contained in the reports of the Hoover Commission (q.v.).

The President's Illness.—On September 24, the legislative machinery was slowed when President Eisenhower suffered what was at first described as a "mild coronary thrombosis" while vacationing in Denver, Colo. A more thorough examination showed the attack to be more serious than had been realized, but the nation was soon cheered by regular reports of his recovery. In his absence from Washington, Vice President Richard M. Nixon presided over the Cabinet and the National Security Council, while both Nixon and Presidential Assistant Sherman Adams shuttled between Washington and Denver to place vital matters before the president for decision. By November 11, Eisenhower was able to return East and resume a limited work schedule, and on November 14 he went to his farm near Gettysburg, Pa., where temporary offices were set up in the post office.

Political Developments.—Since many experts agreed that his illness would prevent the president from running for re-election in 1956, a storm of controversy soon arose over his successor. Democrats were especially hopeful, for no one

of their candidates appeared able to challenge Eisenhower's popularity; a Gallup poll taken just before his illness showed that 61% of the voters favored Eisenhower and only 39% Adlai E. Stevenson. The most widely favored Democratic prospects were Stevenson, Gov. Averell Harriman of New York, and Sen. Estes Kefauver of Tennessee, with Stevenson gaining strength as autumn progressed. Mentioned as Republican candidates if Eisenhower did not run were Vice President Nixon, Chief Justice Earl Warren, Sen. William F. Knowland of California, Harold E. Stassen, and Secretary of the Treasury George M. Humphrey.

That the Democratic swing notable in 1954 was still strong was shown in local elections held on November 8. The Democrats elected a governor in Kentucky and mayors in Philadelphia and in a surprisingly large number of cities in Indiana and Connecticut. They also gained three seats in the New Jersey Senate. Although local issues predominated in the 1955 elections, observers agreed that the Republican Party faced a real struggle to retain the presidency in 1956. (See also DEMOCRATIC PARTY; ELECTIONS; REPUBLICAN PARTY.)

The National Economy.—Republican political aspirations were favored by the booming economy. The president's annual budget message, submitted on January 17, proposed expenditures of \$62.4 billion for the 1956 fiscal year (July 1, 1955—June 30, 1956). Receipts were estimated at \$60 billion, leaving an anticipated deficit of \$2.4 billion. A Treasury Department report of July 20 for the fiscal year 1955 showed an income of \$60.3 billion and expenditures of \$64.5 billion, leaving a deficit for the year of \$4.2 billion.

The inflationary pressures of these budgets meant prosperity for both industry and workers. The gross national product rose from an annual rate of \$375.3 billion in the first quarter of 1955 to \$391.5 billion in the third quarter, while employment climbed from 62,703,000 in May to 65,161,000 in October. With new construction at an all-time high of \$27 billion in the first eight months of the year, and at a yearly rate of \$41.8 billion in October, there seemed every likelihood that expansion of both production and employment would continue for some time. Wages also moved upward; by July average weekly gross earnings in manufacturing industries amounted to \$76.36, up \$5.44 over July 1954, and by September had risen to \$77.71. This money was spent

so freely that by October consumer spending was at the rate of \$256.5 billion yearly, the highest in history. (See also BUILDING AND CONSTRUCTION; INCOME; LABOR.)

The buying spree sent corporate profits soaring and touched off an upward swing of the stock market. In their half-year reports, the United States Steel Corporation showed profits 89% above those of the year before; General Motors Corporation, 40%; Standard Oil Company of New Jersey, 17%; and others in proportion. This sparked a wave of stock buying that sent the Dow-Jones industrial average to 437.62 by June, a 32-point gain since January 3, and to 471.73 in July. After a brief adjustment slump in the late summer, the advance began again, reaching a peak of 487.75 just before the president's heart attack launched a new decline that wiped out an estimated \$14 billion in profits in one day (September 26). The climb soon began again, with the Dow-Jones average reaching 458.47 by the end of October. (See also PROFITS AND DIVIDENDS; STOCKS AND BONDS.)

Weak spots in the economy were still apparent. Farm income continued to decline until in August farmers were receiving 9.3% less than a year before. Equally alarming was the increase in consumer credit as installment buying expanded; this stood at \$29.7 billion in January, \$32.9 billion in July, and \$34.3 billion in September, an all-time high.

Both Congress and the administration took steps to halt or control the boom. A "friendly" investigation of the stock market by the Senate Banking and Currency Committee under J. William Fulbright resulted in a report, issued on May 26, that called for stronger regulatory laws to govern the market and a further study of the increasingly "unhealthy speculative developments in the stock market." The brake was also applied to business borrowing for plant expansion in April, when the Federal Reserve Board authorized member banks to raise their rediscount rates from 1½% to 1¾%. Later, in August and September, most of the banks raised their rediscount rates to 2%, and three of them (Cleveland, St. Louis, and Minneapolis) to 2¼%. New York commercial banks in turn raised their minimum interest charges on business loans from 3% to 3¼%, the highest in 22 years. To discourage speculative building the Federal Housing Administration (FHA) announced on July 30 that it had reduced the maximum FHA loan period from 30 to 25 years and boosted minimum down payments

"ANOTHER BOOMING BUSINESS

from 5% to 7%. (See also BANKS AND BANKING; CONSUMER CREDIT; FEDERAL RESERVE SYSTEM.)

Organized Labor.—Prosperity meant important gains for organized labor. New union contracts negotiated in basic industries in June and July boosted wages by 5 to 10 cents an hour, 50% more than had been granted in 1954. More significant was the acceptance on June 6 of the guaranteed annual wage (GAW) principle in a contract between the Ford Motor Company and the United Automobile Workers, CIO. Designed to offset pay losses suffered by workers in seasonal industries where layoffs are frequent, the GAW contract bound the company to set aside a fund which could rise to \$55 million. This would be used to supplement state unemployment compensation so that laid-off workers would receive

"WELL, DOC, IT'S A RECURRING PAIN"

WOOD IN THE RICHMOND NEWS-LEADER

a total of 65% of their normal take-home pay for 4 weeks and 60% for another 22 weeks. The General Motors Corporation (June 13) and Chrysler Corporation (September 1) signed similar contracts. On November 8, Ohio voters handed the GAW plan a setback by defeating a CIO-sponsored measure to allow workers to receive income from supplementary layoff benefits while collecting state unemployment insurance.

Basic steps were taken in 1955 for the merger of the AFL and CIO. On February 9, President George Meany of the AFL and President Walter P. Reuther of the CIO announced an agreement on terms of unity. The new organization, called the American Federation of Labor and Congress of Industrial Organizations, was formed on December 5. (See also AMERICAN FEDERATION OF LABOR; CONGRESS OF INDUSTRIAL ORGANIZATIONS; LABOR.)

The Farm Problem.—The continuing slump in agricultural income made the farm problem a major political issue. On April 27, the administration proposed a long-range program of education, research, and credit and off-farm job expansion, which was denounced by Democrats as inadequate to meet the emergency. Their solution was a farm bill, adopted (206-201) by the House on May 5, which would have restored rigid price supports on five basic crops at 90% of parity. Although this bill was not considered in the Senate, the Democrats had fashioned a tool for the 1956 elections by going on record in favor of rigid rather than flexible supports.

That this would be effective was indicated by the criticism of the administration's flexible program. By dropping the average 1955 support price for wheat from \$2.24 to \$2.08 a bushel, Secretary of Agriculture Ezra T. Benson reduced production from 969.8 million bushels in 1954 to 915.5 million in 1955. Encouraged by this, he announced a support price of \$1.81 (76% of parity) for 1956. Farmers, faced with the choice of reducing their acreage and securing this price or accepting the market price of \$1.19, voted on June 25 by a 77.5% majority to accept quotas in 1956. Despite mounting objections, Benson announced in September that price supports on five other basic crops would be lowered from 5% to 13% in 1956. The president officially endorsed this program on October 29. (See also AGRICULTURE.)

Making the most of this situation, both the Democratic Party's national chairman, Paul M. Butler, and two of its leading 1956 candidates, Stevenson and Harriman, announced themselves as favoring price supports at 90% of parity.

Public Power.—The principal controversy over public power centered in 1955, as in 1954, on the Dixon-Yates contract.² Negotiated by the Atomic Energy Commission (AEC) and signed on Nov. 11, 1954, this authorized two private utility companies to construct a \$107 million power plant at West Memphis, Ark., which would feed electrical power to replace that being supplied for the expanding atomic energy program into the lines of the Tennessee Valley Authority (TVA). Advocates of public power held that the government should generate its own electricity by expanding the TVA.

The issue was joined on January 28, when the Democratic-controlled Joint Congressional Committee on Atomic Energy asked the president to cancel the Dixon-Yates contract. Instead, on Feb-

² Named for E. H. Dixon, president of Middle South Utilities, Inc., and E. A. Yates, board chairman of the Southern Company.

ruary 5, the AEC voted (2-1) to abide by the contract, while on February 9 the Securities and Exchange Commission (SEC) approved (4-1) a stock-selling plan to raise funds for the plant's construction. Ground was broken at West Memphis on June 2. Meanwhile, the Memphis City Commission voted to build its own public plant, and at the same time notified the TVA that it would buy no more power after 1958. As this increase in generating facilities would make the Dixon-Yates plant unnecessary, the president canceled the disputed contract on July 11.

The last word on Dixon-Yates had not yet been spoken. The Senate Antimonopoly Subcommittee, in a routine investigation of the contract, announced on July 22 that it had found "evidences of corruption" in the method of drafting, and charged that the AEC had withheld vital information from the public. It reported that Adolphe H. Wenzell, an official of the First Boston Corporation of New York, an investment banking concern, had served as a government consultant on the contract, and that only a month later the concern had been named financial agent for the project. On November 23, the AEC ruled that, because of a possible violation of the conflict-of-interest laws, the contract was invalid and it would not make cancellation payments to Dixon-Yates. Then, on December 13, the Dixon-Yates interests sued the government for \$3,534,778 in expenses incurred in connection with the canceled contract.

Security and Civil Liberties.—The government's security procedures were subjected to mounting criticism during 1955, as lessening world tensions allowed spokesmen for civil liberties to become more vocal. Resentment was aroused especially by the handling of the Wolf I. Ladejinsky case. Ladejinsky, an agricultural expert originally employed by the State Department in Japan and transferred in 1954 to the Agriculture Department, was dismissed by the latter on "technical and security grounds." These, it developed, were based on the fact he had been born in Russia, had relatives there, and had worked briefly as a translator for Amtorg in 1930-31. When Secretary Benson refused to back down, Ladejinsky was given an important post in South Viet-Nam by the Foreign Operations Administration (FOA) on January 5.³

Criticism of the handling of this case was

³ On July 2, Benson disclosed that the Agriculture Department had subsequently cleared Ladejinsky.

(Left) Secretary of Health, Education, and Welfare Oveta Culp Hobby (resigned July 13, 1955), discusses polio vaccine program with President Eisenhower, May 16. Surgeon General Scheele stands between them. (Right) John Thompson, one of 11 U.S. airmen released by Chinese Communists, meets his mother at Bolling Air Force Base, Wash., August 13.

partially responsible for a presidential announcement on March 4 of procedural changes in the security program for government employees. These provided for personal interviews with employees against whom charges had been made before suspension, a clearer presentation of charges, and the appearance of witnesses who had given derogatory information in cases in which national security would not be jeopardized. The basic right of accused persons to confront their accusers in all cases was, however, still denied. Hopes that the U.S. Supreme Court would insist on that right in the case of Dr. John P. Peters, a part-time consultant dismissed from the Public Health Service, were frustrated when the court, in a 7-2 decision on June 6, ordered his record cleared on a technical point.

Continuing objections to the program forced the president to reverse himself and sign, on August 9, a congressional resolution calling for the appointment of a 12-member bipartisan commission to investigate the entire loyalty-security program. The commission was appointed on November 10. The Senate Subcommittee on Constitutional Rights, headed by Thomas C. Hennings, Jr., held public hearings on November 14-29 on cases in which citizens' rights had been infringed by government security procedures. (See also CIVIL LIBERTIES.)

Conflict-of-Interest Cases.—In addition to the charges concerning Adolphe H. Wenzell in the Dixon-Yates matter, there were several other instances in which government officials or consultants were alleged to have violated conflict-of-interest laws. In July, the Senate Permanent Subcommittee on Investigations heard charges that Secretary of the Air Force Harold E. Talbott had retained a \$50,000-a-year partnership interest in a New York clerical-efficiency firm after entering government service, and that he was using his position to solicit business for it. Talbott admitted the charges, but professed to see nothing wrong with the practice. Although the president took no stand, he accepted Talbott's resignation on August 1.

On November 25, the chairman of the Interstate Commerce Commission, Hugh W. Cross, resigned following charges before the Senate subcommittee that he had violated conflict-of-interest laws.

Public Health.—On April 12, the National Foundation for Infantile Paralysis announced that a vaccine developed by Dr. Jonas E. Salk had

been shown by statisticians who had analyzed the results of a trial program conducted in 1954 to be 80-90% effective against paralytic poliomyelitis. On the same day, the Public Health Service licensed six pharmaceutical firms to produce the vaccine under carefully controlled conditions; mass inoculations began almost at once, with children in the 5-to-9 age group receiving priority. Hope soon turned to dismay when a number of the children thus treated developed polio. Tests showed that 58 of 73 who contracted the disease following vaccination had received vaccine produced by the Cutter Laboratories of Berkeley, Calif. Use of Cutter vaccine was halted by the Public Health Service on April 27, and on May 7 all further inoculations were banned. The ban was lifted for some vaccine six days later, only to be followed by a halt in the release of further vaccine on May 18.

Criticism of the Public Health Service, and especially of Mrs. Oveta Culp Hobby, secretary of health, education, and welfare, for this indecision and for the inadequacy of the testing methods enforced by the government, was widespread. Mrs. Hobby resigned her post, effective August 1, for personal reasons, and was replaced by Marion B. Folsom (q.v.).

With tests improved and more rigid controls established, distribution of the vaccine was resumed. An announcement by the Public Health Service on October 1, at the end of the polio season, revealed that the incidence of the disease among 7 million children who had been vaccinated was 25-50% lower than among those who had not, even though most had received only one shot. With a more efficient testing and distributing system planned for 1956, the defeat of this crippling disease seemed certain. (See also POLIOMYELITIS.)

School Desegregation.—In a unanimous decision announced on May 31, the Supreme Court laid down the procedure through which desegregation in the nation's schools was to be achieved. Instead of setting a definite date when segregation must end, the court ruled that federal district courts should require school officials to "make a prompt

and reasonable start toward full compliance," but grant them "additional time" if it seemed desirable in the light of "public interest." In effect, the ruling made no compromise with the principle of desegregation, but provided that the process could be sufficiently delayed to allow public opinion in Southern communities to be prepared for integration.

The opening of schools in September showed that some progress had been made. Missouri had integrated white and Negro pupils in the majority of its school districts, while in Arkansas, Texas, Kentucky, Oklahoma, Maryland, and West Virginia a beginning had been made in some districts, usually in urban areas. In other states, notably North Carolina and Tennessee, plans were under way to begin desegregation in 1956. Seven states—Alabama, Georgia, Florida, Louisiana, Mississippi, South Carolina, and Virginia—were, however, devising plans to maintain segregated schools. (See also EDUCATION; NEGROES, AMERICAN.)

Disasters, Imagined and Real.—To offset the growing apathy toward civil defense inspired by relaxing world tensions, the administration on June 15-17 staged Operation Alert 1955, a realistic air-raid test on a national scale. When the air-raid warnings sounded, the president and 15,000 government employees evacuated Washington, to spend three days in 31 secret locations nearby. The president, operating from a tent, directed operations as reports poured in of simulated atomic and hydrogen bomb attacks that "killed" 8.5 million persons, left 25 million "homeless," and "destroyed" 16% of the nation's industrial capacity. Mock martial law was proclaimed, and a meeting of the National Security Council was held in a secret Pentagon. The tests showed that weaknesses existed in methods of distributing medical supplies and personnel; they also reminded the American people of the grim disaster that is modern war. (See also FEDERAL CIVIL DEFENSE ADMINISTRATION.)

More real was the damage resulting from storms that swept the Eastern seaboard. Hurricane Connie, sweeping a lethal path from South Carolina to Lake Erie on August 12-13, left 43 dead in its wake as well as millions of dollars in property damage. Then, on August 18 and 19, hurricane Diane dumped an unprecedented rainfall from Virginia to New England, sending rivers into roaring torrents of destruction. (See also FLOOD CONTROL.) The death toll for the area as a whole amounted to 191, with many others missing, and property damage was estimated at \$500 million. Western Connecticut, which had been severely hit by Diane, again sustained heavy damage from rains and floods that struck the Middle Atlantic and New England states on October 14-17. In the area as a whole, 44 persons were dead or missing.

The West was hard hit in December when overflowing rivers in eastern Nevada, northern California, and southern Oregon brought floods which caused damage estimated at over \$150 million. A total of 74 persons lost their lives in California and Oregon.

UNITED STATES INFORMATION AGENCY. In 1955 this agency (Theodore C. Streibert, director) operated 200 posts in 79 countries to give information to foreign peoples about United States policies and about those aspects of American life and culture which help to explain them. Through virtually all means of communication—press and publications, pamphlets, posters, radio, television, film, books, lectures, music, and exhibits—emphasis was given to promoting worldwide understanding of America's peace objectives, the president's program for peaceful use of the atom, American cultural achievements, international trade fair participation, and industrial and economic stability. The aggressive nature and threat of international communism were also portrayed.

The agency's radio arm, the Voice of America, originated more than 40 hours of broadcasts daily in 38 languages. Repeats brought the total to more than 100 hours each day. About three fourths of the radio output went to Soviet orbit countries. In September 1955 the Voice of America discontinued its foreign-language shortwave broadcasts direct to western Europe and put into effect arrangements for its broadcasts to that area to be made by local stations to which radio audiences customarily listen. The Voice of America also provided American-made films for use on television in countries where that medium is gaining in importance.

The press service of the agency sent daily by wireless 7,000 words of United States news and background materials six days a week to 66 countries. It prepared and distributed abroad two books, *What Is Communism?* and *What Is Democracy?* as well as a bimonthly magazine, *Problems of Communism*. The film service produced film documentaries in the United States and in 22 foreign countries. It made and showed, from trucks and boats, the first motion pictures with Laotian and Cambodian sound tracks.

The 160 libraries in 67 countries, containing a total of 2.6 million books, were visited by 39 million persons. In addition, 42 binational centers in nearly self-supporting programs in 24 countries (37 centers in Latin America and 5 in the Middle and Far East) taught English to about 48,000 adult students. The translation program assisted in issuing through publishers abroad 5.1 million copies of 590 editions of American books in 45 languages. Over 6 million persons saw exhibits on peaceful uses of the atom. International editions of the photographic exhibit, *The Family of Man*, originally prepared for the Museum of Modern Art in New York by Edward Steichen, were shown to large audiences in Latin America and Europe. In the fiscal year 1955 the Informational Media Guaranty Program guaranteed the conversion to United States funds of \$7.5 million of foreign currencies received by American publishers from the sale of their books in ten countries. During 1955 this program was extended to Chile, Indonesia, Pakistan, the Philippines, and Turkey. Through private cooperation with the agency, several colleges opened American reading rooms in overseas institutions. A number of national groups joined in buying and sending, through the facilities of CARE, the agency's 99-

volume paperbound set of "Books Americans Are Reading."

Of 10,157 persons employed by the agency on June 30, 1955, foreign nationals numbered 6,674 and Americans totaled 3,483. The appropriation of agency funds for the fiscal year 1956 was \$85.3 million.

URANIUM. Prospecting, development, and mining of uranium ores have been greatly stimulated by the Atomic Energy Commission's establishing guaranteed minimum prices, the present schedule of which is effective through March 31, 1962. Although uranium production has increased greatly, statistics released by the AEC, as given in the accompanying table, cover nonenergy uses only.

CONSUMPTION OF URANIUM COMPOUNDS FOR
NONENERGY PURPOSES IN THE UNITED STATES
(Pounds of contained U_3O_8)

	1951	1952	1953	1954
Chemical (including catalytic).....	2,016	3,048	2,539	2,462
Ceramic (including glass).....	875	1,627	...	...
Electrical.....	88	226	42	58
Total.....	2,979	4,901	2,581	2,520

Significant deposits of uranium are found throughout the world, the Belgian Congo being the major producer. Prior to the Korean War, the United States imported 90% of its uranium. Since then, however, there has been a boom in uranium prospecting and mine development. In 1955 deposit discoveries were made in Arizona, New Mexico, Texas, and Wyoming. This trend will undoubtedly continue unabated, inasmuch as known deposits (as of 1955) will be exhausted by 1962.

In 1955, Canada bid fair to become the world's leading source of uranium ore. Ontario's Blind River area alone contains known deposits estimated in value at \$3 billion. In both the United States and Canada the governments are by law the only purchasers of uranium.

URBAN PLANNING. See CITY PLANNING.

URBAN RENEWAL. See CITY PLANNING.

URBAN TRANSIT. The transit industry in the United States is composed of nearly 1,600 companies supplying more than 5,000 communities of over 1,000 population with low-cost public transit service. The mass transit facilities in these communities require an investment of \$3.9 billion in motorbuses, streetcars, trolley coaches, rapid transit cars, other equipment, shops, and property.

During 1955 the transit industry operated 2.4 billion vehicle miles and carried more than 11.5 billion passengers. Some 108,000 miles of route were served by 73,000 passenger vehicles.

Industry gross revenue totaled more than \$1.4 billion in 1953. Wages and salaries of 198,000

U.S. URBAN TRANSIT INDUSTRY

	Calendar year 1955 (preliminary)	Calendar year 1954 (final)
RESULTS OF OPERATION:		
Operating revenues.....	\$1,443,000,000	\$1,471,000,000
Operating expenses ¹	1,286,000,000	1,337,260,000

employees amounted to \$861 million, representing nearly 60 cents out of every revenue dollar. On an industry-wide basis, average annual compensation for each employee during 1955 was \$4,348.

Material supplies and other services called for a further expenditure of \$425 million. Operating taxes, including all taxes except federal income taxes, amounted to \$77 million in 1955. (See also CITY PLANNING; PUBLIC UTILITIES.)

ARTHUR W. BAKER,

General Secretary, American Transit Association.

URUGUAY. Situated on the southeastern coast of South America and bordering on Brazil (north), Argentina (west), and the estuary of the Río de la Plata (south), Uruguay is the continent's smallest republic (72,153 square miles). Its population, estimated (December 1954) at 2.6 million, is the densest among South American countries. The last census was taken in 1908, and the Uruguayan government keeps only the most elementary statistics. Montevideo, the capital and leading port, has an estimated population of 900,000, which, more than any other city in the world, places it in a commanding position in relation to its country's total population. Next in rank are the minor ports of Paysandú (est. 65,000) and Salto (est. 55,000) on the Uruguay River. Spanish is the official language and Uruguayans are primarily of Spanish and Italian descent. Mestizos, located in outlying rural districts, represent 8% of the population and Negroes, approximately 2%.

Government.—A 9-man National Council, whose presidency rotates annually, functions as the executive power under the 1951 constitution. National councilors, who are elected for one 4-year term, make decisions by majority vote. The National Council exercises powers traditionally given a president, including the appointment of a 9-member cabinet, which has ministries of interior, foreign relations, national defense, and agriculture, among others.

A bicameral General Assembly is composed of a Senate and Chamber of Representatives with 31 and 99 members, respectively, who are elected by proportional representation for a 4-year term. The ascendant role of the Uruguayan legislature is reflected in its power to override the National Council's veto by a two thirds vote, and in its right of interpellation and informal censure of cabinet ministers. The congress also elects the 5-member Supreme Court for a 10-year term.

Religion and Education.—Uruguay shares with Argentina the highest literacy rate (about 85%) in Latin America. Since 1877 free public education has been encouraged, and compulsory attendance has been required, though not enforced, since 1934. About one fifth of the 1954–55 national budget or 95 million pesos* was appropriated for educational purposes. In 1949–50 (the last school census) there were 223,049 elementary school

* The Uruguayan peso has no official exchange value. The multiple rates range from 1.519 pesos per dollar for basic exports to 2.45 pesos for luxury imports. The free rate in November, 1955 was 3.92 pesos per dollar.

students, 31,250 secondary school students, and 8,540 students at the University of Montevideo. Nearly all the 2,000 elementary schools were public, but 38 of the 92 secondary schools were private. Religious teaching has been forbidden in the public schools since 1909, and since 1917 the church has been legally separated from the state. Although most Uruguayans are Roman Catholics, there are only one archbishop, 10 bishops, and 250 secular priests in the country.

Finance.—The mounting public debt of 1,187.3 million pesos on Dec. 1, 1954 (197.6 million pesos more than the previous year) was primarily represented by internal loans (1,082 million pesos). The deficit for 1954 alone was 53 million pesos, of which 50 million pesos represented excess government spending over total revenues. In 1952 direct taxes accounted for 52% of government revenue, while customs, excess profits, and foreign exchange each contributed about 14%. The government did not publish its budget, which commenced March 1, 1955; but deficit spending, together with tax and wage increases, had raised the cost of living in Montevideo to 175 (1948 = 100), 9% above the previous year.

Agriculture.—As a pastoral country, Uruguay devotes 90% of its 37.8 million acres to stock raising, and reserves the rest for crops. As in the United States, the family-size farm is the basic unit of agriculture, and rural workers are relatively well paid. According to the most recent agricultural census (1951), there were 8,154,109 cattle and 23,408,642 sheep in the country. The wool clip has averaged 93,000 metric tons in recent years; exports of greasy and washed wool during 1954–55 totaled 117,117 bales, as compared with 156,853 bales during the corresponding period of the previous season.

The 1955 estimated production of wheat (780,390 metric tons) and flaxseed (2,680,000 bushels) fell short of the previous season. Both wheat and rice (estimated 1955 production of 70,000 metric tons) created a large surplus, which was partly relieved by special exports to Brazil and Japan, respectively. The total 1954 production of oats (3 million bushels), barley (870,000 bushels), and corn (237,334 tons) each fell somewhat below that of the previous year. Other important agricultural products included sugar, wine, and fruit.

Industry.—A complex system of subsidies and social legislation contributed to economic deterioration during 1955. The lack of coal, petroleum, and electric power have prevented heavy industrial development in Uruguay. Nevertheless, capital investment in industry increased from 500 million to 927 million pesos between 1948 and 1952, while production increased from 875 million to 1,094 million pesos during the same period. An estimated 202,000 industrial workers are generally employed in Montevideo, although there were about 75,000 unemployed in 1955 (twice as many as the previous year). Foodstuffs represented 31.4% of the total production in 1951, followed by textiles, 17.3%; construction, 11.5%; and power, 10.1%. Productivity in the meatpacking industry fell off drastically in 1955. However, the manufacture of wool tops, which during the previous two years had accounted for 10% of Uruguay's exports, suffered from inflationary costs. Other principal industries are petroleum refining, tires and other rubber goods, cement, electrical equipment, chemicals, metallurgy, tanning, and the distilling of beverages.

Foreign Trade.—Uruguay's foreign trade in 1954 increased 12.5% above the previous year. Exports totaled \$249 million, while imports were \$273.4 million. Chief 1954 exports (by percentages) were wool, 38%; meat and hides, 25%; linseed, wheat, and other agricultural products, 16%; and textiles, 14%. Principal imports (by percentages) included raw materials, 28.4%; machinery and spares, 10%; and fuel and lubricants,

14%. It was clear that Uruguay's trade situation was worsening in 1955; reluctance to accept lowering international prices for wool resulted in a 20% drop in shipments during the 1954-55 season, as compared with the previous year. The United Kingdom dominated Uruguay in trade (32%), followed by the United States (28%), Brazil (25%), Netherlands (16%), and Germany (14%).

Transportation.—A standard-gauge, 1,874-mile national railway system joins the Brazilian border at four places. Similarly, the 26,000 miles of highway, 3,200 of which are paved, fan out from the capital. In 1954 there were 48,012 automobiles and 41,623 trucks and buses in the country. Two rivers, the Río de la Plata and the Uruguay, provide 500 of the 700 navigable miles of waterways which are available.

There are 7,508 miles of telegraph lines in the country, and in 1954 telephones numbered 104,510, the per capita figure being second only to Argentina in South America. Direct cable service between New York and Montevideo was established on June 25, 1955. In 1954 there were 44 long-wave and 13 short-wave broadcasting stations and an estimated 362,000 receiving sets. Domestic air service is provided by the government-owned PLUNA (Primeras Líneas Uruguayas de Navegación Aérea), and the Pan American Airways connects the modern airport at Carrasco, outside Montevideo, with North American cities.

Principal Events, 1955.—National elections on Nov. 28, 1954, gave the various divisions of the Colorado Party 6 seats on the nation's 9-man executive council, while former President Luis Batlle Berres (president from 1947 to 1951) became the council president. Señor Batlle promised in his inaugural address on March 1, 1955, to encourage more effective economic production. The difficulties associated with the operation of a plural executive, however, were evident, as the new regime was unable to secure agreement on a budget or to cope successfully with the inflationary rise in the cost of living.

Uruguay welcomed the Lonardi regime in Argentina; it was the first to grant diplomatic recognition to the new government (Sept. 22, 1955). However, tourist travel between the two countries had already been reopened on Jan. 11, 1955, and diplomatic relations had been resumed with the Perón administration on April 19, 1955, after a 2-year rupture. A mutual aid treaty, dealing with the peacetime uses of atomic energy, was signed by Uruguay and the United States on June 15, 1955. The visit of Señor Batlle to the United States in December 1955 also fostered cordiality between the two nations. Uruguay quietly re-established diplomatic relations with the USSR in September 1955, after an 8-year lapse.

Uncontrolled inflation, labor discontent, and economic stagnation plagued Uruguay during the year. The large meatpacking plants began slaughtering for the first time in a year during July 1955, after the government had agreed to subsidize adequately their high-cost operations. However, the shortage of cattle induced a hunger strike in August, when 1,400 national packing plant workers were joined by students in a sympathy strike. To develop its electric power, Uruguay received a World Bank loan of \$5.5 million on August 30.

Assistant Professor of Political Science,
Stanford University.

USSR. See UNION OF SOVIET SOCIALIST REPUBLICS.

UTAH. Western state, United States; admitted to the Union, Jan. 4, 1896. The "Beehive State" ranks 10th in area and 38th in population (1955) among the 48 states.

Area and Population.—Area: 84,916 square miles (land, 82,346; inland water, 2,570), divided into 29 counties. Population: (1950) 688,862; (est., July 1, 1955) 776,000. Urban places with 1950 populations above 7,500 are: Logan, 16,832; Murray, 9,006; Ogden, 57,112; Orem, 8,351; Provo, 28,937; Salt Lake City, the capital, 182,121; and South Salt Lake, 7,704.

Executive.—Chief state officers in 1955:

Governor: J. Bracken Lee (Republican)

Secretary of State: Lamont F. Toronto

Treasurer: Sid Lambourne

Attorney General: E. R. Callister

Supt. of Public Instruction: E. Allen Bateman

Constitution and Judiciary.—The present constitution went into effect in 1896. The Supreme Court comprises five justices; chief justice in 1955 was Roger I. McDonough.

Legislature.—The legislature (Senate, 23 members; House of Representatives, 60) meets in odd-numbered years commencing the second Monday in January.

The 1955 legislative session appropriated \$71,511,120 from all funds for the 1955-57 fiscal biennium, including \$48,028,638 from the general fund. One of the major of the 212 bills which became law reapportioned the legislature, increasing Senate membership from 23 to 25 and House membership from 60 to 64. Other enactments created a new gas and oil conservation act and a right-to-work act prohibiting membership in a labor union as a condition of employment; amended the police and firemen's pension systems; set annual salaries for Supreme Court justices at \$10,000 and of District Court judges at \$8,000; provided \$2,130,000 in additional state aid for emergency school building needs; revised income tax regulations; increased corporate franchise tax rates to 4%; imposed an occupation tax on oil and gas wells and uranium and tungsten mines; required an eye examination every five years for a driver's license; and officially designated the sea gull as the state bird.

Finances.—State treasury receipts (1954-55 fiscal year), \$110,629,405.50; expenditures, \$115,672,421.90; treasury balance, \$38,154,341.53. As of Feb. 13, 1955, the state was free from bonded indebtedness for the first time in its history.

Taxation.—State tax revenue (1953-54 fiscal year): \$55,158,604.17, including \$33,341,572.26 from a 2% general sales tax and selective sales and gross receipts taxes; \$1,868,031.96 from licensing; \$5,657,683.32 from individual income taxes; and \$4,610,118.05 from corporate franchise taxes. The state has no poll tax.

Banking.—As of June 30, 1955, the state's 9 national banks had \$342,197,000 in assets, \$240,704,000 in demand deposits, and \$78,685,000 in time deposits. The state's 45 other banks had \$468,711,808.44 in assets, \$178,966,982.79 in demand deposits, and \$178,889,250.26 in time deposits.

Education.—School attendance is compulsory for all between the ages of 6 and 18, inclusive. Operating expenditures of \$36,099,003 (\$321.89 per pupil) for public elementary and secondary schools in the 1953-54 school year comprised \$20,576,432 from local school districts, \$14,078,611 from the state, and \$1,443,960 from the federal government. Expenditures for construction and improvements amounted to \$13,907,834. Teachers' salaries averaged \$3,595.70 (elementary school teachers, \$3,436.26; high school teachers, \$3,722.03).

UTAH SCHOOL STATISTICS, 1953-54

Type of school	No.	Teachers	Students
Public elementary (k-8).....	371	3,118	114,386
Public junior high (7-10).....	67	981	28,932
Public senior high (7-12).....	82	1,430	39,815
Private and parochial elementary and secondary.....	18	138	2,980
Public vocational and special....	4	138	2,908
Public junior colleges.....	4	172	1,516
Colleges and universities.....	5	...	29,509*

* 1954-55 figures.

Social Welfare.—Public assistance expenditures from state and federal funds (excluding institutional costs) for the 1954-55 fiscal year totaled \$15,251,931.86, including \$6,801,829.23 for old-

UTAH

age assistance, \$4,241,983.13 for dependent children, and \$178,053.50 for the needy blind; a monthly average of 27,905 persons received public assistance. Operating expenditures for health and welfare institutions amounted to \$3,329,000; for correctional and penal institutions, \$1,144,-298.

UTAH WELFARE INSTITUTIONS

(As of June 30, 1955, unless otherwise indicated)

Type of institution	No.	Pop.
Hospitals for mentally deficient and epileptic..	1	716
Hospitals for the mentally ill.....	1	1,357
Sanatoriums for the tubercular.....	1	76
Schools for the blind (Sept. 19, 1955).....	1	52
Schools for the deaf (Sept. 19, 1955).....	1	155
Training schools for delinquent boys and girls..	1	152
Prisons (June 30, 1954).....	1	585

Labor Force.—The labor force on June 15, 1955, numbered 283,000, including 43,500 agricultural workers and 12,400 unemployed. Non-agricultural employment was 225,800, and for 1954 had averaged 210,700. The state paid \$4,-757,385 in unemployment compensation during the year ending June 30, 1955.

Manufacturing.—Estimates indicate that in 1955 there were 990 establishments employing an average of 36,000 persons who received \$140,-000,000 in salaries and wages. Value added by manufacture was an estimated \$305,000,000. Investment in new plant and equipment (1953) amounted to \$15,009,000. Earnings of production workers in manufacturing averaged \$73.42 for an average work week of 39.9 hours during the year 1954, and \$78.38 for 40.4 hours in the first half of 1955.

Principal manufactures include food processing, which in 1953 employed 8,873 persons, paid \$24,335,000 in salaries and wages, and added \$42,241,000 in value by manufacture; primary metal industries, with 8,532 employees (wages, \$41,395,000; value added, \$113,101,-000); fabricated metal products, with 1,777 employees (wages, \$6,552,000; value added, \$15,-707,000); and petroleum and coal products, which in 1952 had 1,533 employees (wages, \$6,-710,000; and value added, \$12,222,000).

Mining.—Mineral production in Utah in 1954 declined 17% in value from 1953, the loss being due primarily to substantial decreases in output of copper, coal, and iron ore. Utah is one of the leading producers of uranium, production figures for which are concealed for security reasons. The state normally ranks second in production of copper, gold, silver, and molybdenum, and third in lead and potash. It stood 13th in the value of its 1953 mineral output, with 2.08% of the United States total.

UTAH MINERAL PRODUCTION, 1954¹

(In short tons, except as noted)

Mineral	Quantity	Value
Asphalt (gilsonite).....	60,500	\$ 2,184,000
Clays.....	250,000	1,590,650
Coal.....	4,850,000	27,985,000
Copper.....	211,300	125,512,200
Gold (ounces).....	407,000	14,245,000

The long strike against the Kennecott Copper Corporation's Utah properties was announced as settled on Aug. 12, 1955, and work was resumed almost immediately. Arrangements were also completed in June 1955 for the building of a large uranium ore processing mill at Moab by the Uranium Reduction Company and the Utex Exploration Company.

Agriculture.—Cash farm income for the first half of 1955 totaled \$60,810,000, and for the full year 1954 comprised \$110,539,000 from livestock and livestock products, \$38,752,000 from crops, and \$2,662,000 from government payments. Receipts from principal crops and livestock in 1954 included: cattle, \$35,593,000; dairy products, \$23,353,000; sheep, \$13,116,000; eggs, \$11,476,000; turkeys, \$10,635,000; and wheat, \$10,082,000.

The state's 22,825 farms (12,234,222 acres; harvested cropland, 1,228,520) averaged 536 acres and \$23,480 in value of land and buildings per farm in 1954. There were 17,037 farms with telephones and 21,948 with electricity. Livestock on farms on Jan. 1, 1955, included 762,000 cattle, 1,412,000 sheep, and 2,717,000 chickens (excluding commercial broilers). During the week of Sept. 26-Oct. 2, 1954, 47,222 family and hired workers were engaged in farming.

UTAH CROP STATISTICS

Crop (and unit of production)	Average 1944-53	1954	Est. 1955
Apples (1,000 bu.).....	422	370	380
Apricots (tons).....	4,900	5,100	4,900

Transportation and Communications.—State and federal funds disbursed for highways and roads in the 1954-55 fiscal year totaled \$17,498,652.12, and newly completed construction and reconstruction aggregated 368.1 miles.

Highways and roads on Dec. 31, 1954, totaled 31,-039 miles (16,009.4 surfaced). Registered motor vehicles numbered 310,134 on the same date, including 243,884 passenger cars. There were (1955) 9 railroads operating (1954) 1,805.53 line miles, and (1955) 5 regularly scheduled airlines and 113 airports and airfields (44 commercial and municipal, 5 military, 54 private, and 10 others).

Communications media (1955) included 20 AM and 2 FM radio stations and 3 VHF operating television outlets; 5 daily newspapers (circulation, 222,701) and 55 other newspapers; and (Jan. 1, 1955) 71,066 business and 177,590 residential telephones.

Principal Events, 1955.—In its biennial session, Utah's legislature passed 179 bills, 17 of which were repealers of statutes declared unconstitutional by the Utah or U.S. Supreme Court or which had become obsolete by reason of other later legislation. Two of the repealers were to remove from the statute books the laws transferring three junior colleges to the Church of Jesus Christ of Latter-day Saints (q.v.) and closing a fourth. These had been disapproved by the electorate in referendum in 1954.

The state's attorney general ruled in 1955 that under Utah law unpatented mining claims are taxable by the state under the net proceeds tax. In the past a property tax has been levied on machinery, but on the theory that title had not yet been obtained, the owners were not subject to the net proceeds tax.

During the summer the Mormon Tabernacle

Choir made a European tour, singing in Great Britain, Belgium, the Netherlands, Germany, and France. Favorable notices were printed in all the cities where concerts were held.

The city of Provo adopted a home rule charter with a majority of only 25 votes. The main purpose for the charter was to change from the commission to the council-manager form of city government. Democratic Mayor Earl J. Glade of Salt Lake City failed in his bid for a fourth four-year term on November 8. He was defeated in a "nonpartisan" race by Adiel F. Stewart, who moved up from his post as a Republican Salt Lake County commissioner.

A local government survey commission was created by the legislature to study the problem of overlapping functions, metropolitan problems, and financial difficulties. The commission of 11 members was scheduled to make its report on Sept. 15, 1956.

Associate Professor of Political Science,
University of Utah.

UTILITIES. See PUBLIC UTILITIES and the Index entry, *Public Utilities*.

UTRILLO, Maurice, French painter: b. Paris, France, Dec. 26, 1883; d. Dax, France, Nov. 5, 1955. Regarded as one of France's greatest modern painters, Maurice Utrillo produced important works of art, notably landscapes of Paris and its environs, while his mind and body underwent degeneration from acute alcoholism.

He was the illegitimate son of Suzanne Valadon, a well-known painter in her own right and an artist's model for Renoir, Toulouse-Lautrec, and Degas. By the age of 18, Maurice had become an alcoholic and then, on the advice of his physician, took up painting as a form of physical therapy. His first and only instruction was given him by his mother. The artist received his name from an admirer of his mother, Miguel Utrillo, a Spanish journalist and amateur painter, and his first canvases were signed "Maurice Valadon,"

later, "Maurice Utrillo-Valadon," and finally, "Maurice Utrillo, V." Although he did not particularly like to paint, Utrillo produced 150 works in his first year as an artist.

Utrillo is known best for his street scenes of the Montmartre section of Paris and the Paris suburbs. Although he did some painting directly from nature, because of an obsessive shyness which made it difficult for him to appear in public, much of his most famous work was done from picture postcards. By 1908, after a brief period of impressionism, Utrillo had developed a personal style, and the next six years, his "white period," saw the production of his most famous canvases. This period was marked by two distinct phases. From 1908 to 1910 he used his palette knife to spread his pigments (which were often mixed with plaster to simulate the texture of weather-beaten walls), and from 1910 to 1914 he added the use of his brush to smooth the surface, producing radiance in his landscapes.

Although not accorded early public recognition, by 1924, after his work had been exhibited in a number of galleries, including the Salon d'Automne, the Galerie Berthe Weill, and the Salon des Indépendants, he had become one of the most discussed painters in Paris. As his fame increased so did his income, and in 1923 the Bernheim-Jeune Gallery guaranteed him and his mother (who died in 1938) a yearly income of about \$50,000 for their future output.

In 1935, Utrillo was married to Lucie Pauwels, who cared for the emotionally unstable artist until his death. In 1937 they purchased a villa in Le Vésinet, a Paris suburb, where Utrillo continued his prolific output. According to critics, however, after the 1920's the quality of the canvases showed evidence of the artist's increasing mental debility, although they continued to command high prices on the market. Among his important works are: *La basilique Saint-Denis* (1909); *La Square Saint Pierre à Montmartre* (1914); *Au Lapin Agile* (1914); *Le moulin de la Galette* (1915); and *Les Mesnuls* (1919).

ANADIUM. See MINERAL PRODUCTION.

VANCOUVER. Canada's third city has an area of 44 square miles and an estimated 1955 population of 395,416. It lies on a promontory ending in Point Grey and is bounded on the north by English Bay and Burrard Inlet, on the west by the Strait of Georgia, on the south by the Fraser River and on the east by the municipality of Burnaby (pop. 80,000). Adjacent to the city are the municipalities of North Vancouver, West Vancouver, Burnaby, and Richmond, which have a combined population of 170,000. The University of British Columbia, with a registration (1955) of 6,356, is located on the westerly boundary of the city at the extremity of Point Grey.

Vancouver is governed by a mayor (Fred Hume in 1955), whose term is two years, and by eight aldermen, four of whom are elected each year.

The Second Five-Year Plan, voted in 1953, has resulted in many miles of new paving, sew-

ers, bridges, park development, and schools, and in the completion of plans for a new central library. Schools and parks are administered by elected boards, while hospitals, exhibitions, the art gallery, libraries, and the museum are administered by appointed boards. The city has 115 parks comprising 2,677 acres. A new police headquarters and court was opened during 1955. There was an unprecedented development with respect to buildings in 1955. By Dec. 31, 1955, building permits had reached a total of \$55,446,193, representing a 22% gain over 1954. A new federal post office, two skyscrapers for office purposes, and a large apartment block were the major buildings under way, while home building continued to form the bulk of new construction.

Vancouver's all-year harbor makes it one of the largest ports on the Pacific coast, especially for shipments to the Orient and through the Panama Canal to Europe. Direct shipping lines go to nearly every country, and airlines connect with other major lines or go directly to Europe and the Orient. Inauguration in 1955 of a direct line

over the North Pole to Amsterdam enables travelers to reach Europe in 18½ hours from Vancouver. In the nine months ending Sept. 30, 1955, 859 deep-sea ships entered the harbor with 3,655,749 net tons of shipping, while 3,661,892 net tons were outbound.

Vancouver is a trading and transportation center through which much traffic, tourist and commercial, is routed. In 1954 there were 752,601 visitors to the city, chiefly from the prairie provinces and the western United States. The Pacific National Exhibition had a total attendance of 750,040 for its 12 day-opening.

Since World War II, thousands of new immigrants have added to the cosmopolitan nature of the city, as well as to its business and cultural life. Chiefly from middle Europe, the new citizens have found places in the skilled and semi-skilled trades, in catering, and in clerical and domestic service. A few are in the professions and small businesses, but all have made a contribution to the culture of a new city, particularly in musical and art circles.

E. S. ROBINSON,

Director, Vancouver Public Library.

VARNISH. See PAINTS, VARNISHES, AND LACQUERS.

VATICAN CITY. An independent papal state within the city of Rome. It includes the Basilica of St. Peter, Vatican Palace, the Vatican Gardens, the Vatican Observatory, and some detached palaces and churches. Area, 108.7 acres; pop. (est. 1952), 651 citizens and 296 residents. Vatican City was recognized as an independent state, with the pope as its head, by the Lateran Treaty with Italy on Feb. 11, 1929. This treaty, slightly modified, is incorporated in the Italian Constitution of 1947.

The pope exercises sovereignty with complete executive, legislative, and judicial powers, in accordance with canon law and pontifical rules. The reigning pope is Pius XII (q.v.), elected supreme pontiff by the College of Cardinals on March 2, 1939. Executive powers are exercised by a governor responsible to the pope. The Holy See has accredited diplomatic representatives in some 40 countries. The city-state has its own currency, railway station, stamps, and postal system. The Vatican radio station, located on Italian soil and having extraterritorial rights, broadcasts in nearly 30 languages. The Vatican daily newspaper, *Osservatore Romano*, has a circulation of about 320,000. Nearly a million pilgrims, tourists, and other visitors were reported to have come to the Basilica of St. Peter in 1955. (See also RELIGION—*Catholicism*; ROMAN CATHOLIC CHURCH.)

VEGETABLE OILS. See FATS AND OILS.

VEGETABLES. Production of vegetables in the United States for both fresh market and processing increased during 1955. The Agricultural Marketing Service estimated output of the 28 principal vegetables for fresh market in the major producing states at 10,289,800 tons, slightly above the previous record set in 1954 and 6% more than the 1949-53 average. These crops account for about four fifths of commercial production in the United States. Value of the 28 crops was estimated at \$786,494,000, or 8% more than in 1954. Tomatoes, at \$141,032,000, was the leading crop in value, followed by lettuce, \$138,934,000; celery, \$59,366,000; and onions, \$53,507,000. Output of these crops, in tons, is shown in the following table.

COMMERCIAL VEGETABLES FOR FRESH MARKET¹
(In tons)

	1954	1955

¹ Includes some quantities not harvested. ² Includes production for processing; carrots, celery, garlic, and onions for dehydration included. ³ Includes casabas, Persians, and other muskmelons, but not honeyball and honeydew melons. ⁴ Figures not given for honeyball melons. (Source: Agricultural Marketing Service, U.S. Department of Agriculture.)

California again was the leading producing state, accounting for 30% of the 1955 output of the 28 vegetables. Florida produced 15%; Texas, 10%. New York and Arizona ranked fourth and fifth, respectively.

Output of the 11 principal vegetables for processing in 1955 was 4% above both 1954 and average. The 6,142,900 tons produced was harvested from an acreage 2% smaller than in 1954 and 7% smaller than average. Average yield per acre continued the upward trend. California retained its lead among the states, producing 36% of the total output of the 11 crops. Tomatoes accounted for the bulk of California's production. Wisconsin ranked second with 8% of the total, and Minnesota, New York, Illinois, and Indiana each had 5% or more of the United States tonnage.

Value of the 11 processing crops was estimated at \$252,361,000 in 1955, compared with \$241,580,000 in 1954. Leading crops in value were: tomatoes, \$80,449,000; green peas, \$40,-

658,000; snap beans, \$34,114,000; and asparagus, \$31,588,000.

Potatoes.—United States production in 1955 rose 7% over 1954 to 381,631,000 bushels. Yields per acre averaged 271.3 bushels, a new record, exceeding the former 1950 peak by nearly 18 bushels. The 1,406,900 acres from which the crop was harvested was slightly less than in 1954. Leading producing states in 1955 were: Maine, 64,325,000 bushels; Idaho, 51,550,000; California, 40,640,000; and New York, 29,700,000.

Sweet Potatoes.—The 1955 crop in the United States was 38,406,000 bushels, 27% more than production in 1954 and the largest crop since 1950. However, production was still 18% below the 1944-53 average. Farmers harvested 357,400 acres, 4% more than in 1954, and yields increased 20 bushels per acre above 1954 to an average of 107.5, the highest on record. States with the largest crops were: Louisiana, 10,500,000 bushels; North Carolina, 4,400,000; Texas, 3,480,000; Virginia, 3,045,000; New Jersey, 2,550,000; and South Carolina, 2,400,000.

Dry Beans.—The United States produced 17,287,000 bags (100 pounds each, cleaned basis) in 1955, compared with 17,063,000 bags in 1954 and the 1944-53 average of 15,961,000. The 1,567,000 acres harvested was slightly more than in 1954, but the average yield of 1,198 pounds (uncleaned) per acre was slightly lower. Pea (navy) beans were the leading variety produced in 1955, totaling 4,622,000 bags. Other leading classes were: pinto, 3,853,000; great northern, 2,029,000; red kidney, 1,121,000; large lima, 1,077,000; and small red, 1,038,000. Michigan, with 4,668,000 bags of beans, led the states in production. California ranked second with 4,109,000 bags; and Idaho ranked third, with 2,441,000.

Dry Peas.—The 2,457,000 bags (100 pounds each, cleaned basis) produced in the United States in 1955 was about one fifth less than in 1954 and, except for 1952, the smallest crop since 1940. The 292,000 acres harvested was 23,000 more than in 1954, but the average yield of 957 pounds (uncleaned) was 341 pounds less. The bulk of the United States crop was produced in two states—Washington, with 1,193,000 bags; and Idaho, with 922,000.

Vegetable Consumption.—Consumption per person of vegetables in the United States has been trending generally upward since 1937. The proportion consumed in fresh form has declined, however, while that of processed vegetables has increased. In 1954, consumption per person of fresh and processed vegetables totaled 204.9 pounds (fresh equivalent basis), compared with 164.9 pounds in 1937. Vegetables used in fresh form made up 57% of the 1954 total, compared with 67% in 1937. Canned vegetables comprised 37% of the 1954 consumption, compared with 32% in 1937. Use of canned vegetables has fluctuated between 35% and 38% of total vegetable consumption per person for several years. Use of frozen vegetables has increased rapidly, but still makes up a small proportion of the total. In 1954, about 12 pounds of frozen vegetables were consumed per person, compared with only 1 pound in 1937. However, frozen vegetables made up only 6% of the per capita total in 1954. (See also AGRICULTURE; FROZEN FOODS.)

WAYNE DEXTER,
Agricultural Marketing Service, U.S. Department of Agriculture.

374,000 cases of venereal diseases reported by state and territorial health departments in the fiscal year 1955 exceeded the combined total of all other notifiable communicable diseases of adults.

Nearly 125,000 cases of syphilis in all stages were reported. This was 11.9% below the number reported the previous year. Early syphilis (primary, secondary, early latent) accounted for 28,900 cases during the same period, as compared with 33,700 early cases in the previous year.

The estimated 239,800 cases of gonorrhea reported in the United States during the fiscal year 1955 was slightly higher than the previous 12-month total. This was the first time an increase has been shown in gonorrhea morbidity since the general decline which began in 1946.

Other venereal diseases—chancroid, lymphogranuloma venereum, and granuloma inguinale—accounted for 4,400 cases, of which chancroid comprised two thirds. These diseases were 2% under the total for the fiscal year 1954.

Mortality and Insanity from Syphilis.—One of the chief aims of syphilis control is the prevention of the disabling complications of late untreated syphilis. Advanced cases of syphilis can result in mental and physical disability and premature death. In the calendar year 1954, there were an estimated 4,970 deaths due to syphilis, a rate of 3.1 per 100,000 population. Final figures for 1953 show 5,273 deaths, a rate of 3.3 per 100,000 population. From 1940 to 1951 the death rate due to syphilis dropped from 10.7 to 4.1 per 100,000 population. Since 1951, this rate has continued to decline, but at a slow rate.

Insanity due to syphilis is measured by the rate of first admissions to hospitals because of syphilitic psychoses. Since 1940, first admission to mental hospitals due to syphilis has dropped from a rate of 6.1 per 100,000 population to a rate of 1.8 in 1952. While the rate has declined in 12 years, the cost of maintenance per case has been rising. The cost in tax-supported installations of maintenance of patients with syphilitic psychoses in 1952 was over \$40 million. The estimated loss of income by males so hospitalized in 1952 was \$98 million.

The rate of infant mortality due to syphilis in 1953 was 1.4 per 100,000 live births, as compared with 2 per 100,000 live births in 1952. Efforts are made to prevent these infant deaths by means of routine diagnostic blood tests on all pregnant women, and adequate treatment of syphilitic women during pregnancy. Forty-two states and three territories have passed prenatal health examination laws to assist in the control of this disease. These legal measures, plus the lowering rate of syphilis in the general population, have resulted in a decline since 1939 of 97.6% in infant mortality due to syphilis.

Control of Venereal Disease.—The control of venereal disease depends on treatment of all infectious persons, curing the disease before the late disastrous consequences can develop, and case finding of the infected person's contacts. State and local health departments primarily are responsible for planning and providing public health services in venereal disease case finding, diagnosis, and treatment, but in 1955 approximately 41% of syphilis cases and 15% of gonorrhea cases were reported by private physicians. Twenty prevention and control centers operating in 7 states and the District of Columbia provided full-time services in case finding, diagnosis, and treatment to 289,385 persons during 1955.

VENEREAL DISEASE. Morbidity.—Approximately

There are also 2,096 venereal disease clinics in 48 states and 4 territories. The centers and clinics made an estimated 1,720,000 diagnostic observations on persons suspected of having a venereal disease. Of those persons examined, 293,000 (17%) were found to be infected, and were admitted for treatment to clinics or other public health facilities. In support of this work done by state and territorial health departments, the Venereal Disease Program continued its aid to case finding activities in 34 states, 3 territories, and the District of Columbia. As a result of 380,000 investigations, 266,000 persons were brought to examination, and 104,500 with a venereal disease were treated. (See also DERMATOLOGY.)

CLARENCE A. SMITH,
*Medical Director; Chief, Venereal Disease
Program, Division of Special Health
Services, U.S. Public Health Service.*

VENEZUELA. A federal republic in northeastern South America, Venezuela borders on the Caribbean Sea in the north, Colombia in the west, British Guiana in the east, and Brazil in the south. It has an area of 352,143 square miles, and is geographically divided into four major regions: the Andes ranges (where the majority of the people live), the Maracaibo Basin, the llanos (interior plains crossed west to east by the Orinoco River), and the Guiana Highlands.

Population.—The Venezuelan population reached an estimated 5,858,000 by January 1955 (1950 census, 4,985,716), representing a 2.9% annual increase for the last decade. The majority of people are of mixed Spanish and Indian ancestry; tribal Indians number 105,000, while mulattoes and zambos represent 10% of the population. Since 1941 Venezuela has had the world's second highest immigration ratio in relation to total population; in 1954 immigrants totaled 328,185, of whom a third were Italian and 76,880 were Spanish. Urban population, now 50% of the total, includes the Federal District with the rapidly growing metropolitan area around Caracas (1 million on Oct. 1, 1955), Maracaibo (330,470), and Barquisimeto (142,225). Spanish is the official language.

Government.—Venezuela's 22d constitution, approved on April 15, 1953, divides the country into 20 states, 2 federal territories, a federal district, and federal dependencies consisting of 72 islands. The president (Brig. Gen. Marcos Pérez Jiménez) has a 5-year term of office, which began on April 19, 1953 and which runs consecutively with that of the legislature and the Supreme Court. A Senate of 42 members is elected by the state legislatures, and a Chamber of Deputies of 102 delegates is elected by direct vote. The current legislative, administrative, and judicial officials were appointed by the Constituent Assembly, a temporary body controlled by the president.

Education and Religion.—A 10-year school building program was launched in 1951 to provide free education for every child. By December 1954 there were 7,014 elementary schools, in which 16,944 teachers instructed 608,976 pupils, and 197 secondary schools with 877 teachers and 33,481 students. There are 44 normal schools, with 4,374 teachers in training. Roman Catholicism is the prevailing religion, but religious instruction in primary schools must be requested by parents. Three national and 2 private universities provide professional training. During the last decade 808 literacy centers have helped reduce the illiteracy rate from 80% to 40% of the population.

Finance.—Governmental revenues for 1954-55 totaled \$844.6 million, \$133.7 million more than the budget had anticipated and \$83.5 million more than was spent. The 1955-56 record budget of 2,680 million bolivars exceeded the previous year by 300 million. (According to the official rate of exchange, 1 bolivar equals 29.85 U.S. cents.)

Venezuela's gross national product (per capita) rose from \$549 in 1950 to \$642 in 1954, a more rapid rise than in any other Latin American country. Large investments accounted for the rapid growth; since 1950, 24% of the total gross product had been reinvested, while an additional 12% of this total came from the United States. Foreign capital in Venezuela on Jan. 1, 1954, totaled \$3.3 billion, 88.5% of which was invested in oil. United States investments represented 60.63% of this total, followed by the Netherlands (25.35%), and the United Kingdom (12.02%). Venezuela has not been plagued by inflation; however, the April 1955 cost of living (1938 = 100) had reached 180.2, almost 8 points

above the previous year. Venezuela's direct internal debt totals \$12 million but the government-guaranteed debt of public agencies (primarily public roads) was over \$150 million in 1955.

Petroleum Production.—As the world's largest oil exporter and second only to the United States as an oil producer, Venezuela had 12,109 producing wells on Dec. 31, 1954, from which had come 692 million barrels of crude oil, 9% more than the previous year and 13.9% of world oil production. The average daily production during the first half of 1955 reached a record high of 2.11 million barrels.

Eleven active oil refineries within Venezuela produced 161.9 million barrels of petroleum products, or more than half as much as the Netherlands Antilles. While 72.6% of the natural gas was allowed to burn as waste in 1954, the average monthly production of gas between January and June 1955 amounted to 68,864 million cubic feet.

Agriculture.—Venezuela has improved its agricultural productivity; since 1950 its food crops have increased 35%. In 1955, the domestic supply of corn, beans, sugar, rice, and cotton was enough to satisfy national demand. However, the production was still below the consumption of wheat, oats, flour, lard, vegetable oils, and dairy products. Food purchases accounted for 15% of the total imports in 1954, compared with 21% in 1950.

Agriculture is presently characterized by a decline in cacao and coffee, the country's traditional crops. About one fifth of Venezuela's 4.9 million acres under cultivation are devoted to coffee production. During the 1954-55 coffee season, 400,000 bags of 132.3 pounds each (200,000 bags less than the previous season) were produced. Cacao exports in 1954 were 16,818 tons.

Mineral Industries.—The development of extensive mineral resources has broadened Venezuela's economy. The most important minerals discovered to date are gold, diamonds, iron ore, asbestos, manganese, bauxite, sulfur, phosphates, coal, and magnesite. The Bethlehem Steel Company and the United States Steel Corporation shipped 5,420,600 metric tons of Venezuela's 65% iron-rich ore to the United States in 1954, while iron exports in the first quarter of 1955 had reached 2,516,228 metric tons.

Gold production continued to rise; in 1954 it totaled 1,744,088 grams, and during the first quarter of 1955 it reached 602,180 grams. Diamond exploitation has been left to primitive extractive methods. Diamonds weighing 96,983 carats were mined in 1954, and 72,092 carats were produced by the end of June 1955. The production of cement reflected construction activity; the monthly average of 108,000 metric tons for the second half of 1954 dropped to 103,000 metric tons through June 1955.

Foreign Trade.—Venezuela's exports in 1954 totaled Bs.5,661 million, an increase of 19.5% over 1953; imports totaled Bs.2,746 million, an increase of 11.3% above the 1953 figure. Sparked by a record petroleum output, exports and imports during the first quarter of 1955 reached a new seasonal peak. Petroleum accounted for 94.3% of the 1954 exports, which included 655 million barrels of crude oil or 166 million more than the 1953 figure. Iron ore exports rose to 2.14% of the total, while coffee and cacao represented 1.97% and 0.84%, respectively. The market value of coffee dropped considerably in 1954 and again in 1955, although petroleum prices were stabilized.

Venezuela's imports in 1954 included machinery (33%), items for manufacturing metals (23%), and food products (15%). These imports were supplied principally by the United States (61.6%), the United Kingdom (7.8%), Germany (6.8%), Canada (3.96%), and France (3.5%).

Communications.—According to a master highway building program adopted in 1950, Venezuela requires 14,430 miles of main roads, of which 7,475 miles have been constructed, with the remainder scheduled for completion by 1965. There were 112,048 passenger cars, 75,921 trucks, and 5,260 buses registered in July 1954. A \$2 billion railroad development program was inaugurated on Jan. 4, 1955; 2,640 miles of standard-gauge track will eventually link metropolitan areas and ports with agricultural and mining areas.

Venezuela's 2,000-mile coastline and 10,000 miles of navigable inland waterways were being developed by a major port and shipyard construction program. To the 11-vessel fleet of the Venezuelan Navigation Company, 4 merchant ships were added by the 1955-56 budget. Development of land and water transportation, however, has not kept pace with aviation facilities. Four airlines connect Venezuela's 100 airports; 42 of these are national, and 58 are privately owned. The country's network of 152,000 telephones was developed through the construction of 17 new central stations in as many cities, and the laying of 513.3 miles of cable.

Principal Events, 1955.—Of his style of rule, President Pérez Jiménez stated in February 1955: "I make every effort to give Venezuelans the kind of government best adapted to them. People may call it a dictatorial regime . . . (but) my country is not ready for the kind of democracy that brings abuses of liberty."

The American Federation of Labor and the Congress of Industrial Organizations issued a joint statement protesting labor suppression in Venezuela and declared they would not be represented at the Fifth Meeting of the Petroleum Committee of the International Labor Organization (ILO), held in Caracas on April 25, 1955. Venezuelan authorities expelled a member of the ILO's governing body after he had spoken critically of the Venezuelan regime, and on May 3, Venezuela announced its withdrawal from the ILO. However, a less rigid labor policy was evidenced in June 1955, when two trade union leaders were exiled to Mexico after four years in prison without trial. By September 1955 it was estimated that no more than 100 political prisoners were still in prison.

The Venezuelan economy profited by the adoption of a compromise amendment to the United States Reciprocal Trade Agreements Act which permitted, but did not demand, limitation of United States imports, including Venezuelan oil, should the imports threaten American industries. Growing cordiality between the United States and Venezuela was evidenced by the American award of the Legion of Merit to President Pérez Jiménez in November 1954, and in the pledge of Foreign Minister Aureliano Otañez to support the United States during the Formosan crisis in January 1955. On May 3, 1955, Venezuela signed an agreement with the United States on cooperation in the use of atomic energy for peaceful purposes.

MARTIN B. TRAVIS,
Assistant Professor of Political Science,
Stanford University.

VERMONT. New England state, United States; admitted to the Union, March 4, 1791. The "Green Mountain State" ranks 42d in area and 46th in population (1955) among the 48 states.

Area and Population.—Area: 9,609 square miles (land, 9,278; inland water, 331), divided into 14 counties. Population: (1950) 377,747; (est., July 1, 1955) 377,000. Towns (defined as civil divisions) and urban places with 1950 populations above 7,500 are as follows:

Barre city.....	10,922	Montpelier city ²	8,599
Bennington town.....	12,411	Rutland city.....	17,659
Bennington village.....	8,002	Springfield town.....	9,190
Brattleboro town.....	11,522	St. Albans city.....	8,552
Brattleboro.....	9,606	St. Johnsbury town.....	9,292
Burlington city.....	33,155		

¹ Unincorporated. ² Capital.

Executive.—Chief state officers in 1955:

Governor: Joseph B. Johnson (Republican)

Lieutenant Governor: Consuelo N. Bailey

Secretary of State: Howard E. Armstrong

Treasurer: George H. Amidon

Attorney General: Robert T. Stafford

Commissioner of Education: A. John Holden

Constitution and Judiciary.—The present constitution went into effect in 1793, and was rearranged in 1913. The Supreme Court comprises five justices; chief justice in 1955 was Olin M. Jeffords.

Legislature.—The General Assembly (Senate, 30 members; House of Representatives, 246) meets in odd-numbered years, commencing the first Wednesday after the first Monday in January.

The legislative session of 1955 had the state's longest sitting, 158 days, and the largest biennial appropriations, \$81,049,614.75. Proposed and hoped-for legislative reforms may shorten later sessions, but new financial precedents may increase financial burdens.

Despite ingrained objections to bond issues, except in emergency situations, the session authorized \$12,000,000 in bonds for highways, and \$1,529,000 in bonds for new armory construction. By authorizing construction of limited access roads under federal controls, the session marked the end of an era.

Increased appropriations for welfare, education, and highways brought a total biennial budget vote of \$67,520,614. Maximum aid to the aged was raised to \$63 a month, unemployment compensation payments were substantially increased, and the governor's request for increased highway funds for construction was granted.

The governor's proposals for tax increases also were granted. The state poll tax for old-age assistance was raised from \$3 to \$5 per year, and the gasoline tax was increased one-half cent, the increase going to town highways. The income tax was increased one third, and corporation franchise taxes went up one fourth. To meet an estimated \$600,000 revenue deficit the collateral inheritance tax was nearly doubled.

Voting machines were legalized. The hottest debates and the most ill-will were engendered in the defeat of a proposed bill furnishing bus transportation for parochial school children at public expense. A discussion between public and private power interests over the proper agency to bargain with New York for St. Lawrence Seaway power was mild by comparison. Private power interests won a partial victory when the Public Service Commission triumphed over a proposed public power agency. (See also below, *Principal Events, 1955.*)

Finances.—State treasury receipts (1954-55 fiscal year), \$38,193,467; expenditures, \$51,954,308.94; treasury balance, \$5,985,647.92; long-term indebtedness, \$7,531,000.

Taxation.—State tax revenue (1954-55 fiscal year): \$27,153,000, including \$12,164,000 from selective sales and gross receipts taxes; \$6,648,000 from licensing; \$5,398,000 from individual income taxes; and \$1,594,000 from corporate franchise taxes. The state also has a poll tax of \$5 per person.

Banking.—As of June 30, 1955, the state's 36 national banks had \$171,397,000 in assets, \$71,903,000 in demand deposits, and \$80,260,000 in time deposits; the state's 37 other banks had \$271,200,880.62 in assets, \$36,107,446.61 in demand deposits, and \$200,908,517.37 in time deposits.

Education.—School attendance is compulsory for all between the ages of 7 and 16, inclusive. Operating expenditures for public elementary and secondary schools in the 1953-54 school year totaled \$14,518,535.95 (\$219.67 per pupil). Revenue comprised \$11,495,738 from local school districts, \$4,233,713 from the state, and \$339,247 from the federal government. Outlays for construction and improvement amounted to \$2,278,656.64. Teachers' salaries (1954-55) averaged \$3,039.45 (elementary school teachers, \$2,893.96; high school teachers, \$3,415.62).

VERMONT

In the 1954-55 school year there were an estimated 650 public elementary schools (grades k-6 and k-8) with 2,023 teachers and 51,320 students; 81 public secondary schools (grades 7-12 and 9-12) with 837 teachers and 18,022 students; 53 private and parochial elementary and secondary schools with 14,626 students; and 3 junior colleges, 3 state teachers colleges, and 8 colleges and universities.

Social Welfare.—Public assistance expenditures from state and federal funds (excluding institutional costs) in the 1954-55 fiscal year totaled \$4,972,261, including \$3,649,353 for old-age assistance, \$988,719 for dependent children, and \$92,994 for the needy blind; a monthly average of 11,160 persons received public assistance. Operating expenditures for health and welfare institutions amounted to \$2,199,215.89; for correctional and penal institutions, \$774,791.

VERMONT WELFARE INSTITUTIONS
(As of June 30, unless otherwise indicated)

Type of institution	No.	Pop.
Hospitals for mentally deficient and epileptic.	1	543
Hospitals for the mentally ill.	2	1,679
Sanatoriums for the tubercular.	2	116
Soldiers and sailors homes (July 31, 1955).	1	60
Training schools for delinquent boys and girls.	1	116
Reformatory for females.	1	28
Prisons.	1	277

Labor Force.—Nonagricultural employment in August 1955 numbered 104,350, and for the year ending July 1955 averaged 100,350. There were 1,916 insured unemployed workers in August 1955, and the state paid \$3,328,372 in unemployment compensation during 1954.

Manufacturing.—Establishments numbering 604 in 1954 employed 35,769 workers who received \$122,767,858 in salaries and wages. Value added by manufacture in 1953 totaled \$246,754,000, and investment in new plant and equipment amounted to \$9,527,000. Earnings of production workers in manufacturing averaged \$59.83 for an average work week of 40.7 hours, and \$63.91 for 42.2 hours during the first half of 1955.

MAJOR VERMONT MANUFACTURES, 1954

Product or industry	Ave. no. of employees	Salaries and wages
Nonelectrical machinery.	7,901	\$33,409,555
Stone, clay, glass products.	3,698	13,318,657
Lumber and wood products.	4,658	11,973,474
Textile products.	2,640	8,085,395
Food, food products, beverages.	2,295	7,977,478
Paper and allied products.	1,918	7,692,844
Transportation equipment.	1,840	7,238,746
Printing and publishing.	1,389	4,715,943
Apparel & other fabric products.	2,131	4,491,477
Furniture and fixtures.	1,348	4,325,676

Mining.—Vermont normally ranks first among the states in production of asbestos and marble, second in slate, and fourth in talc. The state stood 40th in the value of its mineral output in 1953, with 0.14% of the United States total.

VERMONT MINERAL PRODUCTION, 1953
(In short tons, except as noted)

Mineral	Quantity	Value
Copper.	3,947 ¹	\$ 2,265,578
Sand and gravel.	1,113,607	690,073
Silver (oz.).	43,128	39,033
Stone ² .	527,150	8,859,703
Talc.	80,209	240,627
Other minerals.		8,207,318
Total.		20,302,332

¹ Copper output in 1954: 4,181 short tons (\$2,483,514).
² Excluding that used in making cement and lime. (Source: U.S. Bureau of Mines.)

Agriculture.—Cash farm income for the first half of 1955 totaled \$55,666,000, and for the full year 1954 comprised \$90,872,000 from livestock and livestock products, \$12,938,000 from crops, and \$1,051,000 from government payments. Receipts from principal crops and livestock in 1954 included: dairy products, \$72,253,000; cattle, \$8,043,000; eggs, \$6,400,000; maple sirup and sugar, \$3,156,000; and hay, \$2,069,000.

The state's 15,981 farms (3,317,737 acres; harvested cropland, 799,145) averaged 207.6 acres and \$12,720 in value of land and buildings per farm in 1954. There were 11,910 farms with telephones and 15,510 with electricity. Livestock on farms on Jan. 1, 1955, included 479,000 cattle and 929,000 chickens (excluding commercial broilers). During the week of Sept. 26-Oct. 2, 1954, 31,946 family and hired workers were engaged in farming.

VERMONT CROP STATISTICS

Crop (and unit of production)	Average 1944-53	1954	Est. 1955
Apples (1,000 bu.)	770	880	1,200
Corn (1,000 bu.)	2,602	2,856	2,992
Hay (1,000 tons)	1,340	1,343	1,355
Maple sirup (1,000 gal.)	690	721	673
Maple sugar (1,000 lb.)	108	54	43
Oats (1,000 bu.)	1,219	840	735
Potatoes (1,000 bu.)	1,146	720	731

(Source: U.S. Dept. of Agriculture.)

Transportation and Communications.—State and federal funds disbursed for roads and highways in the 1954-55 fiscal year totaled \$16,295,508.76, and newly completed construction and reconstruction aggregated 91,567 miles.

Highways and roads in August 1955 totaled 13,807 miles (3,421 surfaced). Registered motor vehicles numbered 135,468 on Aug. 31, 1955, including 113,209 passenger cars. There were 14 railroads (1955) operating, in 1953, 942.87 track miles, and (1955) 2 regularly scheduled airlines and 41 airports and airfields (18 commercial and municipal, 1 military, and 22 private).

Communications media (1955) included 13 AM radio stations and 1 operating television outlet; 10 daily newspapers (circulation, 93,252) and 34 other newspapers; and (Jan. 1, 1955) 27,640 business and 76,169 residential telephones.

Principal Events, 1955.—The Vermont General Assembly broke previous records when it adjourned on June 11 after 158 days. An acrimonious struggle over the election of the president pro tempore of the Senate required the vote of then Lieut. Gov. Joseph B. Johnson to break a tie. This inauspicious start did not prevent final adoption of most of incoming Governor Johnson's legislative program. (See above, *Legislature*.)

After 164 years the University of Vermont became an "instrumentality" of the state with a promise of continued financial support and lower tuition for Vermont residents. The Legislature ratified the interstate compact for the New England Board of Higher Education, by which the land-grant colleges mutually agree to support educational programs and grant reciprocal privileges to nonresident students, thus reducing the need for duplicating services such as medical schools and veterinary courses.

During the summer and fall, under newly granted authority, the Public Service Commission negotiated a contract with the New York State Power Authority for the delivery of 100,000 kilowatts of St. Lawrence Seaway power to the border of Vermont, where the existing utilities of the state will take over the transmission. Lower power rates and increased industrial activity are expected from the agreement.

The unexpected Democratic strength in the 1954 Vermont elections sparked an unusual

amount of off-year political activity in 1955. President Eisenhower stopped off in Rutland on June 22 to address a public session of the Dairy-men's Association, and then spent the night in a mountaintop inn where party leaders visited him. Significantly, Secretary of the Interior Douglas McKay talked to a Chittenden County rally in November, and Gov. Averell Harriman of New York appeared in Burlington on December 14.

Legislature and Principal Events by:

ANDREW E. NUQUIST,

Professor of Political Science, University of Vermont.

VETERANS ADMINISTRATION. An independent agency of the United States government, the Veterans Administration is responsible for administering benefits provided by law for veterans and their dependents.*

In October 1955, the nation's population of living veterans reached 22,000,000. Eighty per cent, or more than 15,400,000, had served in World War II. More than 4,000,000 had seen service during the Korean War period between June 27, 1950, and Jan. 31, 1955. The remainder had served in earlier American wars and during time of peace.

To bring benefits to the veteran and his family, the VA maintains offices, hospitals, and homes in all parts of the United States. Offices have also been established in Alaska, Hawaii, the Canal Zone, Puerto Rico, and the Philippines, to handle benefits available in those areas.

Following are the major benefits administered by the VA for veterans:

Medical and Hospital Benefits.—As of Sept. 1, 1955, the VA was operating a network of 173 hospitals for the treatment of ill and disabled veterans. In addition, some beds were available for veterans in non-VA hospitals, on a contract basis. During August 1955, the VA's average daily patient load was more than 110,000 veterans, both in VA and non-VA hospitals. More than half were being treated for mental illnesses.

Veterans of all wars, including those who served during the Korean War period, are entitled to VA hospital care under the following priority system:

First, veterans suffering from injuries or disabilities that resulted from, or were aggravated by, their wartime military service.

Second, veterans with injuries or diseases not connected with service in the armed forces. These veterans must state under oath that they are unable to pay for private hospitalization; must submit a financial statement listing their liabilities and assets; and must wait until a bed becomes available.

During 1955, the VA stepped up its many-sided attack on the growing problem of providing aging veterans with the type of medical care that will enable them to lead useful lives in spite of age and disability. While only 600,000 veterans now are 65 years old or more, the number is expected to increase ten times over during the next half-century.

Among the steps taken have been the following: (1) testing a new program of caring for chronically ill veterans in special intermediate beds, where they receive medical service of a nature between that required by the more acutely

ill and that furnished in domiciliary homes; (2) researching the use of drugs, such as nicotinic acid, which may overcome a common mental malady of the aged; conducting psychological studies on the characteristics and needs of the aged; (3) placing eligible aged veteran-patients in convalescent homes or in private homes within their own communities, since it is generally recognized that elderly patients respond better to treatment either at home or in institutions near home; and (4) planning individual "programs of living" for veterans in domiciliary homes, to add new dignity and meaning to their lives.

Korean GI Bill.—A Korean GI bill, enacted in July 1952 for veterans who served during the Korean War, includes five benefits designed to help them in their return to civilian life: education and training; guaranteed or insured loans for homes, farms, and businesses; unemployment compensation; mustering-out pay; and job-finding assistance. The GI education and GI loan programs are the only ones administered by the VA.

Education and Training.—Under the Korean GI training program, a veteran may be entitled to 1½ days of training for each day spent in service during the Korean War period. The maximum is 36 months. While in training, he will receive an education and training allowance from the government. This is the only payment made. Tuition, fees, books, and the like must come out of the monthly allowance.

Rates for veterans in full-time training in schools and colleges are \$110 a month if they have no dependents; \$135 if they have one dependent; and \$160 if they have more than one dependent. Those in training less than full time, as well as those in on-the-job and on-the-farm training, will receive lower monthly rates.

By Sept. 1, 1955, more than 1,000,000 Korea veterans—or one out of every four who served during the Korean conflict period—had taken some form of Korean GI training during the three years the law has been in effect. More than 50% had gone to college; another 34% enrolled in schools below the college level; 12% had taken on-the-job training; and 4% trained on-the-farm.

A VA survey, conducted in 1955, revealed that Korea veterans stayed away from "easy" courses and gravitated toward courses requiring a high degree of skills and training. Business administration courses were most popular, followed by engineering, high-skilled mechanics, crafts, radio and television, medicine, teaching, and science.

GI Loans.—The Korean GI bill contains a loan program that operates under the same conditions that apply to GI loans for World War II veterans. Loans may be used to buy, build, or improve a home; buy a farm, farmland, or farm equipment; or go into business.

As in the case of World War II veterans, GI home loans are guaranteed for up to 60% of the loan, but the guaranteed portion may not exceed \$7,500. Other real estate loans may be guaranteed up to 50%, with a \$4,000 maximum guarantee. Non-real-estate loans, such as business loans, may be guaranteed up to 50%, with a \$2,000 guarantee ceiling.

By Sept. 1, 1955, nearly 200,000 Korea veterans had obtained GI loans. About 90% purchased homes. Loans totaled nearly \$2 billion, of which the VA had guaranteed \$1.1 billion.

Unemployment Pay.—For Korea veterans, unemployment compensation of \$26 a week for a maximum of 26 weeks is handled through the states by the U.S. Department of Labor.

* The agency was created by a presidential executive order on July 21, 1930, under authority of a law passed on July 3 of that year. Its purpose was to bring under one roof the three agencies—Bureau of Pensions, Veterans Bureau, and National Home for Disabled Volunteer Soldiers—which then were administering benefits for veterans.

Mustering-Out Pay.—The mustering-out program, administered by the armed forces, provides veterans with the following payments at time of discharge: \$300 for those with at least 60 days' service, who were on active duty outside the United States; \$200 for those with 60 or more days' service, who were not outside the United States; and \$100 for those who spent less than 60 days on active duty.

Job-Finding Help.—The Korean GI bill's job-finding assistance consists of job counseling and employment placement services, offered by the U.S. Employment Service.

World War II GI Bill.—The World War II GI Bill originally contained three major benefits: GI loans, a program still in full operation; GI training, a program nearing its expiration date; and GI unemployment pay, a program that ended in 1949.

Education and Training.—The cut-off date for starting training under the World War II GI Bill came for nearly all veterans in July 1951. Veterans actually in training at that time were permitted to continue afterwards until they completed their courses, but the training had to be continuous except for interruptions beyond their control, such as summer vacations and recall to military duty. The end of the program for nearly all veterans occurs on July 25, 1956.

By Sept. 1, 1954, more than 7,800,000 World War II veterans—or more than half of all who served during the war—received GI training at some time or another during the 11 years of the program. Of these, 2,200,000 attended colleges and universities; 3,500,000 went to schools below the college level; 1,400,000 took on-the-job training; and 700,000 enrolled in institutional on-farm training (a combination of classroom work and practical experience).

Total cost of the program has been \$14.5 billion. Eighty per cent of the money went directly to the veterans in the form of subsistence allowances. Nearly all the rest was spent for tuition and other training costs. Less than 5 cents out of every dollar went for administration of the program.

GI Loans.—The GI loan program for World War II veterans is similar to that in effect for Korea veterans. By Sept. 1, 1955, more than 4,000,000 World War II veterans had obtained GI loans for an amount totaling more than \$28 billion. Of this sum, the VA had guaranteed or insured more than \$15 billion. More than 90% of the loans were for homes. The remainder were for farms and businesses.

Veterans have made an excellent record of meeting their GI loan obligations. By Sept. 1, 1955, more than 900,000 GI loans amounting to \$4.4 billion had been repaid in full. By the same date, the VA had paid claims on only 37,000 defaulted loans, or less than 1% of the total number. Some of the money the VA has had to pay to lenders is subject to further recovery through the liquidation of assets.

In July 1955, moderate credit restrictions were placed on GI loans, calling for a down payment of at least 2% and a maximum repayment period of 25 years. The reason for this action was to help protect prospective GI home-buyers against increased prices of homes, overextension of credit, and financial risks.

Vocational Training for the Disabled.—Two separate laws provide vocational rehabilitation training for disabled veterans. One, Public Law 16, applies to veterans disabled in World War II; the other, Public Law 894, is for veterans dis-

abled since the start of the war in Korea. Both laws operate in the same manner. Eligible veterans in need of vocational training to overcome their handicaps may train in school, on-the-job, or on-the-farm.

Before a disabled veteran begins training, he is interviewed by a VA counselor, and also may be given a series of tests to determine his aptitudes and abilities. In this way, the VA can help the veteran decide on the type of training he should receive.

While in training, and for two months afterward, the veteran will get a monthly subsistence allowance in addition to his disability compensation payments and also in addition to his training costs—tuition fees and the like—which the VA pays directly to his school. Maximum subsistence rates for veterans in school are \$75 a month, without dependents; \$105 with one dependent; and \$120 with more than one dependent. Additional allowances may be provided, depending on the veteran's degree of disability and the number of his dependents.

Most disabled World War II veterans must have begun Public Law 16 training in time to complete it by July 25, 1956. Disabled Korea veterans discharged before Aug. 20, 1954, must finish by Aug. 20, 1963. Those discharged after Aug. 20, 1954, must complete their training within nine years from separation or from Jan. 31, 1954, whichever comes first. The law allows certain "hardship" cases an additional four years in which to complete their training.

By Sept. 1, 1955, more than 609,000 disabled World War II veterans had received Public Law 16 training during the past 12 years. Another 30,000 veterans, disabled since Korea, also have been trained.

Compensation and Pensions.—Veterans with service-connected disabilities received either during wartime or peacetime service may qualify for monthly compensation payments from the VA. Pensions may be paid to veterans of World War I, World War II, and Korea, for total and permanent disabilities not related to their military service, provided their annual incomes fall below \$1,400 if they are single, or \$2,700 if they are married or have a minor child.

Compensation rates range from \$17 a month for a disability rated at 10% to \$181 for a disability with a 100% rating. Additional statutory awards are payable to veterans with certain severe disabilities, such as blindness and amputations. Peacetime rates are 80% of the wartime scale.

Pension rates are \$66.15 a month, increased to \$78.75 after 10 years or when the veteran reaches age 65. Veterans who need constant aid and attendance may get \$135.45 a month.

On Sept. 1, 1955, more than 2,600,000 veterans were on the VA's disability compensation and pension rolls. Included were 155,000 veterans disabled since hostilities in Korea.

Insurance.—The VA administers three systems of insurance: U.S. Government Life, for World War I veterans; National Service Life, for World War II veterans; and the Indemnity and Insurance Acts of 1951, for Korea veterans.

On Sept. 1, 1955, nearly 5,700,000 World War II veterans held GI insurance policies having a total value of \$37.7 billion; 400,000 World War I veterans had policies valued at nearly \$5 billion; and 339,000 Korea veterans had Korean GI term insurance totaling \$3 billion.

Other Benefits.—The VA administers a number of other benefits for veterans and their depend-

ents. Among these are programs providing cars for the seriously disabled; "wheelchair housing" grants for other disabled veterans; and a guardianship service.

HARVEY V. HIGLEY,
Administrator, Veterans Affairs.

VETERANS ORGANIZATIONS. See specific names of organizations under SOCIETIES AND ORGANIZATIONS.

VETERINARY SCIENCE. Livestock die from ravages of diseases and parasites. Death losses, however, are insignificant when compared with the insidious or hidden losses which result directly from sublethal attacks of many diseases and a myriad of parasites. These are losses due to interference with normal body function. They range from failure of females to reproduce normally, through abortion and infertility, to retarded growth and lowered quality of meat food.

Growers can see and count death losses. They cannot accurately measure losses caused by subclinical infections which sap individual or herd vitality. Apparently healthy animals whose normal body functions are retarded by agents of disease or by parasites cost livestock growers millions of dollars annually, limiting profits from livestock operations. They also add to cost of meat food protein.

Many examples of occult infection or parasitism may be cited to illustrate the importance of microscopic life whose hosts are domestic animals. A small area of mange on a hide may look innocent, but when multiplied by the number of animals on which infestation by tiny mites is unnoticed, losses may be computed in millions of dollars, because of retarded growth and the extra feed for satisfactory finish. In like fashion many other creatures visible only by microscopic study are a drag, limiting results that might be expected from otherwise good management and feeding practices.

Meat foods are, of course, derived from healthy animals. Safeguards to assure consumers wholesome meat cuts, clean milk, and safe nutritious poultry and poultry products are adequate. Inspection services at the municipal, state, and federal levels constitute informed, efficient, and effective forces.

Advancement in veterinary science has been directed toward control or prevention of disease rather than to treatment of ailing animals. Through research, the nature of the relationship of parasitic life to the host animal has been revealed. Human needs have been the continuous motive stimulating inquiry.

The task of bringing meat food supply to an adequate level by 1975 involves the production of 46% more meat on a reduced number of acres. The magnitude of the task of so increasing meat food production has been fully emphasized in many quarters. For example, the former director general of the U.N. Food and Agriculture Organization, Lord Boyd Orr, has claimed that: "It is not the atomic bomb, but the food crisis, that may destroy us. Veterinary medicine is one of the few branches of science in which knowledge can be increased and applied without the danger of doing more harm than good." (See also AGRICULTURAL RESEARCH SERVICE; ZOOLOGY.)

ROBERT L. ANDERES,
Editor, "Veterinary Medicine."

VIET-NAM. See INDOCHINA.

VIRGIN ISLANDS, British. See LEEWARD ISLANDS.

VIRGIN ISLANDS OF THE UNITED STATES. Lying east of Puerto Rico, this West Indian insular possession of the United States forms part of the chain of islands which extends between the Caribbean Sea and the Atlantic Ocean. The islands were purchased from Denmark for \$25 million in 1916, and were proclaimed a United States possession on Jan. 25, 1917.

Area and Population.—Land and inland water area: 132 square miles, comprising three main islands (St. Thomas, with a land area of 32 square miles; St. Croix, 80; and St. John, 20), and approximately 50 small islets and cays (mostly uninhabited), included statistically with the larger islands. Estimated 1954 populations (with 1950 census figures in parentheses): St. Thomas, 15,202 (13,813); St. Croix, 13,065 (12,103); and St. John, 786 (749), for a total of 29,053 (26,665). Charlotte Amalie (1950 pop., 11,469) on St. Thomas is the capital and chief port; on St. Croix are the cities of Christiansted (4,112) and Frederiksted (1,961).

Government.—A new Organic Act of the Virgin Islands (Public Law 517) went into effect on July 22, 1954. Pursuant to its provisions, the executive power of the Virgin Islands is vested in a governor and is exercised under the supervision of the secretary of the interior of the United States. On Aug. 10, 1955, Gov. Archibald A. Alexander resigned effective August 31. On August 19, President Eisenhower appointed as the new governor, Walter A. Gordon, who took the oath of office at Charlotte Amalie on Oct. 17, 1955. Other ranking officials include the government secretary, Charles K. Claunch; the administrative assistant to the governor, George W. Hamilton; the United States attorney, Leon Miller; and the judge of the District Court of the Virgin Islands, Herman E. Moore.

Under the Organic Act, nine executive departments, each headed by a commissioner, replaced 100 bureaus and committees. The new departments are those of Agriculture and Labor, Education, Finance, Health, Insular Affairs, Public Safety, Public Works, Social Welfare, and Tourism and Trade.

Legislative power is vested in the Legislature of the Virgin Islands, with 11 senators elected to two-year terms as follows: two from St. Thomas, two from St. Croix, one from St. John, and six elected at large.

Finances.—With passage of the new Organic Act, the pattern of government financing was changed. Government operations are now financed jointly from revenue collected locally and from Federal Matching Funds from the United States, which are obtained under provisions of the internal revenue laws of the United States on articles produced in the Virgin Islands and transported to the mainland. Separate federal grants-in-aid are made for emergency purposes and essential public projects only. Subsequent to the new Organic Act, a single treasury of the Virgin Islands was created, replacing the system of two separate municipal treasuries; and the Department of Finance was reorganized into tax, treasury, and accounting divisions.

Revenue for the fiscal year ending June 30, 1955, from real property and income taxes, matching funds, and grants-in-aid, totaled \$6,678,196.

Banking.—There are two banks: the Virgin Islands National Bank, with assets (June 30, 1955) of \$10,649,578.13, and the West Indies Bank and Trust Company, with assets of \$3,301,648.48.

Education.—School attendance is compulsory for all between the ages of 5½ and 15. On the three major islands there were in 1955, 32 public schools, comprising 7 kindergartens, 15 rural schools, 7 city elementary schools, one junior high school, and two junior-senior high schools. Their enrollment in 1954-55 was 5,639, and their budget totaled \$716,381. The per pupil cost of \$217 in 1954-55 represented an increase of \$32 over the previous year. Additional enrollment in June 1954 at eight parochial and five private schools was 1,922 and 278, respectively.

Social Welfare.—The Department of Social Welfare administered \$254,701.01 in public assistance expenditures for 1954-55, including \$136,564.37 for old-age assistance, \$65,325.17 for dependent children, and \$19,570.63 for the disabled. Three homes are maintained for the aged and indigent, and there is a school for delinquent boys which in 1954 was transferred from St. Thomas to St. Croix. Some \$1,014,257 was available in 1953-54 for use by the Department of Health for all hospitals.

Agriculture, Industry, and Trade.—There are 755 farms in the Virgin Islands which, according to the 1950 federal census of agriculture, covered 63,753 acres, of which 16,461 had been in cropland harvested the previous year. The value of land and buildings totaled \$6,492,720. Agricultural activities center around the raising of sugarcane (almost 5,000 acres are devoted to its cultivation) and the breeding of livestock.

While much of the revenue of St. Croix is obtained from agriculture, that of St. Thomas is derived largely from the manufacture of rum, handicrafts, tourist expenditures, trade, and shipping. During the year ending June 30, 1955, income from tourists was estimated at \$6 million, representing an increase of 10 per cent over the previous year. Thirty-six hotels and guest houses, mostly located on St. Thomas, had accommodations in 1955 for 1,351 tourists.

During the first 11 months of the 1954-55 fiscal year, exports were valued at \$3,713,886; imports totaled \$11,786,060.

Communications and Transportation.—Daily air-mail and passenger service is provided between St. Thomas and St. Croix, and daily boat mail and passenger service, between St. Thomas and St. John. Caribbean-Atlantic Airlines, Inc., and Pan American World Airways, Inc., added many extra flights in 1955, and British West Indian Airways, Ltd., inaugurated two weekly flights. Thirty-five cruise ships, carrying 13,000 passengers, made St. Thomas a port of call. There are four daily newspapers with a combined circulation of 3,000.

Statistics in the accompanying table are for the year 1954.

	St. Thomas & St. John		St. Croix

GEORGE W. HAMILTON,

Administrative Assistant to the Governor.

VIRGINIA. South Atlantic state, United States; one of the original 13 states. The "Old Dominion State" ranks 35th in area and 15th in population (1955) among the 48 states.

Area and Population.—Area: 40,815 square miles (land, 39,893; inland water, 922), divided into 98 counties and 32 independent cities (as of November 1955). Population: (1950) 3,318,680; (est., July 1, 1955) 3,421,000. Urban places with 1954 populations (as estimated by the Research Department of the Virginia State Chamber of Commerce) above 10,000 are as follows:

Alexandria.....	85,100	Norfolk.....	242,600
Bristol.....	16,800	Petersburg.....	36,600
Charlottesville.....	25,600	Portsmouth.....	93,200
Danville.....	36,400	Richmond ¹	241,000

Hampton.....	69,600	Roanoke.....	97,000
Harrisonburg.....	11,400	South Norfolk.....	23,200
Hopewell.....	22,500	Staunton.....	21,900
Lynchburg.....	49,600	Suffolk.....	12,900
Martinsville.....	18,900	Warwick.....	53,000
Newport News.....	44,000	Waynesboro.....	14,000
Neswome Park-Hilton Park ¹	14,960 ²	Winchester.....	14,700

¹ Unincorporated. ² 1950 federal census figure. ³ Capital.

Executive.—Chief state officers in 1955:

Governor: Thomas B. Stanley (Democrat)
Lieutenant Governor: A. E. S. Stephens
Secretary of the Commonwealth: Martha Bell Conway
Treasurer: Jesse W. Dillon
Attorney General: J. Lindsay Almond, Jr.
Supt. of Public Instruction: Dowell J. Howard

Constitution and Judiciary.—The present constitution went into effect in 1902. The highest tribunal, the Supreme Court of Appeals, comprises seven justices; chief justice in 1955 was Edward W. Hudgins.

Legislature.—The General Assembly (Senate, 40 members; House of Delegates, 100) meets in even-numbered years commencing the second Wednesday in January. (See below, *Principal Events, 1955.*)

Finances.—State treasury receipts (1954-55 fiscal year), \$570,035,528.14; expenditures, \$570,615,868.56; treasury balance, \$70,964,424.38; long-term indebtedness, \$10,431,000.

Taxation.—State tax revenue (1954-55 fiscal year): \$205,765,000, including \$90,141,000 from selective sales and gross receipts taxes (the state has no general sales tax); \$33,912,000 from licensing; \$42,216,000 from individual income taxes; \$20,916,000 from corporate income taxes; and \$10,263,000 from property taxes. Virginia imposes a poll tax of \$1.50 per person.

Banking.—As of June 30, 1955, the state's 132 national banks had \$1,551,662,000 in assets, \$945,559,000 in demand deposits, and \$475,271,000 in time deposits; the state's 185 other banks had \$1,171,439,000 in assets, \$641,432,000 in demand deposits, and \$424,103,000 in time deposits.

Education.—School attendance is compulsory for all between the ages of 7 and 16, inclusive. Operating expenditures of \$123,250,951.46 (\$188.75 per pupil) for public elementary and secondary schools in the 1954-55 school year comprised \$63,428,624.53 from local school districts, \$51,358,731.66 from the state, and \$8,463,595.27 from the federal government. Outlays for construction and improvements amounted to \$18,570,020.79. Teachers' salaries averaged \$3,123 (elementary school teachers, \$3,011; high school teachers, \$3,257).

In the 1954-55 school year there were 2,248 public elementary schools (grades 1-7) with 17,057 teachers and 540,537 students, and 488 public secondary schools with 9,170 teachers and principals and 183,938 students.

Social Welfare.—Public assistance expenditures from state and federal funds (excluding institutional costs) in the 1954-55 fiscal year totaled \$21,284,837, including \$6,139,313 for old-age assistance, \$6,750,536 for dependent children, and \$556,464 for the needy blind; a monthly average of 38,000 persons received public assistance. Operating expenditures for training schools amounted to \$1,062,521; for correctional and penal institutions, \$6,612,114.

VIRGINIA WELFARE INSTITUTIONS

Type of institution	No.	Pop.*
Hospitals for mentally deficient and epileptic.....	3	3,392

* As of June 30, 1955, unless otherwise indicated.

Labor Force.—Nonagricultural employment on July 15, 1955, was 897,800, and for 1954 averaged 881,600. There were 52,000 unemployed workers on Aug. 1, 1955, and the state paid \$13,682,791.31 in unemployment compensation during the year ending June 30, 1955.

Manufacturing.—Establishments in 1953 numbered 4,585. During 1954 an average of 242,000 employees received \$780,074,000 in salaries and wages. Value added by manufacture totaled \$1,646,114,000. Total capital investment in plant and equipment was \$837,846,000. Earnings of production workers in manufacturing averaged \$56.66 for an average work week of 39.9 hours in 1954, and \$59.30 for 40.9 hours in the first half of 1955.

MAJOR VIRGINIA MANUFACTURES, 1954

Product or industry	No. of employees ¹	Salaries and wages (thousands of dollars)	Value added by mfr. ² (thousands of dollars)
Chemicals & allied products.....	36,200	\$153,941	\$485,972

Printing & publishing.....	8,000	30,186	51,540

¹ Average per year. ² Value of products less cost of materials, supplies, fuel, electric energy, and contract work.

Mining.—Virginia normally ranks first among the states in production of kyanite, second in pyrite, third in ilmenite, and fourth in roofing slate. The state stood 21st in the value of its 1953 mineral output, with 1.06% of the United States total. In July 1955, there were an estimated 15,800 persons employed in the state's mineral industries.

VIRGINIA MINERAL PRODUCTION, 1953

(In short tons, except as noted)

¹ Values for processed materials are not included in the total. ² Excluding that used in making cement and lime.

³ Production in 1954: 16,340 short tons (\$3,627,480). (Source: U.S. Bureau of Mines.)

Fisheries.—Commercial fisheries in 1953 engaged 8,911 fishermen whose catch comprised 222,229,000 pounds of fish valued at \$5,814,000, and 55,596,000 pounds of shellfish (\$10,181,000). Poundages and values of leading species were: oysters, 19,512,000 (\$7,652,000); blue crabs, 34,910,000 (\$2,008,000); and menhaden, 160,076,000 (\$1,685,000).

Agriculture.—Cash farm income in the first half of 1955 totaled \$170,008,000 and for the full year 1954 comprised \$256,300,000 from livestock and livestock products, \$198,230,000 from crops, and \$4,676,000 from government payments. Receipts from principal crops and livestock in 1954 included: tobacco, \$84,128,000; dairy products, \$70,681,000; cattle, \$48,918,000; broilers, \$41,384,000; eggs, \$34,650,000; hogs, \$27,845,000; and peanuts, \$21,413,000.

The state's 136,416 farms (14,685,964 acres;

VIRGINIA CROP STATISTICS

Crop (and unit of production)	Average 1944-53	1954	Est. 1955

* Average, 1949-53. (Source: U.S. Dept. of Agriculture.)

harvested cropland, 3,157,774) averaged 107.7 acres and \$10,821 in value of land and buildings per farm in 1954. There were 45,853 farms with telephones and 125,006 with electricity. Livestock on farms on Jan. 1, 1955, included 1,382,000 cattle, 327,000 sheep, 658,000 hogs, and 8,375,000 chickens (excluding commercial broilers). During the week of Oct. 24-30, 1954, 247,930 family and hired workers were engaged in farming.

Transportation and Communications.—State and federal funds disbursed for roads and highways in the 1954-55 fiscal year totaled \$101,991,676.02, and newly completed construction and reconstruction aggregated 489 miles.

Highways and roads on Dec. 31, 1955, totaled 54,827 miles (40,715 surfaced). Registered motor vehicles numbered 1,192,265 on Aug. 31, 1955, including 908,133 passenger cars. There were (1955) 30 railroads operating 4,110 line miles, and 5 regularly scheduled airlines and 107 airports and airfields (77 commercial and municipal, 17 military, 12 private, and 1 other).

Communications media (1955) included 69 AM and 18 FM radio stations and 8 operating television outlets (6 VHF and 2 UHF); 33 daily newspapers (circulation, 910,194) and 105 other newspapers (circulation, 268,471); and (Jan. 1, 1955) 269,656 business and 628,576 residential telephones.

Principal Events, 1955.—The attention of Virginia was focused on issues raised by the 1954 decision of the U.S. Supreme Court holding racial segregation in the public schools unconstitutional. After re-argument in 1955, the Supreme Court remanded the segregation cases, including the one from Prince Edward County, to the trial courts for the entry of decrees requiring compliance with the 1954 decision "with all deliberate speed." Thereupon, the Federal District Court in Richmond in July entered its decree requiring compliance, but, because of the shortness of time, permitted the county to continue its segregation policy for the year 1955-56.

In November the Governor's State Commission on Public Education, appointed in 1954, made public its plan "to prevent forced integration in the schools." The plan would empower school boards to assign pupils to schools for various reasons other than race and would authorize the use of public funds to help operate nonsectarian private schools as a possible alternative to integrated public schools. Integration would be permitted where any locality desired it.

Public opinion seemed to support the commission's plan, but there were strong minority points of view. Congressmen Watkins M. Abbitt and William M. Tuck, the latter a former governor and both from the rural Southside commonly called the black-belt, insisted on a plan which would deny state funds to racially segregated schools unless the voters of a locality approved segregation for their schools. U.S. Sen. Harry F. Byrd tentatively approved this idea without accepting it as the "final answer" to the school problem, and former Gov. John S. Battle said some sections would not appropriate money for integrated schools and that "no system short of dictatorship" could force them to do so. The governor's commission insisted that its chief purpose was to preserve the public schools. The Virginia Council on Human Relations, directed by Dr. John H. Marion of Richmond and consisting of about 280 members, urged a plan for "constructive" step-by-step compliance by appointing local groups of white and Negro leaders to work out the details and safeguard the public schools. The NAACP demanded immediate compliance with the decision.

A special session of the General Assembly, which met on November 30, authorized an early

referendum on whether a constitutional convention should be held, limited to changes necessary to permit the use of public funds for private education. The necessary legislation passed 93 to 5 in the House and 38 to 1 in the Senate, and the assembly adjourned after four days. In the referendum, held on Jan. 9, 1956, Virginians supported the proposal for a convention by a 2 to 1 majority.

The Federal District Court in Norfolk on July 7 outlawed segregation in state-owned parks, and this result was upheld in another case by the U.S. Supreme Court in November, when it held segregation illegal in public parks, playgrounds, and golf courses.

In the November elections, Republicans gained only one additional seat in the General Assembly for a total of 9 out of 140. A special effort by the Democratic organization to defeat Republican Theodore Roosevelt Dalton for the state Senate backfired. Dalton was reelected by the largest majority he had ever received.

VITAL STATISTICS. See Index entry.

VITAMINS. Although no new vitamins were discovered or synthesized during the last year, considerable progress has been made in the clinical evaluation and application of some of the vitamins. The year was particularly productive of results in research involving the interrelationship of certain vitamins and the response of the body in fighting disease. Heretofore, our knowledge of the chief role of the vitamins has been limited to their need in nutrition. As catalysts in the metabolism of many foodstuffs such as carbohydrates, fats, proteins, and minerals, and as functional parts of enzyme systems, the vitamins have been well evaluated.

In the last few years, much of the attention of clinicians interested in or specializing in nutrition has been directed to means of diagnosing subacute stages of nutritional deficiencies. The existence and nature of such subclinical manifestations of malnutrition have been definitely established as being associated with chronic deficiencies

of certain vitamins. Results of research during the past year have contributed further evidence regarding some newly recognized functions of the vitamins.

Ascorbic acid, or vitamin C, was found to exert an important effect on the ability of iron-deficient, anemia patients to absorb and utilize iron. This may account for the inability of chronic anemia patients on low vitamin C intake to maintain normal increases in hemoglobin and red cell count. Ascorbic acid was also found to influence the maintenance of normal blood levels of vitamin B₁₂ in monkeys, thus tending to confirm the concept that this vitamin plays an important role in absorption of certain nutrients by the blood.

Pyridoxine, or vitamin B₆, was found to reduce the toxic side effects of the new antitubercular drug, isoniazid, without interfering with its therapeutic efficacy.

Reports of research investigations, under the sponsorship of the National Vitamin Foundation during 1954-55, reveal the following: Animals on a diet deficient in pantothenic acid, pyridoxine, or folic acid lose their ability to produce antibodies to allergens and diphtheria toxoids, and their innate species resistance to infection by other microorganisms. This condition of functional impairment is not limited to animals; from the July issue of the *Journal of Clinical Investigation*, we learn that severe functional and metabolic disorders, as well as increased susceptibility to infection, can result from pantothenic acid deficiencies.

The importance of thiamine in the intermediary metabolism of heart muscle is well known; new evidence that a body deficiency of this vitamin may be associated with heart failure was reported in a recent issue of the *Journal of Clinical Investigation*. Riboflavin deficiency, as well as chronic deficiency of several of the other B-complex vitamins, has been reported in the June 1955 issue of the *New England Journal of Medicine* to be responsible for a number of oral diseases.

Some of the newer developments in the effects of vitamin B₆ and vitamin E deficiencies in human metabolism and nutrition, and the interrelationships of these two vitamins in their etiological relation to various diseases in humans, were the subject of a two-day conference at the Vanderbilt University School of Medicine in October 1955.

The year 1955 has also been prolific in continuation of investigations furthering our scientific and medical knowledge of vitamin B₁₂. In the previous years this vitamin was definitely recognized as the anti-pernicious anemia factor, and, in 1954, its use orally with intrinsic factor was firmly established as the treatment of choice in this disease. In 1954 its use with folic acid was further recognized as the curative measure in the anemias of sprue and pregnancy.

This last year's reports of research with vitamin B₁₂ have added the following to our increasing knowledge of this vitamin:

- (1) In diabetics, its administration tends to stabilize the disease and gives the patients an increased sense of well-being.
- (2) Vitamin B₁₂, in divided doses, given more frequently, is better utilized than the same total dose given at one time.
- (3) Persons on an absolute vegetarian diet develop low serum levels of vitamin B₁₂ deficiency after several years on such diets.
- (4) The human fetus draws vitamin B₁₂ from the mother's stores, indicating an increased need by the mother for this vitamin.

Research on vitamin B₁₂ continued in 1955. Mice are injected with the vitamin to determine effect on growth.

U. S. VITAMIN CORPORATION

The year 1955 has also seen the achievement of the development of techniques for growing mammalian cells in tissue culture in a synthetic medium. This work, reported by scientists in the U.S. Public Health Service in the Sept. 16, 1955, issue of *Science*, indicates that 7 vitamins, in addition to 13 amino acids, were found to be essential for the growth and reproduction of two types of cells. The vitamins include folic acid, nicotinamide, pantothenic acid, pyridoxine, riboflavin, thiamine, and choline. This reported work seems to re-emphasize the fundamental relationship of these vitamins to life processes.

WAGE AND HOUR AND PUBLIC CONTRACTS DIVISIONS. These divisions administer the Fair Labor Standards Act of 1938, as amended, and the Walsh-Healey Public Contracts Act of 1936.

The divisions are headed by an administrator, who is appointed by the president with the consent of the Senate.

Fair Labor Standards Act.—This law contains minimum wage, overtime pay, and child-labor provisions. It applies to employees who are engaged in interstate commerce or in the production of goods for interstate commerce, except those who are specifically exempt.

Beginning March 1, 1956, the present minimum wage of 75 cents an hour is to be increased to \$1, as provided by the Fair Labor Standards Amendments of 1955. It is estimated the new minimum will mean direct pay increases for 2,100,000 of the 24 million workers now protected by the law. The other changes effected by the amendments concern the procedure by which minimum wages are set for Puerto Rico and the Virgin Islands.

The overtime pay provisions remain unchanged. In general, one and one-half times the employee's regular rate of pay is required for all hours worked over 40 during a workweek.

Also unchanged are the law's child-labor provisions. These set 16 years as the minimum age for employment in most jobs, with 18 as the minimum for occupations which have been designated hazardous by the secretary of labor. Employment of 14- and 15-year-old children is permitted outside school hours in a few kinds of jobs, under strict limits on hours and working conditions. Children under 16 may be employed in agriculture only outside of school hours as set by the school district where they live while working.

The act authorizes the administrator to issue certificates permitting the employment of learners, handicapped workers, and apprentices at subminimum rates, to the extent necessary to prevent curtailment of employment opportunities. On June 30, 1955, 1,128 certificates were in effect permitting the employment of about 20,000 learners at subminimum rates. Certificates were granted for the employment at subminimum rates of 1,865 handicapped workers in industry and of more than 15,000 handicapped clients of sheltered workshops.

Minimum rates for industries in Puerto Rico

and the Virgin Islands are set by wage orders based on the recommendations of special industry committees. The committees are charged by the act to recommend the highest minimum rate (which may be at or below the statutory minimum) which will neither result in substantial curtailment of employment in island industry nor give it a competitive advantage over mainland industry. The committees are composed equally of employer, employee, and public representatives. Their membership includes residents of both the mainland and the islands.

The 1955 amendments will accelerate the industry committee program. They provide that minimum wage recommendations, made by an industry committee after its hearing, shall be published in the *Federal Register* by the secretary of labor and shall take effect 15 days after publication. There will no longer be a separate administrative hearing on the recommendations. The amendments also require a review of all wage orders once a year, beginning July 1, 1956.

During the fiscal year 1955, higher minimum wage rates were approved for seven industries or industry divisions in Puerto Rico. Among industries for which new minimum rates were set are a group of needle trades, which employ about half the workers covered by the law in Puerto Rico. Increases over the former rates for this group average about 40%.

Employees can sue in their own behalf for wages owed under the act and for liquidated damages. The secretary of labor may institute suit in behalf of employees, under certain circumstances; and the administrator may supervise the payment of back wages. There is a two-year statute of limitations on employee claims. Under certain conditions employers have a "good-faith" defense. (See also LABOR.)

Public Contracts Act.—This act applies to government contracts in excess of \$10,000 for the manufacture or furnishing of materials, supplies, articles, or equipment. It requires that covered employees be paid not less than the minimum wages which the secretary of labor has determined to be prevailing in the industry.

During the fiscal year 1955 the labor secretary issued a minimum wage determination for the metal business furniture and storage equipment industry. The determination finds the prevailing minimum wage to be \$1.10 an hour, with a beginner minimum of \$1.00.

The Public Contracts Act also requires pay-

ment of one and one-half times the employee's basic rate for all hours worked over 8 a day or 40 a week; prohibits the employment of boys under 16 years of age and girls under 18; contains safety and health provisions; and prohibits the employment of convicts.

Enforcement.—During the 1955 fiscal year, 39,330 nonagricultural establishments were investigated by the divisions; 55% were found to be violating one or more of the basic provisions of either or both acts. Violations of the minimum wage provisions were found in 12% of the investigated establishments, violations of the overtime pay provisions in 46%, and child-labor violations in 9%. In addition, special child-labor investigations in agriculture disclosed that 59% of the 3,218 farms visited had employed 4,151 children in violation of the law.

Of the establishments found in violation of the minimum wage or overtime provisions of the Fair Labor Standards Act, 79% agreed or were ordered to pay restitution of \$6,165,117 to 81,330 underpaid employees during the fiscal year.

Of the 2,396 establishments investigated for compliance with the Public Contracts Act, 2% had violated that act's child-labor provisions. Safety and health investigations made in 2,151 establishments under the Public Contracts Act disclosed violations in 43% of the firms.

NEWELL BROWN,
Administrator.

WAGES AND HOURS. See Index entry.

WAGNER, Honus (real name JOHN PETER WAGNER), American baseball player: b. Carnegie, Pa., Feb. 24, 1874; d. Dec. 6, 1955. One of the immortals of baseball, and almost universally regarded as the greatest shortstop of all time, Honus Wagner played 21 consecutive seasons in the National League (1897-1917). He established a number of records which still stand, and his lifetime batting average was .329.

Beginning on the sandlots, he broke into professional baseball in 1895 with the Steubenville (Ohio) team of the Tri-State League. In the following year he joined the Paterson (N.J.) club of the Atlantic League, from which he was purchased in 1897 by Barney Dreyfuss, owner of the Louisville Colonels, then in the National League. In 1900, when the National League was reduced from twelve to eight teams, the Colonels' owner obtained the Pittsburgh franchise and took the valuable shortstop with him. Wagner remained with the Pirates as an active player until 1917.

During his fabulous major league career the "Flying Dutchman," a nickname Wagner earned for his tremendous speed on the base paths, came to be recognized as one of the most dangerous batsmen in the game. A right-handed batter, he was not a slugger, but he could hit to all fields. He hit over .300 in 17 consecutive seasons and won the National League batting championship 8 times (1900, 1903, 1904, 1906, 1907, 1908, 1909, and 1911), both league records. At various times in his career he also led the circuit in two-base hits, three-base hits, runs scored, total hits, runs batted in, total bases, and stolen bases. National League lifetime records he still holds include: most runs scored, 1,740; most base hits, 3,430; most total bases, 4,888; and most games played, 2,785. He was equally outstanding as a defensive shortstop, recording a lifetime fielding average of .945 (14,794 chances, 799 errors) and leading the league in this department in 1912, 1914, and 1915.

In 1933, after a number of years on the periphery of the sport, Wagner returned to major league baseball as a coach for his old team, the Pittsburgh Pirates. Although his duties were only nominal, he remained with the club until 1952. Named to baseball's Hall of Fame in 1936, the great shortstop was further honored on April 30, 1955, when a bronze statue of him was dedicated in Schenley Park Plaza, at Forbes Field, Pittsburgh.

WAKE ISLAND. A coral atoll and three islets (Wake, Wilkes, and Peale) in the mid-Pacific, 2,100 miles west of Honolulu, Hawaii. Area, 3 square miles; population (1950 census) 349. Wake serves as a transpacific airlines stop, and is under the jurisdiction of the U.S. Navy.

WALES. A British principality since 1284, Wales comprises 13 counties (including Monmouthshire), forming a wide peninsula west of England and facing the Irish Sea (area, 8,006 square miles; pop., 2,596,986 in 1951). Principal cities (with populations as of June 1954) are Cardiff (248,000), Swansea (161,500), Rhondda (108,730), Newport (104,600), and Merthyr Tydfil (59,700). Thirty-six members represent Wales in the House of Commons; Gwilym Lloyd-George is minister of Welsh affairs in the British cabinet.

Coal, iron, and slate mining, and steel and textile manufacturing are the principal industries; cereals and other food crops are grown (arable acres, 945,000 in 1954), and stock raising is important (permanent pasture, 1,646,000 acres). Four colleges of the University of Wales had 4,290 students in 1954-55 (Cardiff, 1,527; Aberystwyth, 1,091; Bangor, 853; Swansea, 819). (See also GREAT BRITAIN.)

WALLACE, Robert Charles, Canadian educator and public official: b. Orkney Islands, Scotland, June 15, 1881; d. Kingston, Ont., Jan. 29, 1955. One of Canada's foremost educators, Dr. Wallace, who was both a scientist and humanist, was former president of the University of Alberta and principal and vice-chancellor of Queen's University in Kingston, Ont.

After receiving his M.A. and B.S. degrees from the University of Edinburgh in 1901 and 1907, respectively, Wallace continued his studies at Göttingen University, taking his Ph.D. degree in 1909. Returning to Edinburgh to specialize in geology, he earned his doctorate in science in 1912. He also attended St. Andrews University in 1909-10 as a research student and demonstrator in crystallography.

In 1910 he left Scotland to fill a position as lecturer in geology and mineralogy at the University of Manitoba in Canada. Promoted to full professor and appointed chairman of the department of geology and mineralogy in 1912, he continued to teach there until 1928. During this period he was appointed commissioner of North Manitoba (1918-21), and commissioner of mines and natural resources for Manitoba (1926-28).

With the retirement of Dr. Henry M. Tory in 1928, Dr. Wallace was appointed the second president of the University of Alberta, a position he held until 1936. During his administration the young institution expanded its facilities to include a new school of nursing, a summer school of fine arts (at Banff), and expansion of university extension work throughout Alberta.

In 1936, Dr. Wallace succeeded W. Hamilton Fyfe as principal and vice-chancellor of Queen's University, one of Canada's leading educational

institutions. In his 15 years as principal he guided the university in a program of expansion which included the establishing of schools of nursing, physical and health education, and fine arts, a department of industrial relations, an institute of local government, and a biological research center. He retired from Queen's in 1951, but continued his educational activities in the capacity of adviser on university matters to the Ontario Department of Education.

Besides his activities at Queen's, Dr. Wallace performed valuable work for the Canadian government during and after World War II. In 1943 he was named chairman of the subcommittee under the Committee on Reconstruction which brought out the vital information on conservation and development of natural resources known as the Wallace Report. In addition to serving as a member of the Defense Research Board during the war, he was one of the three Canadian delegates who later participated in the London conference that formed the United Nations Educational, Scientific and Cultural Organization (UNESCO). A member of the Arctic Institute of North America in Montreal from the time of its founding in 1945, he was made its executive director on his retirement from Queen's in 1951. He also served as Canadian advisory editor for *THE ENCYCLOPEDIA AMERICANA* from 1940, and was the recipient of honorary degrees from 20 Canadian, American, and British universities.

His publications include *A Study in Isomorphism* (1912); *Dolomitization Processes* (1913); *The Resources of Manitoba and Their Development* (1914); *Mining and Mineral Prospects in Northern Manitoba* (1919); *A Liberal Education in a Modern World* (1932); and *Religion, Science and the Modern World* (1952).

WALNUTS. See NUTS.

WARREN, Earl, American public official and jurist: b. Los Angeles, Calif., March 19, 1891. Three times governor of California (1942-53), he was appointed chief justice of the United States by President Eisenhower on Sept. 30, 1953, and was sworn in on the following October 5.

After his graduation from the University of California (B.L., 1912; J.D., 1914), Warren worked in a San Francisco law office until 1917, when he was drafted into the army. On his return to civilian life in 1919, he became a clerk on the judiciary committee of the California legislature. In 1925 he was elected district attorney for Alameda County; and in 1938, attorney general of California. He became Republican governor of California in 1942, and was re-elected in 1946 and again in 1950. In 1944 he was the unsuccessful Republican vice presidential candidate on the ticket with Thomas E. Dewey, and in July 1952 he was a candidate for the presidential nomination at the Republican national convention.

At the time of his appointment to the Supreme Court, the press, although noting the governor's lack of judicial experience, praised his character and abilities. The most important ruling of the court since he became chief justice was the decision against segregation in the public schools, handed down on May 17, 1954.

In April 1955, Warren announced that he would not accept a presidential nomination in the future because with his appointment to the court he had left politics permanently. He has stated his conception of the nature of the court in the following terms: "I conceive of this Court as the balance wheel of this government. Its function is to keep us from swinging too violently to one extreme or another."

WASHINGTON. City, District of Columbia. See DISTRICT OF COLUMBIA.

WASHINGTON. Northwestern coastal state, United States; admitted to the Union, Nov. 11, 1889. The "Evergreen State" ranks 19th in area and 24th in population (1955) among the 48 states.

Area and Population.—Area: 68,192 square miles (land, 66,786; inland water, 1,406), divided into 39 counties. Population: (1950) 2,378,963; (est., July 1, 1955) 2,497,000. Urban places with 1950 populations above 10,000 are as follows:

¹ Capital. ² Unincorporated.

Executive.—Chief state officers in 1955:

Governor: Arthur B. Langlie (Republican)

Lieutenant Governor: Emmett T. Anderson

Secretary of State: Earl Coe

Treasurer: Charles R. Maybury

Attorney General: Don Eastvold

Supt. of Public Instruction: Pearl A. Wanamaker

Constitution and Judiciary.—The present constitution went into effect in 1889. The Supreme Court comprises nine justices; chief justice in 1955 was Frederick G. Hamley.

Legislature.—The legislature (Senate, 46 members; House of Representatives, 99) meets in odd-numbered years commencing the second Monday in January.

In 1955 the legislature passed 396 bills at its regular session (January 10 to March 10) and 16 bills at its extraordinary session (March 11 to 24). Approximately \$799.8 million was appropriated for the 1955-57 biennium, of which \$233.2 million (an increase of \$51.8 million over the previous biennium) was to be spent for public schools. Tax revisions included the revaluation of taxable property, an increase in the Business and Occupational Surtax to 60% of the base tax, and a rise in the Sales and Use Tax to 3½%. In education, the teachers' retirement program was expanded, school district reorganization laws were revised, and provision was made for a special issue of \$30 million in bonds for state aid and school building construction. A Department of Public Institutions was established, parole legislation was revised, and prison security laws were tightened. Other legislation provided for the identification of sources of campaign literature, safe abandonment of ice boxes, consolidation of funds into the general state fund, and an increase of unemployment benefits to \$35 per week. The Washington Agricultural Enabling Act, relating to the marketing of commodities, was adopted; and the Communist Party was outlawed. Authorization was given for toll-road construction and for the development of a \$350 million multipurpose hydroelectric project at Priest Rapids on the Columbia River.

Finances.—State treasury receipts (1954-55 fiscal year), \$520,975,134.78; expenditures, \$561,875,685.74; treasury balance, \$74,223,409.96; long-term indebtedness, \$193,860,000.

Taxation.—State tax revenue (1954-55 fiscal year): \$293,483,000, including \$241,600,000 from a 3% general sales tax and selective sales and gross receipts taxes; \$26,040,000 from licensing; and \$20,037,000 from property taxes. The state has no individual income, corporate income or poll tax.

Banking.—As of June 30, 1955, the state's 31 national banks had \$2,168,318,000 in assets, \$1,432,204,000 in demand deposits, and \$575,081,000 in time deposits; the state's 82 other banks had \$628,728,483.38 in assets and \$543,042,258.36 in total deposits.

Education.—School attendance is compulsory for all between the ages of 8 and 15, inclusive. Operating expenditures for public elementary and secondary education in the 1954-55 school year were an estimated \$133,797,000 (\$304 per pupil). Estimated income comprised \$70,200,000 from local school districts, \$93,800,000 from the state, and \$11,700,000 from the federal government. Outlays for construction and improvements approximated \$43,000,000. Teachers' salaries averaged near \$4,310 (elementary school teachers, \$4,195; high school teachers, \$4,585).

Labor Force.—The labor force in July 1955 numbered 1,054,600, including 141,500 agricultural workers. Nonagricultural employment was 884,800, and for the year ending July 1955 averaged 852,400. There were 27,300 unemployed workers in July 1955, and the state paid \$35,290,000 in unemployment compensation during the year ending July 2, 1955.

Manufacturing.—Establishments numbering 5,586 in 1954 employed 189,973 workers who received \$863,493,000 in salaries and wages. Value added by manufacture was \$1,550,000,000, and investment in new plant and equipment (1953) amounted to \$125,083,000. Earnings of production workers in manufacturing averaged \$81.31 for an average work week of 39 hours, and \$84.96 for 39.3 hours in the first half of 1955.

MAJOR WASHINGTON MANUFACTURES, 1954

Product or industry	No. of employees ¹	Salaries and wages (thousands of dollars)	Value added by mfr. ² (thousands of dollars)

¹ Average per year. ² Estimated value of products less cost of materials, supplies, fuel, electric energy, and contract work.

Mining.—Washington normally ranks first among the states in production of magnesite and peat. In 1953 it stood 31st in the overall value of its mineral output, with 0.38% of the United States total. Employees in the mining and quarrying industries in 1954 (average of the four quarters) numbered 2,325.

WASHINGTON MINERAL PRODUCTION, 1955¹ (In short tons, except as noted)

Zinc.....	39,591	7,279,386
Other minerals.....	...	19,322,300 ²

¹ Preliminary, excluding uranium. ² The value of clay and limestone used in cement and lime is included in "Other minerals." (Source: U.S. Bureau of Mines.)

Fisheries.—The commercial fish and shellfish catch in 1954 was 153,221,000 pounds, valued at \$24,161,552 to the state's 5,963 commercial fishermen, and having a wholesale value of \$45,180,000. Normally the state is a leading producer of salmon and halibut. Poundages and values of principal species in 1954 were: salmon, 39,420,800 (\$15,294,382); halibut, 17,666,386 (\$3,179,949); Dungeness crabs, 8,314,400 (\$1,122,444); and oysters, 10,524,683 (\$1,683,949).

Agriculture.—Cash farm income for the first half of 1955 totaled \$199,733,000, and for the full year 1954 comprised \$181,575,000 from livestock and livestock products, \$384,140,000 from crops, and \$4,459,000 from government payments. Receipts from principal crops and livestock in 1954 included: wheat, \$148,525,000; apples, \$79,687,000; dairy products, \$68,608,000; cattle, \$50,639,000; eggs, \$26,375,000; and barley, \$14,970,000.

The state's 65,175 farms (17,641,429 acres; harvested cropland, 4,342,833) averaged 270.7 acres and \$29,006 in value of land and buildings per farm in 1954. There were 48,164 farms with telephones and 63,355 with electricity. Livestock on farms on Jan. 1, 1955, included 1,138,000 cattle and 4,981,000 chickens (excluding commercial broilers).

WASHINGTON CROP STATISTICS

* Average, 1949-53. (Source: U.S. Dept. of Agriculture.)

Transportation and Communications.—State and federal funds disbursed for roads and highways between Feb. 1, 1954, and Jan. 31, 1955, totaled \$87,647,905, and newly completed construction and reconstruction aggregated 1,573 miles.

Highways and roads on Dec. 31, 1954, totaled 45,703 miles (38,785 surfaced). Registered motor vehicles numbered 848,776 on June 30, 1955. There were 18 railroads (1954) operating 5,937.3 track miles, and (1955) 9 regularly scheduled airlines and 202 airports and airfields (105 commercial and municipal, 12 military, 57 private, and 7 others, and 21 seaplane bases). Communications media (1955) included 53 AM

and 7 FM radio stations and 6 operating television outlets; 24 daily newspapers (circulation, 891,156) and 176 other newspapers (circulation, 510,030); and (Jan. 1, 1955) 259,241 business and 634,308 residential telephones.

Principal Events, 1955.—Budget problems required an extended legislative session to balance a biennial budget exceeding \$1 billion; new revenue measures included a retail sales tax increase to 3½% per cent, highest in the nation. (See also above, *Legislature*.) Attempts by school forces to reinstate state support of kindergartens met a gubernatorial veto.

On August 18 the first three generators at federally constructed Chief Joseph Dam added 192,000 kilowatts to the region's power supply, representing the largest one-day power increment in the history of hydroelectric generation. (See also DAMS.) Construction of pipelines to bring natural gas to the state from Canada and New Mexico was begun during the year.

On October 16, Boeing's jet transport prototype, the Boeing 707, flew nonstop from Seattle to Washington, D.C., in a record 3 hours 58 minutes, returning the same day in 4 hours 8 minutes. First sales by the Boeing Airplane Company of Seattle of 20 of these planes for commercial airline use went to Pan American World Airways on October 13, and 30 were sold to American Airlines on November 8. Deliveries were scheduled to begin in 1958. (See also AERONAUTICS.)

In September the total number of people at work in the state surpassed the 1-million mark for the first time. Cold spring weather and severe frosts in early November reduced some crop yields and damaged orchards and other horticulture.

Results of Gov. Arthur Langlie's year-long safe-driving campaign showed tight law enforcement to be effective in drastically reducing accidents. The campaign brought nationwide acclaim.

Controversy boiled at the University of Washington in March when President Henry Schmitz declined a faculty request that Dr. J. Robert Oppenheimer, noted American physicist, be invited to the university as a visiting lecturer. The president rejected the request on grounds of Oppenheimer's alleged personal unfitness.

Defending motorboat champion *Slo-mo-shun V* and its sister boat, *Slo-mo-shun IV*, trophy holders since 1950, met defeat at the hands of *Gale V* in the Gold Cup races on Lake Washington on August 7.

Principal Events by: DELBERT C. HASTINGS,
Industrial Analyst, Bureau of Business
Research, University of Washington.

WATCHMAKING. Of the 10 million jeweled lever watches (total retail sales value, \$500 million) sold annually through 32,000 retail jewelry stores in the United States, 75% are imported, primarily from Switzerland. The Swiss, however, have claimed an 18% decline in watch exports to the United States since the mid-1954 tariff increase of 50%, and because of the subsequent government antitrust suit against Swiss manufacturers and domestic importing firms.

Watches with over 17 jewels constitute nearly half the domestic production, but less than 1% of the imports. The tariff on imported watches containing more than 17 jewels is \$10.75, which is more than twice the average tariff on watches with 17 jewels.

Newest designs in watches place style stress on a slimmer, flatter look. The current market is notable for keen selling practices and the incred-

ible variety of new models. Electronic watches, powered by miniature batteries, were still under test in 1955 and had yet to make their first commercial appearance.

Among watch repairmen in the United States, a 1955 survey by a horological association revealed, employed noncertified watchmakers earned an average of \$78 per week, as compared with a certified employed watchmaker's earnings of \$92 per week. In the self-employed category, noncertified men earned \$93 per week, and certified craftsmen, \$129. Watch repair business continued fair to good throughout the country in 1955.

WEEKS, Sinclair, U.S. secretary of commerce; b. West Newton, Mass., June 15, 1893. A business executive and lifelong Republican, Sinclair Weeks became secretary of commerce in President Eisenhower's cabinet on Jan. 21, 1953.

The son of John W. Weeks, secretary of war in the Harding administration, Sinclair Weeks was graduated from Harvard College in 1914. In that year he began his business career in banking, continuing in that field (except for his service with the artillery in World War I) until 1923, when he became associated with the United-Carr Fastener Corporation of Cambridge, Mass. In 1942 he was appointed chairman of the board, and in 1945 he assumed the same position in the Reed and Barton Corporation, silversmiths of Taunton, Mass.

Active in Republican politics from before World War I, he was appointed in 1944 to complete the unexpired term of Henry Cabot Lodge, Jr., in the U.S. Senate. Because of his skill as a fund raiser for the Republican Party on both a state and national level, Weeks was named chairman of the Republican National Finance Committee in September 1949, which position placed him in the inner circle of the party and close to the presidential candidate, Dwight D. Eisenhower.

As secretary of commerce, Sinclair Weeks is a staunch supporter of the American system of free enterprise. In March 1953 he went on record as opposing price and wage curbs, and in the following year he differed with Secretary of Labor James P. Mitchell on the Commerce Department's plans to end the labor unions' immunity under the antitrust laws. In the field of international commerce, he has been an ardent supporter of the reciprocal trade agreements program.

WEST AFRICA, British. See BRITISH WEST AFRICA.

WEST INDIES. An archipelago extending some 2,500 miles from Florida to the coast of Venezuela, composed of the following three island groups: Greater Antilles (Cuba, Hispaniola, Jamaica, and Puerto Rico); Lesser Antilles or Caribbees (Virgin Islands, Windward Islands, Lee-

ward Islands, Netherlands Antilles, and the islands in the south Caribbean Sea); and Bahama Islands. Politically the West Indies comprise three republics: Cuba, the Dominican Republic, and Haiti; two United States possessions: Puerto Rico (since July 25, 1952, a self-governing commonwealth in close association with the United States) and the Virgin Islands; six British colonies: the Bahamas, Barbados, Jamaica, Trinidad and Tobago, the Leeward Islands, and the Windward Islands, forming the British Caribbean Federation (see BRITISH WEST INDIES); two French departments: Guadeloupe and Martinique; and the Netherlands Antilles. In addition, Margarita Island and several smaller offshore islets are owned by Venezuela. The sixth biennial West Indian Conference (an auxiliary of the Caribbean Commission, q.v.), convened in San Juan, Puerto Rico, on May 10, 1955, attended by representatives of 14 West Indian governments. (See separate articles on the political components of the archipelago.)

WEST VIRGINIA. South Atlantic state, United States; admitted to the Union, June 20, 1863. The "Panhandle State" ranks 40th in area and 30th in population (1955) among the 48 states.

Area and Population.—Area: 24,181 square miles (land, 24,080; inland water, 101), divided into 55 counties. Population: (1950) 2,005,552; (est., July 1, 1955) 2,001,000. Urban places with 1950 populations above 10,000 are as follows:

Beckley.....	19,397	Morgantown.....	25,525
Bluefield.....	21,506	Moundsville.....	14,772
Charleston ¹	73,501	Parkersburg.....	29,684

Huntington.....	86,353	Weirton.....	24,005
Martinsburg.....	15,621	Wheeling.....	58,891

¹ Capital. ² Unincorporated.

Executive.—Chief state officers in 1955:

Governor: William C. Marland (Democrat)
 Executive Assistant: Arden Curry
 Secretary of State: D. Pitt O'Brien
 Treasurer: William H. Ansel
 Attorney General: John C. Fox
 Superintendent of Schools: W. W. Trent

Constitution and Judiciary.—The present constitution went into effect in 1872. The highest tribunal, the Supreme Court of Appeals, comprises five justices; president in 1955 was William T. Lovins.

Legislature.—The legislature (Senate, 32 members; House of Delegates, 100) meets annually commencing the second Wednesday in January.

The 1955 legislative session appropriated approximately \$91.2 million for the 1955-56 fiscal year. Taxes were increased on gasoline and special fuels by 1 cent per gallon and on parimutuel pools by 1%, and the deduction allowed from net assessment on gross salaries and transportation allowances was reduced to 5%. Municipalities were authorized to levy business and occupational sales taxes. Salaries of the governor and Supreme Court justices were increased to \$17,500. Police personnel with five years' service were given a \$120 annual raise for the next five years. A Division of Civil Defense was created; the school for Negro deaf and blind was abolished; authority was given for the creation of forestry camps for wayward juveniles and for establishment of a license-making plant at the state prison. A \$2.5 million expansion plan was approved for five state parks, as were funds for a yearly statewide inspection of vehicles.

At a special session held from May 9 to 13, 1955, state aid to schools was set on the basis of local property evaluations for tax purposes reaching 50% of true value within five years, and motor vehicle registration and title laws were amended.

Finances.—State treasury receipts (1954-55 fiscal year), \$363,640,301.67; expenditures, \$370,605,795.57; treasury cash balance, \$44,440,522.71; trust fund investments, \$156,899,116.37; long-term indebtedness, \$140,861,000.

Taxation.—State tax revenue (1954-55 fiscal year): \$128,076,465, including \$66,558,659 from a general sales tax (1% on purchases of from 6 to 50 cents and 2% on purchases from 51 cents to \$1) and selective sales and gross receipts taxes; and \$17,445,505 from licensing. The state has no individual or corporate income taxes but does have a poll tax of \$2 per male person.

Banking.—As of June 30, 1955, the state's 75 national banks had \$642,533,000 in assets, \$415,532,000 in demand deposits, and \$168,190,000 in time deposits;

the state's 107 other banks had \$554,603,262.04 in assets, \$268,541,072.99 in demand deposits, and \$153,117,545.22 in time deposits.

Education.—School attendance is compulsory for all between the ages of 7 and 16, inclusive. Operating expenditures for public elementary and secondary schools in the 1954-55 school year totaled \$73,089,615 (\$176 per pupil). Income comprised \$31,399,109 from local school districts, \$48,115,813 from the state, and \$1,991,349 from the federal government. Outlays for construction and improvements amounted to \$14,418,360. Teachers' salaries average \$3,057.

WEST VIRGINIA SCHOOL STATISTICS, 1954-55

Agriculture.—Cash farm income for the first half of 1955 totaled \$48,866,000, and for the full year 1954 comprised \$94,030,000 from livestock and livestock products, \$28,783,000 from crops, and \$1,332,000 from government payments. Receipts from principal crops and livestock in 1954 included: dairy products, \$23,518,000; broilers, \$18,638,000; cattle, \$18,475,000; eggs, \$14,545,000; and tobacco, \$3,421,000.

The state's 68,583 farms (7,351,874 acres; harvested cropland, 1,073,216) averaged 107.2 acres and \$7,074 in value of land and buildings per farm in 1954. There were 21,751 farms with telephones and 63,264 with electricity. Livestock on farms on Jan. 1, 1955, included 611,000 cattle, 311,000 sheep, and 3,575,000 chickens (excluding commercial broilers). During the week of Oct. 24-30, 1954, 97,674 family and hired workers were engaged in farming.

WEST VIRGINIA CROP STATISTICS

Crop (and unit of production)	Average 1944-53	1954	Est. 1955
Apples (1,000 bu.).....	3,642	5,600	3,700
Corn (1,000 bu.).....	9,925	9,045	7,293
Hay (1,000 tons).....	997	1,056	1,065
Oats (1,000 bu.).....	1,693	1,898	2,080

Transportation and Communications.—State and federal funds disbursed for roads and highways in the 1953-54 fiscal year totaled \$53,361,013.90, and newly completed construction and reconstruction aggregated 748 miles.

Highways and roads on Jan. 1, 1955, totaled 35,889 miles (20,070 surfaced). Registered motor vehicles included 393,397 passenger cars on June 30, 1955. There were 21 **railroads** (1955) operating, in 1953, 3,690 track miles, and (1955) 6 regularly scheduled **airlines** and 31 **airports and airfields** (14 municipal, 1 state, 2 intermediate, and 14 private).

Communications media (1955) included 43 AM and 11 FM **radio stations** and 7 operating **television outlets**; 31 daily **newspapers** (circulation, 574,574) and 91 other newspapers; and (Jan. 1, 1955) 106,572 business and 306,826 residential **telephones**.

Principal Events, 1955.—During a large part of 1955, public interest centered in the proceedings of the first regular session of the West Virginia 52d Legislature, which was stalemated by differences among the governor (William C. Marland), the Senate, and the House of Delegates regarding proposed revenue measures and a state road reorganization program. The results left

state revenues short of funds for increases in teachers' salaries, and an increase in the gasoline tax from 5 to 6 cents a gallon did not meet the road construction and maintenance requirements. The governor vetoed a bill vesting administration of the state road program in a commission of ten members removable only for cause, thus leaving administration of the program in a single executive-appointed commissioner functioning with the advice of an executive-appointed commission of five members, including the commissioner himself. An extra session (May 9-13) failed to compromise the differences regarding teachers' salaries.

Generally, the public was sympathetically interested in Governor Marland's self-imposed campaign "to sell West Virginia," far and wide, to nonresident industrialists, but it was perhaps more interested in reports to the effect that the West Virginia coal industry had made a 20% recovery in 1955. Except in nonunionized strip mining coal operations and in the field of bus transportation, there was little labor unrest in 1955.

Among other interests of the public was the program of continued educational desegregation, to comply with the decision of the U.S. Supreme Court of May 17, 1954. By late 1955, without friction or notable incidents, all the institutions of higher learning were desegregated; 12 county units of the public schools were completely desegregated, 13 were partly integrated, 18 waited for more definite instructions, and 11 had no Negro pupils; and one rescinded a protested integration order. In an effort to accelerate desegregation, suits were brought against three county boards in 1955.

J. Blaine McLaughlin, state commissioner of agriculture since March 4, 1933, and an elective member of the state executive department, died on Nov. 20, 1955. He was succeeded in office on December 15 by John T. Johnson, an executive appointee.

*Principal Events by: C. H. AMBLER,
Professor Emeritus, West Virginia University.*

WESTERN EUROPEAN UNION (WEU). An international organization for the regulation and coordination of military forces and arms production, established by protocols signed at Paris on Oct. 23, 1954. WEU members are Great Britain, France, the Netherlands, Belgium, Luxembourg (members of the original Brussels Treaty Organization formed in 1948), the German Federal Republic, and Italy. Chief organs are the WEU Council, the Agency for the Control of Armaments (responsible to the council), and the WEU Assembly (composed of the representatives of the WEU nations to the Consultative Assembly of the Council of Europe).

The problem of arms standardization was discussed at intermittent meetings of working representatives of WEU from January to May 1955. France proposed the creation of a centralized armaments pool with supranational powers, but the other nations, particularly West Germany and Britain, were opposed to such an agency. A WEU interim commission also met in London in early May on problems subsequently taken up by the WEU Council.

The Western European Union formally came into being on May 7, 1955, when the WEU Council held its first session in Paris, attended by the foreign ministers of the seven member nations. The council elected Louis Goffin of Belgium as secretary general of the WEU's permanent secretariat, which was established in London. Admiral

Emilio Ferreri of Italy was appointed director of the Agency for the Control of Armaments. Instead of the centralized agency favored by France, the council established a standing Arms Committee, which would seek cooperation on arms standardization and work closely with the North Atlantic Treaty Organization (NATO). Charles Christofini of France was chosen to head the committee. On May 11 the council accepted responsibility for the Saar, as provided in the Europeanization statute formulated by France and Germany in 1954. The council reached agreement on the powers of the prospective commissioner for the Saar, set forth regulations concerning the Saar referendum, and constituted an international commission to supervise the voting. The Europeanization statute, however, was rejected by the Saarlanders on Oct. 23, 1955. (See also FRANCE; GERMANY; SAAR.)

WESTERN NEW GUINEA. See NETHERLANDS NEW GUINEA.

WESTERN PACIFIC ISLANDS, British. These island groups are administered by the high commissioner for the Western Pacific, John Gutch, whose jurisdiction extends over all British islands in the Western Pacific Ocean not administered by Australia, New Zealand, or the governor of Fiji. Principal territories (totaling 17,575 square miles; pop., 188,350) are the Gilbert and Ellice Islands Colony, the British Solomon Islands Protectorate, and the New Hebrides condominium. Starbuck, Malden, Flint, Caroline, and the Vo-stock islands are also under the jurisdiction of the high commissioner, whose headquarters are at Honiara, British Solomon Islands Protectorate.

British Solomon Islands Protectorate.—This protectorate comprises the southern Solomon Islands. (The northern Solomon Islands lie within the Territory of New Guinea; see PAPUA AND NEW GUINEA, TERRITORY OF). The protectorate includes Guadalcanal, on which is Honiara, the capital and seat of government; Malaita; Florida; Tulagi; San Cristobal; Rennell; the New Georgia group; the Santa Cruz group; and the northern islands (Santa Isabel, Choiseul, Ontong Java group, and others). The high commissioner is assisted by a 14-member Advisory Council, including 5 nonofficial whites and 5 natives. Estimated revenue in 1955 was £890,041, comprising local revenue, £A514,017; grant in aid and surplus balances, £A197,007; and Colonial Development and Welfare grants and associated receipts, £A179,017. Estimated expenditure amounted to £A711,024, excluding £A179,017 for Colonial Development and Welfare projects. Education is provided chiefly by mission schools, which receive an administrative subsidy; by a government school at Auki, Malaita; and by government elementary schools at Santa Anna and Honiara.

The chief cash crop was coconuts 22,000 tons of copra having been exported in 1954. Also exported were Kauri pine (from the Santa Cruz group), and trochus shell, from which pearl buttons are made. Gold mining was carried on near Honiara, and manganese ore was mined on Hanesavo Island, near Tulagi. Total exports in 1954 were valued at £A1,893,934; imports, at £A1,203,368. Qantas Empire Airways links Honiara with Sydney, Australia.

Gilbert and Ellice Islands Colony.—Extending over one million nautical square miles, the colony comprises the Gilbert Islands (Abaiang, Abemama, Aranuka, Beru, Makin or Butaritari, Little Makin, Kuria, Tarawa—headquarters of the colony and district—Maiana, Marakei, Nonouti, Nukunau, Onotoa, Tabiteuea, Tamana, and Arorae); the Ellice Islands (Funafuti—headquarters of

the district—Nanumanga, Nanumea, Niutao, Nurakita, Nui, Nukufetau, Nukulaelae, and Vaitupu); the Phoenix group (Birnie, Canton, Enderbury, Gardner, Hull, McKean, Phoenix, and Sydney); and the Line Islands (Christmas, q.v., Fanning—headquarters of the district—Ocean, and Washington islands). Canton, administrative headquarters of the Phoenix group, and neighboring Enderbury, constitute an Anglo-American condominium, joint control for aviation and communications purposes having been established by the two powers in 1939 for a period of 50 years. Estimated revenue for 1955, comprising ordinary revenue of £A394,411 and Colonial Development and Welfare grants and associated receipts of £A34,017, was balanced at £A428,428 against estimated general expenditures of £A390,485 and £A37,697 for Colonial Development and Welfare projects.

Ten primary schools were maintained from colonial and local government funds, and 253 mission schools were aided by grants. Technical training was given to boys preparing for work in the phosphate industry conducted by the British Phosphate Commission on Ocean Island. Coconut products are the major export (10,490 tons of copra produced in 1954); pandanus fruit is also exported. Travel in the colony is mainly by boat, although there are 200 miles of roads (40 miles all-weather).

New Hebrides.—This 37-island group constitutes a Franco-British condominium. Vila (pop., 1,200), the capital, is on Efate (Vaté), an island 300 miles north-east of Noumea, capital of New Caledonia (q.v.). Resident British and French commissioners are responsible respectively to the British high commissioner for the Western Pacific Islands and to the French high commissioner, the governor of New Caledonia. Revenue (in sterling) in 1954 was £278,000; expenditure, £304,000. There were also special French and British national budgets. Of the 40 schools, 22 were British mission schools and 15 were French mission schools.

Exports (in sterling), totaling £1,660,558, included copra, £1,302,551; cocoa, £185,839; and coffee, £38,581. Imports, totaling £1,143,841, were principally from Australia (£672,242), the United Kingdom (£189,078), and France (£151,041).

WESTERN SAMOA. See SAMOA.

WHALING. Participating in the 1954-55 Antarctic whaling season, which opened on Jan. 7, 1955, and closed on March 19, were 19 factory ships of 7 nations (Norway, 9; Great Britain, 3; Japan, 3; and the Soviet Union, the Netherlands, and Panama, 1 each). According to the *Norwegian Whaling Gazette* for August 1955, the total number of whales caught was 37,654, of which 2,176 were blues, 28,624 were finbacks, 569 were seis, 495 were humpbacks, and 5,790 were sperms. Total production of whale and sperm oil during the 1954-55 season was about 362,690 and 52,830 short tons, respectively. This represented a decrease of nearly 10% in whale oil production when compared with the 1953-54 figure of 399,665 tons.

WHITE, SIR (William) Thomas, Canadian public official and financier: b. Bronte, Ont., Nov. 13,

1866; d. Toronto, Feb. 11, 1955. As minister of finance during World War I, he directed the difficult task of financing the Canadian war effort.

While attending the University of Toronto, Thomas White worked as a reporter for the *Toronto Telegram*. He received his B.A. degree in 1895, then studied law at Osgoode Hall, was admitted to the bar in 1899, and became general manager of the National Trust Company in Toronto (1900-11).

Sir Thomas' political career began in 1911, when, bolting the Liberal Party leadership of Sir Wilfrid Laurier, he was elected in a by-election as a Conservative to the House of Commons from Leeds, Ont. In the same year he was appointed minister of finance in the new Conservative cabinet of Sir Robert Borden. In this post he fulfilled the great responsibility of meeting the immense fiscal demands laid on the government by World War I. Through his efforts during the war, Canada acted as a clearing house for the financial transactions between the governments of Great Britain and France and the merchants and manufacturers of the United States. In the general elections of 1917 he was re-elected to the House of Commons.

Sir Thomas resigned his portfolio in August 1919, after serving as acting prime minister of Canada while Sir Robert Borden attended the Paris Peace Conference. In the following year, when Sir Robert retired as prime minister, Sir Thomas was asked to form a new government. He resolutely declined, and in 1921 retired from politics to devote his time to banking. He was chairman of the board of directors of the Canadian Bank of Commerce (1938-44), vice president of the National Trust Company, and director of the Canada Life Assurance Company and the Steel Company of Canada.

Appointed to the Privy Council in 1911, he was the senior member at the time of his death. He was made Knight Commander of the Order of St. Michael and St. George in 1916, and Knight Grand Cross of the same order in 1935.

WHITE, Walter (Francis), American Negro social worker and author; b. Atlanta, Ga., July 1, 1893; d. New York, N.Y., March 21, 1955. As executive secretary of the National Association for the Advancement of Colored People (NAACP), he fought vigorously and unceasingly for political and social equality among Negroes and whites in the United States.

Walter White, who was only partially Negro, was blue-eyed, blond-haired, and light-skinned, and could easily have "passed" into white ranks. Nevertheless, he chose to identify himself with the Negro race because in his youth he had been a sensitive witness to frequent exhibitions of racial prejudice and persecution in the deep South. On graduation from Atlanta University in 1916, he became active in the local chapter of NAACP. He was soon recognized as a potential leader by James Weldon Johnson, then executive secretary of the national organization, who appointed him assistant secretary in 1918. In this capacity White courageously and successfully investigated many cases involving racial violence, the most notorious of which were the sharecropping riots in Elaine, Ark., and the Chicago race riots of 1919.

In 1929, on the retirement of Johnson, White became acting secretary of the association, and in 1931, secretary. As unofficial spokesman for America's Negroes, he wielded considerable, if

indirect, influence in civil rights legislation. In 1930 he was influential in preventing senatorial confirmation of President Hoover's appointment to the U.S. Supreme Court of John J. Parker, an avowed segregationist from North Carolina. In April 1935, largely because of his efforts, the Costigan-Wagner anti-lynching bill was brought up for a vote in the Senate, only to be displaced from the calendar by a seven-day filibuster by Southern senators. In 1937 he successfully exerted pressure to have the Gavan anti-lynching bill passed by the House of Representatives, but his efforts were negated by a seven-week Senate filibuster which ended in February 1938.

During World War II, White carried on his crusade against discrimination in war industries and in the armed forces. His career reached its climax on May 17, 1954, when the Supreme Court in a historic decision ruled against segregation in the public schools of the United States. Meanwhile, White had served in 1945 as a consultant at the organizing conference of the United Nations in San Francisco, and in 1948 as a consultant to the United States delegation at the U.N. General Assembly meeting in Paris.

During his years as an investigator for NAACP, White wrote numerous magazine and newspaper articles and several provocative books, including the novels, *Fire in the Flint* (1924) and *Flight* (1926), and a study of lynch psychology, *Rope and Faggot; a Biography of Judge Lynch* (1929). He was also the author of *A Rising Wind: A report on the Negro Soldier in the European Theatre of War* (1945); an autobiography, *A Man Called White* (1948); and the posthumously published *How Far the Promised Land?* (1955). During World War II (1943-45) he visited every theater of operations as a war correspondent for the *New York Post*.

WHITE HOUSE CONFERENCE ON EDUCATION.

See EDUCATION.

WHOLESALE SELLING. Sales by all wholesalers in the United States during the first half of 1955 were at a seasonally adjusted annual rate of almost \$116 billion, or 7% above the first half of 1954 and about 2% above the previous peak in 1951. The overall average of wholesale prices in early 1955 was little changed from that of the preceding year, and about 4% lower than the average for 1951.

The greatly improved movement of goods through wholesale channels mirrored the rapid recovery of economic activity in general during the winter and spring of 1954-55. By June 1955, employment, industrial activity, investment, and national income had all moved up sharply from previous-year rates, with most overall economic indicators achieving new all-time highs. The pervasiveness of the recovery is indicated in the accompanying table. Wholesalers' sales in almost every major type of business were showing gains in the first half of 1955, as compared with the first half of 1954, the only exceptions being in areas where a further moderate weakening in farm prices held sales at approximately previous-year rates.

Within wholesale trade, sales by establishments dealing primarily in durable goods registered relatively greater rates of gain during the first half of 1955 than did wholesalers of non-durable goods. This was a reversal of the experience encountered during the downturn in wholesale sales between mid-1953 and mid-1954. By June 1955, sales of durable and nondurable goods had each returned to rates prevailing in June 1953.

Durable-goods wholesalers' sales in the first six months of 1955 were at a seasonally adjusted annual rate of over \$38 billion, or 12% higher

U.S. WHOLESALERS' SALES, 1952-55

Category	1952 (In millions of dollars)	1953	1954	% change, 1st half 1954 to 1st half 1955
<i>All wholesale trade</i>	112,325	111,936	109,994	7
Durable goods.....	35,974	37,141	34,794	12
Nondurable goods.....	76,351	74,795	74,500	5
<i>Merchant wholesalers</i>	94,783	95,257	92,646	9

(Source: U.S. Department of Commerce, Bureau of the Census and Office of Business Economics.)

than in the corresponding period of 1954. Among these trades the largest relative increases from 1954 were reported by merchant wholesalers handling lumber and construction materials, and metals and metalwork, reflecting the high rate of construction activity and output of metal fabricators. Sales in the first six months of 1955 by wholesalers of automotive products and of furniture and home furnishings were each about 15% above the opening months of 1954, while sales gains by dealers in electrical goods, hardware, and machinery and equipment ranged from 8% to 11% above 1954.

Sales by wholesalers of nondurable goods in the first half of 1955, at a seasonally adjusted annual rate of \$77 billion, were about 5% higher than those for the same period of 1954. All major trades contributed to this increase, with the exception of the grocery, confectionery, and meat and the inedible farm products groups, which were about 1% off their previous year's levels.

Larger-than-average sales increases (about 9%) over the first half of 1954 were reported by merchant wholesalers of paper products and of drugs, chemicals, and allied products. Trading in tobacco, beer, wines, and liquors in early 1955 was about 5% above their rates in the first half of 1954, while sales by apparel and dry goods wholesalers were 7% higher.

WILLIAMS, Tennessee (real name THOMAS LANIER WILLIAMS), American playwright: b. Columbus, Miss., March 26, 1914. Continuing in his plays to demonstrate a keen insight into human psychology and emotions through vivid and imaginative theater, Williams in 1955 was awarded his second Pulitzer Prize in drama for *Cat on a Hot Tin Roof*.

Reared in an atmosphere of decaying Southern gentility, Williams often reflects in his plays the austere and fractious moral standards of his early environment. *The Glass Menagerie*, first produced in 1944, has its basis in Williams' family relationships and the boredom of tenement living in St. Louis, Mo., where he and his family moved while the playwright was still in his teens. Although he attended the universities of Mis-

souri (1931-33); Washington, in St. Louis (1936-37); and Iowa (B.A. 1938), Williams gained his penetrating insight into human nature through his travels and the variety of jobs he held during and after his college career. A *Street-car Named Desire* (produced in 1947; Pulitzer Prize and Drama Critics Circle Award in 1948) grew out of the author's experiences in New Orleans. *Summer and Smoke* (1948) and the one-act play, *27 Wagons Full of Cotton* (1955), both demonstrate Williams' preoccupation with the theme of Southern decadence.

In 1940, after winning a Group Theatre prize the preceding year for four one-act plays entitled *American Blues*, the Theatre Guild produced his *Battle of Angels*, which failed before reaching Broadway. Two Rockefeller fellowships enabled him to continue writing, and in 1943 he was engaged by Metro-Goldwyn Mayer for a few months as a script writer in Hollywood, where he wrote *The Glass Menagerie*.

Like most of Williams' plays, *Cat on a Hot Tin Roof* proved to be controversial. Although united in their judgment that the play (about a neurotic Southern plantation family) is a tribute to the author's dramatic genius, critics felt that it demonstrates both Williams' virtues and weaknesses as a playwright in that it incorporates poetic intensity, dramatic sense, and a penetrating analysis of human emotion, but at the same time is often verbose, overly theatrical, and obsessed with abnormal states of mind.

In addition to the plays mentioned above, Williams is also the author of *You Touched Me* (written in collaboration with Donald Windham, produced in 1946); *Rose Tattoo* (1950); *Camino Real* (1953); and a novel, *The Roman Spring of Mrs. Stone* (1950).

WILSON, Charles Erwin, U.S. secretary of defense: b. Minerva, Ohio, July 18, 1890. For many years a leader in the automobile industry, he became secretary of defense on Jan. 28, 1953, after agreeing to dispose of his stock holdings in the General Motors Corporation.

Wilson obtained his E.E. degree from Carnegie Institute of Technology in 1909, and subsequently worked as an electrical engineer for Westinghouse Electric and Manufacturing Company before joining General Motors in 1919 as chief engineer and sales manager for the subsidiary Remy Electrical Company automobile division. From 1941 until his appointment to the Defense Department post he was president of General Motors Corporation.

Noted for the frankness with which he often expresses his views on public issues, Wilson has been a vigorous supporter of President Eisenhower's defense policies, from the controversy in 1953 over the \$5 billion reduction in the air force budget to the debate over the defense program of 1955-56. In the summer of 1955 he took issue with retiring Chief of Staff Gen. Matthew B. Ridgway's contention that United States military policy was sacrificing ground forces for greater air power. Throughout the year he urged that there be no letdown in United States military strength as a result of the apparently friendlier spirit shown by the USSR at the Geneva Conference (q.v.). He announced on September 29 that defense expenditures for the fiscal year 1956 would be increased by about \$285 million, bringing the total to approximately \$34½ billion, and that defense spending should not be reduced solely for the purpose of helping to balance the budget. However, he ordered all Defense Depart-

ment heads to try to effect maximum economies in the fiscal years 1956 and 1957 without sacrificing military strength.

In March 1955, Wilson issued an order requiring all military and civilian personnel of the Defense Department to submit all speeches and publications for clearance. Later in the year he set up a committee to draft a new code of conduct governing the behavior of American military personnel when taken prisoner of war. (See also NATIONAL SECURITY.)

WINDWARD ISLANDS. Forming the southern chain of the Lesser Antilles, these British West Indies islands (area, with dependent islets, 821 square miles; 1953-54 est. pop., 299,957, of whom more than 90% are Negroes) comprise four colonies under a single governor (C. M. Deverell, appointed June 23, 1955), whose headquarters are at St. George's, Grenada:

Colony	Area (sq. miles)	Population	Capital
Grenada ¹	133	83,000 ²	St. George's
St. Vincent.....	150	72,300 ²	Kingstown
St. Lucia.....	233	85,520 ²	Castries
Dominica.....	305	59,137 ²	Roseau
Total.....	821	299,957	

¹ The Grenadines are administered in part by Grenada, in part by St. Vincent. Carriacou (13 square miles; pop., 7,113 in 1949), largest island of the Grenadines, is administered by Grenada. ² Mid-1953 est. ³ Mid-1954 est.

In each of the colonies, the administrator is president of the 14-member Legislative Council, including 3 nominated and 8 elected nonofficials. Each colony also has an 8-member Executive Council, including 3 nonofficials elected by the Legislative Council from its own elected members and 1 nominated nonofficial from the Legislative Council. The Windwards have adopted the plan for a British Caribbean Federation (see BRITISH WEST INDIES), with provision for new constitutions, including ministerial systems, in Grenada, St. Lucia, and St. Vincent. The British Treasury has allocated £ 6,607,000 to the Windward Islands toward the cost of development and welfare programs.

Excepting Grenada, school enrollment totaled 60,300 primary and 3,000 secondary pupils in 1953. The currency is the British West Indian dollar (BWI\$1 = U.S.\$0.58).

Exports from the Windwards were valued at £ 4,090,000 in 1954 (£ 3,400,000 in 1953); imports, £ 4,450,000 (£ 4,290,000 in 1953).

Grenada.—Revenue in 1954 was BWI\$4,827,079; expenditure, BWI\$4,427,999. There are 11 government and 42 state-aided primary schools, and 5 secondary schools.

Agricultural production includes cocoa, nutmeg, lime oil, bananas, coconuts, cotton, and sugarcane. Rum is manufactured. In 1954, exports were valued at BWI\$8,510,288 (cocoa, BWI\$4,959,403; nutmeg, BWI\$1,939,203; lime oil, BWI\$64,084; and copra, BWI\$80,228); imports totaled BWI\$8,108,669. There are 478 miles of roads (220 miles surfaced). British West Indian Airways links the colony with Trinidad.

St. Vincent.—Chief islands of the Grenadines administered by St. Vincent are Union, Mustique, Canouan, and Bequia. In 1954 the 42 primary schools (government, 20; state-aided, 22) had 16,249 pupils; and 4 secondary schools (government, 2; subsidized, 1; private, 1), 670 pupils.

Most of the world's supply of arrowroot is derived from St. Vincent (44,538 barrels, or 9,976,512 pounds, from 4,500 acres in 1954), and the colony's Sea Island cotton (178,000 pounds of cotton lint from 1,628 acres in 1954) is the best in the British Commonwealth. Other cultivation includes coconuts (4,720,151 pounds of copra from 5,000 acres in 1954), and sugarcane (3,852 tons of sugar from 1,732 acres). Exports, valued in 1954 at BWI\$4,261,900, included arrowroot, BWI\$2,579,918; copra, BWI\$460,034; cotton, BWI\$227,030; sugar, BWI\$296,530; and bananas, BWI\$56,601. Imports were valued in 1954 at BWI\$5,456,000. Roads totaled 410½ miles (oiled, 63½ miles; metaled, 37 miles; and earthen, 310 miles).

St. Lucia.—Including the Colonial Development and Welfare grant-in-aid, revenue in 1954 was BWI\$3,961,960; expenditure, BWI\$3,683,483. Primary schools in 1954 totaled 49 (government 1; state-aided 48), with 15,240 pupils; 2 secondary schools (state-aided) had 633 pupils.

Sugarcane is the major crop (1954 production, 8,771 long tons). Bananas, cocoa, and coconuts are cultivated; and rum, molasses, edible oil, lime juice, lime oil, and bay oil are processed or manufactured. Exports in 1954 had an aggregate value of BWI\$3,542,092, including sugar, BWI\$1,309,899; copra, BWI\$389,396; cocoa, BWI\$321,903; bananas, BWI\$506,421; and coconut oil, BWI\$578,605. Imports were valued at BWI\$4,826,429. Highways totaling 557 miles link Castries with all main centers. Vigie, near Castries, is the principal airport; commercial traffic uses Beane Field at Vieux Fort on the United States-leased base (reactivated from Sept. 16, 1954).

Dominica.—Under a constitution adopted in 1951, government comprises an administrator (H. L. Lindo); a Legislative Council with an elected majority; and an Executive Council, including 3 of the elected members of the Legislative Council. In connection with the British Caribbean Federation plan, the colonial secretary announced on Feb. 2, 1955, that proposals for new constitutions for Grenada, St. Lucia, and St. Vincent would be applied also to Dominica when requested. Government revenue in 1953 was BWI\$2,813,525; expenditure, BWI\$2,606,781. There are 47 primary and 4 secondary schools.

Exports in 1953 included copra, 1,804,769 pounds (BWI\$241,649); cocoa, 446,307 pounds (BWI\$219,937); and bananas, 1,137,437 stems (BWI\$1,792,858). (See also BRITISH WEST INDIES.)

DONOVAN ROWSE,
Author and Publicist.

WINE. United States Production.—A bigger than average 1955 grape crop and a wine production that promised to be the largest in four years were indicated in California by mid-December. The 1955 vintage, although a week to two weeks later than the year before in some California districts, was beyond its peak at that time. The California grape crop, in the December forecast by the U.S. Crop Reporting Board, was estimated at 2,947,000 tons, 27.00% over the 1954 harvest and 9.61% above the five-year (1950-54) average. The outlook for the entire United States was a grape crop of 3,173,700 tons, 24.00% above the previous year and 9.35% higher than the five-year average.

The 1955 grape crush in California reached its high point the third week of October, but there were still large tonnages of grapes going to wineries in the early part of November. Grapes crushed by wineries reporting to the Federal-State Market News Service totaled 1,476,539 tons by December 17, compared with 1,082,864 tons on approximately the same date the year before, an increase of 36.36%. Indications were that wine production per ton of grapes would be less for some varieties than in 1954, with a total 1955 crush approximating slightly over 1,500,000 tons and a gross wine production of around 145,000,000 gallons. A 1955 production of this size would exceed the 1954 vintage in California by 22.05%. It would be California's largest vintage since 1951, when gross wine production was 163,569,000 gallons.

In 1954, California's gross wine production totaled 118,807,000 gallons from a grape crush of 1,102,959 tons. Production included 19,314,000 gallons of red table wine, 11,868,000 gallons of white table wine, and 87,625,000 gallons of dessert wine.

The latest net wine production figures available are for 1953. In that year, California's net wine production of 100,075,000 gallons included 21,650,000 gallons of table wine, 76,736,000 gallons of dessert wine, 1,082,000 gallons of vermouth, and 607,000 gallons of sparkling wine. Production in other states consisted of 12,975,000

gallons of table wine, 1,477,000 gallons of dessert wine, 2,343,000 gallons of vermouth, and 904,000 gallons of sparkling wine. California's 1953 wine production was 84.97% of the total production of 117,774,000 gallons.

California wine shipments of 108,366,961 gallons through November 1955 (1.42% under the 1954 period) compared with a 1954 total of 117,110,872 gallons. California table and sparkling wine shipments in the first 11 months of 1955 were higher by 4.01% and 43.91%, respectively, while dessert wine shipments were 0.46% higher. United States wine distribution of 142,156,000 gallons in 1954 set a new record. Inventories of aging wines in California wineries on Oct. 31, 1955, were 164,918,210 gallons, 6.98% less than on the same date in 1954.

World Production.—World wine production in 1953 was estimated at 5,626,821,000 gallons, 14.88% above the five-year (1948-52) average, by the U.N. Food and Agriculture Organization in its May 1955 *Bulletin of Agricultural Economics and Statistics*. Production figures (in thousands of gallons) for the countries and regions shown were: France, 1,561,509; Italy, 1,330,096; Spain, 619,743; Portugal, 310,136; Greece, 101,970; Yugoslavia, 99,328; West Germany, 59,702; other European countries, 54,155; Eastern Europe, 246,999; and Algeria, 483,167.

DON W. MCCOLLY,
*President, Wine Institute,
San Francisco, Calif.*

WINNIPEG. The capital of Manitoba, Winnipeg is the fourth most populous city in Canada. The city proper has 235,710 residents (1951 census); the metropolitan area of Greater Winnipeg, 354,100. The city area includes 15,535 acres of land and 465 acres of waterways. At an altitude of 760 feet above sea level, Winnipeg is located at the confluence of the Red and the Assiniboine rivers.

The city government is carried on under a special provincial charter of incorporation granted in 1873 and revised and consolidated in 1918 and 1940. The City Council comprises a mayor (elected at large) and 18 aldermen (3 elected annually from each of the 3 city wards), all serving 2-year terms. The 5-man Greater Winnipeg Investigating Committee, appointed by the premier of Manitoba, has been authorized to recommend what municipal services should be the responsibility of the metropolitan council. The committee was to study the feasibility of establishing a single governmental unit for Winnipeg and neighboring municipalities. The Winnipeg civic elections were held on Oct. 26, 1955.

Greater Winnipeg is the industrial center of the prairie provinces of Canada. Winnipeg's manufactures are varied and include flour milling and other food processing, printing and publishing, and the output of railway rolling stock, clothes, malt products, furniture, jute, cotton and fur goods. Winnipeg has numerous wholesale houses serving as distributing centers; it is the largest grain market in the world; and it holds annual fur auctions which draw buyers from all over the continent. The estimated number of industries in Winnipeg in 1955 was 1,138; the number of new industries, 38; and the estimated value of production, \$480 million.

Winnipeg is served by the Canadian Pacific Railways which have western headquarters in the city; by the Soo Line, Great Northern, and Northern Pacific railroads, which connect with the United States; and by Trans-Canada Air Lines.

Among new constructions in 1955 were 4 new schools, costing about \$3,300,000, and a new post office, the cornerstone of which was laid on July 5, 1955. The new \$2 million Winnipeg Arena was opened in October; the old Amphitheatre, former home of hockey for 40 seasons, was to be demolished.

The new \$2 million Midtown Bridge across the Assiniboine was officially opened on Sept. 15, 1955. It has four lanes of traffic and completed the first link of an expressway into downtown

Winnipeg from the south of the city and from Highway No. 75 between Canada and the United States. The last streetcars in Winnipeg were replaced by diesel buses on Sept. 18, 1955.

MARJORIE MORLEY,
Manitoba Provincial Librarian.

WISCONSIN. North Central state, United States; admitted to the Union, May 29, 1848. The "Badger State" ranks 25th in area and 13th in population (1955) among the 48 states.

Area and Population.—Area: 56,154 square miles (land, 54,705; inland water, 1,449), divided into 71 counties. Population: (1950) 3,434,575; (est., July 1, 1955) 3,691,000. Towns (defining civil divisions) and urban places with 1950 populations above 10,000 are as follows:

Appleton.....	34,010	Milwaukee.....	637,392

Executive.—Chief state officers in 1955:

Governor: Walter J. Kohler (Republican)
Lieutenant Governor: Warren P. Knowles
Secretary of State: Mrs. Glenn R. Wise
Treasurer: Warren R. Smith
Attorney General: Vernon W. Thomson
Supt. of Public Instruction: George E. Watson

Constitution and Judiciary.—The present constitution went into effect in 1848. The Supreme Court comprises seven justices; chief justice in 1955, Edward T. Fairchild.

Legislature.—The Legislature (Senate, 33 members; Assembly, 100) meets in odd-numbered years commencing the second Wednesday in January.

The 1955 session of the legislature produced several pieces of major legislation, notably a highway safety program, including an increased gasoline tax to finance an accelerated highway building program, a state drivers' licensing system, and an enlarged state traffic patrol. It also effected a compromise act coordinating the state's tax-supported institutions of higher education; revised the Children's Code and the Criminal Code; created a Claims Commission and a joint legislative committee to review administrative rules; adopted a cost of living bonus of \$100 a month for legislators required to live in Madison; prohibited labor unions from contributing to political campaigns (see below, *Principal Events, 1955*); and ratified the Great Lakes Basin compact.

Finances.—Gross General Fund receipts (1954-55 fiscal year), \$620,777,258; gross expenditures, \$620,916,712; General Fund balance (June 30, 1955), \$66,190; par value of state investments, \$403,035,588.

Taxation.—Total tax revenue of state and local governments (1954-55 fiscal year): \$580,289,011, of which \$133,594,211 was retained by the state. The general property tax yielded slightly more than half of all taxes received; individual and corporate income taxes account for about 21%. The state has neither a general sales nor a poll tax.

Banking.—On June 30, 1955, the state's 95 national banks had \$1,766,898,000 in assets, \$1,096,273,000 in demand deposits, and \$542,795,000 in time deposits; on Dec. 31, 1954, the state's 463 other banks, including 5 trust companies and 4 savings banks, had \$1,971,260,369 in deposits, \$728,615,025 in loans, and \$1,021,990,004 in investments; the state's 154 savings and loan associations had assets of \$799,276,619; and its 668 credit unions had assets of \$102,598,430.

Education.—School attendance is compulsory for all between the ages of 7 and 16, inclusive, except for certain handicapped children and those attending vocational high schools. Expenditures for elementary and secondary public education in the 1953-54 school year totaled \$181,233,002 (\$270.26 per pupil); overall expenditures for public education, including higher education, to-

taled \$235,985,588. Public school teachers' salaries averaged \$3,458 for elementary and \$4,106 for secondary teachers.

WISCONSIN SCHOOL STATISTICS

Type of school	No.	Teachers	Students
Public elementary (1953-54) . . .	5,292	15,813	415,404
Public secondary (1953-54) . . .	445	7,422	157,393
County teachers' colleges (1954-fall) . . .	22	...	1,178
State colleges (1954-55) . . .	9	680	8,914
Evening schools ¹ (1954-55) . . .	...	1,634	77,724
Vocational and adult education schools (1954-55) . . .	...	1,002	39,931

¹ State supervised.

In the fall of 1954 there were 50,399 students in 63 institutions of higher education, including 22 county teachers colleges, 29 private colleges, 9 state colleges, the University of Wisconsin, Stout Institute, and Wisconsin Institute of Technology.

Social Welfare.—Public assistance expenditures in the 1954-55 fiscal year totaled \$52,439,935, including \$32,549,870 for old-age assistance, \$13,396,519 for dependent children, \$911,726 for the needy blind, and \$1,224,675 for the disabled; a monthly average of 104,954 persons received public assistance, including 27,695 who received local funds only. The state spent \$14,-452,551.73 for public welfare, correctional, and penal institutions.

WISCONSIN WELFARE INSTITUTIONS, 1955

Type of institution	No.	Pop. ¹
Hospitals for the mentally ill . . .	3	2,356
Colonies for the mentally deficient . . .	2	3,208
County hospitals for the mentally ill . . .	38	12,642
Homes for dependent and neglected children . . .	1	87
Correctional schools for boys . . .	1	257
Correctional schools for girls . . .	1	146
Reformatories for men . . .	1	685
Prisons for men . . .	1	1,439
Prisons for women . . .	1	147

¹ Daily average in September 1955.

Labor Force.—The civilian labor force in September 1955 numbered 1,562,000 persons, of whom 34,100 were unemployed and 3,000 were involved in labor-management disputes. There were 1,027,000 nonfarm wage and salary employees; 227,900 persons in all other types of nonfarm employment (including self-employed, unpaid family, government, and domestic workers); and 270,000 agricultural workers.

Manufacturing.—Establishments numbering 7,-500 in 1954 had an estimated 329,500 production workers whose wages totaled \$1,281,451,000. Earnings of production workers in manufacturing averaged \$74.79 for an average work week of 40.8 hours in 1954, and for the first six months of 1955 averaged \$80.35 for 41.9 hours.

PRINCIPAL WISCONSIN MANUFACTURES

Industry	Production workers (est. 1954)	Ave. wage per week (est. 1954)	Value added by mfr. ¹ (1953)
Nonelectrical machinery . . .	60,400	\$82.83	\$764,869,000
Food and kindred products . . .	44,600	69.13	519,249,000
Transportation equipment . . .	25,200	83.90	317,084,000
Electrical machinery . . .	29,300	77.50	309,387,000
Paper and allied products . . .	28,800	77.38	301,273,000
Fabricated metal products . . .	25,000	74.44	285,463,000

¹ Value of products less cost of materials, supplies, fuel, electric energy, and contract work.

Mining.—Primary mineral output in 1953 was valued at \$55,212,000, ranking Wisconsin approximately 32d among the states.

WISCONSIN MINERAL PRODUCTION, 1953

(In short tons, except as noted)

Mineral	Quantity	Value
Iron ore (long tons) . . .	1,655,331 ¹	\$ 548,628
Lead . . .	2,094	1,566,085
Lime . . .	123,997	16,173,302
Sand and gravel . . .	23,656,086	15,979,756
Stone ² . . .	7,450,396	3,870,900
Zinc . . .	16,830	17,073,329
Other minerals . . .	...	...

¹ 1954 preliminary figures: 1,591,000 gross tons. ² Value included in "Other minerals." ³ Excluding that used in making cement and lime.

Fisheries.—The commercial fish catch in 1954 was valued at \$2,157,083.81 for 20,869,147 pounds. Principal species landed were chubs (\$834,211.14), herring (\$450,319.06), whitefish (\$272,068.58), trout (\$229,285.75), and perch (\$177,193.80).

Agriculture.—Cash farm income in the first half of 1955 totaled \$488,404,000, and for the full year 1954 comprised \$878,616,000 from livestock and livestock products, \$124,076,000 from crops, and \$5,556,000 from government payments.

Receipts from principal crops and livestock in 1954 were dairy products (including 219,906,-000 pounds of creamery butter and 480,979,000 pounds of American cheese), \$501,798,000; hogs, \$140,162,000; cattle, \$115,481,000; eggs, \$56,-301,000; corn, \$19,118,000; and greenhouse and nursery products, \$12,775,000.

The state's 153,558 farms (22,507,288 acres; harvested cropland, 9,849,700) averaged 146.6 acres and \$14,801 in value of land and buildings per farm in 1954. Livestock on farms on Jan. 1, 1955, included 4,318,000 cattle (2,656,000 milch cows), 1,850,000 swine, 112,000 horses, and 13,-714,000 chickens (not including commercial broilers). During the week of Sept. 26—Oct. 2, 1954, there were 320,198 family and hired workers engaged in farming; 103,139 farms had telephones, 148,648 had electricity.

WISCONSIN CROP STATISTICS

Tobacco (1,000 lb.) . . .	30,178	22,680	22,430

¹ 1949-53 average.

Transportation and Communications.—State and federal funds disbursed for roads and highways in the 1954-55 fiscal year totaled \$50,685,536.93, and county and local funds amounted to \$4,593,-659.50. State aid to counties and municipalities for roads totaled \$33,181,271.60.

Highways and roads on Jan. 1, 1955, totaled 95,425 miles, including 57,101 miles of local roads, 19,198 miles of county trunk highways, and 10,877 miles of state trunk highway system. Registered *motor vehicles* numbered 1,386,423 (1954-55), including 1,108,484 passenger cars. In 1955 the state's *railroads* covered 6,266 miles; and there were 7 commercial *airlines* and 127

airports and airfields (65 municipal and 54 private fields and 8 seaplane bases).

Communications media in 1955 included 70 AM and 22 FM radio stations and 16 operating television outlets; 44 daily newspapers (circulation, 1,061,001) and 291 weekly newspapers; and (Jan. 1, 1955) 303,815 business, 690,783 residential, and 155,204 rural telephones.

Principal Events, 1955.—On the political front, the most controversial issue in 1955 was the passage of two acts by the Wisconsin Legislature. The first of these, the so-called Catlin bill, prohibited labor unions from contributing to political campaigns. This act received nationwide attention, particularly in the labor press, with opponents of the bill seeing in it an attempt to check the increasing importance in Wisconsin of the Democratic Party, which stood to gain most from labor union funds.

The second measure, which also received national publicity, sought to redistrict parts of the 4th and 5th congressional districts. Proposed by the Republicans, it brought charges of gerrymandering from the Democrats since its effect was to place certain heavily populated Democratic wards of Milwaukee in the already strongly Democratic 4th District, and the Republican city of Wauwatosa in a Democratic district with greater Republican opposition, thus increasing Republican chances of success in the latter district at the 1956 elections. On November 26, Governor Kohler vetoed the measure because he felt that it ignored the larger and more urgent problem of statewide redistricting.

The centennial of the birth of former Sen. Robert M. La Follette, progressive Republican leader, was held in June at Madison. U.S. Chief Justice Earl Warren was the principal speaker.

On July 22, a new air terminal at Milwaukee was dedicated. The \$3,200,000 glass and aluminum building was described by architect Frank Lloyd Wright as "one of the finest in the country."

WOOD, Robert Williams, American physicist: b. Concord, Mass., May 2, 1868; d. Amityville, Long Island, N.Y., Aug. 11, 1955. One of the world's foremost authorities on spectrum research, Robert Wood was educated at Harvard University (B.A. 1891), Johns Hopkins University (1891-92), and the universities of Chicago (1892-94) and Berlin (1894-96). In 1897 he was appointed to the faculty of the University of Wisconsin, where in 1898 he developed the widely used method of thawing frozen street mains by passing a current of electricity through them. From 1901 to 1938, with the exception of the years 1917-19, when he served as a major in the Army Signal Corps, he was professor of experimental physics at Johns Hopkins University. He retired in 1938, but was named research professor, a post he held until 1951.

Dr. Wood was one of the first scientists to explore thoroughly the properties of ultraviolet and infrared radiation. With Alfred L. Loomis, he pioneered in the investigation of the physical and biological effects of high-frequency sound waves. In 1936 he announced his discovery of a new method for measuring spectroscopy lines accurately, and, with Loomis, succeeded in producing sounds of as high as 300,000 to 500,000 vibrations per second.

During World War II, Dr. Wood served as

consultant to the U.S. Army and Navy and to the Manhattan Project, in which he assisted in the development of the atomic bomb by utilizing his researches into the production of spontaneous incandescence of metals in cold atomic hydrogen. Other important work included his research on resonance radiation and fluorescence, critical temperatures for deposition of metal vapors as homogeneous films, destruction of polarization of resonance radiation by weak magnetic fields, and diffraction gratings for astrophysical research.

In addition to numerous scientific papers on optics, spectroscopy, atomic and molecular radiation, and astronomy, Dr. Wood was the author of *Physical Optics* (1905; rev. ed., 1934) and *Researches in Physical Optics* (2 vols., 1913-19).

WOOD. See LUMBER and the Index entry, *Wood Research*.

WOOL. World wool consumption is limited by available supplies. Postwar gains in wool production reflect efforts of major producing countries to meet growing world needs. During the 1955-56 season, world wool production was expected to reach a new peak of 4,560 million pounds, greasy basis, or 23% above the low 1945-46 clip.

Although the United States ranks fifth as a producer of wool, it must import about half its apparel wool and all its carpet wool requirements. Its production of 304 million pounds in 1955 was 40% below the 1942 peak level. The government has tried to encourage greater wool production through various price-support programs. Beginning with 1955 a new program permits growers to sell at market prices which may be below a predetermined average price for an entire season's clip. The growers will receive government payments computed on their sales prices by applying the percentage difference between an established "incentive" price and the lower average market price of the entire wool clip.

WORLD PRODUCTION OF VIRGIN WOOL

(In millions of pounds, greasy basis)

Country and type	Average 1934-38	Low year 1945-46	1954-55	1955-56 forecast
Major exporting countries:				
Australia.....	995	936	1,294	1,331
Argentina.....	376	467	364	348
New Zealand.....	300	365	455	475
South Africa.....	261	208	306	306
Uruguay.....	114	175	198	200

Carpet-type.....	791	762	951	960

(Source: Commonwealth Economic Committee.)

The United States is outranked by only the United Kingdom as a consumer of wool. During the United States textile recession of 1954, raw wool consumption fell to 389 million pounds, clean basis, from 504 million in 1953. The 1954 level was over 15% of total world consumption.

In 1954, imports of 206 million pounds, clean basis, constituted 15% of total world imports. Apparel wool (dutiable) imports of 104 million pounds comprised: 69%, fine to medium-fine; 15%, medium to low-medium; and 16%, low grades. Australia, New Zealand, and South Africa supplied 70%, and Argentina and Uruguay pro-

vided 25%. Argentina supplies about half the carpet wool imports (duty-free), which totaled 102 million pounds in 1954. Other important suppliers are India, Pakistan, and New Zealand.

Both consumption and imports rose during 1955. For the first ten months, apparel wool consumption was 5% higher, and carpet wool consumption was 14% higher than during the corresponding 1954 period. Imports of apparel wool during the first eight months were 11% higher than during the corresponding 1954 period, and carpet wool imports were 32% higher.

Economist, The Wool Bureau, Inc.

WORLD BANK. See INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT.

WORLD COURT. See Index entry, *International Court of Justice.*

WORLD HEALTH ORGANIZATION. A permanent agency of the United Nations, the World Health Organization (WHO) in 1955 comprised 81 full members and 4 associate members.*

The Eighth World Health Assembly met in Mexico City, May 10-27, 1955, and was attended by delegates from 76 member countries, as well as observers from international and national agencies and associations.

Dr. Ignacio Morones Prieto, minister of health and welfare of Mexico, was elected president of the assembly, succeeding Dr. Joseph Nagbe Togba, director general of the National Health Services of Liberia. In the course of its session, the assembly approved a \$10,203,084 budget for WHO in 1956, an increase of \$700,000 over the 1955 budget. The 1956 budget will finance more than 300 health programs to be assisted by WHO.

During its meetings the assembly adopted 47 resolutions dealing with vital health subjects, among them the establishment of a world fund to assist countries in malaria eradication campaigns. The assembly also defined, for the first time, WHO's role in the development of atomic energy in the field of medicine and public health. It was also decided to enlarge the basic network of polio laboratories which WHO has set up to study the various strains of polio virus.

During 1955, WHO continued its technical and advisory services. The central technical services are mainly carried out by WHO headquarters in Geneva, and include the drawing up and adoption of the International Sanitary Regulations; the provision of an epidemiological intelligence service; international health legislation for uniform registration of diseases and deaths in all countries; standardization of drugs; publication of the *Pharmacopoeia Internationalis*; participation in work for international control of drug addiction; and research on narcotics, alcohol, and related subjects. WHO provides a complete range of documentation on health, and issues several different types of publications on important developments in public health and medicine.

Regional activities in 1955, in assistance to governments, often carried out with the aid of United Nations Children's Fund (UNICEF) supplies, are highlighted in the following paragraphs.

Africa.—Activities directed toward control of the tsetse fly were in progress in Bechuanaland. Maternal

* Albania, the Belorussian SSR, Bulgaria, Czechoslovakia, Hungary, Poland, Rumania, the Ukrainian SSR, and the USSR earlier notified WHO of their withdrawal. Since the organization's constitution has no provision for withdrawal from membership, the Third and Fourth World Health Assemblies resolved that WHO would welcome their resumption of active membership at any time. The USSR in 1955 announced its intention to resume participation.

UNITED NATIONS

Two blind Moroccans, who live by begging alms, are among those helped by the World Health Organization. The child sleeping in the seated man's lap acts as their guide.

and child health development was carried out in Tanganyika and Uganda. Leprosy control measures were undertaken or planned in French Equatorial Africa, Gambia, and Nigeria. Malaria and tuberculosis control measures were under way or planned in the Gold Coast, in Kenya, and in Liberia. A number of fellowships in various fields were awarded to countries of the region, and assistance was given to several training institutes. A malaria conference and a yaws symposium were held, as were a seminar on environmental sanitation and a training course on malaria.

The Americas.—The Pan American Sanitary Bureau, which serves also as WHO's regional office for the Americas, continued its wide program of collaboration with the governments of the Western Hemisphere. The bureau continued to stimulate national and hemispheric programs aiming at the eradication of communicable diseases, as well as those designed to strengthen national health departments.

One of the high lights of the work of the bureau during 1955 was the increasing emphasis given to programs to eradicate malaria from the Americas, under the mandates given by the 14th Pan American Sanitary Conference (1954) and the 8th World Health Assembly (1955). In addition, practically all the countries in the hemisphere have now joined in the program sponsored by the bureau for the eradication of the *Aedes aegypti* mosquito, the urban vector of yellow fever. In several areas of the tropical Caribbean, campaigns to eradicate the disfiguring treponematous disease known as yaws were continued.

Several government-operated projects—particularly BCG vaccination and maternal and child health programs—were undertaken with the joint sponsorship of the bureau and UNICEF. In the important field of environmental sanitation, the governments of the hemisphere took advantage of the 1955 World Health Day theme, "Clean Water Means Better Health," to stimulate interest in the development of adequate supplies of safe water.

Southeast Asia.—Malaria and insect control activities were in progress in Afghanistan, Burma, Indonesia, and Nepal. Tuberculosis control measures were carried out in Afghanistan, Burma, Ceylon, India, Indonesia, and Thailand. Yaws control programs were assisted in India, Indonesia, and Thailand, as were leprosy control measures in Ceylon, Indonesia, and Thailand. Other activities included plague control, mental health and dental health development, along with extensive maternal and child health work in India. Environmental sanitation projects were in force in Afghanistan, Burma, Ceylon, India, Indonesia, and Thailand. A number of conferences and seminars were held and fellowships awarded in a wide variety of health fields.

Europe.—The anesthesiology centers in Copenhagen and Paris conducted further courses. Trachoma control activities were carried out in Algeria, French Morocco, Spain, and Tunisia. Assistance was given to sera and vaccine production in Austria, to tuberculosis control in Greece, and to mental health development in Italy. Public health training programs were conducted in the Netherlands and Sweden; aid was given in dental health to Switzerland and in maternal and child health to Turkey. A public health program was in progress in Yugoslavia.

Eastern Mediterranean.—Tuberculosis control activities were carried out in Egypt, Iran, Iraq, Israel, the Anglo-Egyptian Sudan, and Syria. Assistance was given in control of venereal disease in Ethiopia, Pakistan, and Saudi Arabia. A mental health development program was aided in Jordan, as was microfilm production in Lebanon. Maternal and child health development continued to be assisted in Iran, Iraq, Libya, Jordan, Pakistan, and Syria. Aid was given to public health administration in Yemen, nursing education in Cyprus, and malaria control in Iran, Iraq, Saudi Arabia, and Syria. Seminars were held on public health, environmental sanitation, meat hygiene, and maternal and child health.

Western Pacific.—Aid in malaria control was given to Cambodia, China (Taiwan), Netherlands New Guinea, North Borneo, the Philippines, and Sarawak. Maternal and child health demonstration work continued in Cambodia, China (Taiwan), Hong Kong, and Viet-Nam; while nursing education programs were under way in Cambodia, China (Taiwan), the Federation of Malaya, Japan, North Borneo, and Singapore. Tuberculosis control measures continued in Cambodia, China (Taiwan), the Philippines, and Viet-Nam. Further work was carried out on the Philippines Pilot Project for Schistosomiasis Control. Venereal disease control measures were assisted in China (Taiwan), as were yaws control activities in the Federation of Malaya, Fiji, Netherlands New Guinea, the Philippines, and Western Samoa. Environmental sanitation work was in progress in Japan, North Borneo, and the Philippines. (See also CHILD WELFARE.)

WRESTLING. See SPORTS, GAMES, AND SHOWS.

WYOMING. Western state, United States; admitted to the Union, July 10, 1890. The "Equality State" ranks 8th in area and 47th in population (1955) among the 48 states.

Area and Population.—Area: 97,914 square miles (land, 97,506; inland water, 408), divided into 23 counties. Population: (1950) 290,529 (est., July 1, 1955) 295,000. Urban places with 1950 populations above 7,500 are: Casper, 23,673; Cheyenne, the capital, 31,935; Laramie, 15,581; Rock Springs, 10,857; and Sheridan, 11,500.

Executive.—Chief state officers in 1955:

Governor: Milward L. Simpson
Secretary of State: Everett T. Copenhaver
Treasurer: Charles B. Morgan
Attorney General: George F. Guy
Supt. of Public Instruction: Velma Linford

Constitution and Judiciary.—The present constitution went into effect in 1890. The Supreme Court comprises three justices; chief justice in 1955 was William A. Riner, who died on Nov. 21, 1955.

Legislature.—The legislature (Senate, 27 members; House of Representatives, 56) meets in odd-numbered years commencing the second Tuesday in January.

The 1955 legislative session changed the opening date of the fiscal biennium from April 1 to July 1, and appropriated nearly \$2 million to cover the interim period during the changeover. Major legislation created the office of state fire marshal; set up a commission to provide an annotated compilation of state statutes; repealed a statute setting up separate schools for Negro children in districts having 15 or more Negro children; increased drivers' and chauffeurs' license fees by \$1; authorized blood tests for the presence of alcohol in persons at the time of their arrest in connection with automobile accidents; established a State Board of Nursing; set the state minimum wage at 75 cents an hour; and required the registration of Communists and Communist-front organization members who have been in the state for five consecutive days. (See also below, *Principal Events, 1955*.)

Finances.—State treasury receipts (1954-55 fiscal year), \$65,815,112; expenditures, \$47,699,626; treasury balance, \$82,475,832. The state had no general obligation bonds outstanding on June 30, 1955.

Taxation.—State tax revenue (1954-55 fiscal year): \$30,787,000, including \$18,218,000 from a 2% general sales tax and selective sales and gross receipts taxes; \$5,993,000 from licensing; and \$6,339,000 from property

taxes. The state has no individual or corporate income taxes but does have a \$2 poll tax per person.

Banking.—As of June 30, 1955, the state's 25 national banks had \$241,462,000 in assets, \$258,694,000 in demand deposits, and \$54,915,000 in time deposits; the state's 28 other banks had \$91,363,648 in assets, \$51,850,661 in demand deposits, and \$19,788,739 in time deposits.

Education.—School attendance is compulsory for all between the ages of 7 and 16, inclusive. Operating expenditures of \$18,644,703 (\$328.25 per pupil) for public elementary and secondary schools in the 1953-54 fiscal year comprised \$9,655,487 from local school districts, \$8,659,520 from the state, and \$329,696 from the federal government. Outlays for construction and improvements amounted to \$2,106,713. Teachers' salaries (1954-55) averaged \$3,542 (rural school teachers, \$2,622; elementary school teachers, \$3,560; high school teachers, \$4,008).

There were (1953-54) 620 public elementary schools which in the 1954-55 school year had 1,969 teachers and 62,678 pupils, 10,185 of whom were in junior high grades (7-8). Secondary schools (1953-54) numbered 107 and in 1954-55 had 1,059 teachers and 15,708 pupils. The University of Wyoming had 6,399 students in 1954-55.

Social Welfare.—Public assistance expenditures from state and federal funds (excluding institutional costs) in the 1954-55 fiscal year totaled \$5,092,198, including \$2,846,521 for old-age assistance, \$703,542 for dependent children, and \$52,341 for the needy blind; a monthly average of 5,791 persons received public assistance.

WYOMING WELFARE INSTITUTIONS

(As of Sept. 1, 1954)

Type of institution	No.	Pop.
Hospitals for mentally deficient and epileptic....	1	475
Hospitals for the mentally ill.....	1	700
Sanatoriums for the tubercular.....	1	35
Homes for dependent children.....	1	60
Homes for the aged.....	1	64
Soldiers and sailors homes.....	1	32
Training schools for delinquent boys.....	1	45
Training schools for delinquent girls.....	1	43
Prisons.....	1	245
Prison farms.....	1	30

Labor Force.—The employed labor force on July 1, 1955, numbered 131,000 persons, including 27,000 agricultural workers. Nonagricultural employment totaled 104,000, and for the 12 previous months averaged 91,000. There were 3,000 unemployed workers on July 1, 1955, and the state paid \$2,657,631 in unemployment compensation in the year ending July 1, 1955.

Manufacturing.—Manufacturing employees numbering 7,213 in 1953 received \$33,601,000 in salaries and wages. Value added by manufacture totaled \$54,099,000, and investments in new plant and equipment amounted to \$14,423,000. Leading manufactures include petroleum and coal products and stone, clay, and glass products. Earnings of production workers in manufacturing averaged \$84.03 for an average work week of 40.4 hours in 1954, and \$83.23 for 40.8 hours in the first six months of 1955.

Mining.—Wyoming normally ranks 16th among the states in the value of its mineral products, and accounted for 1.78% of the United States total in 1953. The value of its mineral output in 1955, which exceeded \$300 million, was approximately 6% higher than in 1954.

Agriculture.—Cash farm income for the first half of 1955 totaled \$35,139,000, and for the full year 1954 comprised \$105,439,000 from live-stock and livestock products, \$28,318,000 from

WYOMING MINERAL PRODUCTION, 1955¹

(In short tons, except as noted)

Mineral	Quantity	Value
Clays.....	990,000	\$ 9,753,000
Coal.....	2,610,000	11,745,000
Iron ore (long tons).....	748,000	4,857,600

crops, and \$3,293,000 from government payments. Receipts from principal crops and livestock in 1954 included: cattle, \$67,595,000; sheep, \$15,392,000; wool, \$9,288,000; wheat, \$8,604,000; and dairy products, \$6,462,000.

The state's 11,392 farms (35,251,410 acres; harvested cropland, 1,552,006) averaged 3,094.4 acres and \$45,327 in value of land and buildings per farm in 1954. There were 5,887 farms with telephones and 10,168 with electricity. Livestock on farms on Jan. 1, 1955, included 1,072,000 cattle and 2,132,000 sheep. During the week of Sept. 26-Oct. 2, 1954, 25,274 family and hired workers were engaged in farming.

WYOMING CROP STATISTICS

Crop (and unit of production)	Average 1944-53	1954	Est. 1955
Barley (1,000 bu.).....	4,176	3,360	3,612
Beans, dry (1,000 bags).....	986	811	589
Hay (1,000 tons).....	1,231	1,097	1,365
Oats (1,000 bu.).....	4,602	3,120	4,205
Peas, dry (1,000 bags).....	45	87	63
Potatoes (1,000 bu.).....	1,784	1,536	1,495

Wheat (1,000 bu.).....	6,075	2,946	5,200

(Source: U.S. Dept. of Agriculture.)

Transportation and Communications.—State and federal funds disbursed for roads and highways in the 1953-54 fiscal year totaled \$23,178,405.-65, and newly completed construction and reconstruction aggregated 622.4 miles.

Highways and roads in 1954 totaled 30,115.6 miles (5,468 surfaced). Registered motor vehicles in 1955 numbered 109,000. There were (1955) 3 railroads operating 2,000 track miles, and 3 regularly scheduled airlines and 34 airports and airfields (32 commercial and municipal and 2 military).

Communications media (1955) included 16 AM

radio stations and 1 operating television outlet; 9 daily newspapers (circulation, 200,000) and 20 other newspapers; and (Jan. 1, 1955) 30,725 business and 64,890 residential telephones.

Principal Events, 1955.—The Wyoming Legislature, meeting in January and February, enacted virtually all of Gov. Milward L. Simpson's program (see above, *Legislature*). The most controversial action of the Legislature was the elimination of various property tax exemptions, including a \$500 homestead exemption and a \$2,000 veteran's exemption. In response to a last-minute appeal from the governor, the Legislature established a commission to study the feasibility of purchase by the state of tourist facilities held by private concessionaires in Yellowstone National Park. There was criticism of this "socialistic" proposal from outside the state, but it received strong support within Wyoming. Negotiations with the concessionaires failed to reach agreement on price, and by year's end there appeared to be little chance that the state would take over active management or supervision of the facilities.

Convicts rioted in the state's penitentiary at Rawlins on July 16-17. Promises of an investigation of prison conditions ended the riot with little damage.

Drought conditions persisted for the third straight year in several counties, adding to the distress of farmers and ranchers already suffering from declining prices. The booming oil industry, however, buttressed the state's economy.

A United Air Lines plane crashed into 12,005-foot Medicine Bow Peak near Laramie, October 6, killing all 66 passengers and crewmen. It was the worst air tragedy in American civil aviation history.

The opening of 46,440 acres of public land in the Pumpkin Buttes area to uranium development was postponed from May to November when an outbreak of violence threatened between prospectors and ranchers who already held grazing rights. No violence occurred when 500 prospectors rushed in to file claims when the area was finally opened on November 17.

William A. Riner, chief justice of the Wyoming Supreme Court died November 21. He had served on the Supreme Court bench since 1928.

(See also NATIONAL PARKS; RECLAMATION.)

Principal Events by: T. A. LARSON, Head, Department of History, University of Wyoming; Author, "Wyoming's War Years: 1941-1945" (1954).

-RAY. Progress during 1955 in all branches of X-ray science has been steady and fruitful. The appearance of the 4th edition of the writer's book, *Applied X-Rays* (McGraw-Hill Book Company), after an interval of 15 years has focused attention on these advances on the 60th anniversary of the discovery on Nov. 8, 1895, of roentgen or X-rays.

High-Voltage Radiation.—The unremitting demand for X-rays with higher energies and shorter wavelengths continues to be met with spectacular engineering improvements, especially in particle accelerators, specifically for electrons. The Van

de Graaf generator, an example of a statatron in which a static electric field is maintained, has produced up to 4 million volts in 1955, and a 12-million-volt unit is being completed. Not only do many hospitals now use such equipment with growing success for deep therapy of resistant cancers, but many industries are installing 3-million-volt units for radiography of thick specimens and for study of chemical effects of radiation on petroleum products, foods, metals, and other materials as steps toward understanding the effects of atomic bomb radiation. There are in operation several billion-volt synchotrons in which electrons travel at approximately the ve-

locity of light. Construction at Brookhaven, N.Y., of a 35-Bev. (billion electron volt) generator is under way.

Medical Diagnosis.—Most marked in 1955 was the advance in intensifying X-ray images electronically, especially on fluoroscopic screens. Notable progress in this direction has been made at the RCA research laboratories. With very weak radiation, safe for both patient and radiologist, brilliant, sharp images produced by intensification permit diagnostic observations never before possible.

Industrial Radiography.—A brilliant chapter has been added in this field with the complete testing,

BY PERMISSION, GENERAL ELECTRIC CO.

Radiograph of an automatic pistol, produced by X-rays generated in a 10 million electron volt betatron.

by means of a new 260-kv. portable Triplett and Barton X-ray unit, of every detail of construction of the nuclear-powered submarine, U.S.S. *Nautilus*. Without these X-ray tests, completion of the submarine would have been impossible.

Microradiography (Historadiography).—There have been spectacular developments in techniques and applications of this method of testing. Heretofore the radiographic image of a small specimen (metallurgical, mineral, biological, etc.) was registered on fine-grained photographic film and then enlarged to a maximum of 200–300 diameters before graininess interfered with clarity of the picture. The search for grainless sensitive media with which much greater enlargements could be made has been rewarding. A new metal-diazonium light-sensitive surface, developed at the Philips Laboratory in the Netherlands, greatly surpasses the usual emulsions, which are capable of resolving lines spaced 1 micron apart. Still more remarkable is the fact that the face of an ammonium dichromate crystal or a sheet of plastic have been found to be radiation-sensitive, and varying exposures to radiation cause corresponding changes in their solubility. Thus, by solvent etching, a microradiographic image on these materials can be brought into relief. A replica can be made, shadow-cast, and photographed in the electron microscope up to 150,000 diameters.

Radiobiology.—A flood of papers and many books, catalyzed by research on atomic bomb effects, continues to appear on the biological effects

of X- and γ -rays. The journal, *Radiation Research*, now in its second year, has become the best source of new information on this subject.

Radiogenetics.—A tremendous upsurge is noted in practical experiments aimed at effecting genetic changes in organisms of all types. Much of this work is noncritical and perhaps nonreliable, but in a few instances excellent agricultural advantages from mutations seem to be evident, such as the prevention of seed shattering, which is a common property of wild plants but undesirable in domestic crops. (See also GENETICS.)

Dosimetry.—The year has witnessed the general acceptance of the recommended new international terminology for the unit of absorbed X-ray dose—the rad, or 100 ergs per gram. Gradually the confusion in usage of the terms roentgen, rep, rem, and rad, all signifying units of dose, will be dispelled.

Chemical Analysis.—The most rapidly developing branch of X-ray science seems to be chemical analysis by fluorescent X-ray spectra. The development of tubes designed to produce more intense primary radiation, in order to excite characteristic fluorescent rays in the unknown sample; the use of a variety of crystals for analysis of the beam; and the use of vacuum and helium tunnels for transmitting reflected beams to improved Geiger, proportional, or scintillation counter detectors, in order to avoid absorption of soft rays from elements of low atomic number, have resulted in quantitative analyses in almost trace amounts of all elements down to carbon (atomic number 6) and nitrogen (7), whereas the limit a year ago was potassium (19).

Absorption methods have also advanced. In one of the large petroleum laboratories, routine analyses are made of sulfur in hydrocarbons by K-capture spectroscopy, using radioactive iron-55, from which characteristic X-rays of manganese-55 are emitted. (Hughes and Wilezowski, *Anal. Chem.*, 26:1,889, 1954). Analysis by X-ray absorption of gas-fluidized solid systems, of greatest importance in modern chemical industry, has been found by General Electric to be most effective.

Crystal Structure.—Progress in utilizing X-ray diffraction for determining crystalline and molecular structures has been extensive. In the advanced mathematical phases of interpretation of X-ray data, progress has been continuous, and more and more difficult questions of structure and bonds have been answered. For example, the boron hydrides, long an enigma in chemistry, have been analyzed; and bond structures, depending on hydrogen bridges, have been logically deduced by Lipscomb at the University of Minnesota, opening the way for an understanding of many other structures such as those of alloy intermetallic systems. Chlorophyll has been successfully crystallized for the first time in the writer's laboratory, leading to analysis of its structure and relation to the more common chlorophyllides.

YALTA PAPERS. The Yalta Conference (as the Crimea Conference of Feb. 4-11, 1954, is generally known), when viewed with hindsight—the truest sight for judgment—represents, to many historians, an unfortunate episode in American diplomacy, and records the unsatisfactory consequences of the process wherein major executive commitments are made without approval by the Senate.

A substantially complete documentary record of this conference and of the pre-conference discussions at Malta¹ was released on March 16, 1955, by the State Department in the form of galley prints of a volume entitled *The Conferences at Malta and Yalta 1945*. Release of the documents created a public stir in the United States, as well as considerable critical comment abroad, but was strongly defended by the State Department as a proper move in the public interest, opportunely timed to avoid approximation to a domestic election period. The better to understand the Yalta Papers, one must briefly recall the Crimea Conference and the agreements there concluded in 1945.

Background: The Yalta Conference.—As the light of prospective victory over Hitler's Germany began to dawn in Europe in the last months of 1944, the Allies seemed to be drifting apart in their views of final peace terms. The Soviet Union was most interested in nailing down the victory in terms of control of expansive new Slav states, allied and revolutionized on the Soviet model and reaching deep into central Europe from the USSR's western border, plus control of Austria and Germany. Great Britain wanted to make the best possible compromise with the USSR on the new map of Europe. American diplomacy feared that Russian forces might advance across Europe to the Rhine before the American Army could occupy any of Germany, and perhaps across Manchuria and North China during the final campaign against Japan. President Roosevelt wished to include the USSR in a workable charter for a new League of Nations as the best guaranty for future peace, and took the position that disputed boundaries (there were already some 30 of them in Europe alone) could not be adjusted until the final peace settlement under the seal of a United Nations Organization.

Above all, Roosevelt, badly informed by his military intelligence on the collapsing structure of Japan's power, wanted to make absolutely sure of the Soviet Union's entry into the war of the Pacific as soon as Hitler was defeated in Europe. (Stalin had already promised this orally to U.S. Secretary of State Cordell Hull at Moscow in October 1943 and again to Roosevelt at Teheran in November 1943.)

Immediately after Roosevelt's election for a fourth term in November 1944, arrangements were completed for a conference of the Big Three chiefs of state—Roosevelt, Churchill, and Stalin—near Yalta in the Soviet Crimea in February 1945.² On the way to the meeting, Roosevelt, en-

feebled in health and accompanied by his military and naval chiefs of staff, as well as by the inexperienced Secretary of State Edward R. Stettinius, Jr., and a large diplomatic retinue, does not appear to have read the briefing book which had been carefully prepared for him in the Department of State. This is not to say, however, that he was not well posted, by Admiral William D. Leahy and other military and diplomatic advisers, on the wide-sweeping dangers of the Russian potential in western Europe and in China.

The most vital decisions reached at the conference (really of largest treaty import) were between Roosevelt and Stalin personally, or in conference with Churchill and Stalin, and were in the form of executive agreements, with secret provisions, rather than in the form of treaties. The Senate had no opportunity to discuss the documents until they were signed and announced, and even then was long kept in the dark about some of the secret articles.

The Yalta agreements, as first announced in 1945, prepared for: (1) the unconditional surrender of Germany, and military occupation of that country by the United States, the Soviet Union, Great Britain, and France in zones to be worked out by an Allied Control Commission; (2) reparations in kind by Germany to "the greatest extent possible"; (3) provisional governments in Poland and Yugoslavia (the latter under Marshal Tito, then a Soviet protégé) on a broad, democratic anti-Nazi basis, pledged to fair and free elections of more permanent governments; (4) extensive territorial compensations to Poland at Germany's expense in the north and west, in return for Russian acquisitions in the east at Poland's expense; (5) agreement to assist the liberated peoples of Europe to re-establish their states on the basis of democratic institutions of their own choice, a principle of the Atlantic Charter; and (6) a conference of the United Nations to meet at San Francisco on April 25, 1945, to draw up a charter for a new world peace organization, with agreement on the voting formula for the big powers which would be members of its Security Council.

These publicly announced articles masked secret agreements later successively revealed, among them the following: (1) repatriation of citizens of the United States and the USSR (with no exception for doomed political dissidents of the latter); (2) a total of \$20 billion (50 per cent to the USSR) agreed on as a "basis of discussion" for German reparations, to be paid in forced labor and in kind, and to be fixed by an interallied commission sitting in Moscow; (3) membership of the U.N. General Assembly, and the voting formula in the Security Council (kept secret until cleared with China and France).³

Finally were the conditions agreed upon "unquestionably" for the entrance of the USSR into the war against Japan: (1) preservation of the status quo in Outer Mongolia, designated as the Mongolian People's Republic (already a Soviet satellite); (2) restoration to the USSR of her status in Manchuria as of the period preceding the Russian-Japanese War, with specific safeguarding of the USSR's "pre-eminent interest";

housed at Koreiz, and the British delegation at Alupka, both several miles west of Yalta.

³ On all but procedural matters, a decision of the Security Council required seven votes, including unanimity of the five permanent members—the United States, Great Britain, the USSR, China, and France. In the General Assembly the USSR could have three votes to one for the other powers, but if the U.S. Senate later objected (when it considered the final treaty of peace), the United States could also have three votes.

¹ The Malta Conference, which took place between President Franklin D. Roosevelt and Prime Minister Winston Churchill at Malta on Jan. 30–Feb. 2, 1945, attempted to coordinate American and British views on subjects which were expected to be discussed subsequently with Soviet Premier Joseph Stalin at Yalta.

² Although it is known as the Yalta Conference, the conference was not actually held in the village of Yalta. Most of the meetings were held in Livadia Palace, some two miles southwest of Yalta, where the United States delegation was housed. The Soviet delegation was

and (3) handing over to the USSR the southern half of the island of Sakhalin, plus the Kuril Islands. President Roosevelt agreed to obtain from Generalissimo Chiang Kai-shek the consent of the Chinese Nationalist government to these terms (the president easily procured this consent without Chinese protest), and in turn Stalin promised to support the Chinese Nationalist government. Nothing was stipulated at Yalta about the Open Door policy, the traditional policy of the United States in the Far East.

There was no definition of democratic principles at Yalta, and in the sequence of events, Soviet regimes were quickly installed in Poland, as well as in Rumania, Bulgaria, Albania, Hungary, East Germany, and Czechoslovakia, under the name of democracy and the guise of people's republics. In China, instead of supporting the Nationalist government of Chiang Kai-shek, the USSR assisted a Communist revolution against the Nationalist government, quickly recognized the Chinese People's Republic, and made an alliance with it.

Defenders of Yalta generally evade the question of constitutionality, or else they argue (as Roosevelt maintained) that the agreements made there were only military agreements not dependent on the treaty-making power of the Senate. They suggest that if no such agreements had been made, there was nothing to have stopped the USSR from doing what she did later to violate them in both the East and the West—and more too. But no noteworthy American voice defends the agreements as of today (1955), or maintains that the United States should do the same thing over again under the same circumstances as now understood. At the time of advising and consenting to the treaty of peace with Japan (not signed by the USSR) in 1952, the Senate attached a reservation that nothing in the said treaty, or in the Senate's advice and consent to its ratification, implied recognition on the part of the United States of the provisions in favor of the Soviet Union contained in the "so-called Yalta agreement" regarding Japan.

Publication of the Papers.—The American press, as well as the general public, was almost unanimous in its approval of the Yalta agreements when they were first announced, in an official joint communiqué on Feb. 11, 1945. Understandably, nothing was said in that announcement of the agreements about the war in the Pacific. After President Roosevelt's death, President Truman's

new secretary of state, James F. Byrnes, revealed that he did not know of the Far Eastern agreements until Sept. 2, 1945. At Mr. Byrnes' request, President Truman, when he learned about the pledges to the USSR in the Far East, had the documents transferred to the Department of State. "I wanted to know," Mr. Byrnes explained in his memoirs, "how many of these IOU's were outstanding."

The public wanted to know too. As the years wore on, and the diplomacy of the Crimea Conference was more fully revealed in the diaries and memoirs of participants, though not yet by publication of the official record, Yalta, like Munich, became a byword for diplomatic defeat. The Republican opposition to the Democratic administrations capitalized on mounting public indignation at the way in which President Roosevelt had allowed himself to be overreached by the Russians at Yalta in secret agreements that circumvented the constitutional treaty-making power of the Senate. After the Republicans came into power in 1953, the State Department planned to reduce arrears of the documentary series, *Foreign Relations of the United States*, and also to issue a special series on the Far East, as well as one on presidential conferences with Allied chiefs of state during World War II. At first the subcommittee on appropriations in the (Republican) House of Representatives balked at the mounting expense of publishing the greatly expanded volume of the regular series, not to mention a special series, but the appeals of scholars in all parts of the United States helped to arouse Congress to vote the necessary funds.

The Department of State seems to have given priority to the documentary history of the Yalta Conference in the special series planned for presidential conferences, and arrangements for its publication were cleared, under diplomatic comity, with the British government. On March 14, 1955, the State Department announced its intention to make copies of the documents available, in the form of galley prints, to six congressional committees and to individual leaders of both parties in Congress. Following Democratic protests, it appears to have been decided to release the "Malta and Yalta papers" only to the six committees. After such a release it could scarcely be expected that the papers would not reach the public anyway, perhaps in distorted form; and the day before their release, galley copies were "leaked" to the New York Times, which enjoyed a spectacular scoop (by a few hours) and, by an outstanding feat of journalism, published the major part of the galley record (notably of the Yalta papers) on March 17.⁴

The public, both in the New World and the Old, was by now conditioned for a sensational revelation—the journalistic event of the year 1955. The ensuing review of the diplomacy of Yalta and its aftermath did elicit a lively discussion both in the United States and abroad, but, notwithstanding the great volume of detailed discussions recorded in minutes, little that was significantly new came out except numerous undignified informal personal remarks on the part of the three chiefs of state at the conference, and Stalin's opposition to including France, which had "opened the gates to the enemy," on the Board of Control for future occupied Germany. In England, the aging Prime Minister Sir Winston Churchill, pressed in Parliament, asserted there were some "serious mistakes" in the pub-

⁴ See also the New York Times for March 18 and 19, 1955.

lished documents, but the Department of State described the documents as "substantially correct." What these "mistakes" were, Sir Winston did not reveal.

It is plausible to guess that the contemporary debate in the French National Assembly (beginning late in December 1954), on which depended the rearmament of West Germany and her admission to the North Atlantic Treaty Organization, may have had something to do with the extraordinary manner in which the record of *The Conferences at Malta and Yalta 1945* got printed in the newspapers. The documents may have helped carry ratification of these treaties by disillusioning France about the USSR. Certainly they would not have been so fully reproduced in the press if they had been first published in the usual form of a ponderous volume in a regular State Department series.

The documents were belatedly published in book form on Dec. 28, 1955. When it appeared, 41 documents not released in galleys in March were printed. The new material added little new important historical information to the material published in the *New York Times* in March.

SAMUEL FLAGG BEMIS,

Sterling Professor of Diplomatic History and Inter-American Relations, Yale University.

YEMEN. An independent state, Yemen lies in southwestern Arabia along the shore of the Red Sea between Aden Protectorate and Asir Province of Saudi Arabia.

Yemen has an area of 75,000 square miles and a population (1953 est.) of 4,500,000. San'a, the capital, has a population of about 50,000, and Hodeida and Mocha are the country's major seaports.

Yemen is called an imamate, and the inhabitants are Shi'ite Moslems. The ruler, an absolute monarch, is Imam Seif al-Islam Ahmed, who acceded on March 14, 1948.

Most of the state is a high, tilted plateau with terraced slopes on which are produced wheat, millet, barley, grapes, figs, apricots, walnuts, and some coffee. In 1955 the Dielman Company of Germany began drilling for oil under its concession at Saleef in Tihamah Province, and in the northeast, an American company, the Yemen Development Corporation, was granted a new concession to develop oil, with profits to be shared equally between the company and the government.

Yemen stood with Egypt and Saudi Arabia in opposing Iraq's 1955 Baghdad Pact with Turkey; and on March 26, Yemen announced that she would enter into the Arab collective security pact among Egypt, Syria, and Saudi Arabia. Difficulties with Aden Protectorate over border incidents continued into 1955, but Great Britain endeavored to avert widespread hostilities.

On April 2, 1955, the imam's brothers, Seif al-Islam Abdullah and Seif al-Islam Abbas, staged a coup d'état which was successful for five days. The imam's son, Emir Seif al-Islam al Badr Muhammad, suppressed the revolt, and six of the conspirators were subsequently beheaded. In August the imam announced the formation of a new cabinet with himself as premier, and his son, who

had been designated as crown prince, as deputy premier and minister of defense and foreign affairs.

SYDNEY N. FISHER,

Professor of History, Ohio State University.

YOUNG, Cy (real name DENTON TRUE YOUNG), American baseball player: b. Gilmore, Ohio, March 29, 1867; d. Newcomerstown, Ohio, Nov. 4, 1955. One of baseball's greatest pitchers, he amassed an unsurpassed lifetime record of 511 wins against 313 losses (.620 average) and won 20 or more games in each of 14 consecutive seasons in his 22 years in the major leagues. In 1937 he was elected to the baseball Hall of Fame at Cooperstown, N.Y.

Denton Young, nicknamed Cy (short for "Cyclone") for his blazing fast ball, began his major league career with the Cleveland Nationals. Subsequently he played for St. Louis in the National League (1899–1900), Boston in the American League (1901–08), Cleveland in the American League (1909–11), and Boston in the National League (1911). He retired from baseball at the age of 44, after having pitched his 906th game (a major league record).

During his career Young won 20 or more victories in each of 16 seasons, in 5 of which he won over 30. He had his best year in 1892, winning 36 games against 10 defeats. In addition the great right-hander pitched 3 no-hit shutouts—on Sept. 18, 1897, against Cincinnati; on May 5, 1904, against Philadelphia; and on June 30, 1908, against New York. The second of these was a perfect game (no runner reached first base), a feat achieved only six times in the history of major league baseball. His lifetime strikeout total of 2,832 was surpassed only by Walter Johnson.

YUGOSLAVIA. Largest of the Balkan states of southeastern Europe, Yugoslavia has an area of 99,380 square miles and a population (June 31, 1955, est.) of 17,530,000. In 1953 some 15 million persons were South Slavs; among these more than 12 million in the central portion spoke Serbo-Croatian dialects, about 1,500,000 in the north spoke Slovene, and more than 700,000 in the extreme south spoke the Macedonian Slavic language. About 1 million persons (chiefly Magyars, Albanians, Rumanians, and Italians) made up the minorities.

Belgrade (Beograd), the capital, has a population of 469,998 (census of 1953). Among the few larger cities are Zagreb, 350,452; Ljubljana, 138,221; Sarajevo, 135,657; Subotica, 115,402; and Skopje, 121,551.

Constitution.—Following the seizure of power by the Communists during World War II, a constitution, modeled on that of the Soviet Union, was adopted by the Communist-controlled Constituent Assembly on Jan. 31, 1946, and was amended on Jan. 13, 1953. It provides that Yugoslavia is a federal people's republic. The bicameral National Assembly comprises a Federal Council and (in place of the previous Council of Nationalities) a Council of Producers, made up of delegates representing various sectors of the economy. A Federal Executive Council has replaced the old cabinet, and the collegial Presidium has given way to the president of the republic. On Jan. 29, 1954, Marshal Tito (Josip Broz) was unanimously re-elected president by Parliament for a term of four years. The political structure of the six constituent republics¹ is similar except that there is no position comparable to that of the president of the republic.

Political Structure.—Despite a façade reminiscent of democracy, the center of political power is to be found in the Communist Party of Yugoslavia, now called the League of Yugoslav Communists. With a membership approximating 700,000, it imposes its will through a welter of "mass organizations," the largest and most

¹ Of the total population (1953 census), the six republics have the following percentages: Serbia, 41.3; Croatia, 23.1; Bosnia-Herzegovina, 16.8; Slovenia, 8.6; Macedonia, 7.7; and Montenegro, 2.5.

far-reaching of which is the People's Front, created in World War II, and changed in 1953, to the Socialist Alliance of the Working People of Yugoslavia. The party also exercises control through the Federation of Yugoslav Trade Unions, the People's Youth Organization, and the secret police apparatus (UDBA), and through the manipulation of all public opinion media.

When the party became the League of Yugoslav Communists in November 1952, it seemed evident that the Communists were seeking to make their influence and control felt in ways less obvious and more indirect than had previously been the case. The principal function of the league was said to have shifted from ruling to that of inspiring and educating the masses. The moving forces in the dictatorship, however, have quickly put an end to concrete proposals which would move Yugoslavia toward democracy and thereby undermine their monopoly of power. Tito himself admitted, in connection with the purges of Milovan Djilas and Vladimir Dedijer in 1954, that anti-Communist forces would be victorious if political freedom were restored.

In the autumn of 1955, the Yugoslav regime introduced a change in the administrative system at the local level by abolishing 4,032 existing communities and replacing them with 1,508 larger "communes." While describing this move as an extension of "democracy," government leaders were quick to point out that the commune was an organic part of the whole and could not therefore promote local interests at the expense of national interests, nor could it lead toward a form of federation. In reality, the introduction of the commune resembled other efforts of the regime to find a workable formula for the administration of the nation's planned economy.

Religion and Education.—Historically, three religions took root among the Yugoslavs: 41.4% of the population in 1953 belonged to the Serbian Orthodox Church, 31.8% were Roman Catholic, 12.3% were Moslem, 0.9% were Protestant, and 12.3% were without religious affiliation. Initially, Marshal Tito's regime proclaimed separation of church and state, but this was followed by a systematic and persistent campaign on many fronts against all the major religious denominations and their clergy. After a temporary lull, this campaign has been intensified in recent years, indicating that religious groups continue to present problems to the Yugoslav Communists.

In 1953-54, Yugoslavia had (exclusive of similar schools provided for national minorities) 13,781 elementary schools with 1,382,843 pupils; 1,904 secondary schools with 491,282 students; 79 teacher-training colleges with 22,983 students; 1,016 technical schools with 144,480 students; 150 art, music, and dramatic schools with 16,181 students; and 108 workers' educational colleges with 5,187 students. There were 54,775 students at universities and other institutions of higher learning. Physical facilities and capable teachers, already in short supply, were further taxed by increased enrollments in 1954 and 1955. Worse still, from the regime's point of view, was the "low ideological level" which continued to prevail among the graduates despite elaborate efforts on the part of the Communists to indoctrinate the new generation in a different mode of thinking.

Agriculture.—Most Yugoslavs are engaged in farming, and individual peasant farmers and their families on small plots of their own make up about 70% of the population. Agricultural products include wheat (2,506,101 metric tons in 1953), corn (3,831,021), potatoes (2,069,353), and sugar beets (1,514,327). Although the Communists engaged in a furious drive to collectivize the peasants, they have largely failed. The regime succeeded in collectivizing about 22% of the arable land by 1951, but, because of the opposition of the peasants, the government has been in retreat since 1952. Of some 6,800 collectives existing in 1951, less than 1,000 were in operation in 1955. While not officially giving up collectives as the ultimate aim, the Tito regime has mentioned them less often in recent years.

Determined that the private peasant should not prosper, the government adopted a law (May 1953) limiting private landholdings to 10 hectares (1 hectare = 2.471 acres) instead of 35 hectares (which had been the legal limit since 1945), thereby confiscating some 300,000 hectares of land. These lands were to be made available only to groups of peasants who agreed to form collectives, and in some instances to already existing collectives or industrial enterprises.

During 1953 and 1954 the government also

sought to salvage the collectivization principle by creating a supposedly less odious type of mechanized farm cooperative, which, it was hoped, would eventually evolve into the desired collective. Both in 1954 and 1955, the government announced increased investments in agriculture.

Despite all these efforts, the government's agricultural policies have not met with success. Most significantly, agricultural production has dropped below prewar levels. The index (1935-39 = 100) for wheat and corn production in recent years, according to official Yugoslav statistics, was as follows: 1951—wheat 90, corn 90; 1952—wheat 67, corn 33; 1953—wheat 99, corn 86; and 1954—wheat 55, corn 67. The government also pointed out that this lag in production would be still worse if the increase in population were taken into account. Prices, on the other hand, have increased. Prices (1938 = 100) in 1955 were said to be as follows: wheat, 1,550; cattle and cattle products, 1,960; vegetables, 1,954; and wine, 2,773.

Of United States aid to Yugoslavia in the fiscal year 1954-55, some \$23 million was used to buy agricultural products. Additional amounts of wheat (900,000 tons) and cotton (50,000 bales) were supplied to Yugoslavia under the provisions of the Agricultural Trade Development and Assistance Act of 1954. In addition, 10,000 tons of wheat and 750 tons of butter were granted under the Danube Flood Relief Program. Despite this help, food prices continued to rise and shortages, especially in fats and sugar, were so acute at times that rations could not be met.

Industry and Trade.—Following World War II, Yugoslavia's Communist rulers nationalized all industry and trade, with virtually no compensation to the owners. Seeking to imitate the Soviet Union, they emphasized the rapid development of heavy industry. While they have continued to insist that industrial production has been rising (in 1955 it was said to be 23% above 1954), evidence of economic difficulties has been ample on every hand. These difficulties have manifested themselves in shortages (both in consumer and industrial goods), in waste and idleness in many industries (due in part to grandiose plans which did not take into account the difficulties of importing raw materials from abroad), and in an increasingly adverse balance of payments.

In 1953-54, the government was saying that the investment program in key industrial projects was being completed, and that in 1955 Yugoslavia would have a favorable balance of payments. In a mid-1955 report, however, Belgrade announced that only 33% of the government's export plan had been realized, the electrical industry, for example, having fulfilled only 12% of its export plan. In the first five months of 1955, exports (\$108 million), instead of increasing by \$6.5 million as planned, had actually decreased by \$7.33 million. (Imports for the same period amounted to \$229 million.) Following this adverse report, the government announced that centralized planning would be reintroduced in some form; that familiar Communist work norms would be brought back; and that the state trade unions would come into greater prominence.

Since 1950 Yugoslavia has received over \$500 million in Western aid (mainly from the United States and exclusive of military assistance), as well as \$350 million in long- and medium-term credits. Of American nonmilitary aid in the fiscal year 1954-55, some \$20 million was used to buy coking coal, wool, fertilizer, pharmaceuticals, fats,

and oils, and to pay for transportation costs. In September 1955, Yugoslavia asked the United States for \$40.5 million worth of economic aid in the next fiscal year.

In spite of all this aid, coal and power shortages continued to be in evidence during 1955. The consumer, already plagued by food shortages and higher prices, found that textiles, footwear and other needs were more costly. For a number of years Tito's government had insisted that the standard of living had been raised, but in 1955 it was publicly admitted that, except for unskilled workers, real wages of industrial workers and white collar employees were considerably below the 1938 level.

Yugoslav mineral production in 1954 (in metric tons) was: bituminous coal, 980,000; brown coal and lignite, 12,756,000; copper ore, 1,298,860; lead-zinc ore, 1,484,522; and bauxite, 680,597.

Principal Events, 1955.—Perhaps the most significant event since Yugoslavia's expulsion from the Cominform in June 1948 was the visit to Belgrade from May 27 to June 2, 1955, of top Soviet leaders, including Soviet Communist Party Secretary Nikita Khrushchev and Soviet Premier Nikolai Bulganin. Following a gradual improvement of relations between Moscow and Belgrade after Stalin's death, this meeting produced an agreement to develop cooperation "in all fields, which is fully in conformity with the interest of the two countries, as well as those of peace and socialism, and for which objective conditions exist today." In addition to this expression of the belief that the evolution of social and economic forces in the world is toward communism, the meeting produced a wide measure of agreement on such concrete issues as coexistence, European security, admission of Communist China to the United Nations, Communist China's claim to Formosa, German unification, and colonial problems.

On June 27, 1955, Belgrade announced that Tito had accepted an invitation to visit Moscow. In addition, there were exchanges of visits by parliamentary delegations and artists and actors, and select groups of Yugoslav physicists, teachers, journalists and air force generals made trips to Moscow.

During the summer, Tito announced that the Kremlin had cancelled a commercial debt of \$90 million and, in addition, had made a ten-year loan of \$30 million, plus \$54 million in credits. A short time later a trade pact was concluded (announced September 1) between the two countries to exchange \$70 million worth of goods each way annually.

In 1955 Yugoslavia also re-established normal relations with the countries of eastern Europe, signing new trade agreements with several of them. On Jan. 10, 1955, she established diplomatic relations with Communist China. Toward the end of the year, the Soviet Union was urging the election of Yugoslavia to the U.N. Security Council, against United States support of the Philippines. (See UNITED NATIONS.)

After the Khrushchev visit, which was followed by increasing criticism of United States policies in the Yugoslav state-controlled press, doubts as to Tito's value to the free world were being expressed in Western capitals. Nevertheless, during 1955 Yugoslavia continued to receive American military aid, including tanks, trucks, radar, minesweepers, and jet fighter aircraft, and Yugoslav military personnel were given instruction in United States service schools. On July 27, Tito declared that he would not permit United

President Tito of Yugoslavia (left) with Soviet leaders Khrushchev (center) and Bulganin (right) during the Russians' reconciliation visit to Yugoslavia in May 1955.

States supervision of military equipment granted to Yugoslavia, but in November it was announced that Belgrade had consented to an increase in the size of the American military mission from 44 to 60 persons.

On November 6, Secretary of State John F. Dulles visited Tito. At the end of the visit, he declared, with Tito's assent, that they had agreed that the eastern European countries should be independent, free to choose their own social and economic order, and free from outside interference in their internal affairs. The language was not too different from that used by Khrushchev and Tito earlier in the year. It was soon obvious, however, that the same words had somewhat different meanings for Dulles and Tito. The Soviet satellites even went so far as to suggest that since there was no mention of liberation or free elections, Mr. Dulles had in effect reversed United States policy toward them.

Also of concern to the West was the status of the Balkan alliance. Already strained by Greek-Turkish quarrels, it was further weakened by Tito's assertion in July, repeated more than once subsequently in the Yugoslav press, that the military provisions of the pact were less important than economic and cultural ties.

Among other visitors to Yugoslavia in 1955 were the king and queen of Greece and Prime Ministers Nehru of India (June 30), U Nu of Burma (June 6), and Menderes of Turkey (May 4). In December, Tito visited Ethiopia and Egypt at the invitation of those two governments. After his return to Belgrade in January 1956 he denounced the Western-sponsored defensive alliance in the Middle East, known as the Baghdad Pact (q.v.).

Vanderbilt University.*

YUKON TERRITORY. Created a separate territory in June 1898, the Yukon Territory is situated in the extreme northwestern part of Canada, and is bounded on the north by the Arctic Ocean, on the east by the Northwest Territories, on the south by British Columbia, and on the west by Alaska. It has an area of 207,076 square miles and a population of 10,000 (1954 est.). Whitehorse is the capital; Dawson and Mayo are the principal towns.

Government.—The territorial government consists of a commissioner (F. H. Collins, appointed June 15, 1955) and an elective Council of five members having three-year terms. The territory is represented in the Canadian Parliament by one member (J. A. Simmons, re-elected in 1953).

Finance.—Revenue for the fiscal year ending March 31, 1955, amounted to \$2,073,062.38; expenditures totaled \$1,753,660.40.

Education.—In 1954 the territory had 15 schools, enrolling 1,414 pupils and employing 51 teachers. Expenditures on education amounted to \$323,378.48.

Production.—Mining is the chief industry. During the fiscal year ending March 31, 1955, gold production totaled 102,798 fine ounces; and a raw tonnage of 202,241.08 tons of silver-lead ore was produced. During 1954, 11,800 tons of coal were mined at the Tantalus-Butte coal mine. The trapping of fur-bearing animals provides a livelihood for some residents, the main furs being squirrel, muskrat, beaver, marten, and weasel. The export tax on furs amounted to \$8,180.28.

Communications.—An all-weather graveled highway connects Mayo with Whitehorse and the Alaska Highway. Ore concentrates are hauled over this road from the mines at Mayo for shipment to the smelter. An all-weather road, considerably improved and rerouted during 1955, connects Dawson with the Whitehorse-Mayo Highway at Stewart Crossing. A summer road connects Dawson with the Taylor Highway at Boundary, thus affording a connection with Fairbanks, Alaska, and points along the Alaska Highway. Main trunk roads join centers of population with adjacent mining operations. The Alaska Highway, 554 miles of which are in the Yukon Territory, provides direct communication with British Columbia, Alberta, and interior Alaska.

Some 110 miles of railroad, 58 of which lie in the Yukon Territory, connect Whitehorse with tidewater at Skagway, Alaska, where the Canadian Pacific Steamship Company operates a regular summer service from Vancouver, B.C. The Canadian Pacific Airlines operates daily service, except Sunday, from Vancouver and Edmonton to Whitehorse; biweekly mail and passenger service from Whitehorse to Mayo and Dawson; and service from Whitehorse to Fairbanks. Pan American World Airways operates daily service from Whitehorse to Juneau, Alaska, and to interior Alaskan points. Several independent air services offer scheduled and chartered trips from centers of population. Dawson and Mayo have local telephone service, and Whitehorse has outside telephone connections.

Principal Events, 1955.—The new federal building was opened in Whitehorse in November 1954, and the Duke River Bridge at Mile 1098.5 on the Alaska Highway was opened on Aug. 5, 1955. A ten-room addition to the Whitehorse Public and High School was completed for the 1955 school term. Construction began in June 1955 on a water and sewer system in the Townsite of Whitehorse, and contracts were let during 1955 for the construction of bridges over the Yukon River at Whitehorse, and over the Takhini River on the Whitehorse-Mayo Highway. Work began on these projects in 1955, and will probably be completed during 1956. The exploration and development of mineral resources reached a peak during 1954-55 throughout the territory.

F. H. COLLINS,
*Commissioner,
Yukon Territory.*

ZANZIBAR. See BRITISH EAST AFRICA.

ZHUKOV, Georgi Konstantinovich, minister for defense of the USSR; b. Strelkovka, Kaluga Region, Russia, 1896. The outstanding Russian military leader of World War II, he was appointed Soviet minister for defense on Feb. 9, 1955.

In 1915 Zhukov was drafted into the czar's army, serving with distinction in the 10th Regiment of the Novgorod Dragoons during the early phases of World War I. After the November Revolution of 1917, he joined the Red Army and fought in the civil war as a cavalry officer. In 1919 he joined the Communist Party. During the 1920's he served as a division commander in General Semyon Budyonny's First Horse Army, but with the obsolescence of the horse in warfare, he was sent to Germany to study armor. In 1932 he undertook an intensive course in mechanized warfare at the Frunze Military Academy in Moscow, and in 1936 he went to Spain to observe actual tank combat in the civil war.

Surviving Stalin's bloody army purge of 1937, Zhukov successfully commanded the Soviet tank forces against the Japanese troops invading Outer Mongolia in 1939. After serving on the staff of Semyon Timoshenko in the 1939-40 campaign against Finland, he was named commander of the important Kiev Military District in May 1940,

and in June was promoted to the rank of general.

In February 1941, shortly before Germany invaded the USSR, Zhukov was named chief of staff. Eight months later, when the Wehrmacht was pounding at the gates of Moscow, he replaced Timoshenko as field commander of the Soviet troops defending the city. In December he counterattacked, stalled the German drive, and saved the capital. Later he engineered the great victory at Stalingrad in late 1942, having been appointed vice commissar of defense in August of that year. In January 1943 he broke the siege of Leningrad. For his remarkable victories he was named marshal of the Soviet Union.

In a series of battles from the Arctic to the Black Sea, Zhukov succeeded in putting the German Army on the defensive in 1944. His troops took Warsaw in January 1945 and Berlin in April. On May 8 he signed the German surrender document for the USSR. During the remainder of 1945, he served as Soviet military administrator and representative on the Allied Control Commission in Germany.

In March 1946 Marshal Zhukov was recalled to Moscow to assume command of all Soviet ground forces. In May he was suddenly sent by Stalin to command the insignificant Odessa Military District and there he remained in obscurity until Stalin's death on March 5, 1953, when he was immediately appointed first deputy minister

for defense in the government of Georgi Malenkov, the new premier. Shortly after the arrest of Lavrenti P. Beria, head of the secret police, in June 1953, he took over the latter's seat in the Central Committee of the Communist Party. On Feb. 9, 1955, a day after Nikita S. Khrushchev had apparently emerged as the top political figure and Bulganin was elevated from defense minister to premier of the USSR, replacing Malenkov, Marshal Zhukov was named to the key post of minister for defense.

ZINC. Primary zinc metal production in the world and the United States for the past decade is given in thousands of metric tons in the accompanying table, as compiled by the U.S. Bureau of Mines.

Year	World	U.S.	% U.S.	Year	World	U.S.	% U.S.
1945....	1,291	693.6	53.8	1950....	1,970	765.2	38.8
1946....	1,386	660.7	47.7	1951....	2,100	799.8	38.1
1947....	1,595	728.0	45.6	1952....	2,200	820.5	37.3
1948....	1,698	714.6	42.1	1953....	2,320	831.1	35.8
1949....	1,811	739.2	40.8	1954....	2,400	727.9	32.9

United States.—Mine production of zinc was 465,245 short tons in 1954 (547,430 in 1953). Production for the first 10 months of 1955 was 423,711 short tons, as compared with 241,600 tons during the same period of 1954. Production of primary metal declined from 916,105 tons in 1953 to 808,000 tons in 1954, but reached 508,653 tons during the first 6 months of 1955. Consumption of slab zinc in 1954 was 875,000 tons, as compared with the record high figure of 986,000 tons in 1953. During the first 10 months of 1955, consumption reached 884,000 short tons. The metal content of ore imports dropped from 513,383 tons in 1953 to 448,706 tons in 1954. Slab zinc imports in 1954 declined greatly to 156,898 tons (234,576 in 1953). During the first 10 months of 1955, the metal content of ore imports reached 399,379 tons, and metal imports reached 157,103 tons.

Canada.—The production of recoverable zinc reached 244,337 short tons through July 1955, as compared with 206,240 tons for the same period in 1954 (376,491 for the entire year). Corresponding figures for metal output for the first seven months of 1955 were 149,342 tons, and for the first seven months of 1954, 116,597 tons (213,775 tons for the entire year 1954). The excess of mine production over metal production is due to the exportation of ore. (See MINERAL PRODUCTION for table showing output of major producing countries.)

OLIVER BOWLES, *Former Chief, Nonmetals Division, U.S. Bureau of Mines;* and BERNICE B. MITCHELL, *Foreign Minerals Staff, U.S. Bureau of Mines.*

ZOOLOGY. Ecology and Populations.—With the explosive growth of the human population, zoologists as well as other biologists have become vitally interested in the problems concerned with the abundance and distribution of animals of all sorts. Since the human organism must receive a steady supply of food, it is imperative that sufficient plants and animals be produced for use as food by humans. Essentially man must try to manipulate animal and plant populations so that the desirable kinds—the ones which man can utilize—increase in numbers, while the undesirable types—the ones which detrimentally affect the desirable kinds or man himself—are reduced in numbers.

The history of the past hundred years is replete with instances in which man's manipulation of animal and plant populations has been, from

the human point of view, ineffective and in some cases disastrous. Sometimes these adverse results have occurred because man has ignored pertinent biological data, but often they have occurred because of ignorance of fundamental biological forces which control populations. Pains-taking work by innumerable scientists has provided voluminous information on these basic factors; but the data, collected by diverse kinds of biologists, are widely scattered through many scientific publications and are not readily available even to trained scientists. Further, the problems of animal numbers are so intricate and complicated that there is ample room for disagreement on the interpretation of the underlying causal factors which are in actual operation.

Andrewartha and Birch¹ have studied and interpreted much of the available information. These authors point out that Haeckel in 1870 gave the name ecology to "the total relations of the animal to its inorganic and its organic environment." Ecological problems therefore concern animals in their natural habitat and can be solved by: (1) studying the physiology and behavior of the animal both in the laboratory and especially in the field; (2) investigating the climate, soil, and vegetation of the area in which the animal lives; and (3) determining the population density and number by careful, long-time (usually 10–15-year periods) census sampling. Having learned these things about the animal, one is then prepared to give the reasons for the distribution and numbers of animals.

Using published scientific information, as well as that derived from their own ecological studies, Andrewartha and Birch have built a general theory of the distribution and abundance of animals in nature, and also have related the relationship of ecology to the general problem of animal evolution.

Screwworms.—Screwworms, the maggots or larvae of a fly, *Callitroga hominivorax*, are serious pests of domesticated animals in many parts of the American tropics and subtropics. The adult female is attracted to any small wound or scratch on the body of an animal, such as a cow, and lays numerous eggs in the wound. When the larvae hatch, they bore into the sound flesh of the cow and thus cause severe damage to the animal, often resulting in its death. These flies were accidentally introduced into Florida in 1933 and have since caused immense losses to the livestock of that region.

In studying the life cycle and behavior of the fly, Bushland and Hopkins^{2,3,4} found that a female mated only once in her lifetime and that she would as readily mate with a male which had been rendered infertile by X-ray or gamma ray treatment as with a normal male. This seemed to present a possible way of eliminating the screwworm, since the insect can easily be reared in the laboratory and sterilized by means of gamma radiation. The theory was that if enough sterile males were released they would mate with a large number of the wild females which would then lay infertile eggs.

In order to test this method, the island of Curaçao, which had a large year-round active screwworm population, was selected for a trial experiment. Releases of sterile flies started in March 1954. After some preliminary testing of techniques, it was decided to release 400 sterile males for each square mile of the island each week. By November 1954 the screwworms were apparently eradicated, and from Oct. 1, 1954, to July 1, 1955, no cases of screwworms were found

in the domestic animals of the island. Since the complete life cycle takes only four weeks, it appears that the screwworm has been eliminated from the island. Bushland and Hopkins feel that it can also be eliminated by the same technique from the southeastern United States.

Symbiosis.—Any observant person who has lived along the warmer seashores knows that creatures such as jellyfishes and the famous Portuguese man-of-war (*Physalia*) can inflict painful wounds on swimmers. Yet it is common knowledge that certain little so-called man-of-war fish (*Nomeus*) can swim and live without injury among the tentacles of the *Physalia*. The term "symbiosis" is used to characterize intimate constant partnerships of this sort between two very different kinds of animals, or between animals and plants.

Originally symbiosis was applied mainly to partnerships in which both partners benefited. Today, however, scientists are well in agreement that three distinct subdivisions of relationships should be considered as belonging to symbiosis. These three subdivisions are: (1) *mutualism*, in which both partners are benefited; (2) *commensalism*, in which one partner receives the major benefit but the other is not injured; and (3) *parasitism*, in which one partner receives benefit and the other is injured.

Examples of these various kinds of symbiosis are numerous and widespread in nature. Further, many of them are not only fascinating but bizarre. Thus a small marine fish, *Carapus acus* (*Fierasfer*), twists its way into the posterior end of the digestive system of a sea cucumber and dwells in this odd place. In North Africa, Europe, and Australia there are certain species of orchids whose flowers look to the human eye somewhat like females of certain wasps. Male wasps apparently think that these flowers resemble their females, for they fly about attempting to mate with the flowers and in so doing pollinate the flowers.

Most of the knowledge of symbiosis is of a purely descriptive nature, and although it is known that many specific relationships of such sorts exist, little is known about the functional behavior and stimuli of the individuals involved. Here and there, however, a few workers have carefully analyzed the behavior of such symbiotic pairs. Davenport⁵ has collected and evaluated many such data and shows that in every case one or both partners show specialized behavior, the

primary function of which is to effect and maintain the association. In many instances in which the exact stimuli involved are known, it can be shown that they are of a chemical rather than a physical nature. The analytical understanding of symbiotic behavior is, however, in its infancy, and it may be eventually learned that physical stimuli are also of importance.

Molluscan Evolution.—When one thinks of oysters, mussels, clams, and related bivalves, he normally visualizes soft, helpless animals enclosed in heavy, calcareous shells. Clams typically burrow in the bottom of the ocean, especially in sandy or muddy areas, whereas marine mussels usually attach themselves by means of thin, secreted threads, known as byssus threads, to rocks and other objects.

Some clamlike creatures, instead of burrowing in sand or mud, have developed the ability to burrow in rock. Such individuals, once they have constructed their cell-like burrows, can never leave the spot. Yonge⁶ has carefully studied two of these rock-boring creatures. One, *Botula*, excavates its burrow in noncalcareous rocks such as shale and uses its hard shell to cut away the rock mechanically. Another, *Lithophaga*, bores into calcareous rocks, but instead of cutting the rock by mechanical means, seems to use chemicals which it secretes. Both these creatures are shaped superficially much like some of the clams which burrow in sand and mud. Yonge, by detailed study of the anatomy and the shells, shows, however, that these rock borers are much more closely related to the byssus thread-producing mussels. This is just another example of the fact that the evolutionary history of any organism must be ascertained by careful investigation of the total animal. (See also MARINE BIOLOGY.)

INDEX. CUMULATIVE INDEX TO THE AMERICANA ANNUAL, 1952-1956

This Index covers editions of THE AMERICANA ANNUAL from 1952 to the present volume (1956), inclusive. Cumulative indexes to all editions of THE ANNUAL, 1923 to 1932, inclusive, will be found in the 1933 ANNUAL; for the years 1933 to 1941, inclusive, in the 1942 ANNUAL, and for the years 1942 to 1945, inclusive, in the 1946 ANNUAL. Beginning with the 1950 ANNUAL, indexes are cumulative for five years, covering the current and preceding four editions.

Main article headings appear in this Index as bold-faced capitals; subjects within articles appear as lower-case entries. Most important general reference numbers appear at the beginning of each entry, and the subentries which follow them direct the reader to related topics appearing elsewhere; both the general references and the subentries should be consulted for maximum usefulness of this Index. Maps, charts, etc. are indexed herein; half-tone illustrations in this edition are indexed at the front of the volume. Figures in bold-faced type indicate the year of the volume, followed by the page number in light-faced type. Cross-references used herein are to entries in this Index.
